### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

more houses

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to have more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

should build further

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

should be far from main centres

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

many housing provision is good

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

provide more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

needed more and more houses

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

need more and more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good project

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good project

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good walking distance

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

10 mins is fair enough

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

for who cant afford cars

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

walk is better

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. **Tell us why**

minimise vehicle gas pollution

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for users

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good for users

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

not suitable for old people

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

not ok for people on wheelchair

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

Your local board: Not supplied

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for wellbeing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good for wellbeing

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

for wellbeing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good for wellbeing

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

should close

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

has to be near

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

for better access

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

better access

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for future generation

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

for future generations

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

assist people for travelling

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

assist people for travelling

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils plans

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

support Auckland councils plans

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

excellent initiative

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

excellent initiative

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

promote sustainable developments

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

promote sustainable developments

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. **Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

more housing i guess

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

more housing i guess

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

increase government revenue

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

increase government revenue

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

better choices

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

### Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Name: Koreti Filipo

Name of organisation/business:

Your local board: Not supplied

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

too much noises

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

too much noise

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

overcrowded

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

overcrowded

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

unsafe too many people in the city centres

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

unsafe too many people in the city centres

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

easy to travel

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

for people to travel

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

move in a little bit

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

move in a little bit

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

environmental advantages

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

environmental advantages

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

find bus easy

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

find bus easy

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

eaay to get to bus stations

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

easy to get to bus station

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

im old

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

im old

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

too close

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

too close

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

cant walk that long

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

cant walk that long

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. **Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

3mins walk

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

3 mins walk

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

good to move in closer

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

good to move in closer

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

help the economy

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

help economy

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

for clean air

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

for clean air

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

i dont want high building close to us

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

i dont want high building close to us

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

i dont want high building close to us

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

i dont want high building close to us

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

i dont want high building close to us

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

i dont want high building close to us

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good for economic development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to makes changes that saves money

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

TOO CROWDED AND WILL BE NOT UNSAFE

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

**Tell us why**

WOULD BE RISKY FOR PEOPLE NEARBY IF THAT WOULD BE US WITH HIGH BUILDINGS UNSAFE

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

TOO CROWDED AND WILL BE NOT UNSAFE

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

**Tell us why**

WOULD BE RISKY FOR PEOPLE NEARBY IF THAT WOULD BE US WITH HIGH BUILDINGS UNSAFE

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

TOO CROWDED AND WILL BE NOT UNSAFE

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

**Tell us why**

WOULD BE RISKY FOR PEOPLE NEARBY IF THAT WOULD BE US WITH HIGH BUILDINGS UNSAFE

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

TOO CROWDED AND WILL BE NOT UNSAFE

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

**Tell us why**

WOULD BE RISKY FOR PEOPLE NEARBY IF THAT WOULD BE US WITH HIGH BUILDINGS UNSAFE

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

widely accessible for all

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

widely accessible for all

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

widely accessible for all

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

widely accessible for all

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

widely accessible for all

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

widely accessible for all

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

widely accessible for all

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

widely accessible for all

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

widely accessible for all

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

widely accessible for all

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

must be a good change to ease movement of people live in the area

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good to build more houses, less time to travel

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to build more houses, less time to travel

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

good to build more houses, less time to travel

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

good to build more houses, less time to travel

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

support Auckland Councils proposal for better movement of pubic

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

Accessible to amenities, town centres etc.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Great in promoting healthier lifestyles, accessible without transport, environmentally friendly

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

I think it's a fair proposal for the sake of the people living around these area.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Having all these build up with a limit space for people to walk or explore, can affected their well-being etc.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

Away from busy roads

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Good for a busy mall

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

20 minutes walkable catchment area is better.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

It will be more easy for people to get their needs, as some people do not afford to buy cars, or travel by taxi's. It was a good exercise for young people who still can walk

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

It will be more easy for people to walk and get their needs. Good exercise to walk instead of travelling by cars.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

Good to have such space in a busy metropolitan. It breaks the busy momentum and an exercise space too

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Good for exercise and break the busy life schedule

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

It should be closer. Dont want any tall building beside my house.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

800 is fine, no further than that

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. **Tell us why**

800 is fine, no further than that

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Name: Liveti Iosua

Name of organisation/business:

Your local board: Not supplied

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

It should be closer. Dont want any tall building beside my house.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

800 is fine, no further than that

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

Yes we need more houses

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

We need to build more houses to solve the current housing crisis

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

We need to build more houses, and 800 is ok

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

We need to build more houses, and 800 is ok

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

**Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

We need to build more houses, and 800 is ok

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

We need to build more houses, and 800 is ok

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

We need to build more houses, and 800 is ok

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

Dont want any tall building blocking my view

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. 2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. **Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. **Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?**

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

St Marys Bay is not in a walkable distance to the city centre.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

**Tell us why**

Closest rapid transit stop would be  Victoria st station. that is not within 800 mtrs.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

**Tell us why**

St Marys Bay is beyond the walkable catchment area.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

**Tell us why**

St Marys Bay has over 200 properties of historic heritage rated 6 and 5.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

**Tell us why**

The technique should be expanded over the entire suburb of St Marys Bay.

8. **What do you think of the proposed business special character areas that we have identified?**

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

**Tell us why**

Any proposed increase in  residential density will not be accommodated in the proposed infrastructure upgrading.

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

St Marys Bay is bounded to the north by an unstable former coastline edge which presents a coastal hazard that has not been considered as a qualifying matter as it should have been.

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

**Tell us why**

Second attempt: lost this form on trying to return to it after consulting the indecipherable map connected to a later question:

There is no "city centre" in Auckland anymore and this is a well-known and confirmable fact.

What about streets with lots of trees in them?

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

**Tell us why**

The substitute buildings that this survey appears to be supporting will be badly built or available only to the wealthy.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

**Tell us why**

Unfortunately, Auckland is not London. The transport system in Auckland is appalling and will continue to be so because of unsupervised management practices in New Zealand.

It is troubling that this "survey" is being premised on linguistic actualities.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

**Tell us why**

Replacing what are well built and in most cases, visually attractive buildings with terrace housing and apartments will not assist Auckland in being a "destination" or assist those who cannot afford or are without housing.

