Future Development Strategy

Howick Local Board

WRITTEN FEEDBACK

Date published: **Friday, 10 August 2023**

Future Development Plan 2023 #18

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I don't want to lose the green spaces in local parks and communities. Nobody wants to drive a toddler or dog half an hour before letting them play

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #26

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Future Development Plan 2023 #36

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Lack of convenient and reliable public transport. Billions of dollars were spent on improving public transport but no solid improvement in time saved, or willingness to ride. The focus should be spent on improving traffic and widening roads instead. Investment in a reliable metro system should be fast-tracked and expanded quickly, rather than waste money on reliable bus transportation.

The only interconnection right now is by car.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Yet none of the public infrastructure has caught up to the development of the urban areas. Transportation is already a sham and this must be addressed before adding more cars on the side of the road and making it even more dangerous to drive. Reducing the speed limit only amplifies this issue and shows the impotence of Auckland Transport to provide a safe and reliable road for all users.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

How are Takanini, Drury, and Opaheke areas affected by sea-level rise? This is subjective and non-constructive to the overall growth of Auckland, by forcing people within crowded regions where they are faced with increased crime, long travel times, and overall low quality of life.
Auckland should be looking to expand outwards and make plans for a second arterial motorway.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

The contradiction between nature-based infrastructure and evolving technology.
Which one is it? Does Auckland want to achieve its goals to improve infrastructure or to waste more land and money on inadequate infrastructure that lacks the accommodation for growth and change?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Having grown up in Auckland it's sad to see what Auckland has become due to poor planning and continued waste of taxpayers' money. I welcome growth in Auckland but the focus has not been in the best interest of the entire Auckland population.

Future Development Plan 2023 #68

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why
Neighbourhoods need to be built more densely in order to make shops and workplaces more accessible to households and make public transport more efficient.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why
This should be implemented with a 15 minute city approach for each region.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
We need to plan ahead for any future predictable changes and vulnerabilities to environmental hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Nature based infrastructure helps restore local flora and fauna within the environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

These densification and increased public transport services/bike lanes need to be implemented quickly. A cost effective way to do this would be when roads need to be repaved, protected bike lanes are also added in at the same time, and bus lanes/transit lanes where appropriate to ensure busses are as efficient as possible along major transit ways.

Future Development Plan 2023 #125

Makes sense

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why
I don't have enough information

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Limit immigration so all people already in the city can be adequately housed, and have a job. Growth for growths sake is idiotic and decreases the wellbeing of those already living in a city. We should be focusing on decreasing emissions not ramping them up with continual population growth.

Future Development Plan 2023 #260

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Agree in principle to the idea, but it is nonsensical to make our cities denser without improving the already below par infrastructure (e.g public transport, water, etc)

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Totally agree. We need to be thinking like a modern city would. So many other cities out there we can model from. Just need to commit to something and go from there

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Should also be looking for any underlying issues instead of solely bandaid fixes. If we don’t fix our weak infrastructure all these climate problems will just come back again but worse

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yep new technologies will help, but we should also think deeper to see if there are issues with any current processes that could simply be changed to positively impact our infrastructure

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #273

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #311

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Compacting and living on top of each other only increases unhealthy living, over capacity schooling, hospitals and not enough infrastructure like drainage, water ways, parking to support dense communities - have we forgotten devaluing the urban cities and increasing housing on the outskirts

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Building housing and business developments with public transport as apart of that development should be first. Not left to after you've built all of the houses and businesses sites - not to mention environmentally friendly solar driven businesses

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Build and provide support for those communities who have been and will continued to be effected by climate change, build to support the future

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

I don't understand the logic behind a detention basin, if you are trying to concentrate building infrastructures in urban areas that don't have the capacity? You are taking away the reserves, play grounds etc to make way for overloading with dense development

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Invest in the hospital infrastructures, and schooling for the amount of people we have in Auckland! Make them easier to get to by fixing direct services to the hospitals, making land available to build another hospital further out south in the Bombays. Look at further developments outside of the already congested centralised areas

Future Development Plan 2023 #321

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #382

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The infrastructure is not able to cope with such intensification. Increased non-permeable surfaces cause major overland flooding issues, lack of off street car parks for residential housing causes serious safety issues etc etc. If Auckland had decent reliable public transport then maybe people can give up their cars but until then, everyone needs to drive. I live 21 km from the CBD but my only option for public transport is an unreliable ferry service or a bus, then a train ...which will take more than an hour.....if the train or bus is even running.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

People need to access services easily. Think London - with it's efficient public transport facilities allowing you to live in a major city with no car.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Please note that the sea level in Auckland has not risen much in many years - but the increased use of non-permeable surfaces and lack of storm water infrastructure has caused serious flood risk zones. Coastal erosion can be attributed to increased sea traffic - think Ports of Auckland - so you cannot blame climate change on that.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

How can you intensify housing yet create rain gardens etc? Sort the stupid transport, stormwater & wastewater systems first!! Climate change is not the cause of flooding or coastal erosion in most parts of auckland. Poor housing intensiviation , removal of off street parking and increase use of Ports of Auckland have.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Sort out Auckland Transport!!! They would have to be the most incompetent organisation in the entire country. I travel to work everyday in my car to the CBD - (public transport takes too long and is too unreliable for me to risk) and I go through 3 major road works areas on my route. My travel route is a common one - why you would undertake 3 loads of major road works taking months to sort is just unbelievable. No one talks to each other, no one shares information, everyone says 'its not my department' and passes the buck.

Get organised - and sort out your own housekeeping before making major changes to how we live our lives. We are paying Auckland Council (and all their other departments) to make Auckland work. All I am seeing is problem after problem and no one is doing anything about it.

Auckland needs better maintenance! Get the gutters and stormwater drains cleared of debris on a regular basis to help with drainage and prevent flooding, repair roads that are riddled with pot holes and cause serious damage to vehicles, make transport more user friendly.

Auckland Council need competent staff at the front line who can actually help with enquiries and who have a realistic outlook when it comes to Auckland. Stop sitting around having meetings and conferences. Do some work for a change - you are the consultants so stop hiring them.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

With a more connected world and the embracing of working remotely, physical location is less important. Instead, we should be decentralizing. Creating decentralized business hubs instead of pushing everyone to a city center that is poorly designed and will not adapt to a higher population. Auckland/NZ is notoriously poor at implementing major infrastructure - it takes too long to build roads and costs too much due to over regulation, onerous health and safety, etc. It will take a century for Auckland to develop a rail infrastructure that accommodates the entirety of Auckland. Instead, encourage businesses to locate outside of the existing urban areas and create "village communities" with local business hubs. Encourage people to work locally instead of commuting . Tax incentives for businesses and workers to stay local would be better use of the money as opposed to expensive, empty bus lanes. Auckland has already created villages such as Beackhlands, but there is no infrastructure there, so everyone commutes. There are no schools so the roads are now jammed at rush hours. There is not even clean drinking water for an ever growing community. A location like Beachlands needs local business, schools and services. This is a result of poor planning and lack of vision.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As per my previous comment, but dont focus on Making Auckland more dense, it will simply attract more commuting. Instead focus on decentralizing businesses into smaller communities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

I only disagree because I do not agree with any policy that is race based, it is divisive and unhealthy for such a multi-cultural country and it is demeaning. It would be much healthier for NZ to embrace all the cultures that have come together to build one of the best countries in the world to live in. Acknowledge all people of all origins who have taken a role in building schools, hospitals, roads, farms and infrastructure that we all depend on and what gives us all a modern and healthy lifestyle today.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

This depends on whether there is supporting infrastructure. For example, someone has misguidedly given Kainga Ora permission to build in Northpark. This area is not within walking distance of primary or intermediate schools, nor is on a bus route. This goes against the mission statement of Kainga Ora.

I would support this proposal, ONLY IF, the supporting infrastructure is in place FIRST. Eg a Train station at Botany Town Centre as buses take 2 hours to the city and are impractical so building more housing before more viable trains and buses will force more people into their cars.
There are constant issues Auckland wide with public transport which means the entire network is stuffed and people are forced into their cars. Until you fix this issue, you should not be making the problem worse by encouraging even more people to live here!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why
People need to be able to access services without travelling far, however, this needs to be addressed in the area of employment as people cannot rely on public transport in Auckland.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why
Sounds sensible, IF it does not mean replacing car lanes with stupid cycle lanes as they are a waste of money and just make traffic congestion worse. We have a city where people have to rely

on their cars due to public transport being either too slow so impractical to use (Botany/Howick) or other places where the trains and buses are unreliable and cancelled.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If you want people to commute to work via public transport then you MUST extend the train network out to Botany and also across town as all modern functioning cities around the world have an efficient train network. The Eastern Busway is being built and this would be a prime opportunity to have the train run alongside it! Buses should only be a standby option as take far too long. We are terrible compared to other cities in the world. I lived overseas and never needed a car as the train was quick and took me everywhere I needed to go!

Future Development Plan 2023 #474

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

While I agree that we should use nature-based infrastructure where they are effective and appropriate, more intensive urban development will necessitate some technological solutions. Intense urbanisation is, by definition, not nature. I think decision-making should be based on honest and objective cost-benefit analyses, without preconceptions about "natural" solutions being inherently better. If you say that, where nature-based and technological solutions are equally good, you will choose the nature-based solution, I can support that. But do not insist on nature-based infrastructure if other approaches are objectively more efficient and effective.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think transport is the biggest and most persistent problem affecting the growth of Auckland. It's not enough just to zone higher density around existing transport availability, there needs to be a deep integration of transport planning and growth planning.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Allowed density in suburbs is too high for the available road widths (parking, height and bulk effects and natural light) and schools. Allowing more residential capacity in town centres, and is good, but not ruining the suburbs and attempting to replace single homes with up to 10 or more units. This is a half-pie version of an apartment without the proximity to amenities including the additional reserves that would be required. It will also put an added burden on the health system which is already about to face a "silver tsunami" of aged residents.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I have answered Other as I am between Agree and Disagree. Recent weather events have highlighted how poor planning, infrastructure management and potentially infill housing lead to bad outcomes when intensification is the focus. If the plan for intensification was zoned starting at Transport/retail hubs and planned to expand outwards over the next 30 years including upgrades to infrastructure I agree with intensification - if not, I vote for Greenfields.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Agree with the focusing housing & business development near local centers. If the first sentence is correct why do we have people living on the North Shore travelling to South Auckland, or West Auckland to East Auckland. Transport has to prioritise all forms including roads, public transport, cycling and walking.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This makes sense, the politicians knee jerk policy on infill housing to address the housing shortage is an absolute failure.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why
Sounds like greenwashing to me, its too late for Auckland to go down this path. We need bigger pipes to manage stormwater and sewage in the short term and better transport options as the city focuses on intensification around centres and builds out from there.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

think I have given enough feedback, I hope it is listened to.

Please use plain English - what is MAuri? This is not a maori country so use official language. Dutch flood absorbing techniques are proven Agree go with nature

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Council have been guilty as have Central Govt in immorally allowing housing to creep into beautiful arable cabbage growing land in areas like Pukekohe. Both of you have been immoral, stupid, wasteful and not thinking clearly to allow this to happen . We will have a food shortage crisis on our hands. Further Ak Council has no control over immigration. Why do you just allow this growth to ruin our city when other towns could easily take them. Immigration is a Govt Ponzi scheme, it boosts GDP for a short time but long term it creates growth issues and a drag on resources. The economic heart is still largely in the Farms and horticulture, so it only needs support people not all these folk just living here creating growth problems.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Too much good agricultural , and more importantly, food growing, land is being lost to urban expansion.
In particular the loss of horticulture land around Pukekohe is a national disaster!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This is a great ideal. However, this approach should have governed Auckland's growth since WW2.

Instead the urban area has ben allowed to sprawl in each direction. Financially sound public transport needs concentrated growth.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Once again, these strategies should have governed growth since WW2. But, I guess we now need to start
listening to the Tangata Whenua!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Aucklanders need to understand that future housing needs to go up, not outwards.

The planners need to take a good look at how mass housing has been developed in South Korea.

That country is approximately the same size as the North Island. Yet, it supports a population that is 10 times that of the whole of New Zealand!

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

There is already too many people/traffic in the small areas as it is. The roads are not sufficient (and will be hard to make them so).

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

While I agree that in an ideal world we would all walk or take public transport, it just isn't the case. People will always drive, because it is convenient if you are going out to buy things/do your groceries etc

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I agree that a lot of places are at risk of damage and lives are potentially in danger as per the last few natural disasters

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Without knowing the efficiency of the stated things it sounds like an awesome idea. So long as they are worthwhile and functional

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

You really should consider pedestrian/cycle underpasses or overpasses instead of road crossings. The public transport system is confusing, it would be great if it could be streamlined. As a parent of children with extra needs, it is quite stressful planning travel to health and medical appointments not knowing if I will be able to park or find my way. The public transport system should be easier to navigate as it is an extra stress that isn't needed.

The housing needs to also be more family oriented. We have a large family, but large houses and especially those with actual outdoor areas are so hard to find (within our means particularly).

Future Development Plan 2023 #800

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

This will require significant investment in infrastructure as the current systems cant cope as it is without putting further pressure. Just look at the recent floods. There is insufficient green space to absorb the rainfall.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This will create congestion within small pockets

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Cost effective options need to be considered as councils can not just continually expect rate payer to absorb costs

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #808

We need more tram style public transport as well. Existing centres out east (Howick area) are poorly served by PT, relying on infrequent and expensive ferries or buses. Light rail to Howick running frequently would reduce traffic travelling to / from CBD - Howick. PLEASE!

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Stop intensification in established older suburbs as you are changing the face and life styles people have worked hard for. Intensification in high-rise apartment wishing the CBD is OK. leave the green fringes and food producing land alone. I support making new immigrants move to the provinces where they not only need growth but can support it.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

But once again the Council has fallen into the trap of must build and provide. If you stop the building in inappropriate place and stop intensification people will move out of Auckland. Lets face it with the current rating system lounge and lower socio economic families can't afford to live here anyway so make affordable housing in the provinces.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Train networks out East are desperately needed plus the rail system needs to be reliable. Are we looking at solutions from overseas that prepare us for the future? Can we have buses with trains along the eastern corridor? If you are carrying bulky items and have multiple places to visit, no amount of public transport will solve this.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Growth in existing urban areas works however more needs to be done to ensure this growth is suitable for families. So many houses are popping up in pakuranga, which is a hub for transport, local shopping, schools, sports etc, however families do not want to live in 3 bedroom townhouses with no room to place a trampoline and no garage, it just won't work.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

again, it makes sense but only when the housing in these dense areas is suitable for families. because if families can walk to the shops/walk to school/sports etc, it's awesome, but not if there isn't any suitable housing in these areas.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I think there needs to be a balance of both. But in creating further greenfields developments on the fringes of Auckland, these shoul dbe done with a view ot creating urban hubs, where there is reduced need for people living near those hubs to travel to the CBD and less pressure on existing infrastructure.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This agrees with my comments above. But private motor vehicles will always be the most important mode of transport. This is beacuse many NZers participate in multiple activities that require carrying equipment to multiple locations which public transport doesnt cater for.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I believe denser in Urban area will significantly reduced people well-being. I would privileged better and more efficient transport rather than densifying house in urban areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Accessible local centers yes but focus on better transport rather than building high density house around

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #964

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think more compact urban areas are more efficient in delivering services to the city's population. And, I think it is important to preserve green spaces for health of ecosystem and people (now and future generations)

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I prefer to be near centres, and would like to see expansion/improvements in public transport

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I think intentional development of known vulnerable areas is irresponsible, both financially because it can be reasonably anticipated that above-average costs will be required to maintain those areas and socially because the people in those areas will also require greater supports (eg mental health) and will more vulnerable because of the vulnerability of their homes/worplaces.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I think a balanced approach is necessary. nature-based infrastructure can be good, but will not be adequate in all circumstances. The best outcomes of infrastructure for the people should be prioritised, not a particular ideological approach to infrastructure.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #997

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

No proper planning for extra drainage and schools an medical facilities

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Seems like just a jumble with no parking facilities and no proper central area

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Need to admit problems with climate change

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Sounds good but don’t trust the council

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1001

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The grwth should be well spread. There is so much of unused land. If the transport infrastucture is improved, people will strat livng in those areas as well

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Same as above. Do not focus only on the centres.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Suburban living is becoming more and more cramped as intensification increases. Facilities and infrastructure are not keeping up with the new buildings. It would be better to create more decentralised hubs such as Drury, which can have its own b businesses, manufacturing etc. While business districts are fine for intensification, suburbs are not - they are losing their character and resources are becoming strained.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This has to be accompanied by infrastructure.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Intensification should be looked at from a human point of view, not just an engineering perspective. The quality of life can deteriorate when intensification is taken too far. I speak from experience of living in a suburb where green areas are shrinking, micro-housing developments are taking over and the appeal is dwindling.