The reason is quite clear: the administrative reality is that building standards have been and are unsupervised in New Zealand resulting in ugly block designs: walk along Jervois Rd sometime.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

**Tell us why**

The current cohort of New Zealand architects are well known for designing ugly and/or defective building.

Please consider the mental health and financial health outcomes of those purchasers who purchased accommodation in the Victopia Apartment block.

They were directly and successfully exploited.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

**Tell us why**

Your definition of "special character" should have a wide scope and not allow what happened and Paget Street with a building identified as special character or similar but ripped down anyway and replaced by something that looks like a celebration of wealth and entitlement. We are now all waiting for the Council to approve a helipad.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

**Tell us why**

When I consulted this map I lost the survey: the above is my second attempt.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

**Tell us why**

The map was not clear and this is troubling.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

**Tell us why**

Infrastructure is crucial to the health and functioning of any community but should be narrowly defined.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Simple language should be used.

The Ridgeline Protection Overlay qualifying matter needs clarification.

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

**Tell us why**

The distances as a general guideline are too great. And need to be aligned with the OPEN SPACE PROVISION POLICY 2016 adopted by Council. We agree on the need for intensification and having standards of access but the planning is too one sided on transport and housing. Access to other community amenities and environmental facilities need to be included and aligned with the intensification proposals. This applies especially to parks and green spaces. We are very concerned that access to pocket parks, neighborhood parks, suburb parks and even regional parks are not being considered in this planning process. As intensification increases people will want access to green open space and countryside by public transport and this needs greater discussion and planning.

The present OPEN SPACE PROVISION POLICY 2016 adopted by Council needs to be applied as a matter of urgency and part of housing intensification planning. Even access to regional parks [ part of Tamaki Makaurau overall parks system] needs greater attention as outlined in our submissions to the Draft Regional Parks Management Plan.

Our submission:

The POCKET PARK "provision targets" need to be part of walkable catchment planning. See P 18 of the Open Space Provision Policy. Also the Pocket Park targets link with the 3 30 300 3000 proposals on green space and trees. These are essential for recreation, health and wellbeing. See attached

The NEIGHBOURHOOD "provision targets" can be linked/aligned to the proposed transit stops but standards need to be as stated in the Open Space Provision Policy. These are 400m in high and medium density residential areas and 600m in all other residential areas. This needs to sorted out?

SUBURB PARKS need to be part of the walkable distance to the proposed rapid transit stops but the walkable distance in the Open Space Provision Policy of "1000m in high and medium density residential areas" needs to be adopted. This is a more reasonable distance considering older and less able citizens.

Overall, far more community discussion is needed on walkable distances. As mentioned, distances my vary and therefore the need for more localized planning.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

**Tell us why**

SEE ABOVE Align with the OPEN SPACE PROVISION POLICY 2016 The distances as a general guideline are too great. And need to be aligned with the OPEN SPACE PROVISION POLICY 2016 adopted by Council. We agree on the need for intensification and having standards of access but

This is a more reasonable distance considering older and less able citizens.

Overall, far more community discussion is needed on walkable distances. As mentioned, distances my vary and therefore the need for more localized planning.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

**Tell us why**

SEE ABOVE  Align with the OPEN SPACE PROVISION POLICY 2016 The distances as a general guideline are too great. And need to be aligned with the OPEN SPACE PROVISION POLICY 2016 adopted by Council. Overall, far more community discussion is needed on walkable distances. As mentioned, distances my vary and therefore the need for more localized planning.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

**Tell us why**

Parks and Regional Parks need to be included as part of the infrastructure requirements

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

**3 -30 -300 -3000 rule for a Parks Revolution**

4 simple rules or guidelines for the health, well being and environment for a growing city. Ratios may vary but it's important a principle is adopted and followed.

**1 Every citizen should be able to see at least 3 trees (of a decent size) from their home.** b]

**2 Every citizen lives in a neighbourhood where there is a tree canopy of 30 percent.** b]

**3 Every citizen has easily access within 300 metres of the nearest park or green space.** b]

**4 Every citizen using public transport can easily access a large area of countryside or large natural type open space within 3000 seconds of their home.** a]

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

## Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

In Auckland, as in most cities, people are willing to walk up to 30 minutes or further (presumably this is 2,400 metres+). A Business - Mixed Use Zone should be used instead of a Terrace Housing and Apartment Buildings zone. I used to live in Newmarket and walking or cycling were a preferable form of transport and this should be recognised in the formal catchment. Also, Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the City Centr.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

Most people would walk more than 800m on the average walking commute and catchment definitions should reflect this. Household Travel Survey (2011-14) says median walking commute is 23 minutes and post-covid I'm sure this has increased as more people elect for this over driving/public transport. This would provide for options to be more accessible to micromobility and cycling.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

Walkable catchments should be 1600 metres (20 minutes) for Rapid Transit Stops in the isthmus, and 800 metres (10 minutes) elsewhere. These are key places that people want to live, and this is reflected in other cities (people walk further than 1.5km in London to rapid transit and rent costs within/outside that range show that this is valued.)

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

I support upzoning adjacent to town centres and to a distance of 800m - further than currently proposed by Council - should take place around all Town Centres defined by Council as 'large + high accessibility', as well as all other town centres on the isthmus.

This will support the development of 15-minute neighbourhoods centred around town and local centres, enabling residents to access everyday services and amenities, by walking, cycling and micro-mobility, living lower carbon lifestyles.

I grew up in Mt Eden and my parents still live there and within 700m of the Village - it's only right that as many people experience and benefit from local amenities as possible.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

I support upzoning adjacent to town and local centres.

Upzoning to a distance of 400m - further than currently proposed by Council - should take place around all other Town Centres (not on the isthmus) which are small but have high accessibility.

Upzoning to a distance of 400m should take place around all Local Centres defined by Council as 'large + high accessibility', as well as all other local centres on the isthmus.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

The Special Character Area overlay should not compromise or limit development in Walkable Catchments

I support protection of listed Heritage, and high quality, continuous SCA outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

I can't see how Central Government would allow SCAs as defined here to exist when they are so blatantly against the objectives of their own NPS-UD. We have multiple crises, including housing affordability and climate, and it's simply unacceptable that some areas in the city perimeter have more than 90% coded as SCA, without these areas being specifically heritage protected.

Effectively this is blocking development in some of the places that are obviously the most appealing to live, namely city fringe. No one is saying villas will be bowled down, simply that other options that encourage density, lower carbon lifestypes will be permitted to exist within the city fringe. The costs of developing further from the city are not factored into this framing.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

See my comments above too. The Special Character Area overlay should not compromise or limit development in Walkable Catchments

I support protection of listed Heritage, and high quality, continuous special character outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

Old homes were not built to modern standards of warmth and dryness, nor weather tightness. Replacing older homes and villas with modern apartments will radically improve quality of life for residents, offering warmer, drier and healthier living environments.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

Business zones need flexibility to adapt in order to provide for the needs of a growing local population. This includes providing for local shops and services, as well as apartment-style housing above.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

It is the responsibility of the NZ Government, Auckland Council and its CCOs to deliver infrastructure in anticipation of future housing growth. It may be reasonable to have extremely limited areas qualified where it is impossible or extremely difficult to address long-term infrastructure constraints.

Wherever there is strong demand to live, and high accessibility, central and local Government agencies should endeavour to address infrastructure constraints to support development.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support the protection of viewshafts of cultural and spiritual significance to mana whenua in Tāmaki Makaurau.

**Important privacy information**

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. **Your feedback** (all questions are optional)

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

I am concerned that the excessive Special Character Area overlays as proposed at the moment really hinder this. Additionally, the 1,200m range is still quite limited.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

As with the city centre, I am concerned that SCA overlays in particular will undermine the stated intentions, and the range is too short in general.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

I am concerned that this is too short, especially when considering that there seems to be no real acknowledgment of the extending effects of bicycles and scooters.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

This is too short. With the short AND long term housing crisis, greater flexibility is needed, and should be at least 800m aligned with minimum walking catchments proposed.

I am also concerned about the "high accessibility" criterion - all centres should achieve this (accessibility), and considering only current situation could be a self-fulfilling negative prophecy.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

As per large town centres, this is too small to really make a dent in Auckland's issues.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

This is likely to prove a major barrier to resolve our housing crisis. This kind of protection should only apply to much smaller, higher-value areas, rather than wide-spread areas as proposed.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

**Tell us why**

The initial identification seems to be a "as much as possible" approach, aimed at undermining the government direction.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

**Tell us why**

Again, this feels excessive, and undermining key objectives for Auckland's progress and equity.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

This is a very problematic approach, as this would push even more housing to the edge of town, with potentially  similar initial costs, but much higher long-term costs.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I am concerned that this will just add more hurdles. It's unclear whether these provide any real benefit, and they should not just be included "just because".

9 May 2022

To: Auckland Council
By email

Dear Sir/Madam

**Submission on Auckland Council's Preliminary Response for Intensification on behalf of Summerset Group Holdings Limited**

**Background**
Summerset is one of New Zealand's leading and fastest growing retirement village operators, with more than 6,600 residents living in our village communities. We offer a range of independent living options and care, meaning that as our residents' needs change, we have support and options within the village. Summerset has 35 villages which are either completed or in development, spanning from Whangārei to Dunedin. We employ over 1,800 staff members across our various sites.

**Preliminary Response for Intensification**
Summerset welcomes the opportunity to provide feedback to the Council on its preliminary response for intensification planning to respond to the National Policy Statement on Urban Development 2020 and the Resource Management (Enabling Housing Supply and Other Matters) Amendment Act 2021.

Summerset has commented separately on the planning maps relevant to its sites and in addition wishes to express its support for the submission of the Retirement Villages Association of New Zealand in its entirety. Summerset requests the Council engages constructively with the Retirement Villages Association in relation to Council's preliminary response for intensification planning.

**Aaron Smail**
General Manager Development

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

The walkable zone from the central city needs expanding to 2.5km. In this zone both terraced housing and business use should be allowed.

Even a 30 minute walk is a bit on the low side. Perhaps it should be a 30 minute cycling distance.

Special character overlays should not restrict development. Having more people walk is good for their health and good for the environment.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

I suggest tripling this to 2.5 km. Many people walk this distance to and from work each day.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

Again, 2.5 km would be a good distance. 800 metres is too small a catchment. And commercial development should be allowed in this area.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

A two kilometer zone would encourage a 20 minute city. More upzoning is necessary for affordable housing.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

Again a 1-2 km distance would be desirable.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

Perceived special character should not restrict development in walkable areas near the central city and transport links. Special character has largely been defined in terms of a high proportion of pre-WWII colonial housing. In reality, these suburbs are frequently a patchwork of housing that needs to keep evolving. Modern housing is often warmer and more healthy. And it is more economically efficient and better for the environment and people's health to have more housing in inner city suburbs that people can walk, cycle or catch a bus to work from. Having housing further out encourages commuting by car and damages the environment. Shorter commuting times also make life easier for those with families. The Auckland isthmus and parts of the North Shore near ferry services need considerable upzoning.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

More housing is needed in areas where people can walk or cycle to the central city. Special character overlays are mostly for the most centrally located suburbs and block this development. It is economically inefficient to push higher density housing into outer suburbs where a higher proportion of people drive to work. And special character overlays also makes life harder for those with families and those seeking to buy or rent accommodation. Housing needs to become more affordable for reasons of equity and economic efficiency.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

The Council should not be blocking development of much needed accommodation.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

As an economist I know that infrastructure usually follows development, rather than vice versa. Waiting for new roads won't work as they will be clogged by existing inhabitants driving more. Allowing more development in inner city suburbs will make new infrastructure, such as better bus services and light rail, feasible.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I think the viewshafts should go. They hinder economic development.