Future Development Plan 2023 #1141

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Good in principle if infrastructure improved

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Saves travel but needs a decent transport system in place

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This should have been considered decades ago but ignored.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
As above infrastructure completely ignored for decades.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Why have empty bus and bike lanes? 1 lane for buses is enough with passing bays as the buses are so infrequent

Future Development Plan 2023 #1164

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1249

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I see that 1) council is Incompetent in urban planning in new areas like Flat Bush, 2) dated infrastructure, 3) no public transportation, and more.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

I want to see evidences or facts that back your ideas. No assumptions.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

I want to see evidences or facts that back your ideas. No assumptions.

Other feedback

I like what you did with queen street with the bike lane and the trees, could you take that further and make the whole street compliantly walkable with no roads (besides paths for delivery vans)

Future Development Plan 2023 #1315

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Only partially agree. Quality of living should be more important and densification does NOT provide a lifestyle I and many others would find acceptable

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Once again only partially agree. I accept we need to encourage more use of public transport, cycling and walking. This however isn't Europe. Most of us will continue to travel by private car

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Improvements to pathways (open drains, cleared existing streams etc over land for water is essential. Some repeated flood prone area where water pathway mitigations cant be achieved need homes purchased and removed

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Statements have too much focus on intensification. Dont go overboard, more intensification and less greenfield is ok. A slight change in balance, not a giant lurch to say 70% plus of growth being intensification

Future Development Plan 2023 #1332

Please address infrastructure needs asap. Too many suburbs have old, inadequate drainage, sewerage and needs updating. Do not put more infill housing into older suburbs as the pressure on the existing infrastructure is too much.

Future Development Plan 2023 #1337

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

This is, as expected, a leading question devoid of all the crucial facts, so the result is utterly meaningless, just like the morons who created it.

I support the use of existing spaces, for sure, but NOT at the expense of life.

I absolutely reject the building of these ghastly narrow vertical pigeon-hole structures that you morons call houses.

I absolutely reject your refusal to enforce parking areas commensurate with the size of the property.

I absolutely reject your refusal to enforce parking areas equipped with EV charging points.
I absolutely reject your blind obsession with coercing people onto buses, bicycles, and trains. These means of transport are inefficient, take car longer than necessary, impractical when carrying large loads such as work equipment or groceries, expose the participant to extreme illness due to exposure to crap weather, and, except for bicycles, cost a bloody fortune to use!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

As above.
Contrary to your naive idiotic stupid narrow-minded irresponsible belief, we do NOT all work where we live. It is entirely counter-productive to cram thousands of people around your little "local centres" when they need to escape to go to work, visit friends, play sports, and so on. People need to live all over, not just where you want to cram us in!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Because you use these idiotic situations to justify extortionist rates. Bu not building in inappropriate areas, you need to be more creative with your feeble lies around our rates. Any move that strips you of excuses to rip us off is welcome.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

What do you mean by "nature-based"?

Will you legislate all buildings to have solar heating and / or solar electricity generation facilities, AND provide those at affordable costs with strong negotiation with suppliers?

Will you ban these disgusting narrow vertical pigeon-hole things that you call houses and enforce proper houses with gardens to provide more green space AMONG buildings, thus reducing storm-water runoff, increasing oxygen production right where it's needed, increasing opportunity for native fauna and flora to flourish thus protecting our biodiversity, improving the mood of people thus reducing mental health problems, and providing a basis for dignity for all?

Will you ban felis murderus (the second most prolific pest of all, after the council) from the entire area, thus giving native fauna at least SOME chance of survival?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Auckland should grow UP, become mature and intelligent, and act accordingly. This includes:

1. Reducing the pay of ALL rich-listers down to a maximum if $150k.

2. Making it a non-negotiable condition for remuneration from council - whether the person is elected, employed, or contracted - to use council's diabolically useless public transport system at their own personal expense, just like you demand that we do, and to sell off council-owned cars, release council-reserved parking to the public, save millions on interest, maintenance, repairs, insurance, and fuel for these cars AND the car / fuel / transport allowance issued to thousands of remunerated individuals at council and their puppet organisations, er, CCOs.

Auckland should change:

1. the brown drongo for something that actually wants to serve the city rather than wanting to boost their ego and their bank balance.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Expanding the city boundaries requires more infrastructure and takes up productive land, however, intensification should be around transport hubs only.
I would ask the question, do Aucklanders realy want Auckland to grow by 500,000 people. I think the majority of people would say no.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Around transp[ort hubs. As things stand, families in the outer suburbs live in fear of three story building going up within one metre of their boundary, cutting sunlight and views, not to mention the loss of trees.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Agree

Tell us why

Makes use of existing infrastructure but needs to focus on being more central too

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Most travel people are doing is travelling to work. Online shopping becoming more common. It's more important to be well linked to work areas. Large commercial and industrial areas

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Need action not just investigation. Don't further develop and do more to prevent more storm water from the extra development. Also audit storm water collection in new developments

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Only if it actually works and it's maintained and not overloaded

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1426

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Some growth and intensification is okay. Om main routes and in urban centres higher intensity is appropriate but we need to preserve some areas that are beautiful and also ensure families do not end up living in townhouse slums with no land or proper planning.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Many areas are inaccessible by public transport so centres are a logical place to expand. However I notice most development in centres is unsuitable for the elderly and we will have many elderly needing smaller homes soon.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I'm constantly amazed that building is allowed in some areas of potential risk ie Cockle Bay foreshore has been subdivided at the back over the last 20 years when the risks of sea rise have been well understood. Eastern Beach likewise. The sea is already reaching properties subdivided just a few years ago. This crazy and the rest of us should not have to pay out people silly enough to buy in these places in the last 20 years.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

But in some places it is already too late to do this.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Plese stop the building of horrible, badly planned blocks of flats that steal sunlight from neighbours. Some areas around us are now like a nightmare. The infrastructure is not coping with all the extra traffic and the roadsides are clogged with cars making movement through some streets one way only. on large highways this would not be so bad but in small streets it is making life unpleasant for everyone bar the developers.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We must focus on utilising used areas rather than expanding out all the time, encroaching on viable agricultural and conservation land.
In other words, UP, NOT OUT!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Decrease our distance to work with the consequent benefits of cycling and walking - and even with cars...

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Better to be prepared!

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Co-operate with our environment rather than destroy it and make if difficult to exist in the biosphere....

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Creates more affordable living, less congestion on roads, lower travel times, less sprawl and loss of productive land, better quality of life and wellbeing, less expensive to supply the required infrastructure, less emissions and better access to services, entertainment, etc.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Better access to facilities and services, less travel and congestion, lower emissions, better quality of life.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Should never have been allowed in the first place.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

It's common sense and a logical approach as the stormwater system combined with the large amount of impermeable surfaces will never cope with the shifting climatic extremes.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Get rid of special character areas, they're not heritage which is already protected and allow more density and mixed-use zoning throughout Auckland.

Future Development Plan 2023 #1481

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Because it's basically stacking homes upon homes and will make things more suffocating rather than more organic. Health and wellbeing suffers due to once good neighbourhoods now becoming urban slums

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Although it's a good idea for those that can work and live locally, it still makes it harder for others that need to travel more and spend more to get decent paid jobs to pay for mortgages, rates and rent. There are more problems than solutions

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Housing, costal erosion, environmental issues should have been pre-emptive 30 year's ago and pre-planning should have been done decades before this type of thing started affecting locals.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Should have been pre-emptive 30 year's ago, then we wouldn't have wildlife disappearing

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Green carbon foot prints on all hybrid/electric transport. This should also be accessible through AT hop whether it be bus, electric scooter or bike. There should be competition and cheaper hireage to use these facilities for all Aucklanders.

Future Development Plan 2023 #1493

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

I don't know

Tell us why

What would the other options be?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1497

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

But we have to do it properly, not in the adhoc way it is done now with individual property investors

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need to live in communities, in the end we all depend on everyone, all people must be included, no excluding people that have particular needs

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Because doing what we have always done will mean we get the same outcomes. We need to plan even further out than 30 years, a 100 year plan would be much more sensible

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We need to live with nature, not try to think we can do whatever we like

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop listening to lobbyists and people who have vested interests in making money or excluding people because they are considered to be unworthy.

Future Development Plan 2023 #1501

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Already poor parking, most new urban houses are now built without adequate parking and adding multiple houses to where there used to be one is causing chaos not only with illegal parking, blocking roads with multiple vehicles per household forced to park on the roads, but also causing much worse congestion to and from work. Add to that the moronic speed reductions, urban Auckland is becoming a shambles.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Your logic is flawed. More houses equals more cars which in turn causes more accidents, slower commute times, more aggressive drivers and frustration. Ultimately the workers and families will move elsewhere, but will be replaced by those used to living in slums and rat races.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Because if you continue to build in these areas, surely the council will be held to account if disasters happen seeing you already know they are hazardous areas? And the rate payers will be the ones paying for the damage claims.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Agreed. You had me until Mauri enhancing. Assuming that means something positive.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop cramming multiple houses on sections where existing housing is and old infrastructure is. It's just a rates grab and doesn't at all take in to account the people of Auckland. Auckland needs to grow out. Think bigger and drop the tunnel vision. Focus on green field developments and getting the developers and end users of those areas to fund it.

Future Development Plan 2023 #1515

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Agree but the infrastructure needs to be able to support this growth. Right now we are increasing dwellings at a rapid rate, but without viable public transport options, this additional population causes increased congestion and lack of parking options.
Perhaps a second city centre should be considered with good transport links so not everyone is trying to get to one place.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Being able to walk to shops rather than drive would be a huge win. We don't have as many "high streets" as towns like the UK does so it makes this less common. We instead tend to have bigger malls and areas where everyone goes, again creating congestion problems

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

As long as this infrastructure serves a growing Auckland population

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Build more train lines and have more reliable services. Allow Citymapper launch in Auckland so that people aren't battling with the shocking AT transport app.

Having more dense housing is good but can't be done in isolation, without investment in public transport infrastructure. Look at any European city for inspiration

Future Development Plan 2023 #1522

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

It will work only if the infrastructe is able to support it. Roads, water and waste transport

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs. Providing that the infracstructure is able to support and grow with it.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Set the foundation first ten build on that

Future Development Plan 2023 #1547

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

I agree to.some extent. I live in an area that has seen a significant growthin population, it isnt supported by public transport, there is a lack of schools and medical facilities. Tethered needs to be better planning rather than simple creating more housing, infrastructure needs to come first in order to service the growing population in existing urban areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Works ok if ypu understand where the current population in urban areas work. Most people I know are not in a cycling, or walking distance and public transport is woefully poor

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Having seen the effects of poor planning first hand, I totally agree with this approach

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Although a lot of people prefer housing which has it's own land, I do believe that the only way to sustainably scale is by focusing on population density.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Great concept, though I would note that there are existing areas with "local centres" which still require better public transport options to become a more viable.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

Future Development Plan 2023 #1585

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Need a balance, there is a need for upmarket larger areas for the people that pay the bulk of taxes.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

People need to move closer to their workplace, not complain that they have to travel 1h to get to the other side of the city.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

"One hundred year events" happen, people need to build homes in ways that allow for them. No point e.g. building a coastal home at beach level, it needs to be at least on stilts, and have sea walls. But a blanket exclusion is a waste.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

The term "mauri-enhancing" is racially discriminatory and offensive, all cultures have "nature-based" methods and we should work together to get the best outcome. Unless the intention is to fully embrace Mauri culture which means we need to get rid of all Weastern, European, Asian, and African enhancements... I find the statement highly offensive. But if it is the combination of the best of all cultures, then it makes sense and is what science, technology and engineering is all about.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Combination of the proposals will work, not just yes/no. Auckland is multi-cultural, it would be silly to e.g. cater for only high density housing.

Future Development Plan 2023 #1587

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

It is ideal. However, the planning of the present city of Auckland did not prepare for this growth.

The basic infrastructure is not designed to cope with the volume of people (commuter and public transport system) you have envisaged to live and work in Auckland.
Unless you are able to have a public transport with the likes of Japan and Hong Kong, and only until then, should you all even begin to think of a plan such as this.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Again, your plan is idealistic but not feasible unless you solve your public transport system first.

Also, the roads everywhere are not designed for the volume of vehicles you have using the roads. No amount of encouragement you do will entice people to give up their vehicles until, again, you have a very efficient public transport system that the likes of Japan and Hong Kong has.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Stop building in flood prone zones or design them appropriately. And if you do design and use these flood plains, use material that is not susceptible to water damage.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

This seems to go against your initial proposal stated above.

Before you engage in this, first ask if this is what the people (your target users) want and require.

The impacts of climate change means little to people who would prefer to be able to find a job that is convenient to go to and fro from rather than an agenda that is designed to justify taxing the hard working and tax paying citizenry of this country.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

You need to hire the services of people of who have extensive real life experience in living in different cities abroad.

No, I am not talking about the people you send to attend conferences in fancy cities and live there for a week or so.

You need people who have lived extensively in congested cities, as well as people who have lived in first world countries.

They know the downward trajectory that the plans you currently have is spiralling towards.

Academics and idealists do not make good urban planners.

You also need to hire psychologists who will study and engage with your end users and the mental health effects of living in this planned approach of yours.

For example, you are driving the MDH everywhere in the city, which very little to no courtyards, and private open spaces - have you studied the mental health impact of this on your end users? Or you don’t care to know?

Many immigrants come to New Zealand to get away from their congested cities and this is exactly where you are driving them into.

Look at the planning debacle that is Flat Bush (just to name one) That is just horrible! The streets did not consider the users once again. Congested streets, and houses right on top of one another. A users nightmare realised.

I can go on and on about what approach you need to take but until you get a competent team of professionals (again, not academics, theorists, idealists and those who simply say why you want to hear) who know and experienced the mentally exhausting lifestyle that you seem to be leading us towards, that is exactly where Auckland will be in the next 30 years when another 500,000 people move into it. By then, it will be too late.

Start with that. The basics. Then get all idealistic. Until then, Act now.

Future Development Plan 2023 #1588

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

It also creates traffic congestion, reduction of green spaces, overloaded schools, parking problems, pollution and many would loose the lifestyle they have paid for to enjoy.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

What is required is good, fast and frequent public transport and people would not mind staying on the outskirts, away from the hustle and bustle of busy and noisy city life. Communities need SAFE areas to live.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It makes sense to build in safe areas with good drainage systems in place.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

If its going to help with climate change and the devastation it causes, its certainly the way to go

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The concern is with mixed housing. If it genuinely helps lift those who are willing to get the help, it's all very good but when we constantly read about families that are disruptive and create hell for their neighbours and nothing gets done about it, there is good reason for families to be apprehensive about the situation. Everyone has a right to peace of mind, their and their children's safety and security in the areas where they live.

Also the absurd speed limits and slowing down of traffic should be changed back to where it was.

Future Development Plan 2023 #1593

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1598

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Families will have no choice about the lifestyle they want to live if there are no housing options with backyards

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It makes sense to have a local area for people to easily access for everyday needs and social activities. A great way to build local communities

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If you want people to use public transport make it trustworhthy

Future Development Plan 2023 #1615

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Apartments and smaller houses and units are great, provided that there is parks close by. We don't want Auckland to become a sprawling city, we need our green areas, farm land nature reserves.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

IF public transport is functional, it will work and people will enjoy having less of a commute.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Only morons are going to build in known flood areas. Too expensive to do repairs continually when you know it will happen again.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Need to prepare for the inevitable.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I myself would love to live in an apartment, so free up my little house for a couple - BUT - unless the council own the apartment, Corp. body charges are extorniate, so not worth living in a flat.

Future Development Plan 2023 #1617

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Urban intensification goes with a need and recognition for better public transport. Spreading out would only increase the issues surrounding public transport. Expansion also leads to further stretching the current infrastructure to it's limits. Rebuilding and upgrading exisiting ones should be key. Quality and use over low quality/costly idealistic expansion. Having short distances to green areas from the city is also good for general public health.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

"Successful" cities that people enjoy living and thrive often are built like hubs that are interconnected.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Building in significant natural hazard risk are in someways ofsetting costs and burdens for the future which might exponentially increase.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I agree with all these propasals, but I also understand there might be major public/priavate resistance and misunderstandings. The council has many challenges of it's own internally. Please push through, find a way :)

Future Development Plan 2023 #1622

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Cramming as many houses onto a site does not foster a community, if 1 house is removed instead of cramming in 5 houses allow 3 to be build with space for kids and families. You also need to think of neighbours and shading

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

How do you expect business and industry to be able to manage around cycle lanes and walking, they do not mix safely with our narrow roads and the poor reading design

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

If council who approved the development or construction of the building nows deems the area at risk of a natural hazard then of course they should look to improve is areas resilience until it becomes futile and at this point they should buy the house/owner out.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

But goes against the intensification that council are progressing with housing

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

How does the 30 year plan fit with councils current approach to intensification, will we see the current buildings not become fit for the above approach

Future Development Plan 2023 #1635

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Green field areas are important for the well being of people, somewhere to walk, enjoy bird song, breath fresh air and makes our city more attractive to live in

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is important to be close to services and facilities....only that way will we reduce traffic from our roads

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is just stupid to build near flood prone areas. Insurance companies will eventually refuse to insure people. People have a right to live in areas that are safe from natural hazards

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

About time!! Should have been a priority years ago!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1761

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Kids need space, 3 storey buildings are not environmental friendly. Dense means more noise. Too many rubbish bins, not enough parking.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Auckland is very large, people travel across and through it for work. Auckland is very expensive to live in.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Stop planning building on flood zones.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Put in proper drainage at the start of any infrastructure.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

You're making it too complicated and hard to live every day lives

Future Development Plan 2023 #1768

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

in fill housing has a huge impact on the infrastructure which is aging. Roads are clogged and AT has dropped the ball with roads. The Swedish crossings are a waste of money, lights are a better choice.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

More centers with housing spread out, less houses more trees and parks

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Plant vegetation that holds the land together, clean out drains in the streets, its been a long while since workmen have been see sucking out the dirt, leaves and rubbish, also natural streams need checking.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Fix what we have, titillate after the work is done on the real problems. My street had water blow outs 5 times before the pipes were replaced.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop wasting rate payers money on things that don't matter. Keep the city tidy, prosecute taggers and people who dump rubbish on the streets, especially south Auckland. It would be nice to have pride in our city return. Cut the dead wood in the council

Future Development Plan 2023 #1775

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Its the council who should shoulder the responsibility for signing off approvals for flood prone land to be built on in the first place, any company that approves land needs to be bonded so rate payer arent footing the bill on someones quick money maker

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

climate change is not a thing, Tearing down one house and building 5 on the same property reduces the amount of earth and grass to absorb rain fall

5 properties with little to no lawn are now diverting large amounts of run off down storm water systems that were never built for.
Bucklands beach rd in East Auckland has more than 100 extra houses on it from infill development being serviced by diameter storm water pipes laid in the 70's

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

With age becomes knowledge..

Stop employing spotty faced children straight from school with no life skills to make decisions learnt from text books.

Grow will be a great thing providing its done with wisdom

Future Development Plan 2023 #1778

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Would agree - but should be with restrictions - define 'URBAN areas'. Recent changes in unitary plan have pretty much decided the whole of Auckland is Urban! Development must be focused around and centralised on good transport hubs only and within 10kms of the centre of Auckland central - and not be allowed to spread across the whole of Auckland which would lead to the removal of any personality and an even greater traffic/access problems. To develop the whole of Auckland using the same rules for such a huge area and covering many different type of neighbourhoods is a mistake e.g. 3 stories everywhere is a huge mistake particularly with no requirements for off-street parking or lifts limiting their use for an aging population. Development in areas liable to future flooding by overland or coastal inundation must be restricted. Encouraging intensification in areas beyond 10km should be restricted given access problems e.g. having to cross bridges/water courses (which act as a bottle neck). Agree with stopping the development of (more?) good farm land - which is very short sighted.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

As long as you DO mean near local centres - but define NEAR? It should be no more than a couple of Kms from the centre - not allowed to sprawl - lack of public transport to outer areas just encourages more people to drive e.g. places like Eastern suburbs/beach areas - single house sites being developed to 4-6 houses - but disconnected and inconvenient public transport mean roads that are at capacity and getting busier from the intensification.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Do not allow intensification - in areas likely to be hit - sooner or later those areas will be hit - intensification is just short sighted greed. Understand that the rate of change is faster than we predicted even 10 years ago. The results could be the council paying for managed retreat of increasing number of households and allowing development will just exacerbate the issue. People could be trapped due to overloaded escape routes,. Also understand areas where infrastructure is not able to be economically improved and will be threatened by climate change long before managed retreat is required.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Needs to be practical and fit for purpose too. Do not understand what mauria-enhancing is.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Understand Auckland is a huge and varied place - do not try to treat is as a single blob where anything can be applied to the whole area.

Other

Tell us why

More intensive is not a problem. But you need to make sure your bylaw will be able to manage high intensity. For example, enforced control for the noise, or annoying neighbor.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Public transport needs pace up to company this proposal.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1984

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There is no point building further and further out, the existing areas need improvement.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is important to be easily connected

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
It will cause future issues

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why
Not certain on the impacts

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please improve public transport - it is far too unreliable. We need more light rail everywhere.

Future Development Plan 2023 #1996

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

develop a proper big city rail system....there are many examples globally. Fire the national and local transport elected members and public servants, and replace them with global transport experts

Future Development Plan 2023 #2021

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The plan allows developers to encroach on current properties, creates further problems for present infrastructure. Parking issues and creating unsafe urban roads.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This is the same question as the first, just in a different way.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This is related to good planning.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why
This can be combined with sporting requirements.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Flooding in certain parts of Auckland must be related to the fact that we are decreasing the area of lawns related to housing and replacing open soil with concrete, where rain just runs off into storm waters over taxing the system.

Future Development Plan 2023 #2031

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

More of the world population is nowadays living in cities. This is a known fact. It will become harder to feed people if we continue with our urban sprawl, consuming vast areas of good quality farm land. We have to accept denser living and taller apartment style building. London has three time the population of NZ, in an area smaller than Auckland. Go up, not out.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

5 minute cities are the future. The UN has finally done something sensible.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Houses need to be future proof. We need to retreat from clifftops, and coastal areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Manukau city has been doing this very well for a long time now. Look and learn. Where I live, there are hardly any flooding issues, because of water catchment basins.
What the hell is mauri-enhancing?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop talking pidgin english. It is cultural misappropriation, offensive and just dumb.

Future Development Plan 2023 #2055

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Increasing density in existing areas means we'll know better how to develop the new spaces when we eventually need to do them.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

Avoiding hazards

Build swimming pools in southeast auckland.

Future Development Plan 2023 #2068

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I bit of both - Auckland is made up of so many different styles etc that growth should not be in one area. Also you before you have growth fix the problems.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Agree to an extent - but by doing this in one area - makes it crowded and not too be rude I do not want to live in China or Japan where everyone lives on top of each other

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

I don't think we should build where there has been flooding UNLESS Council puts right some issues - clearing of drains/streams etc.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I agree but we have put in place things like drains overflow - which basically would assist "not clear the situation" but would help but there is no upkeep to clearing drains or streams behind property - I have helped friends clear these things which is something that should be undertaken by council - WE PAY RATES

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2124

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Fix existing problems FIRST. Need to change the building codes first.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Council should look at its existing rules /regulations/ policies first and utilise common sense, if there is any.

Also the left hand does NOT know what the right hand is doing. Hence there is a clash of philosophies already.

Changes are made without resident input and the most nonsensical and outrageous changes are made which are totally ludicrous eg blanket speed limits in suburbs where there are 6 lanes of traffic and poor synchronization of traffic lights.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If we cease the urban spread, there must be a greater emphasis and enough provision of outdoor areas for families and citizens

Future Development Plan 2023 #2213

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

To help commuters to transition to public transport and encourage people to live locally.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Same as above

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Building in areas prone to flooding will cost house owners mentally and financially. It will also cost councils and governments.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Leaving low lying marshes in their natural state will assist with future flooding and enhance our lives by having more green space.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Intensifying housing should include consultation with those already living in the area. Not just any 6 storey building should be allowed. Councils should have the authority to allow or not allow these developments based on impact on current residents, the environment and infrastructure. But intensification is a good idea near public transport and town centres. Asthetics of the buildings should be considered. Some recent builds in Highland Park are very ugly. People will still want a car even if they use public transport for work. Off street car parking should still be included in any new developments.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We need to ensure that intensification is planned for properly and services are fit for purpose, eg intensification has led to flooding on the North Shore in areas that haven't flooded in 100 years. Protect the existing housing by building on the outskirts or in planned developments, with good transport links.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

We value our backyards and some privacy. Build further out!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This is a no brainer! Don't build on risky locations. Council should restrict such building.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Future Development Plan 2023 #2248

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Denser, more compact cities may not necessarily result in improvements to the environment, the economy, and people's well-being if blue corridors (improved waterways to convey larger floods, retarding basins to temporarily hold extreme floods, devices for stormwater treatment and to lower down the temperature of urban discharges in order to protect flora and fauna in the streams and bays) and green corridors(spaces for trees to fight temperature increase in the future such as "Heat Island " effects) as well as parks for children to play and places for people to do exercises are not adequately provided.

The document suggests that the growth will be more intensive around town centres and neighbourhoods. I suggest that a land use budget be prepared for areas where growth in the next 30 years will take place. This Land use budget will project the expected population in 30 years, the infrastructure required to support that growth and the green spaces set aside for public conveniences. It will also show hazard areas such as geotechnically unstable areas, flood hazard areas, coastal erosion and areas affected by sea level rise. Most of the town centres where growth is proposed are already congested and would not be able to accommodate too much intensification without compromising public conveniences and safety.

Suggestions:

1.1 Prepare Land-use budgets for areas where growths are proposed and show the details discussed above.

1.2 Consider housing development along existing and future transport corridors. The integrated transport and housing projects can be cost-effective.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

By culture, significant Aucklanders prefer to live in less crowded areas. Therefore, while developing around town centres is logical, suburbs will also need to be developed requiring the upgrade (or new infrastructure) to support developments. Even around some town centres, getting public transport is difficult (In Flat Bush approx. 5,000 people in new areas do not have bus services, the life is painful for these people?), all cannot walk and cycle, growth should be integrated with and connected to the daily life requirements of the communities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

The floods of 27 January 2023 and Cyclone Gabrielle have taught us all a lesson about what not to do. In Auckland, about 55,000 houses are reported to be on a 100-year floodplain. A lack of the Land –use budget as discussed in item no 1 above may have resulted in such mistakes in the past that allowed houses in places that were susceptible to flooding. New houses must be built on stable and non-flooded areas (while Auckland Council uses the 100-year flood to protect habitable floors, larger storms such as 27 January 2023 - a 200-year storm; and Cyclone Gabrielle

which were reported to be from Atmospheric Rivers are life-threatening hazards, how will such floods be managed? Blue infrastructure corridors consisting of enhanced overland flow paths, improved stream capacities (with ponds and wetlands created in them to treat and hold stormwater, widened waterways to take future flows and protected banks) and a large number of small basins where practical including on private properties, on road reserves and in the parks to temporarily hold and retard larger flows and volumes will be required. Other hazards such as geotechnical instabilities, erosion issues, and seawater flooding should be identified. Houses and infrastructures should be kept away from such hazards. Is there a plan to protect existing houses and infrastructures from such hazards?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Resilient infrastructures (including houses) should be able to adapt as the situations change. The storms of 27 January 2023, Cyclone Gabrielle and other significant rain events across the country suggest that the weather pattern is changing and we are facing increased amounts of rainfall than previously experienced. The approach to prioritising nature-based infrastructure that responds to the impacts of climate change is an appropriate way to address natural hazards associated with climate change effects. However, our traditional practices of the drainage design to protect properties from 10-year flood and residential habitable floors from a 100-year storm still poses risks from larger floods resulting from Atmospheric Rivers (a natural phenomenon difficult to quantity and is cost prohibitive to protect from) needing attention on how best we can manage them.

Low-lying areas and floodplains could be developed to function as retarding basins. Playgrounds and parks (such as Victoria Park) could be used to temporarily hold flood waters. The concept of having retarding basins within towns and suburbs will help minimise the flooding effects from unusual storm events.

The growth will create numerous construction sites across the city. It is essential to recognise the sensitivity of the receiving environments and manage discharges of sediments and other contaminants during construction and long term. Literature

3

suggests that once sediment has accumulated in the CMA, there are very few realistic options for remediation.

Nature-based infrastructure, such as rain gardens, roof gardens, grass swales, wetlands and detention basins, is better able to respond to ongoing change. Where practical shallow dry detention basins could be created on private properties, on road reserves, in low-lying areas and the parks. The use of permeable pavements in carparks and driveways would help reduce flows and contamination.

In the future, due to the increase in temperatures, smaller streams can dry up. In such streams creating wetlands and ponds in series could provide resting places and lives for fish and aquatic habitats.
For a resilient city, technological advances should be used to improve designs such as changing the colours of the walls and roofs from dark to light colours; light colours absorb less heat and minimise “Heat Island “effects. If practical and cost-permissible, consideration should be given to changing the colour of the road surfaces from black to light colours.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I want to raise the following matters for consideration.

• How many houses will be required in 30 years and what are the needs for 5 years, 10 years, 20 years and 30 years, so successive growth can occur to meet housing needs?

• A city cannot be sustainable with Council's leadership and action only. How is the private sector involved in the growth and development journey? Involvement of the private sector as builders and contractors is not enough, the Public-private-partnership (PPP) approach in planning, design, construction and funding would be useful. All sectors should have a role to play and each should take ownership of their roles.

• For a city to be resilient, the communities should be resilient. What are the plans and programs to make local communities resilient?

I would like to attend a hearing if there is one.

Date: 9th June 2023

Auckland Council

Subject- Auckland's Future Growth - Have your Say!

I am writing to provide my comments and feedback on the Council's Future Development Strategy. In summary, the following are my points

1 Focusing growth

What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Denser, more compact cities may not necessarily result in improvements to the environment, the economy, and people's well-being if blue corridors (improved waterways to convey larger floods, retarding basins to temporarily hold extreme floods, devices for stormwater treatment and to lower down the temperature of urban discharges in order to protect flora and fauna in the streams and bays) and green corridors(spaces for trees to fight temperature increase in the future such as "Heat Island " effects) as well as parks for children to play and places for people to do exercises are not adequately provided.

The document suggests that the growth will be more intensive around town centres and neighbourhoods. I suggest that a land use budget be prepared for areas where growth in the next 30 years will take place. This Land use budget will project the expected population in 30 years, the infrastructure required to support that growth and the green spaces set aside for public conveniences. It will also show hazard areas such as geotechnically unstable areas, flood hazard areas, coastal erosion and areas affected by sea level rise. Most of the town centres where growth is proposed are already congested and would not be able to accommodate too much intensification without compromising public conveniences and safety.

Suggestions:

1.1 Prepare Land-use budgets for areas where growths are proposed and show the details discussed above.

1.2 Consider housing development along existing and future transport corridors. The integrated transport and housing projects can be cost-effective.