**Important privacy information**

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. ### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

**Tell us why**

KiwiRail recognises the benefits of co-locating housing near transport corridors and generally supports the intent of Draft Housing Supply Plan Changes. However, KiwiRail is concerned to ensure the benefits of co-location accord with the ability of the railway network to operate safely and efficiently without constraint (both now and well into the future) and that a safe urban environment is provided for those living adjacent to the rail corridor. Auckland's rail system plays a critical role in achieving the broader aims of a connected transport network for all Aucklanders and is fundamental in enabling the necessary mode shift to support New Zealand's commitment to reducing emissions. Together with Auckland Transport, KiwiRail is actively planning the rail infrastructure network requirements for the next 30 years. An integrated and proactive approach to planning is critical to support the overall vision of Auckland being a connected city, and to ensure that Auckland's transport network can support the increasing growth and housing intensification. Intensified housing will not be able to function as intended if essential infrastructure is not enabled, protected and provided for in a safe and healthy way (both now and into the future).

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

**Tell us why**

KiwiRail recognises the benefits of co-locating housing near transport corridors and generally supports the intent of Draft Housing Supply Plan Changes. However, KiwiRail is concerned to ensure the benefits of co-location accord with the ability of the railway network to operate safely and efficiently without constraint (both now and well into the future) and that a safe urban environment is provided for those living adjacent to the rail corridor. Auckland's rail system plays a critical role in achieving the broader aims of a connected transport network for all Aucklanders and is fundamental in enabling the necessary mode shift to support New Zealand's commitment to reducing emissions. Together with Auckland Transport, KiwiRail is actively planning the rail infrastructure network requirements for the next 30 years. An integrated and proactive approach to planning is critical to support the overall vision of Auckland being a connected city, and to ensure that Auckland's transport network can support the increasing growth and housing intensification. Intensified housing will not be able to function as intended if essential infrastructure is not enabled, protected and provided for in a safe and healthy way (both now and into the future).

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

**Tell us why**

KiwiRail recognises the benefits of co-locating housing near transport corridors and generally supports the intent of Draft Housing Supply Plan Changes. However, KiwiRail is concerned to ensure the benefits of co-location accord with the ability of the railway network to operate safely and efficiently without constraint (both now and well into the future) and that a safe urban environment is provided for those living adjacent to the rail corridor. Auckland's rail system plays a critical role in achieving the broader aims of a connected transport network for all Aucklanders and is fundamental in enabling the necessary mode shift to support New Zealand's commitment to reducing emissions. Intensified housing will not be able to function as intended if essential infrastructure is not enabled, protected and provided for in a safe and healthy way (both now and into the future).

### Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

**Tell us why**

KiwiRail recognises the benefits of co-locating housing near transport corridors and generally supports the intent of Draft Housing Supply Plan Changes. However, KiwiRail is concerned to ensure the benefits of co-location accord with the ability of the railway network to operate safely and efficiently without constraint (both now and well into the future) and that a safe urban environment is provided for those living adjacent to the rail corridor. Intensified housing will not be able to function as intended if essential infrastructure is not enabled, protected and provided for in a safe and healthy way (both now and into the future).

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

## Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

**Tell us why**

KiwiRail considers it is necessary for the rail corridor to be recognised as a qualifying matter, in order to manage the interface of the rail corridor with urban development. Managing this interface by recognising the rail corridor as a qualifying matter allows KiwiRail to meet its long-term vision for a connected Auckland. A connected Auckland is one where the needs of communities are met without compromising KiwiRail's ability to keep pace with future demands, such as the need for an increased volume of tracks, greater segregation of passengers and freight, and a more resilient transport network generally.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

**Tell us why**

KiwiRail considers it is necessary for the rail corridor to be recognised as a qualifying matter, in order to manage the interface of the rail corridor with urban development. Managing this interface by recognising the rail corridor as a qualifying matter allows KiwiRail to meet its long-term vision for a connected Auckland. A connected Auckland is one where the needs of communities are met without compromising KiwiRail's ability to keep pace with future demands, such as the need for an increased volume of tracks, greater segregation of passengers and freight, and a more resilient transport network generally.

8. **What do you think of the proposed business special character areas that we have identified?** Other

**Tell us why**

KiwiRail considers it is necessary for the rail corridor to be recognised as a qualifying matter, in order to manage the interface of the rail corridor with urban development. Managing this interface by recognising the rail corridor as a qualifying matter allows KiwiRail to meet its long-term vision for a connected Auckland. A connected Auckland is one where the needs of communities are met without compromising KiwiRail's ability to keep pace with future demands, such as the need for an

increased volume of tracks, greater segregation of passengers and freight, and a more resilient transport network generally.

### Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

**Tell us why**

infrastructure operates safely or efficiently, and avoid reverse sensitivity concerns. This could include ensuring residential housing is safely set back 2 RMA, Sections 77I(e) and (g). 3 Resource Management (Enabling Housing Supply and Other Matters) Amendment Bill 83-1, Report of the Environment Committee (December 2021) at page 15. 4 from high voltage transmission lines, and other infrastructure such as airport noise areas, in order to avoid reverse sensitivity concerns. [Emphasis added] 17. These controls sought by KiwiRail are also appropriate to implement the objectives and policies of the AUP which seek to protect existing infrastructure, such as the rail corridor, from reverse sensitivity effects and to ensure that the development and operation of infrastructure is enabled while managing the health and safety of communities.

### Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

infrastructure operates safely or efficiently, and avoid reverse sensitivity concerns. KiwiRail

9 May 2022

**To:** Auckland Council (**Council**)

**Subject:** Feedback on Preliminary Response to Resource Management (Enabling Housing Supply and Other Matters) Amendment Act 2021 and changes to the Auckland Unitary Plan (**Draft Housing Supply Plan Changes**)

**Summary**

1. KiwiRail welcomes the opportunity to provide feedback on the Draft Housing Supply Plan Changes which propose amendments to the Auckland Unitary Plan (**AUP**) to enable intensification of housing in urban areas as required under the Resource Management (Enabling Housing Supply and Other Matters) Amendment Act 2021 (**Amendment Act**).

2. KiwiRail recognises the benefits of co-locating housing near transport corridors and generally supports the intent of Draft Housing Supply Plan Changes. However, KiwiRail is concerned to ensure the benefits of co-location accord with the ability of the railway network to operate safely and efficiently without constraint (both now and well into the future) and that a safe urban environment is provided for those living adjacent to the rail corridor.