2 Accessible local centres

What do you think of our approach to focus development near local centres?

By culture, significant Aucklanders prefer to live in less crowded areas. Therefore, while developing around town centres is logical, suburbs will also need to be developed requiring the upgrade (or new infrastructure) to support developments. Even around some town centres, getting public transport is difficult (In Flat Bush approx. 5,000 people in new areas do not have bus services, the life is painful for these people?), all cannot walk and cycle, growth should be integrated with and connected to the daily life requirements of the communities.

3 Avoiding hazards

What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

The floods of 27 January 2023 and Cyclone Gabrielle have taught us all a lesson about what not to do. In Auckland, about 55,000 houses are reported to be on a 100-year floodplain. A lack of the Land –use budget as discussed in item no 1 above may have resulted in such mistakes in the past that allowed houses in places that were susceptible to flooding. New houses must be built on stable and non-flooded areas (while Auckland Council uses the 100-year flood to protect habitable floors, larger storms such as 27 January 2023 - a 200-year storm; and Cyclone Gabrielle which were reported to be from Atmospheric Rivers are life-threatening hazards, how will such floods be managed? Blue infrastructure corridors consisting of enhanced overland flow paths, improved stream capacities (with ponds and wetlands created in them to treat and hold stormwater, widened waterways to take future flows and protected banks) and a large number of small basins where practical including on private properties, on road reserves and in the parks to temporarily hold and retard larger flows and volumes will be required. Other hazards such as geotechnical instabilities, erosion issues, and seawater flooding should be identified. Houses and infrastructures should be kept away from such hazards. Is there a plan to protect existing houses and infrastructures from such hazards?

4 Resilient infrastructure

What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Resilient infrastructures (including houses) should be able to adapt as the situations change. The storms of 27 January 2023, Cyclone Gabrielle and other significant rain events across the country suggest that the weather pattern is changing and we are facing increased amounts of rainfall than previously experienced. The approach to prioritising nature-based infrastructure that responds to the impacts of climate change is an appropriate way to address natural hazards associated with climate change effects. However, our traditional practices of the drainage design to protect properties from 10-year flood and residential habitable floors from a 100-year storm still poses risks from larger floods resulting from Atmospheric Rivers (a natural phenomenon difficult to quantity and is cost prohibitive to protect from) needing attention on how best we can manage them.

Low-lying areas and floodplains could be developed to function as retarding basins. Playgrounds and parks (such as Victoria Park) could be used to temporarily hold flood waters. The concept of having retarding basins within towns and suburbs will help minimise the flooding effects from unusual storm events.

The growth will create numerous construction sites across the city. It is essential to recognise the sensitivity of the receiving environments and manage discharges of sediments and other contaminants during construction and long term. Literature

suggests that once sediment has accumulated in the CMA, there are very few realistic options for remediation.

Nature-based infrastructure, such as rain gardens, roof gardens, grass swales, wetlands and detention basins, is better able to respond to ongoing change. Where practical shallow dry detention basins could be created on private properties, on road reserves, in low-lying areas and the parks. The use of permeable pavements in carparks and driveways would help reduce flows and contamination.

In the future, due to the increase in temperatures, smaller streams can dry up. In such streams creating wetlands and ponds in series could provide resting places and lives for fish and aquatic habitats.

For a resilient city, technological advances should be used to improve designs such as changing the colours of the walls and roofs from dark to light colours; light colours absorb less heat and minimise “Heat Island “effects. If practical and cost-permissible, consideration should be given to changing the colour of the road surfaces from black to light colours.

5 Other feedback

Do you have any other feedback on our approach to how and where Auckland should grow and change?

I want to raise the following matters for consideration.

- How many houses will be required in 30 years and what are the needs for 5 years, 10 years, 20 years and 30 years, so successive growth can occur to meet housing needs?
- A city cannot be sustainable with Council’s leadership and action only. How is the private sector involved in the growth and development journey? Involvement of the private sector as builders and contractors is not enough, the Public-private-partnership (PPP) approach in planning, design, construction and funding would be useful. All sectors should have a role to play and each should take ownership of their roles.
- For a city to be resilient, the communities should be resilient. What are the plans and programs to make local communities resilient?

I would like to attend a hearing if there is one.

Sincerely,

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

For people's well being living in dense homes literally on top of one another or next looks terrible. We need more green space and homes that are well presented

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

There are way too many food shop like pak and Save in a small area it causes more traffic and congestion and looks terrible

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It's pointless re building in areas known for flooding unless they address the root of the problem

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

The traffic is becoming harendoussometimes sitting still for 20 min you can't keep letting people into say Auckland without addressing poor infrastructure roads have potholes and people driving 50km an hour is pathetic causing impatient people skipping traffic lights causing accidents and death

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2295

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Concentration of people in areas in a smaller scale (e.g. multiple apartments where there was once a single home) than proposed is already stretching limited infrastructure in many areas. Roads are being used as carparks and in a number of cases causing dangerous blockages for traffic flow due to the Unitary Plan allowing a lack of off street parking for new developments, with a wholly inadequate public transport system unable to reduce dependence on cars.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Future Development Plan 2023 #2300

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Urban density has not been planned for - the infrastructure can't cope - and the quality of the new housing and roads is appalling. Roads are too narrow, houses are too small. Your are creating slums of the future.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This is an excuse for poor transportation. A more balanced focus should developed to provide opportunities for more people to live further away from their work but with efficient and affordable transport solutions.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Stop building in flood zones.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

AT should be completely overhauled. If the council needs to save money, it needs look no further than the nonsense that this department has rolled out over the last few years e.g. raised pedestrian crossings, traffic lights instead of roundabouts, bus lane priority lights when there is no bus, what seems an almost deliberate plan to make traffic lights less efficient (being time based instead of using sensors), not using our waterways but allowing a single operator to have a stranglehold.

Future Development Plan 2023 #2308

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Melbourne and many other citys have better "interconnections" yet they still have 60 plus stories apartment blocks in the city. it's this area, withing 2km of the CBD that needs to go up to and beyond 40 stories to reduce transport and other infrastructure costs

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Flat Bush was 40,000 houses, no rail, no light rail, no bus corridor and only 2,000 minimum wage jobs when first developed - how wrong can anyone get it - it leaves very little faith in "experts"

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

ever thought of Parks and greenbelts in these locations?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Up in the cities - 40 stories and higher

#2308

Future Development Plan 2023 #2353

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Intensification brings slums, ghettos, social disharmony due to over-crowing and lack of privacy

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The concept of forming mini-cities will eventually lead to the removal of people's ability to commute when and where they want to.
This because personal vehicles will be banned, and public transport will be insufficient to support people's preferences and freedoms.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

The whole of the Auckland area is subject to the potential of volcanic action.

Your proposal would require NO growth in Auckland at all.
However, there is some logic in avoiding known areas that have issues (eg flooding) that cannot be easily mitigated.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

If you have objective proof of the above claims, and can also guarantee that these options are SAFE, then it may be a sensible approach.
Holding water rather than directing it away sounds like it would require a lot of extra land??

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Minimise the high-rise slum/ghetto areas

Future Development Plan 2023 #2355

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Denser population means more air pollution, more transmissable bugs.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Assuming people do work near where they live, will reduce air pollution and outdoor exercise will be great for health.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Especially in coastal regions with high cliffs. People shouldn't be building on or anywhere near cliff edges (eg along the Howick coastline.) I think erosion is more imminent a worry than rising sea levels.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Natural means are best.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

It would be great if you developed an area like the rural land between Manurewa and Brookby as a perfect model of future town planning. Don't let the developers develop it; let the Council develop it based on the best overseas models.

Future Development Plan 2023 #2375

Disagree

Tell us why

The rules around increasing density are inadequate to protect the people who are already living in that area. eg I agree with some density increase but lack of protection of privacy, and sunlight disruption have not been addressed.
There are some ares on the fringes of the city that could be developed without huge infrastruture problems.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I only agree if commonsense prevails- I know I am expecting the impossible.eg where I live it would be possible to put up 6 story buildings, because it is close to a major shopping centre, but the whole area is full of one and two story houses. Greater care is needed when designating what can or cannot be built

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Commonsense

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why
I agree in principle, but 'mauri enhancing' needs a very clear definition, and evidence how this would help with the problem

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2404

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need to look after our farming areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Libraries, knowledge centres, should be focused in suburbs and neighbourhoods. Not all areas have been given the attention - for instance there is no library in Flat Bush area, the closest one in Botany shopping centre is too small and too noisy.

Stop wasting money on empty buses

Future Development Plan 2023 #2445

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The existing development model is too conservative and no longer suitable for the development needs of modern society. It requires significant updates and improvements, which can introduce new culture, attract new residents, and contribute to economic and cultural growth.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This model restricts the development of large commercial centers, which is detrimental to the expansion of the economy, standardized services, and cost savings in transportation, labor, and operations.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This would be responsible urban planning, preventing unpredictable risks to residents' lives and properties. Developing residential and commercial areas in unsuitable living areas would result in significant losses in case of natural disasters causing extensive damage.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When designing new transportation systems to reduce car emissions, lessons should be learned from the City—costly newly built bike lanes are seldom used and often empty, while adjacent car lanes experience more congestion and generate more emissions due to narrower lanes. Bicycles are not the optimal solution for reducing emissions.

Future Development Plan 2023 #2446

Tell us why

This model restricts the development of large commercial centers, which is detrimental to the expansion of the economy, standardized services, and cost savings in transportation, labor, and operations.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Modern architectural science offers various possibilities for human habitation in different environments. As long as policies permit and attract sufficient foreign investment, technological advancements can address the changing natural disaster risks. Examples include buildings in earthquake-prone areas in Japan, farming communities in deserts in Israel, and coastal residences in the Netherlands. Failing to consider these technological advancements would cause Auckland to miss out on opportunities for advanced development.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

If natural disasters are an irreversible trend for Auckland, then investments in infrastructure are not worthwhile. The next flood will always be more destructive than the previous one, and you never know how much investment will be enough. Only evacuating people and residences can reduce losses and allow nature's forces to adjust to natural disasters to the maximum extent.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When designing new transportation systems to reduce car emissions, lessons should be learned from the City—costly newly built bike lanes are seldom used and often empty, while adjacent car lanes experience more congestion and generate more emissions due to narrower lanes. Bicycles are not the optimal solution for reducing emissions.

Bicycles are not the optimal solution for reducing emissions.

Future Development Plan 2023 #2475

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

This approach can save development resources, reduce environmental impact, and take into account the established community culture and social connections between communities, avoiding excessive development.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Indeed, it can cater to the residents' living needs.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

After the recent rain, floods, and wind disasters, frequent flooding in Auckland reflects the city's infrastructure lagging behind climate changes. It is necessary to enhance the city's ability to cope with adverse weather conditions, such as expanding drainage systems and reinforcing slopes. These investments also create opportunities for local investment and employment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When designing new transportation systems to reduce car emissions, lessons should be learned from the City—costly newly built bike lanes are seldom used and often empty, while adjacent car lanes experience more congestion and generate more emissions due to narrower lanes. Bicycles are not the optimal solution for reducing emissions.

Future Development Plan 2023 #2476

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Continued growth without densification is unsustainable from an environmental perspective as well as a commuter perspective. Modern lifestyles make less and less use of gardens too.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I really like Paris's idea of having apartments above businesses in the city. This keeps the city a vibrant area all day round and keeps a sense of pride in how the city looks. Sylvia Park has recently promoted the "20 minute city" and it makes a lot of sense to me.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

If the January floods have taught us anything it should be that development in flood prone areas is foolhardy. The developer makes a fats buck but the costs of addressing the floods are borne by the ratepayer.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Natural systems are often better able to cope with a sudden downpour than man-made systems. Concrete stormwater drains obstruct and reach capacity whereas natural systems allow runoff into the land itself, reducing stresses.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2496

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need housing intensification in areas that are accessible with public transport

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Current infastructure is inadequate to deal with the increasing natural disasters

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Sell the golf courses, not the airport shares. The golf courses are a money pit. The airport shares allow the council to set standards of practise within the airport

Future Development Plan 2023 #2532

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

compact cities are better for the people and the environment.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

shorter distances to amenities and daily needs encourage active modes of transportation, social interaction, physical and mental health, and is better for the environment.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

avoiding areas prone to hazards is the economically and ecologically logical thing to do.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

reducing exposure by avoiding sprawl is good, increasing resilience for compact cities is a logical consequence to minimise vulnerability.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Just like focusing on compacting the city, we should decrease density in remoter suburbs, encourage their self-sufficiency, allowing for a 'high-density rural' lifestyle to ultimately disconnect them from urban services.

Future Development Plan 2023 #2535

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Need to leave agricultural land for food growth , and improve transport options , which is easier if population more concentrated.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Agree with your reasons.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Makes sense

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Should encourage rain water tanks in suitable back yards

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

It seems the current pattern of ugly/ closely built together / boxes are popping up all over Auckland . AC should do what is possible to improve design , allow for green areas / play grounds , village style growth areas .

Future Development Plan 2023 #2540

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We need to have the infrastructure first. We cannot cope with the growth we have now as shown by the way our sewerage, stormwater, roads cannot cope now. So how are the going to be with more concrete - worse. More green space is needed not more concrete that makes the flooding worse.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Yes it does all those things but we need the infrastructure first. You cannot develop these areas further until you create more green space and infrastructure to support growth.
You tend to word these surveys in such a way that people tend to agree because it seems logical but you forget what we need first before we intensify - infrastructure!!!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

There should be no future growth in the areas that are vulnerable as has been shown by the recent events which are still ongoing for many people. Some have no homes, ruined lives why would you inflict that on anyone else when you know it is an area of risk.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Better to have the intensification in urban areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Elderly people need to be near shopping centres & 6 story appartment buildings would not be ideal for their mobility

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This should always have been the case.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Nature areas can be enjoyed by all as well as providing help for our environment

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

All new developments need to provide car parking. By pushing cars onto our roads, we are creating blockages & easy crime situations.

Sure, it's a good idea to take action, but we must also address the root issue of excessive waste production. Eliminating plastic bags entirely could be a step in the right direction, as some individuals tend to accumulate them unnecessarily. While there are numerous other factors to consider, tackling this visible problem should be a priority and addressed promptly.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There are several challenges that we face in our community, such as traffic, parking, high petrol and vegetable costs, and the unsightly new housing construction that lacks adequate parking space. Additionally, our roads can be hazardous and there seems to be a lack of togetherness among community members. While we are better off compared to other countries, there is always room for improvement if we focus on our goals.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I agree that above are focus areas. However biggest problems Auckland have are housing and transportation - so those need a big plan to bring us to the next century, not just to the next govt.

Future Development Plan 2023 #2677

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Growth areas need to match available infrastructure. Existing areas and recently developed areas need concentrated development of community facilities before developing new areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Need to include small shops in local suburbs as well as malls.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Reduce development in high-risk areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Enhances localities with a blend of nature and function. Even small natural feature enhancement creates attractive spaces to enjoy and more habitat for wildlife. Recommend increasing investment in removing non native species and invasive plants. Recommend considering fruit trees in public spaces.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2720

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I absolutely agree with intensification. Greenfield development is far more expensive as new infrastructure is required, and more crucially, greenfield eats into our natural environment while encouraging sprawl. Intensification and higher density is both cost and climate friendly, and we should focus our approach on existing urban areas before creating new ones.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This approach is logical and feasible. No brainer.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Avoiding development in high risk areas is an important part of climate adaptation and mitigation. There should be legislative change happening in this space too - it is not enough to simply say ‘don’t build’

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Green infrastructure like those named above are equally efficient and essential as typical grey infrastructure, with green infrastructure proving to be more cost-efficient in cases (Philadelphia, USA). Current plans and policies do not seek to provide for green infrastructure as they do for grey infrastructure – the NPSUD categories green/open spaces as ‘additional’ infrastructure with discretionary provision, so long as it “is likely to be available” (p. 15) and not development infrastructure for which provision is required. The same is true for the LGA (section 101b).
Green infrastructure forms an essential component of ecosystems and performs biophysical services such as filtrating air and water, mitigating floods, and enabling biodiversity through habitat, which the lives of biota – including humans – depend on. For humans, green infrastructure

benefits often extend into social and economic realms, such as visual amenities, recreation, and spiritual well-being. Green Infrastructure also increases resilience against social and environmental crises, the latter occurring with increasing frequency and ferocity due to climate change. Perhaps most crucially, once there are gone, they are difficult to get back. Thus, it is essential to both prevent the loss of and increase the quantity and quality of green infrastructure in order to maintain the life-sustaining functions provided and to plan for cities which are resilient against climate impacts.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I do not support a 'solution' that proposes to invest a ton of money into packing people in like sardines. This is not living. That is not the 'kiwi' way. We need more suburbs and developers (*guven how much money they make) should be part of the solution.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Why are you taking 'housing' to workplaces, facilities and shops? Almost every business has created some form of convenience servie to have good delivered to a 'home' location! Also, who is

to say my 'work location' will be in the vicinity of where I live? I think thats a foolish assumption. Do city councilors live coluse to the council buildings? What about policemen and firemen? Of course they don't! We make choices for ourselves around such things!
I do like the idea of traffic free 'malls' like Cuba Mall in Wellington. Like 1km square spaces. Make community hubs traffic free (save public transport). People will have lovely spaces to connect and dine without emmissions. Without the need for tarseal, more trees could be planted.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This is a smart idea and I hope you team it up with an appraisal of 'swamp areas' - areas of land (likely now developed) that used to be low land that attracted water. Create 'development red zones' where to ensure safety, housing can't be built.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why
Ye gads?! Why does everything 'nature' have to be 'mauri-inspired'? What happened to Kiwiana? I don't personally find anything beautiful in 'war totems' sticking their penis' and tounges out. Lets plant trees, create drainage but please apply science and design as a first point of call vs culture.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Yes, create more local spaces for 'mom & pop' shops. The family owned business that REALLY build communities. Consider a leasing structure thats based on tax paid. If a business is successful, they pay full rent. If they aren't qyite there yet, they pay 45%. Make communities profitable by creating opportunity and space to exist in a world where big-business is eroding way-of-life.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Intensification causes more negative social issues that this country needs to avoid! We are not stock, don't try to cage the people just because it's more efficient!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Kiwis don't move into houses to work 'just down the road'. Employment doesn't always work like that!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

That makes a lot of sense. It is a shame this wasn't considered earlier for some areas!

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yip, as long as it is done within a sensible budget!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2839

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Already Auckland has overextended. For one million and a half inhabitants it is absurd to travel almost 80 km from north to south extremes and nearly 40 km from east to west. A too-large city paid by farmland and trees. It has made infrastructure much more expensive, and sometimes so complex that after many years there are many problems still not been solved. Increasing density is the only way to face growth.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is time to help a healthier lifestyle through urban solutions. This is how to help people depend less on cars and more on efficient public transportation.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It should say immediately investigate further actions. It's an urgent problem.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Beachland and maraetai has lots of housing built but the road is still one lane to and from. These area can probably house more but the roads need to be able to accommodate more cars. Ormiston flatbush has been growing over the years but still no swimming pool/ leisure centre. Highbrook and ti rakau drive is already showing signs of heavy traffic every day. If you want to focus on other developments, best to check the area's infrastructure if it can handle more cars.

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2938

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

needs to be a mix. Yes urban intensification - but do not take this as an excuse to reduce the need for roads - we need better transport options to support the reality that we have a very sprawled out city with poor public transport - if we have a 100% electric fleet in 25-35 years we still need roads to allow people to move around --- + we need the concept of park and ride and there is no viable park and ride options in south Auckland (it is faster, cheaper and more reliable to drive)

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

yes - encourage city centers such as Albany, Manukau, Henderson, Kumeu, Papatoetoe, Drury , Airport hub ..... with REAL commercial hubs, good job and high quality fast transport links (rail, bus, and road)

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Identify the hazards - allow people / business to make sensible decisions -- in areas that are a flood hazard - build the house on tall piles and use the under level for garage - if we have 1-2 floods per year (extremes) if the lower level of the hose is designed to allow the water through - wash out and continue -- but have this and known and that living areas need to be 2.5m above ground level

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

but this needs to be done sensibly -- we should not be stopping floods and climate change but learning to live around and with the change -- this means some zoning may need to change and

some land use may need to change --- acknowledge that mistakes have been made in the past - own it and move on

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2941

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

All the reasons described in the draft strategy

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need to create more, easily accessible, local centres - reducing emissions, encouraging connectedness, supporting health & wellbeing

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We need to reduce our exposure to climate change, as well as limiting climate change

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Recent flooding showed the benefits of well designed, nature-based infrastructure

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Concerned at the ability for, and impact of, challenges to be made to the effective implementation of this strategy

Future Development Plan 2023 #2948

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Intensive housing should only be put in urban areas with good public transport links, otherwise there will be no reduction in private vehicles on the road. For example, for me to catch a bus to from Half Moon Bay to Pakuranga Town Centre or Panmure Station station involves a long walk to a bus stop and an even longer bus trip via Botany. As a pensioner there is no way I will do this.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

But I think your definition of easy access is different to the average public transport user. In my view, you need to have good park and ride facilities before people will give up using their private

vehicles. I think you should send your people on field trips carrying heavy shopping bags from existing urban areas to find out for themselves just how difficult and inefficient the bus service is in urban areas. Most buses seem to be empty- why do you think that is? The train service is good (providing it's running). Getting to the train station is the hard part.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

I think I probably agree with what you are suggesting but don't really understand your terminology in regard to rain gardens, swales, detention basins and mauri enhancing.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Dense high rise buildings should only be erected close to shopping areas with very good transport links.

I think some of the cheap and nasty high rise buildings recently erected in previously nice urban areas are a disgrace to the City and in my view are turning Auckland into a third world city.

Fortunately the National Party seem to share the same view, so hopefully other Parties will also follow suit so that some common sense will prevail

Future Development Plan 2023 #2967

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The housing you allow to intensify areas with are quite often of poor design, lacking any street appeal and do not fit in with the character of the areas. People buy in neighbourhoods for a reason, not to have them ruined by crowded houses cramped in for every dollar a developer can make who has no desire to have any design ideas other than to make a buck! Also the existing infrastructure is generally at capacity and can not handle the extra housing!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Put more light rail in to areas and keep them separate from roads.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It's because of intensification in some areas you have this problem anyway.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

As long as it does not become too bureaucratic and a sensible and flexible approach is applied.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Put in descent roading and expressways free of traffic lights to get from A to B that go across Auckland (East to West). Exampe, Beachland is putting in more housing and already has poor infrastructure. There should be safe dual lane expressway free from roundabouts and traffic lights from Ormiston put in before any more major housing development start. If the infrastructure is not in, no building is allowed. Have a proper fast train (160kph) from Huntly to Auckland, and build satellite towns. Te Huia is not fast and realistic, and therefore not practical.

Future Development Plan 2023 #2976

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Density is more cost effective for the tax payer, and more convenient for the residents. If you don't like density you can move to the country side, but having a half way in-between only capture the worst of high density and low density.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This is the best for not only the health of the environment and local community. But also for the health of individuals.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Seems like a waste of money

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

If we don't, we will have more destruction in the wake of further floods that happen yearly now.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think we should have light rail reinstalled, the removal of the light rail system from Auckland was the worst decision ever made in our cities planning history.

Future Development Plan 2023 #3058

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Too many 3-storey 6-units with little or no parking already springing up and creating issues. If this type of development was stopped and the land that is available as per the district plan was used I would be happier to use existing urban areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

None of the development ideas appear to take note of the fact that we have an aging population and that public transport at present is going to cater for these older people, or for young mothers with pushchairs. Not all older folk will be living in retirement villages or with extended family.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Basically the idea is right, but who is going to pay to relocate those who live in areas as described?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

sounds good on paper but is it really feasible?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3090

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think encouraging density should put most residents within easier reach of services like shops and public transport. It makes public transport more efficient, is a better use of space, and protects existing green zones

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I am a huge fan of the 20min walking distance concept - which attempts to put most people within a 20min walk of services like shops and transport. This has health benefits such as encouraging

walking, while also improving local business use as people are more encouraged to shop where it is most convenient rather than drive to mega centres

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We need to seriously consider pulling out of areas that are exposed to significant risk from extreme weather. This is the only sensible option in the long run. Trying to take an interim position will only waste resources and put people in harms way

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This will not only increase amenity and improve health outcomes from more green space, but is a more cost effective solution over the long term. Once established, maintenence costs should be lower than a built solution and the additional benefits of encouraging biodiversity, capturing carbon and improving air quality are difficult to match with built solutions

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I am a bit concerned that the pace of change will not be fast enough

Future Development Plan 2023 #3107

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Denser, more compact cities do not result in improvements to people's well-being. It encourages violence and creates ghettos

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

How are people going to have 'easy access' to workplaces? Very few people are privileged enough to have their workplace just around the corner. This appears to be ideologically driven rather than dealing with reality

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

How is it known that these areas have 'significant risk of environmental hazards'? If this is based on known or clearly indicated problems then that is wise, however ever since Leonard Nimoy hosted that documentary on global COOLING in the 1970's it's hard to take some comments seriously

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Please see my comments above

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3115

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Currently the way we view Auckland is flawed, it isn't an interconnected city due to the poor and worsening transport situation within the city. As a result the better strategy is to further plan to divide Auckland into smaller more self-contained towns. The transport situation isn't going to improve as the political willpower and ability to forward plan doesn't exist within the Auckland leaderships skillset. As a result, continuing to expand and give up on the notion of a super city is the only way forward.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Focusing development around the idea of town centres is the way forward however more town centres will need to be carefully planned to keep up with the rate of the city's growth.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It makes sense to revisit investment in these areas but a robust plan needs to be put in place surrounding the resulting outcome. Simply abandoning communities now at risk is a poor outcome but most likely given the scale of incompetence we have seen in the managing of the city thus far.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This is a sensible approach to the solution with the provisor that costs can be kept at a manageable level for ratepayers and in a timely fashion as to mitigate further devastation.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

To date, Auckland continues to be behind other major global cities in adapting to the modern needs of its citizens and provide a forward looking and achievable vision of a future Auckland. This give me pause that any plan put into effect will be executed in a fashion that actually benefits Aucklanders. So many other projects have fallen to the wayside, been lost or delayed leaving Aucklanders worse off than ever before. Any plan to adapt the growth of the city has to be achievable with a firm plan laid out alongside strong accountability measures.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Existing infrastructure (pipes and the like) is not sized adequately to handle increasing occupancy.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

As per previous statement

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Make sense to avoid these areas and make plans for those areas already inhabited

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

There needs to be continued planning and evaluation across all areas of the city in regard having a resillient infrastructure

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3141

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The transit infrastructure and reliability doesn't support any growth, and you don't have the right to force people out of cars with exorbitant fees.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

What are "local centres"? Why aren't you giving incentive for businesses to move out of intensive areas?

It's not reality for people to bike in Auckland, tell that to a mom picking up a load of groceries, kids, and sport equipment. It's time to start looking at how families really live.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

"improvement to the environment ", who dreamed up that phrase! An indictment on the authors of the proposal

Vertical cities hardly enhance wellbeing.

Services are already stretched.

Schools already have closed rolls, surely class sizes are not planned to be increased further, never mind space for extra classrooms. Does that mean removal of playgrounds.... its already happening!

What about people who have invested in "nice" homes in "nice areas." Current rules allow 3 stories on the boundary, reduced sunlight, reduced outlook. Who pays for this devaluation in property value.

High rise apartments tend to be small in area, occupied by 1 or 2 persons. What child wants to grow up in a high rise. Even low rise intensification tends to mean small dwellings with minimal green space.
Not everyone works in a tower block. Industry tended to be on the city outskirts where land was cheaper. Can't see future industrial areas being anywhere different.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

In the real world people don't necessarily want to live a stone's throw from where they work.

Walking to a bus stop, walking from bus stop to work, doesn't appeal to everybody and in many cases would be impractical. Surely we are not heading towards the State dictating where we live and work!

To get these ideas to work you would be demolishing suburbs and rebuilding them. Who pays? Cycling is overrated for work journeys, promoted by a vocal few. Keep cycling for recreational purposes

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Sounds great but seems incompatible with idea of intensification

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3228

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It is more sustainable, more resilient. Also less commuting time. Will also result in more vibrant neighbourhoods.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Lots of global examples prove this is a more sustainable solution

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Unnecessary loss and damages cost everybody

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
It is more effective

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3233

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Of course I want to keep the green areas green however it does worry me that growing existing areas is only good if the road infrastructure can cope. Already, single road closures in my area are causing massive headaches for morning/afternoon commutes and biking to and from work doesn't feel safe with a lack of consistent bike paths.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Traffic congestion parking are already a big problem!! People lack of space, existing old infrastructure needs upgrading, and flooding is a big issue. Kiwis prefer to live in the houses with green area, not high rise building.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Many people are working from home after Covid pandemic, public transport is very inconvenience, people are moving out of Auckland to find greener land and space.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

There is always a way to overcome it, there are many successful examples in other countries.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Tell us why

We are not Holland, we are so far off acceptable infrastructure, all of the listed points should be at the bottom of your list until further development is made. Dream world

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3347

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

As long as it is not on valuable growing land then it's fine. However, you also need services first. For example Beachlands has expanded but there is no mains water, no library. If builds include intensive housing there should always be a reserve close for children to exercise and play.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

The presumption is that buses take you to where you need to go, unfortunately the reality is that people work in all directions of the city not just in the city. If my son took public transport to

where he works, it would take 8 hours by bus. This is the same for so many people and that's the reality of why everyone has a car.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It's devastating when flooding happens, but it doesn't appear that drains get cleared regularly as part of a maintenance scheme. Old councils should to afford to do this within budget. The super city was supposed to save money but most services have now been cut so not sure what money is spent on.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Common sense

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I would like to see a more detailed of where and how rates money is spent, to be more accountable of ratepayers money. I see buildings around that are not being used, eg the old building in Moore street Howick and could be utilised better.

It is really important to have open spaces especially near concentrated housing. Council should be mindful if children growing up in houses with no garden. In these types of developments more parking should be created within the development. There are cars parked on narrow roads near these developments simply because you think they will have less cars. get real this isn't the case. Back roads are getting dangerous because of this. If you go down Andrew Road Howick at times for example, I don't think you would fit a fire engine if there was an emergency.

Future Development Plan 2023 #3349

Agree

Tell us why

Areas which are constantly under siege should be blacked out.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Planting more trees will absorb the impact and reduce greenhouse emisssions.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

A flyover after the harbour bridge exiting @Greenlane will reduce the congestion around the CBD

Future Development Plan 2023 #3393

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I disagree because we have four three storey houses going up on one site in our street, which are just box like, block the sun from the established houses and are so close together. I support apartment living more around transport rather than spoil the suburbs with these unattractive homes.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

To build more housing near shopping centres and work place4s makes sense.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Only common sense

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Sounds like sound thinking

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3397

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Most existing regions in Auckland aren't suitable for high density housing with the limitation of infrastructure and transportation. High density housing requires rebuild/re-lay infrastructure and redesign transport system on quite a large region. In the urban areas there are very few regions suitable. (From what I can tell, only region like Glen Innes could be a good option. it is empty, central, and handle to go everywhere). Otherwise I support focusing the growth on the outskirts following the train lines or motor ways.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

I think it should be the other way round. The new development will bring its own new local centres. Infrastructure and transportation should be the priority to consider.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

When the flooded houses were built, they had been considered safe and invulnerable. The climate changes made frequency, severity and even the from of hazards unpredictable. It will be difficult to judge the future hazard risk.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Sounds good. Auckland became quite vulnerable to natural hazard. It needs more efficient infrastructure instead of higher density.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Disagree

Tell us why
Multi-transport commuting ways should be available to all aged people, not development near local center.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

development should outside the urban area. just find solutions for the areas which are exposed to significant risk of environmental hazards, not stop further growth.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

case by case, not one manner for all things.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

limited the urban area development to ease the pressure on hospitals, education, transport and expand development on future urban area and rural area.