3. Auckland's rail system plays a critical role in achieving the broader aims of a connected transport network for all Aucklanders and is fundamental in enabling the necessary mode shift to support New Zealand's commitment to reducing emissions. Together with Auckland Transport, KiwiRail is actively planning the rail infrastructure network requirements for the next 30 years. An integrated and proactive approach to planning is critical to support the overall vision of Auckland being a connected city, and to ensure that Auckland's transport network can support the increasing growth and housing intensification. Intensified housing will not be able to function as intended if essential infrastructure is not enabled, protected and provided for in a safe and healthy way (both now and into the future).

4. The planning maps released with the Draft Housing Supply Plan Changes indicate significant up-zoning around train stations and adjacent to the rail corridor across the city. This will significantly increase the development adjacent to the rail network. However, the initial consultation documents released by Council do not identify the rail corridor (as nationally significant infrastructure) as a qualifying matter.

5. KiwiRail considers it is necessary to recognise the rail corridor as a qualifying matter (as enabled by the Amendment Act) and seeks that when the Housing Supply Plan Changes are formally notified:

   (a) a building setback of five metres from the rail corridor is included as a permitted activity standard for sites that adjoin the rail corridor. This is necessary for the safety of both communities who live near the rail corridor, and the efficient operation of the rail corridor;

   (b) acoustic insulation and ventilation permitted activity standards must be included within the AUP for new dwellings within 100 metres of the rail corridor. Vibration controls should also

**www.kiwirail.co.nz | 0800 801 070**
8-14 Stanley Street, Auckland 1010
Private Bag 92138, Auckland 1142

be introduced for any new (or altered) sensitive uses within 60 metres of the rail corridor. This is important to ensure that housing development occurs in a way that provides for the health and amenity of occupants near the rail corridor while also minimising the potential for reverse sensitivity effects on the existing lawful operations of the rail corridor.

**KiwiRail's operations**

6. KiwiRail is a State-Owned Enterprise responsible for the construction, maintenance and operation of New Zealand's rail network. KiwiRail's national rail network includes more than 3,700 km of track and 1,300 bridges, with over 200 locomotives available to transport both freight and passengers, as well as he necessary infrastructure to move freight and passengers efficiently and safely across the country, such as railway stations, container terminals, and freight yards.

7. The importance of the rail network to New Zealand's economy is also demonstrated by the significant volume of freight and passengers it carries each year. On an annual basis, KiwiRail transports approximately 25% of New Zealand's exports, carries over 1 million tourists, and provides the infrastructure for 28 million commuter journeys in Auckland and Wellington. The current rail network underpins New Zealand's freight industry by providing a vital connection between primary producers and the nation's ports.

8. In addition to its commercial importance, the rail network offers considerable environmental and safety benefits. Sustainability advantages include reducing national greenhouse gas emissions, as transporting a tonne of freight by rail generates 70 percent less carbon emissions compared with heavy road freight. The New Zealand Government has identified New Zealand's rail network as a critical component of the nation's wider transport sector and material model shift to rail is necessary to contribute to lower carbon transport outcomes.

**Providing for Auckland's growth in an integrated manner**

9. The rail network is critical to ensure Auckland's economic wellbeing and provision of managed growth. Currently 41 stations across the Auckland network serve between 1.8 – 1.9 million commuter journeys per month.[1] As the population of Auckland grows and development intensified, passenger rail becomes even more critical for the efficient movement of people and it is important that the rail network can meet the needs of Auckland both now and well into the future. Meeting the needs of Auckland requires a substantial change to the way we move around the city. As at 2018, 43% of Auckland's greenhouse gas emissions come from transport, emphasising the importance of modal shift to more sustainable modes of transport in order to reach our climate change targets.

10. While City Rail Link is critical to unlocking the capacity of the network, additional infrastructure will be needed to support any material increase in capacity and the long-term vision of a connected city. KiwiRail is working closely with Auckland Transport to develop a rail plan (looking out over a 30-year horizon) to ensure there is sufficient capacity in the network over the long term to support population growth as well as ensuring the network is safe and resilient.

11. However, as well as planning for its own operations, KiwiRail needs to manage development adjacent to the rail corridor. It is expected that the population adjacent to the rail corridor will more than double by 2050. This means careful, integrated planning to ensure that the rail corridor is enabled for growth, and effects on rail corridor are managed as well as impacts on landowners from the effects of the rail corridor, like noise and vibration.

[1] KiwiRail Integrated Annual Report 2020, page 17.

**Qualifying matters – Recognising the national rail network**

12. The Amendment Act enables the Council to amend the MDRS and intensification requirements where a "qualifying matter" applies. The qualifying matters expressly include:[2]

    (a) the need to give effect to a designation (but only in relation to the land that is subject to that designation); and

    (b) matters "required for the purpose of ensuring the safe or efficient operation of nationally significant infrastructure". The rail network is nationally significant infrastructure for the purposes of the Amendment Act.

13. In the initial consultation material released, the Council has recognised designations as qualifying matters (which would include land designated for the rail network). However, the Council has not recognised the rail corridor more broadly as a qualifying matter. This is a significant omission given that:

    (a) The draft planning maps released by the Council show significant up-zoning around train stations and adjacent to the rail corridor. While draft planning provisions have not been released as part of the Draft Housing Supply Changes, it is anticipated the proposed upzoning will result in a significant increase in the density of housing, including around the rail network, which increases the number of sensitive receivers that will be subject to rail noise and vibration.

    (b) Further, the application of the MDRS and other more permissive development controls limit the setbacks of structures to boundaries (including boundaries from the rail corridor) which will result in a larger number of buildings locating in very close proximity to the rail corridor. This has the potential to generate adverse health and safety effects for communities near the rail corridor as well as result in reverse sensitivity effects on the rail network.

14. KiwiRail considers it is necessary for the rail corridor to be recognised as a qualifying matter, in order to manage the interface of the rail corridor with urban development. Managing this interface by recognising the rail corridor as a qualifying matter allows KiwiRail to meet its long-term vision for a connected Auckland. A connected Auckland is one where the needs of communities are met without compromising KiwiRail's ability to keep pace with future demands, such as the need for an increased volume of tracks, greater segregation of passengers and freight, and a more resilient transport network generally.

15. In order to achieve this, KiwiRail considers the following controls are necessary when the plan changes are notified later this year.

16. The Select Committee report on the Enabling Housing Supply Bill expressly outlined its intention that qualifying matters were intended to enable the exact type of controls KiwiRail seeks, where it stated:[3]

> […] the qualifying matters set out in new section 77G include a matter of national importance and a matter required to ensure that nationally significant infrastructure **operates safely or efficiently, and avoid reverse sensitivity concerns**. This could include ensuring residential housing is **safely set back**

---

2 RMA, Sections 77I(e) and (g).

3 Resource Management (Enabling Housing Supply and Other Matters) Amendment Bill 83-1, Report of the Environment Committee (December 2021) at page 15.

> from high voltage transmission lines, and **other infrastructure** such as airport noise areas, **in order to avoid reverse sensitivity concerns**.
>
> [Emphasis added]

17. These controls sought by KiwiRail are also appropriate to implement the objectives and policies of the AUP which seek to protect existing infrastructure, such as the rail corridor, from reverse sensitivity effects and to ensure that the development and operation of infrastructure is enabled while managing the health and safety of communities.[4]

*Setbacks*

18. KiwiRail considers a setback of five metres is necessary for any buildings and structures (residential or non-residential) from the rail corridor. This is appropriate to ensure there is sufficient space for everyday activities to occur without physically encroaching into the operational rail corridor. Without a sufficient setback, there is a real risk that occupants will interfere with the rail corridor which could cause disruption to the network, or more seriously, a collision or accident. There are additional risks for electrified tracks (like Auckland) which provide additional danger to those that come in contact with them.

19. This control would not compromise the objectives of Draft Housing Supply Plan Changes (or the Amendment Act) as it would only apply to those sites that directly adjoin the rail corridor. Provision should also be made so that resource consent can be sought to infringe the standard as a restricted discretionary activity with the matters of discretion limited in scope to those matters affecting the safe and efficient operation of the rail corridor.

*Noise and vibration standards*

20. The changes proposed will increase the number of sensitive receivers that will be subject to rail noise and vibration. Exposure to activities that create noise and vibration can give rise to annoyance and adverse health effects for people living near noisy sources. Where people become annoyed by the noise, they will often complain or object to the lawful operations of the rail corridor, such that KiwiRail may have to constrain or alter its operations (otherwise known as reverse sensitivity effects).

21. KiwiRail considers that noise standards are required for new or altered noise sensitive activities (eg residential activities) within 100 metres of the rail corridor, which require the installation of acoustic insulation to achieve an appropriate internal noise level as well as ventilation with heating and cooling abilities. KiwiRail also considers that vibration standards should be required for new or altered noise sensitive activities within 60 metres of the rail corridor which require buildings to be designed and constructed in a manner that minimises the impacts of vibration.

22. These controls do not affect the density of development near the rail corridor, but rather seek to ensure that where urban development co-locates around the rail corridor, the health and amenity of nearby residents is not adversely affected and the rail corridor is protected from reverse sensitivity effects.

**Next steps**

23. KiwiRail would welcome the opportunity to meet with the Council (and other key stakeholders such as Auckland Transport) to discuss these matters in further detail (and provide any further information the

---

[4] See, for example, B3.2.1(3)(b) and (6).

Council may need to further these amendments to the Draft Housing Supply Changes prior to notification.

Yours faithfully

Mike Brown

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

1200 isn't far enough. Given the trade-off at increased distances up to 2km - 3km walking would still be a preferable choice for many when the alternative is driving and having find a park and then pay for the park. Similarly for public transport there is still a strong case that walking would be the better choice for both speed (not waiting for the next bus) and cost.

Critically here the special character areas should not be exempt from up zoning within this catchment. These areas are ideal for intensification and would provide much opportunity for walking to the city and cycling/micro mobility.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

Similar logic to my previous comments about walking speeds and how this is traded-off against the alternative. I have not relied on a car for well over 95% of my commutes for several years now even in situations where many consider a car 'essential'. Buying groceries etc.

Again there should be no special treatment for special character areas and they should not be exempt from upzoning

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

Again similar to my previous comments. People are willing to walk further than 800m to get to a rapid transit location. You seem to have low-balled many of your numbers in a way that is detrimental to an overall goal of encouraging more public transport use, less private vehicle dependence, and allowing more people to live closer to ammenities.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city

blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

Absolutely there should be up-zoning and it should go further to a wider catchment. Again it feels like you are underestimating people's ability to walk or cycle. I regularly walk over a kilometre to my local supermarket and which includes walking up a couple of hills. This is no issue for me and I suspect many others. More opportunities for people to live like this would be a great idea. Push out the distance further.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

All the same comments. People are willing to walk. 200m is barely anything, maybe a 5 minute walk. At least put it up to 400m. You are really limiting yourself otherwise.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

It feels like you are just trying to frustrate the direction from the government. From recent articles it is clear you have drawn SCAs in a way to maximise their area by using some tenuous logic and dubious methodology. By doing this you are locking many in Auckland to having to live further away from the centre city and therefore be more reliable on driving or public transport when lower carbon methods like walking, e-scooters, and cycling would be better options.

I also do not believe that many of the identified SCAs actually have any meaningful character. Narratives like how these areas are draws for tourists are just fantasies. No tourist is flying from Italy to look at our streets of villas in Epsom.

You have declared a climate emergency. Put your money where your mouth is and actually allow for up zoning rather than frustrating the directive from the central government to keep the central suburbs from seeing intensification.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

These areas are full of homes that are in most cases sub-par, cold, drafty, damp homes and where they are not it is because they have been extensively renovated to the extent it is dubious to say they have any form of historic character. Replacing these homes with modern apartments and town houses would significantly improve the quality of housing and given the dubiousness of the character value asserted not much will be lost.