Future Development Plan 2023 #3486

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The higher population concentration will result in shorter distances for individuals to reach essential facilities and workplaces. As a result, there will be a decrease in dependence on cars, making public transportation a more logical choice for many like other cities around the world.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Being in proximity to amenities is definitely advantageous. Personally, I firmly believe that wearing helmets while cycling should be a matter of personal choice, particularly for adults. A significant number of individuals refrain from cycling to work due to the inconvenience of carrying a helmet

and the potential impact it can have on their hairstyle. It's worth noting that many other developing countries do not enforce mandatory helmet regulations.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is often the economically disadvantaged regions that witness development in areas prone to flooding. This situation significantly affects the residents' financial well-being. It is crucial to evaluate this scenario and implement improved infrastructure to mitigate the occurrence of floods. In cases where such measures are not feasible, future development in those specific areas should undergo careful scrutiny and consideration.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

In my opinion, I see nature-based infrastructure as a temporary solution to address flooding problems, which can be challenging to undo. While it adds aesthetic value, it often occupies valuable land that cannot be utilised for recreational purposes. Personally, I believe a more effective approach to tackle this issue is by improving drainage systems through the

implementation of larger pipes or detention tanks. This would allow for better land utilisation, such as creating housing or recreational areas.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

My experiences overseas clearly show that the council needs to be focused on providing opportunities in all parts of the city to ensure choice is available to Auckland. Council does not know best what Aucklanders need and want. Greenfield development is an option that some Aucklanders want - if that can be achieved through developers meeting infrastructure costs then council's role should be to facilitate it.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The proposed approach fails to recognise the impact on neighbourhoods of intensification. Limit intensification to local centres only not the neighbourhoods immediately around them.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

#3710

Submission to Auckland Council on the Draft Future Development Strategy (FDS)

My name is [redacted] (JHADU LTD) Date 23/6/23

Address [redacted] Email [redacted]

[redacted] Phone [redacted]

As Auckland resident / Owner of Future Urban Zoned land in Auckland (delete one) I make the following submission in response to an invitation to comment on the Auckland Council Draft Future Development Strategy 2023 (FDS).

I strongly oppose the Council's approach to the FDS which focusses almost all of Auckland's growth in existing areas of Auckland for the following reasons:

1. Brownfields feasible residential capacity of 2.3m houses is highly over-estimated with much of the plan enabled capacity economically unfeasible, and not able to be developed due to limited infrastructure, private restrictive covenants (preventing further subdivision or development), high value existing dwellings, high construction costs (especially for apartments), and lack of market demand for the product.

2. The use of brownfields demolition and redevelopment as the predominant source of land supply is a highly risky strategy that does not provide a resilient supply and limits housing choice by type and location.

3. Infrastructure is already at capacity in brownfield areas including schools, early childhood centres, recreation reserves, hospitals, medical centres, roading, storm water, water, wastewater, and other services and cannot continue to be utilised for 30 years of projected population growth. Costs to upgrade this have not been compared with the same costs complained about in greenfield areas. This will be a budget blow out just like the CRL.

4. Intensification is already taking place in outlying areas of Auckland no closer to the CBD and employment hubs than many current Future Urban locations. Increased density will generate traffic adding further congestion.

5. The FDS ignores the unsatisfied demand for employment zoned land especially land for large footprint buildings. No business capacity study has been published yet no new business sites can be created in brownfields areas. As a result, the price of such land will continue to skyrocket while the FDS completely misses an opportunity to create sustainable residential communities close to new employment areas.

6. The FDS presumes there is no opportunity in ANY FUZ area where development could occur. This shotgun approach wastes expenditure already incurred on infrastructure upgrades. These assets will not be fully utilised if the greenfield land which they service is left undeveloped.

Scanned with CamScanner

7. Perceived funding constraints should not be a reason to limit greenfield development.

8. Infrastructure triggers to be met before greenfield development are overly conservative and based on the assumption that the entire area is being developed. There is no allowance for smaller scale incremental development.

9. Greenfield developments coped well with the recent rain events in the Auckland region and provided for resilient communities compared with many of the existing brownfield areas. **Hobsonville Point** has been cited as a good example. Many brownfield areas earmarked for growth cannot cope with additional intensification.

10. The FDS deferral of zoning creates severe financial hardship for FUZ landowners who purchased in reliance on the 2017 FULSS. The U-turn signalled by the draft FDS will significantly damage investment confidence for years to come, sending developers to more development friendly cities.

11. It is unconstitutional to embed the FDS in the Regional Policy statement and through that mechanism remove the ability of landowners to apply for and achieve private plan changes.

12. It is most likely illegal for this policy to be introduced without extensive consultation and public hearings.

The outcome I would like to see from my submission is:

- Future urban area development should be allowed for in all FUZ zones where piped services capacity exists or can be provided by developers, especially where nearby business land is included to enable people to live near work and have housing choice.
- Defer the FDS by at least two years until Plan Change 78 is resolved and an accurate assessment of **feasible** brownfield capacity is completed including business land.
- A capacity study is done on infrastructure (particularly three waters) in brownfields areas to ensure it can handle future residential growth and the costs are in fact less than the per unit cost in greenfield areas.
- Initiate alternative funding models to fund infrastructure and allow incremental development to occur in FUZ areas where the infrastructure can be upgraded to allow for it.
- Assess current greenfield development opportunities on a much finer grained basis enabling at least some land to be developed immediately under a revised FDS.

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3754

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

In the most recent Auckland future development strategy (FDS) release, I would like the council to reconsider the removal of Takanini and Drury East as a future urban area (FUA). Although there are potential challenges as per indicated in the Auckland FDS appendices, these identified challenges can be mitigated through careful engineering design and planning. Takanini in particular lays inside a frequent transit network and its geolocation is ideal for new residential development that does not force intensification into existing urban areas that do not have the necessary infrastructure to support such development. Furthermore, its geolocation aligns with the government's environmental targets of reducing carbon emissions when compared to alternative greenfield development, which are typically located further away from the CBD and zones of business activity. These two areas also lay within existing infrastructure such as the Takanini train strain which means that utilization of these assets will increase along with realisation of their design potential. Elimination of these two areas will be a significant loss in potential and money.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3888

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The existing urban areas would be full of construction sites everywhere in Auckland. Small and big projects which will seriously affect most of the residences daily life.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

When everyone head to the local centres, would not make it easier but harder to access -- because of the traffic jam. People who drive the cars have the freedom to drive instead of walking, cycling and public transport.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

There are still large lands around Auckland without the risk of hazards and undeveloped. On the other hand, lots of existing urban area has the risk but people are still living there.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

This problem is unrelated. The climate change is a global issue that it doesn't matter for what Auckland can do.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The existing urban area is too crowd and people need a peaceful life, no noisy construction everyday.

Future Development Plan 2023 #3899

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Auckland needs to expand into greenfield areas. Set up infrastructures for developers to build houses and apartments at affordable prices. At least give Aucklanders the options to live within 40 km from city center. America does not have problems like NZ even in an older city like Philadelphia because new developments adjust the house prices and balance out demand and supplies.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Only in New Zealand where you see 1 house knocked down to build 6 small houses. The other country you would see that happening is in 3rd world country where they have neither the funds nor the technology available. We are becoming a 3rd world country with plenty of lands but no houses could be built.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Of course we need to mitigate known risks. In a country where property investment is 1st choice, it's people life savings and generations wealth you are looking at.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Affordable housing should be the focus of more attention

New Zealand is a country with vast land and sparse population, but housing is unaffordable. This is a joke, especially in Auckland. This is completely caused by the intensification policy. Intensification restricts the acquisition of land for construction, and the price of land naturally rises, which will cause land More expensive, people will be less able to afford to buy a house .

After intensification, it will become more congested, and people will compete for parking spaces, causing emotional tearing, which will cause irreparable damage.
The current infrastructure is built according to the housing density at that time, and all the facilities will inevitably be unable to cope with the increase in density, which will cause traffic congestion, the difficulty of sewage discharge is equal to the difficulty of flood drainage, and there are not enough schools.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The spacious living space is the embodiment of the high quality of life of New Zealanders

The reason why New Zealand attracts many tourists and immigrants is because of our current wide living environment and beautiful scenery, the higher density of buildings means that we will lose the New Zealand identity, to see the crowded scene in this world too many people are not short of New Zealand to join.

Every family has a car and there is no problem getting around.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Credit and commitment - the city government will lose the trust of the people

With such a large area that floods once every 100 years, why only select a small part of the land to be returned to agriculture? Does this prevent other areas from flooding? This is obviously an extremely unfair and unconvincing policy, which raises the suspicion of a conspiracy, even if the burden of the flood relief should be borne by all rather than by a few landowners.
This will lose people's trust in the government, which is more serious than corruption. In the future, everyone will not be able to trust the government, and politicians should not cause fear among people.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

The developer undertakes the infrastructure

What the government should do is to open up green space to reduce the price of construction land, so that people can afford to buy houses should be the first priority.
In any development project, the role of the government should be the supervisor and auditor rather than the funder. Now the technology is very advanced, the flood problem is not a serious problem, but the serious problem is that people can't afford to buy houses.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4059

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I am concerned that existing infrastructure won't cope with all the housing being put on. Need more grassy areas so water can drain away naturally and not run into stormwater drains.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I have trouble understanding why we need to take in more people more growth when we simply do not have the infrastructure. Why do we need more people. People Weill continuously flock to Auckland as this is where the work is. I think we really need to consider taking more people until We have the infrastructure to support that intake.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Council needs to stop over densification with poorly designed 2-3 storey townhouses and increased impervious surface areas which causes a lot of these flood runoffs.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4166

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

By using the land we currently have for urban development we can preserve land that is currently used for farming or conservation

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Having centres for commerce and community is more convenient for many residents. Not only will we not have to travel as far for groceries or healthcare, but community spirit can be strengthened by allowing the residents of those communities to go to local businesses and outlets, thus people will know one another better

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

While indeed development should be more focussed on areas where there is less risk, existing areas of development should not have to be abandoned or de-intensified. Instead, a combined approach could be used. Eg, building new developments on stilts to prevent damage from flooding, or using more flood management systems like a recessed field to capture rainwater and prevent catastrophes like landslides or flooding where we dont want to flood

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other major cities like tokyo or amsterdam have implemented such devices, with much success. However we must bear in mind that since we dont use groundwater, our water table is pretty high already. Therefore, we must engineer more than one solution to ensure that flooding doesn’t occur due to the overfilling of the groundwater catchment

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If we build new, or rather concentrate houses/developments along or very nearby transit routes, that can prevent traffic problems and generally make it easier for people to commute.

Future Development Plan 2023 #4168

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I agree with the above description. From a perspective of construction, it makes more sense in our current environmental situation to densify what we already have and to transform our existing urban environments. This won't be easy with aucklands current state of infrastructure, and I suspect means less opportunity and profit for our developers, but I believe that this is better both economically and environmentally, socially and culturally in the long run. But really, would people be willing to set aside immediate gain for long term benefit? I sincerely hope so.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Increase the diversity of transport options, of local community, and provide more means to enjoy living within a smaller urban area... less travel.
I feel important is - what development is happening? Are we transforming these local centres into more upmarket shopping centres and offices... or are we providing uses and spaces that can support what will be a larger and more socioeconomically diverse community?

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This just feels like it should be common sense.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
I agree and just caution that, Nature-based infrastructure shouldn't denote new, complex technologies that solve certain problems but also create more problems. There are many low complexity solutions that require less energy or financial input, and still might yield similar benefits.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

That we demolish with as much intent to recycle. That what exists in an urban sense should not be considered as waste, but an opportunity for transformation. And that totally new construction reduced. Find ways of development that use local resources and knowledge rather than importing international ideals.

Future Development Plan 2023 #4179

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4181

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Greenfield growth delivers poorer financial returns for the city beyond 30 years in the future. Especially in the light of budget 'balances' and cuts, intensification of existing urban areas is a necessary development for the city in order to maintain city income rates and prevent socioeconomic issues in the future e.g. increase in congestion caused by Greenfield development.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Socioeconomic benefits to building walkable/non-car dependent urban areas help to ensure both the financial prosperity of Auckland, e.g. supporting local businesses and good financial

performance for Auckland, and overall increase in health and living standards for residents involved.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Prevent approved developments in vulnerable locations to be built if no solutions or measures are able to be made within the short-term to prevent long-term damage to properties from the previously mentioned hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Recent floods and current road conditions are the result of existing infrastructure being poorly integrated with the region's previously greenfield developments.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4554

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

If this can be achieved, people will be able to save time and energy regardless of their activities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4695

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Disagree

Tell us why

The Auckland Future Development Strategy (FDS) is long on ideals but it fails to include any population projections to prove that the vision of an intensified compact city as outlined is at all realistic and that it will be likely to deliver quality environments enabling people to provide for their wellbeing and to avoid adverse effects , as required by law under the RMA. (S 5(1) , S 5 (2) , S 7 (c) and (f) and S 5 (2) (c) .

Instead of MDHS, (3 x3) there should be a variety of different section sizes to allow for different size families. One size doesn't fit all and it is quite wrong to rely upon families being small. There is no space allowed for people to move about outside of their home and no concern for the potential loss of sunlight, privacy, and views or outlooks and no space for trees and plants. This is not ensuring a healthy and attractive or quality environment for people, especially for children and young adults who must be able to get outside to move about , or for the city as a whole.

There are no projections over the likely increase in the number of vehicles using our roads to confidently show that the existing public transport system would be adequate with necessary connections in all directions . The current use of public transport shows that public transport does not cater for Auckland people's needs. There is also nothing on the future harbour crossing to show how this will work and be adequate. NZ has a temperate climate and people like to go to sports fields, beaches (close and remote) and to regional parks in Auckland and beyond. The

public transport is not up to this so this strategy is more likely to create massive traffic congestion across Auckland when people must have this time to relax and to enjoy life. This strategy is likely to cause people to leave Auckland and likely New Zealand. It is also likely to greatly increase crime from people becoming frustrated, bored and angry over all of the above.

There is no investigation of greenfield alternatives or potential locations and their feasibility for a proper comparison including matters such as available rail transport (in addition to buses) and the comparative cost of providing roading and other infrastructure. Such investigation should have been done under S 32 of the RMA for Plan Change 78 and it is entirely out of order for the Council to be doing this inadequate assessment following the PC 78 public legal process.

There is a lack of evidence also to show that a compact city would reduce greenhouse gas emissions. In addition to more likely greatly increased traffic congestion as above, a drawn out costly retrofit of the city constantly pulling houses down and remodelling street is more likely to greatly increase emissions than that new carefully designed towns and cities.

It is also fallacious to conclude that compact housing will at least improve housing affordability and choice. Permitting 3x3 on every site immediately increases the value of potential mother sites, making sites that could house larger families better more expensive, not less. In wealthier suburbs closer to the central city land zoned for high rise has increased the price of property, so intensification does not automatically equate to affordability as assumed . In lower socio economic areas, this also runs the risk of creating slums . There has been no likely population increase projection done for areas , re the number of new schools likely to be required, re the land available for this, and re the provision and adequacy of parks and reserves. In packing and stacking people into closer and higher living, regard must be given also to the potential cost to sunlight, of shadowing and creation of wind tunnels as well as to the social fabric. Eg Judging by the amount of ram raiding going on, unmanaged lifts to apartments could also become very dangerous places .
A compact city as envisaged does not uphold the kiwi way of life and dream. Nor is it necessary given our relatively small population, reasonably large land mass and temperate climate. It would be far better for people's wellbeing, and for the NZ economy, for us to design new well located greenfield towns and cities now , while protecting our prime soils , to uphold what has made NZ , a highly desirable place to live .

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4891

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There is a lot of waste/poorly used areas, areas previously used for light/service industry that has moved further afield that could be developed into housing. Locally places like around the old movie theatres at Highland Park, Ben Lomond Cres, parts of Ti Rakau Drive, Pakuranga Plaza etc etc.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

I grew up in England where there are town belts & green belts so that parks & farmlands are protected from urban sprawl. This is probably more important in England because of the dense population but in most towns there is funding for public transport & it is more financially efficient to run than in rural areas. We need to preserve fertile land for growing food & are really fortunate to grow good food at present in rural areas. We shouldn't need to import any food & it can't be built on!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

If we want to be a responsible country for reducing our carbon emissions & meeting our global obligations we must try to be less reliant on cars. Well connected cities do that. Visit Munich! For example.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Its a good approach to intensify housing but people do have concerns about existing infrastructure and if it can handle the intensification. However when you drive through areas like around

Ormiston it feels like your in the country. Also do we really
need all these golf courses ie, golflands, Musick point, Howick

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Its a good plan, other cities in the world do it. Plus it would also
alleviate congestion as people could wall to work and school etc. Can't wait for a few monorails around like the highly successful Docklands light Rail in London.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Climate change is a reality, just look at the recent floods

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Future planning and thinking about overcoming these problems is great.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Why not build a whole new suburb with a high speed rail going

straight to Auckland CBD.

Maybe build more housing complex buildings with a nice big courtyard and a swimming pool, private gym and its own little shops and supermarket, with a school near by, people wouldn't have to leave the complex very often, this would also reduce traffic congestion.

Future Development Plan 2023 #5050

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

You need to provide more information on what "decentralized" means before people can meaningfully engage with this question.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Any growth and development needs to be lead by infrastructure first. If you put more people in existing or new developments, it will still be the same problem, resulting in increase in crime and strain on infrastructure and support services.

By leading first with public infrastructure, it will be people focused and easier for communities to be established.

Future Development Plan 2023 #5056

Tell us why

I hope that the construction of the Half Moon Bay-North Shore Harbour Tunnel to start soon.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5079

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Reduce the waste of resrouces.

Accessible local centres

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The convenience brought by the existing infrastructure is irreplaceable. Especially there are existing infrastructure in the current urban areas. If these can be improved and maintained, it is sufficient to meet the living needs of urban population.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

What is area centre? Can you explain?

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Areas with high risks often require more investment before they can be delivered to liveability. If the maintenance in the future is not effective or not enought, they may end up to be uninhabitable.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The residential density in Auckland is not too high, therefore, development can be done near the town centres. This can also save national development costs. The existing road facilities, water and electricity pipes are ready-made. (We may) spend less money and do more. Of course, overseas countries are also developing gradually. To build new town centres in the rural areas, many shops, schools, public facilities should also be built, which must be a drag on other important things.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

The traffic congestion is getting worse and worse. Long-distance commuting should be avoided. Go to work nearby, which is convenient for individuals and environmentally friendly. It is very good to drive less and take a bus trip to get to destinations. Town centers that have been or are being developed should also be actively constructed so that they can serve residents as soon as possible. The development of new districts needs to be improved and reduced in the future, so that focus is put on the vicinity of old and new town centers.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Areas that are vulnerable to natural disasters should not be invested and investment should be withdrawn. At present, people are unable to fight against severe natural disasters. Insisting on change will take time and effort, and even waste all previous efforts.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Decentralise! It must be universal, long-term planning, and be persistent. After a few years, there will be a big achievement. The local residents should be the majority and volunteers need to be

mobilised. Professionals need to be involved in planning. We should solve the problem fundamentally.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There should be a two-way approach. It is very important to develop near the existing town. It is then less need to build public facilities andmay solve housing problems as soon as possible. But rural areas also need development. Otherwise, we will be caught off guard in a few years. At present, the focus is close to the towns, but a development areas must also be planned, so that there will be no tension in the future.

Tell us why

Redue harm to the nature.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. Developments in international trade should not follow the inexplicable claims of the United States, "war". We should advocate peaceful economic development, and comprehensive economic cooperation with China, Russia, and Middle Eastern countries. New Zealand is a small agricultural country which economy cannot be isolated. As long as it is helpful to New Zealand's economy, government must strive for it with all its strength. * World prices soared due to the United States. Now the people's living cost is very painful. When there was no war (Russia and Ukraine), the price of 100 New Zealand dollars worth now only 50 NZD

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5109

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5137

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5173

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5289

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. Agree with this Council proposal. 2. The current bus route No. 72 and No. 70 in East Auckland go directly from Pakuranga to the train station. So that it is very inconvenient to go to Pamura Town centre. People have to transfer bus at the train station. It is a waste of time and money. Could an additional stop be added near Panmura for the convenience of the people? 3. There are no trains passing by in East Auckland, resulting in traffic congestions. Can we prioritise the improvement of the traffic in East Auckland?

The Highland park area needs development efforts. Highland Park area a large area and a large population. It is far away from the central city. Education, business, medical and community services are relatively legging behind. I suggest that a Pak'nSave supermarket and a hospital to be build here. Otherwise, this place will become a forgotten location. Don't let the Highland park area disappear!

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Transport, Law and Order, Roading.

Future Development Plan 2023 #5532

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Focusing development near local centres allow for the efficient use of land resources. It promotes a compact urban from and reduces urban sprawl. Which can help preserve open spaces and protect the environment. Concentrated development can also lead to more efficient provision of infrastructure and services as public transportation, utilities and amenities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

The effechveness of nature -based infrastructure depends on various factors such as design, maintenance, and integration with other urban plannning strategies. It is essential for ALD council to carefully plan, implement, and monitor nature-based infrastructure initiatives in order to maximise their positive impact on climate change adaption and mitigation.

Other feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Outstairs of districts need more improvement of infrastructure and facilities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5561

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1.Strengthen social security. 2.Strengthen infrastructure construction such as roads. 3.Build the harbour tunnel between the City and the North Shore as soon as possible to solve the traffic bottleneck. 4. Build a satellite city in the south, and gradually connect Auckland and Hamilton. 5.Vigorously develop public transport and build the Auckland-Hamilton high-speed rail.

Future Development Plan 2023 #5649

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Human should not fight against the mother nature. Now we can only take shelter from the undefiable disaster weather. There are houses in low-lying areas such as at the foot of mountains and on the beach with low ground level, etc. We cannot develop those types of houses. On the contrary, people should be gradually move away from those places.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

I suggest that buses may use large and small buses according to the peak passenger flow to save costs. I also hope that all buses could use electric vehicles to save energy and reduce emissions. We need to speed up subway and tunnel traffic in cities and regions.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Making Space for water is a great opportunity for this

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5888

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6120

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6317

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Good for my grandchildren

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I agree, especially with public transportation. Eg: train, nearest train to our area is a bit of a drive, would be nice to one near our home. Also, more diaries and smaller supermarkets especially when you're buying just 5 or fewer items.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6603

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Provides more housing options for a growing population

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7088

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Future Development Plan 2023 #7287

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Auckland's population is not growing at a rate that warrants this 'densification' approach. This approach is currently being adopted and is already having negative impacts. Areas are densified without improvements to the infrastructure which results in adverse effects, such as waist water processing problems, flooding, traffic, cramped living conditions. These problems cause a detriment to the environment, economy and peoples well being.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

While this approach looks good on paper and in theory, in practice it only works to a certain degree.

Having a local shop will save on travel time, but if it more expensive than another shop, or does not have the products people are after, they will travel to the shop that is cheaper and has the products. If a local center does not have the recreational activities people are after they will need to travel to another center that does have them. If a person changes there job, they may need to travel to another location, which in most cases may not be local, and some jobs rely on travel to different areas so in principle cannot be 'local'.
I think the focus should be more on improving the transport sector and existing facilities are are already operational.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

I think a lot of the problems eg flooding in west Auckland, could have been managed better by maintaining the storm water network, and not allowing for densification with no improvements to the infrastructure.
A hypothetical question: Rising sea levels have been known for decades. Mission by should be starting to submerge (based on predictions 20 years ago), or will be in the next 20 years. Yet there are plenty of developments along this coast line that were approved by the banks who know all the information about the risks of the sea rising. Banks are typically very interested in managing there financial risks and do not issue loans unless there is a very good chance they will be paid off. Why would the banks approve developments in an area that will supposedly be under water before the loan in investment can be paid off? Perhaps they know that there is not such a risk to flooding and there investment?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I agree with the need to improve and maintain infrastructure to cope with ongoing change. However, this 'Nature-based infrastructure' that is 'decentralised' contradictory the the first point of 'Focusing growth'. Perhaps growth should be focused on 'greenfield areas at Auckland's edges' where it is easier to build future proof infrastructure for the current and future needs, as well as adopt the 'Nature-based infrastructure' in these areas that 'can help protect communities from hazards, as well as protect and restore the natural environment'

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Before focusing on additional growth we must bring up to standard the areas that have already grown.

Future Development Plan 2023 #7308

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I disagree with your statement that more people in a smaller area creates wellbeing, (mental stability) and is better for the environment and the economy.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

You are creating the potential for mass crowding

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

I disagree with your climate change agenda being pushed by global elites. Listen to the real science from those you have no agenda

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

I disagree with your climate change agenda

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I believe expansion outwards is better than building upwards. change some of the local by laws that allow this and free up land for people to enjoy the true kiwi way of life ... there is space for everyone without having to herd us all into make shift prisions

Future Development Plan 2023 #7314

Intensified house does not solve anything - instead it creates social and other quality of life issues

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The 20minute city idea is a flawed model. I serve the wider Auckland community in health worker role - this would disadvantage my clients, increase cost. Furthermore, I work to earn a living and have choices- do not appreciate bureaucracy dictating

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Common sense should prevail, backed by science and not ideology

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Fix basic infrastructure first before spending the money we don't have on these pet projects

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Rate payers are groaning under the weight of financing ideology - time for the council to return to basic infrastructure and services

Future Development Plan 2023 #7322

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Less wastage of land and environmental damage

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Best not to need to own a car. Also avoids wasting potentially fertile land and wildlife habitat - etc

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

If you know disaster is coming, it is foolish not to build accordingly

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This is the best way to care for the environment and avoid damage to poorly designed infrastructure.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Where the environment cannot naturally retain temporary flood waters, retention tanks should be installed on private properties to control peak discharges of stormwater.

Judging by the above questions I question what you mean by nature infrastructure

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Grow outward

Future Development Plan 2023 #7450

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The over population of existing areas are turning them into ghettos. Overcrowding, lack of parking. Exisiting drains can't handle the extra non permeable land. Also, existing gutters and drains are not being cleared and serviced leading to unnecessary flooding.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Give us better public transport. Akl has never been given a good public transport service. NZ is about living with backyards in urban areas. We don't want it to become high density. We want neighbourhoods where children are safe to play outside in their yards or the bottom of cul de sacs.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Clear the drains! Why have they not been done? Our street has not been done since 2018. Where are the trucks that pump out the wastewater drains. This is the cause of the flooding that has been happening.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Every household should still have a back yard for children to play, have a seing set, grow vegies, fruit trees etc.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Because shops and businesses come and go and too many people make it too hard to use this services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

I think you need to fix the flooding issues and trading issues befire doing any more housing developments.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Fix/Build better roads to the start.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

No 3 storey housing. Too high, csntvbe cleaned ir looked after properly.

Future Development Plan 2023 #7490

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Can anyone explain why the council has approved intensive residential developments in the most fertile areas in the region? Doing this destroys the ability to grow food close to markets which reduces carbon footprint

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

What about those who can't walk, cycle, or are capable of using public transport? These numbers will increase as the population ages. Are businesses going to want to be located in these areas?

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

No evidence to date that sea levels are rising. How are you going to determine significant risks?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

What the hell is a detention basin? You'd do better to concentrate on replacing and modernising existing infrastructure e.g., out of date pipelines, sewerage, and storm drainage.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Auckland can't cope with the current level of growth so why try and increase the numbers living here. Sort out the existing problems in the city and put a hold on growing the population. Clean up the transport system and the grid locks and get rid of the recent reduction in speed limits so people can move around the city easily and quickly

Future Development Plan 2023 #7512

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

City is big enough. I also enjoy the green areas mixed in around the city and the expansion of urban space removes them.
Also some areas need to be refocused as there is no point to go there and explore.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We do not have services that are only in small communities. Our jobs are all over Auckland. Trying to put us into small blocks will not work in auckland

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

We need to make access to all Auckland better as well. Travel between is essential as jobs are not isolated to areas. Also need choice of schools, shopping and activities. Consider the travel needed for sports teams even. Most weekends spent travelling around Auckland to compete

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Are you turning Akl into a 15 minute city?..

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

You are following Agenda 2030 and turning Akl into a 15 minute city!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Who decides WHAT and WHERE is a significant risk of an environmental hazard and WHY have they got it so wrong in the past and why must we believe they will get it right this time?? Thinking of previous properties with not enough drainage turned into high density and flooding... and this happens over and over again...

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Taxing the citizens out of existence is NOT an option. Climate change is a HOAX and has been proven over and over again by "real" experts. Weather modification as currently being used to affect our weather here in NZ is the problem. If you stop the weather manipulation projects - the so called climate change problem will be solved.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Yes, if you want Akl to thrive, improve public transport- which currently is in a mess... buses being cancelled as well as ferries... but this govt wants cars off the roads...

Stop changing single properties into high density properties with not enough drainage or parking.

Remove the useless cycle lanes taking up space and preventing traffic to flow.

I thought we had "experts" working on this - but it seems like we do not have any common sense or critical thinkers deciding and planning this.

Future Development Plan 2023 #7822

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Denser more compact cities do not offer improvement to wellbeing & environment. Quite the oposite, less green space, increased pressure on already broken infrastructure, smaller cramped living spaces to an overweight population is hardly an improvement.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

There needs to be a balance b/w practical reality, economic and environmental benefits. Intensification will certainly not deliver environmental or individual wellbeing.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

I dont think anyone can predict future hazzards. We cant prefict weather correctly how can we predict future hazards with any degree of certainty.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I agree with the above other than i have no idea what mauri- enhancing infrastructure means. That part i cant comment on.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There needs to be a balance b/w practicality, economic benefit, personal well being and environmental benefit. Shutting people into small intensified zones will not achieve the above. Possibly quite the opposite, more polution, more environmental damage as a result of intensification, not mentioning already strugling infrastructure. Storm water, sewrage, etc...policies based solely on climate change is wrong. Ice age did not dissapear because of impact of emmissions. It dissapeared because of natural events. We should focus on creating more green space, planting trees as opposed to less, to neutralise the so called emmissions.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Agree, but Densification needs to happen in a structured way. An increase in townhouses with lots of driveways and less green garden is not a desirable outcome.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Agree but the centres need to be connected to each other in a network rather than the current hub and spoke model of public transport.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

There needs to be less dependency on Developers paying for infrastructure that is already overloaded by poor management. This just acts as a deterrent for Development in the most appropriate areas, and adds additional cost to the end purchaser.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There should be fewer barriers to good development e.g. vertical rise with lots of green space, rather than townhouses and subdivisions with lots of driveways

Future Development Plan 2023 #8005

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Depends on what is the priority.

Denser cities will cause more tension among neighbors. Everyone have more space to live would improve people's wellbeing.

In my opinion,

Need to have more Greenfield areas development but not focus most of Auckland's growth in existing urban areas.

Could be 50% on each area.
Capital Gain Tax and Wealth People Tax rate should be implemented and raised respectively to fund the projects on Infrastructures.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As a 50% increase in existing urban development for the next 30 years that I suggested, accessible services for sustainable community development is needed. Public transport needs to be well function to fit for public expectation. Not having something need to wait for a long time for a train/bus and costly.
AT reduced speeds can help lower the death and injury percentage, but it is not the only factor. Will see if the death and injury will be lower after the speed limits have been changed in Auckland.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Sea level raises is a big issue to the costal and lowlands. Already floor prone area as Takanini will be quite likely to be flood as sea level raises lead to water table raised as well. Many once was farmlands turned into residential subdivision in last 10-20 years will become a frequent flood area with ten thousand people in it.
Risk of have nearby costal housing development is also higher than before as bad weather occurrences are more frequent.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Auckland Roading is a problem, pot holes, on going road repairing.
Using concrete payment will lower the cost in long term.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Kāinga Ora should notify through publication and consultation to let the public know they have any intentions or plans of their various social housing projects actively. The publication should periodically list on their own website and updating it at least monthly. The consultation process should be at least 3 months after the publication. This could affect any local community's economy, resident well being and investment expectation.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Putting 60 homes in a small area in Wattle Downs with no parking whatsoever is not the way forward. People have cars and Wattle Downs isn't the greatest when it comes to public transport. The planning rules need to change.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The transport facilities don't allow for this.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Climate change is too broad to mitigate and will most likely be another tax on the population.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Infrastructure in general is good.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Get rid of the 30 k speed limits.