It is fair to protect actually heritage listed property or if there is an area with genuine character but in the case of character it should not stand as a strong enough case on its own to limit development within a walkable catchment. What is the priority here? To allow for more housing

closer to ammenities and allowing for lower carbon lifestyles or to try turn suburbs into museums and banish everyone else to live in other suburbs and force them to drive to get anywhere?

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

It is all the same arguments here. SCAs feel like they have been made up to frustrate the direction from central government and to try turn areas into museums. Let intensification happen around areas within walkable catchments and stop making up excuses and exemptions.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

Infrastructure for things such as water is something which should not be a qualifying matter. Intensification should be allowed to occur around where people want to live. It is the job of the central government, Auckland Council and other agencies to provide the required infrastructure. Changes through things like 3 waters will help to secure funding for such infrastructure investment.

If there are areas where it would be effectively impossible to provide infrastructure it would be okay to have a very tightly limited area where there is a qualification but this should be used as sparingly as possible and the bar should be set very high to qualify.

It is also true that intensification of brownfields is more efficient than endless new greenfield development which demands bigger wider roads, more pipe laying for plumbing, power lines, etc. This should all be priced into any consideration and trade-off. This is to say nothing of the climate emergency and obligations to lower emissions. Brownfield projects should be counted as a benefit from this perspective and infrastructure funding targeted accordingly.

This should not be a qualifying matter.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

This feels like a fishing exercise to find any other excuse that will stick to limit intensification especially around the central suburbs. Further work is needed to justify any of these matters as meeting the threshold as a qualifying matter. Well some viewshafts may be nice to have they should by no means be a justification to prevent intensification. The direction from central government is clear that qualifying matters be justified on a site by site basis. Spending another 12-24 months trying to cook-up some other excuse is a disservice to all of Auckland and shows a lack of commitment to your declared climate emergency. Get on with things, let intensification happen where it needs to happen.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

People routinely walk further than 15 minutes. I myself frequently walk 20-30 minutes to work, shopping, and restaurants. It sounds like you're just trying to avoid developing the suburbs immediately around the central city. It's very important that people can live close to the city!The walkable catchment should be 2400 metres (30 minutes) for the City Centre. A Business - Mixed Use Zone should be used instead of a Terrace Housing and Apartment Buildings zone.

In Auckland, many people are willing to walk further than 15 minutes to access jobs, services, opportunities and rapid transit.

Walking is an attractive travel mode within a 30-minute catchment of the city centre, since 30 minutes is a typical commute time for Aucklanders and it avoids the need to pay for parking or pay/ wait for public transport.

We can already see this in 2018 census 'travel to work' data which shows walking mode share above 10% (and often much higher) for these central suburbs.

This larger walkable catchment also better reflects the accessibility of the city centre by cycling/micro-mobility and the bus network, giving a wide range of options for low-emissions travel.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

I regularly walk 20 minutes to adjacent urban centers for restaurants, shopping, etc. It's crucial that more people have the opportunity to do this.

Walkable catchments should be 1600 metres (20 minutes) for Metropolitan Centres in the isthmus (Newmarket, Sylvia Park), and 800 metres (10 minutes) for other Metropolitan Centres.

In Auckland, many people are willing to walk further than 10 minutes to access jobs, services and opportunities that the metropolitan centres provide.

Household Travel Survey data shows that the median walking commute in Auckland takes around 22 minutes, compared with the median driving commute of 23 minutes. This data covers 2011-2014 and it is likely that driving commutes have lengthened since then, due to development in remote suburbs and greater congestion.

Greater walkable catchments for Newmarket and Sylvia Park better reflect the accessibility of these centres by cycling/micro-mobility and the bus network, giving a wide range of options for low-emissions travel.

Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the Metropolitan centres - this is crucial to enabling More Homes in the Right Places and climate-responsive development.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

I regularly walk 20 minutes to frequent bus lines to the beach, and other parts of town. Many more people should have this opportunity. walkable catchments should be 1600 metres (20 minutes) for Rapid Transit Stops in the isthmus, and 800 metres (10 minutes) elsewhere. The definition of Rapid Transit in implementing the NPS-UD should include high bus priority areas.

In Auckland, people are often willing to walk further than 10 minutes for rapid transit. Auckland Council research (Wilson, 2013) shows that many rapid transit stops have a walkable catchment larger than 800 metres, and that walking is often the dominant mode up to around 2000 metres. There have been many network improvements since 2013 which will only incentivise walking more.

Furthermore, increased walkable catchments better reflects the cycling and feeder bus catchments of isthmus stations.

Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the rapid transit stops - this is crucial to enabling More Homes in the Right Places and climate-responsive development.

The Business - Mixed Use Zone should be used instead of a Terrace Housing and Apartment Buildings zone, in the first 200 metres of the Walkable Catchment of Rapid Transit stops.

This will support:The creation of new centres, at stops which aren't already in Town Centres, and in highly accessible locations on our public transport network;

The development of 15-minute neighbourhoods centred around the rapid transit stop, enabling residents to access daily needs by walking, cycling and micro-mobility and to live lower carbon lifestyles.

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

400m is ridiculously short. People are willing to walk so much further than this.

I support upzoning adjacent to town centres.

Upzoning to a distance of 800m - further than currently proposed by Council - should take place around all Town Centres defined by Council as 'large + high accessibility', as well as all other town centres on the isthmus.

For town centres on the isthmus, the new zone should facilitate development up to six storeys.

This will support the development of 15-minute neighbourhoods centred around town and local centres, enabling residents to access everyday services and amenities, by walking, cycling and micro-mobility, living lower carbon lifestyles.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

200m is not far enough. People are willing to walk much further than this. Limiting development >200m around will vastly reduce the benefits of this policy.

I support upzoning adjacent to town and local centres.

Upzoning to a distance of 400m - further than currently proposed by Council - should take place around all other Town Centres (not on the isthmus) which are small but have high accessibility.

Upzoning to a distance of 400m should take place around all Local Centres defined by Council as 'large + high accessibility', as well as all other local centres on the isthmus.

For town centres and local centres on the isthmus, the new zone should facilitate development up to six storeys.

This will support the development of 15-minute neighbourhoods centred around town and local centres, enabling residents to access everyday services and amenities, by walking, cycling and micro-mobility, living lower carbon lifestyles.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

These zones don't have character. They're just a handout to the rich at the expense of all the rest of us. It's a disgrace that the best most desirable suburbs with best walkability are trying to be excluded from development by blanket suburb-level bans.

Special Character Area overlay should not compromise or limit development in Walkable Catchments  I support protection of listed Heritage, and high quality, continuous SCA outside of Walkable catchments  With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

"Character" (sounds like just rich areas to me) isn't a good enough reason to limit the ability for people to live there. The city isn't a museum.  The Special Character Area overlay should not compromise or limit development in Walkable Catchments  I support protection of listed Heritage, and high quality, continuous special character outside of Walkable catchments  With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.  Old homes were not built to modern standards of warmth and dryness, nor weather tightness. Replacing older homes and villas with modern apartments will radically improve quality of life for residents, offering warmer, drier and healthier living environments.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

The Special Character Area overlay should not compromise or limit development in Walkable Catchments  I support protection of listed Heritage, and high, quality continuous special character outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.  Business zones need flexibility to adapt in order to provide for the needs of a growing local population. This includes providing for local shops and services, as well as apartment-style housing above.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

It's your job to sort out the infrastructure, and density will help achieve infrastructure (making public transport easier, agglomeration benefits, and enabling denser schools). It is the responsibility of the NZ Government, Auckland Council and its CCOs to deliver infrastructure in anticipation of future housing growth. It may be reasonable to have extremely limited areas qualified where it is impossible or extremely difficult to address long-term infrastructure constraints. Wherever there is strong demand to live, and high accessibility, central and local Government agencies should endeavour to address infrastructure constraints to support development. Intensification in existing urban areas is a more efficient use of infrastructure, compared to greenfield development. Prioritisation of infrastructure funding between greenfield growth and brownfield intensification needs to be considered. With the climate emergency, investing in infrastructure upgrades to support development in existing urban areas - close to existing amenities and transport - is crucial to reduce transport and housing-related emissions. Auckland Council should minimise and avoid extensive greenfield development requiring new infrastructure in peripheral urban areas, locking-in higher emissions for households.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Further analysis of these other qualifying matters is required by Auckland Council to provide evidence that these Matters meet the legislative threshold to be applied.

The NPS-UD sets out that Qualifying Matters need to have identified Specific Characteristics that makes the level of intensification required by the NPS-UD and MDRS inappropriate in light of the national significance of urban development. Heights and density more restrictive than the NPS-UD catchment or MDRS can only be imposed to the extent that it affects the characteristic in question. Site by site evidence is required for qualifying matters, which includes justifying the extent of the area that it's applied to, as well as the sites that it applies to.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

People are prepared to walk further esp in downtown locations. Also E-scooters and bikes make trips of 2km or more very easy so this 'walkable' catchment needs to be larger

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

People are prepared to walk further if they live in apartments. Also E-scooters and bikes make trips of 2km or even more very easy so this 'walkable' catchment needs to be larger

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

See above -People are prepared to walk further if they live in apartments. Also E-scooters and bikes make trips of 2km or even more very easy so this 'walkable' catchment needs to be larger

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

We need more intensification

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

Special character qualifying matters should be limited to actual heritage buildings (site-by-site), not entire suburbs streets and suburbs. The most sensible place for intensification is close to the

city centre where the best public transport links are, and getting into the city centre is easy and lower-emissions regardless of transport mode. Special character provisions locks out housing where we need it the most. Zoning laws in the central fringe suburbs is increasing transport emissions by pushing housing development further away from where many people work.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

**Tell us why**

Build infrastructure to support intensification, not the other way around. With many more people and families moving into an area, you should have more local ratepayers able to fund the necessary infrastructure upgrades and more efficiently (per unit) than if they were spread out over a large area of greenfield development, for example

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

**10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

**Tell us why**

Yes to focus attention on intensification in areas where it is appropriate eg Albany and close to Highbury and not down Hinemoa Street nor Rawene Road.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

**Tell us why**

sensible proposal

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

**Tell us why**

sensible proposal

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

**Tell us why**

We do not support this and think distances should be closer because those centres are already small with limited public transport links and parking. The neighbourhoods would lose their local feel if surrounded by large high-density housing.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

**Tell us why**

We do not support this and think distances should be closer because those centres are already small with limited public transport links and parking. The neighbourhoods would lose their local feel if surrounded by large high-density housing.

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

**Tell us why**

The proposed new rules are too narrow. The existing special character areas should be retained including Birkenhead Point and Northcote Point. It is important to keep this so these areas keep their unique historic and distinctive character.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

**Tell us why**

All character areas should  be identified not just subsets The special character threshold should be lower to 50%. - still the majority

All properties with a score of 4/6 that the council still counts as character houses should be included not just 5/6 or 6/6.

Northcote and Birkenhead Points were surveyed using google Street viewer which is a crude measure compared to in-person meaning it is impossible to show their true character status.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

**Tell us why**

All character areas should  be identified not just subsets The special character threshold should be lower to 50%. - still the majority

All properties with a score of 4/6 that the council still counts as character houses should be included not just 5/6 or 6/6.

Northcote and Birkenhead Points were surveyed using google Street viewer which is a crude measure compared to in-person meaning it is impossible to show their true character status.

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

**Tell us why**

The infrastructure should be taken into account as a limitation on increased housing density.

Little Shoal Bay and Le Roys Bush are sensitive ecological areas that are already under pressure and increased intensification means more stormwater runoff and silting.

Onewa Raod is already above capacity for traffic and has severe gridlock. Increased density would add to these problems.

**Other qualifying matters**

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

## Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

**Tell us why**

## Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

## Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

**Tell us why**

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

**Tell us why**

## Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

### Requirements for intensification

### Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

**Tell us why**

CBD is the heart of the city. Good intensification should surround the city.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

**Tell us why**

These centres provide all amenities.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

**Tell us why**

## Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.