#8070

Gracechurch Drive Ratepayers Group Feedback in Response to Auckland Council Future Development Strategy 31 July 2023 (includes prior submissions concerning potential for development in Gracechurch Drive, Inchinnam Road and Browns Lane East Tamaki).

1) **Principles for Growth and Change.**
   a) We support the 5 principles outlined in the draft strategy together with their sub principles. These seem to us to be the appropriate overarching strategic approach to enable to achieve its goal of the provision of 200,000 additional residential households for Auckland over the next 30 years.
2) **Growth Scenarios.**
   a) The 4 scenarios on page 26 of the strategy appear to be presented as alternatives. As currently defined, we submit that none of the scenarios individually yet capture all the necessary options required to achieve the 200,000 households within the principles for growth and change. We believe that selecting any one alone would preclude elements in another scenario from contributing. For example, the boundaries between existing urban and other areas may not be appropriate to current day information, experience and knowledge given the significant time lapse from when they were established (decades in some instances).
   b) While we recognise the budgetary constraints of infrastructure investments and the need to target these to best, effect we believe that it is too early to effectively disregard an opportunity which may have the potential for providing a significant number of residential households for Tamaki Makaurau.
   c) For example, the Spatial Approach adopted in the strategy appears to confine growth primarily to existing urban areas with limited potential outside the areas currently defined as such. It is also not clear which of the 4 scenarios this spatial approach is linked to as the focus on existing urban areas is included in several of the scenarios. Some further clarity on this would be appreciated.
   d) In addition, figures 12 and 14 lack boundary detail at street level to be able to identify which streets fall within the existing urban area and those which fall outside it. Given our group is on or near this boundary, we request further detail regarding these to be able to make an informed response.
3) **Constraints on Development.**
   a) We support the constraints on development outlined in the strategy namely,
      i) Natural hazard constraints
      ii) Land Use Capability (LUC) Class 1, 2 and 3
      iii) Natural environment constraints
      iv) Natural heritage constraints
      v) Cultural heritage constraints .
   b) However we believe that it will be inevitable that some areas where constraints are identified will need to be the subject of development to achieve the number of household units required under the plan. Increasing Auckland's housing stock by 200,000 or an additional 34% over 30 years is a significant step increase and unprecedented in Auckland's history. Therefore to achieve this, we believe decisions must be pragmatic and development should not be precluded in areas where constraints are not major and can be managed without significant compromise to the strategic principles in the plan.
   c) Once again we believe that the detail in figures 4-8 lack sufficient detail for ratepayers to identify which hazards or combination of hazards apply particular property or neighbourhood. Therefore we request further detail regarding these to be able to make an informed response.
4) **The Gracechurch Drive, Inchinnam Road and Browns Lane Large Lot Zone.**

a) In 2022 our group made submissions to Council to change the zoning of this area to enable subdivision into smaller lots. These submissions are attached.
b) The Council's Planning Division responded by saying that their focus at that point was on implementing the Government's legislation on intensification in Auckland. The Council deferred further consideration of our submission until zoning decisions including the Large Lot Zones were considered along with the review of the Unitary Plan, due to commence in 2024 and be completed for announcement in 2026.
c) The Auckland Future Development Strategy document to which this response is directed seems to be the overarching document under which these zoning decisions will be made. Hence our interest in having our voices heard at this point.
d) The submissions we made for a zoning change appear to us to be compelling and if approved would provide a minimum of 400 additional residential households. Such a development also appears to be on the information currently available to us entirely consistent with the Goals and principles contained in the Auckland Future Development Strategy.
e) In addition the strength of our submissions has increased following Cyclone Gabriel and several other significant weather events which have occurred in Auckland over the last 12 months. This area emerged essentially unscathed by any flooding or land subsidence, thus establishing a significant record for resilience to the impact of climate change which is a major hazard identified in the Auckland Future Strategy.

5) Additional Information now sought in respect of the Auckland Future Development Strategy.

a) Please confirm the boundaries of the existing urban area in figures 10 and 12 in so far as they impact Gracechurch Drive, Inchinnam Road and Browns Lane Large Lot Zone. In other words is this area currently within or outside the existing urban area. Can you provide a more detailed map at street level to illustrate this boundary.
b) Please advise which of the constraints identified in the Future Development Strategy and shown in figures 4-8 apply to the this area. Please provide the detail on these constraints and whether they are assessed as more or less constrained and/or high or low risk. Can you provide a more detailed map at street level to illustrate the exact areas of each constraint..
c) Please advise which of the 4 scenarios or combination of scenarios is the basis for the Auckland Future Regional and Local Spatial Responses and Scales.
d) The requests in paragraphs 5(a) (b) and (c) are made pursuant to the Local Government Official Information Act 1987.

6) In view of the fact that some of the information contained in the Auckland Future Development Strategy is unclear as outlined in these submissions, and the fact that we have made a request for further information to clarify how the Strategy may impact our neighbourhood, we also request a further opportunity to address this further information after it is received and after the 31 July 2023 deadline for feedback.

Yours sincerely,

Peter Doone

Gracechurch Drive Ratepayers Group

#8070

The Howick Board
Auckland City Council.
19 April 2022.

Submissions in support of urgent services upgrade and further zoning intensification along Gracechurch Drive and Inchinnam Road Flat Bush.

1) Introduction.

a) Gracechurch Drive between Browns Lane and Jeffs Road comprises "semi-rural" in the main 2-acre lifestyle blocks with some subdivision into smaller blocks (now restricted to 5000 sq. m). It is zoned Large Lot Residential with the sub designation Countryside Transition Precinct I.

b) Residents in this area have been talking with each other about the condition of our street, the impact of higher intensification (including apartment blocks) and the cost of our rates lately and we thought it was about time that we put our combined concerns to the local board with a number of recommendations to resolve the issues identified.

c) This submission addresses the following areas of concern:

i) The lack of urban amenities including effective storm water drainage, the provision of mains water supply from some to all properties, proper footpaths and streetlights.

ii) In particular the lack of storm water drainage causes frequent flooding along the road during heavy rainfall and resultant damage to properties and the environment.

iii) Mains wastewater connections are only available for some of the properties and while connections for other properties are close by they have not been brought up to property boundaries to enable a connection.

iv) The level of intensification (up to the highest density residential Apartment zone) right next to the Large Lot Zone (the lowest density residential zone) with the result that many residents are no longer able to enjoy our previous "Lifestyle" character of living. The changes in the area since the rules for the Large Lot Zone were developed in 2003 is huge. The areas to the south and west were farmland at that time and we now have large blocks of apartments backing onto Large Lot properties.

v) Roading and footpaths are substandard for the significant foot and motorized traffic now being experienced, leading to significant safety risks for residents and people moving through the area.

vi) The relatively high levels of rates charged in the area without the provision of these services.

vii) The provision of these services will have a cost and we propose that this be met from zoning rule changes which will permit further subdivision down to 1000 square metres generating additional rates and development contribution revenue to meet those costs.

viii) We further submit that these changes can be managed to maintain and in in fact enhance the environmental issues identified by Council when the zoning rules were established and to provide a much safer environment for residents.

2) Provision of Services and Flooding.

a) Storm water drainage in this Area of Grace church Drive is rudimentary at best. While Storm water drainage off the road is connected into the Councils storm water system

but age has made it ineffective. About 6 years ago the drains in the lower parts of the area started blocking up whenever we had a large down pour of rain causing flooding to the roads and some surrounding properties.

b) From time to time contractors have turned up to fix the blockage but their efforts have also been ineffectual and they have had to keep coming back. The storm water drains are still getting blocked as illustrated in a video sent to Mike Turinsky from 21 July last year.
c) The torrent of flood water washing down our properties erodes the land away behind the concrete wing wall and under our fences. You can see the damage in the video.
d) When the flood gets across the road, it starts gushing down around the large pine trees on our neighbouring properties and the water is undermining tree root systems. Since the flooding has started there have been 3 or 4 large trees come crashing down with 2 of them totally blocking the road.
e) One of our local residents Andrew Barge has a digger and has himself cleared much of the damage caused by the flooding on several occasions, thus saving the council considerable expense.
f) The use of septic tanks was identified as a risk to the environment in the 2003 Flat Bush Plan yet after nearly 20 years only some of the properties are connected to the mains wastewater system. Connections are relatively close to other properties and work to connect the whole area should be an urgent priority for Council.
g) On the new district plan, our road is classed as a local road, not a rural road. The road would be a lot safer if it was up to the standard the district plan shows. We have no curbing, shoulder or channelling and no street lights and no footpath on one side, no mains water and a storm water drainage system that can no longer cope and is causing danger to traffic on the road, damage to properties and harm to the environment through erosion.
h) Drainage in Gracechurch Reserve is also a problem. It has a relatively steep gradient in places and drains directly into the neighbouring properties on the southern side and the stream which runs through those properties. Flooding and erosion into these properties and the stream are issues during heavy rain.
i) Each year the council is increasing our rates without addressing the causes of the problem and failing to provide us with effective storm water drainage, a safe road, street lights, footpaths and town supply water, all benefits enjoyed by ratepayers in neighbouring streets.
j) Here's an example of why we are upset. A neighbour has to replace his irrigation line on his septic which will cost thousands and then the council expect them to pay for waste water!!!

3) Source of Funding to Provide Essential Services to the Gracechurch Drive area between Browns Lane and Jeffs Road.

a) Recognising there is a cost to provide these services we recommend that the council raise the money by letting us subdivide to approx.1000 squares meters per section. This would raise significant finance from additional rating as well as development contributions from the subdivided lots. Then we would be helping with the formation of a new road, improved and effective storm water drainage, street lighting and additional footpaths.
b) It would also make our properties 'fit in' with the surrounding area where there has been significant intensification in neighbouring streets which range from Mixed Suburban to Terraced Housing and Apartment Zones. This has resulted in sizeable apartment and terraced housing development in close proximity to this area including backing right onto some of our supposedly Lifestyle Blocks. This in turn has seriously impacted the Countryside "Lifestyle" we used to enjoy to an extent

that the designations “Countryside” and “Lifestyle” are no longer valid descriptions of the area.

4) **Background to Building Intensification in Adjacent Streets.**
   a) The first development in Gracechurch Drive occurred in the 1970's when the majority of Lots in were divided into the traditional 2-acre (0.8 hectare) Lifestyle Blocks.
   b) In 2003 the Manukau District Plan was amended to enable lots of 8000 sq. metres in Gracechurch Drive, Inchinnam Road and Browns Lane to be further subdivided into lots to a minimum of 2000 sq. metres but averaging a minimum of 4000 sq. metres.
   c) A Substantial factor in maintaining the 4000 sq. m limit was the lack of wastewater connections to the properties in this area and the concern held by Council of the impact of septic tanks on the environment.
   d) At that time there was no "urban development" in Flat Bush. This was about to change however and development mushroomed through the development that became known as the Flat Bush Development Plan. This was incorporated into the Manukau District Plan around 2008. The Gracechurch Drive Area was designated as *Flat Bush Sub-precinct I (Countryside Transition).*
   e) In 2016 these provisions were incorporated into the Auckland Unitary Plan (Part I412 "Flat Bush Precinct") almost in their entirety. In an ironic exception however, the subdivision rules were changed to allow only subdivision of lots into 5000 sq. metre lots, effectively halting further subdivision in Gracechurch Drive due to lot sizes being in the main only around 0.8 hectares. Prior to this some 13 of the 68 properties in Gracechurch Drive had been subdivided into 2 lots. The zoning in the area became designated under the Unitary Plan as a "Large Lot" Zone but retained its "Countryside Transition" designation.

5) **Flat Bush Sub-precinct I (Countryside Transition). Key Provisions:**
   a) This Sub-precinct relates to land within the upper catchment area and alongside the many streams and waterways in the Sub-precinct. The Sub-precinct further functions to protect and enhance the natural environmental qualities found within the Sub-precinct, while providing for appropriate countryside living.
   b) The landscape quality, water and soil resources, native forest, wetlands and open space amenity values of this highly visible landscape in the mid to upper reaches of the Flat Bush basin along with the spaciousness in these low density residential sub-precincts is maintained and enhanced.
   c) Require lower densities and site coverage to create spacious rural and transitional urban development with reduced visual impact.
   d) Require riparian planting of native species within the conservation and storm water management area to: maintain and enhance water quality and aquatic habitats, existing native forest and to create spacious rural and transitional urban development with reduced visual impact.
   e) Retain significant native vegetation, including riparian vegetation and protect the ecological and landscape values associated with the area.

6) **Housing Intensification in Adjacent Streets**
   a) In direct contrast with the provisions relating to the Gracechurch Drive Large Lot Residential Zone the adjacent streets have been designated either Suburban Residential or Apartment and Terraced Housing. In particular the following areas are zoned for Apartment and Terraced Housing either adjacent to or very close to the Large Lot properties in Gracechurch Drive and Inchinnam Road:
      i) Carlos Way which runs off Gracechurch Drive and backs onto properties in Inchinnam Road and are very close to properties in Gracechurch Drive
      ii) 1 Gracechurch Drive. Now an 18 block Apartment Complex.

iii) 2 Gracechurch Drive. Another large Apartment Complex now incorporated into Stancombe Road but directly on Gracechurch Drive.
iv) Wyon Way. Runs off Stancombe Street but backs onto properties in Inchinnam Road and is also very close to properties in Gracechurch Drive.
v) Stancombe Street, numbers 124-132. These are further apartment blocks and back onto Carlos Drive. Number 136 is also in close proximity.

b) It should be noted that of the 5 Auckland Residential Zones the Large Lot Zone is the least intensive housing area requiring 5000 sq. metres per lot, the Apartment and Terraced Housing Zone is the most intensive requiring only 50 sq. metres or less per accommodation unit; some 100 times more intensive. The Mixed Suburban Zone is the third most intensive requiring only 400 sq. metres per lot which is 12.5 times more intensive than the Large Lot Zone. The Mixed Suburban zone is about to become even more intensive with the implementation of the recent Government legislation requiring more intensive housing development in major city residential zones. It is noted however that the Large Lot Zone is specifically exempted from this legislation.

c) Actual Development in Carlos Drive and 124-136 Stancombe Road.
i) This is a confined area but now has a total of 14 apartment blocks built with a total of 420 apartments. Individual blocks range from 16-44, averaging 35 apartments per block.
ii) The size of apartments are dominating and have a visual impact totally inconsistent with a “Countryside” and Lifestyle Block living experience. In addition however, the architecture and quality of some of the apartments is poor and unsightly. In particular the apartments at 1 Gracechurch Drive are of ugly (unsightly?) architecture and constructed of low quality building materials, not at all in keeping with the high quality architecture and building materials used in the rest of Gracechurch Drive.
iii) In addition 2 large apartment blocks at 132 Stancombe Street have been closed and blanketed in plastic sheeting for “remediation” for at least 2 years with no sign of an early completion. They are less than 10 years old and must have serious construction flaws.

7) The Case for Intensification now:

a) The result of the above intensification has totally undermined and effectively destroyed the former “Countryside Living” or a Lifestyle experience in nearby Gracechurch Drive and Inchinnam Road. This is despite the fact that the Unitary Plan has designated the area specifically for this purpose. Key negative impacts are caused through:
i) The provision of the highest density residential zone (Apartment and Terraced Housing) right next to the lowest density residential zone (Large Lot). The contrast is huge in terms of visual impact, additional noise, foot and vehicular traffic.
ii) Just looking at the apartments, there are 420 apartments in a residential space of approximately 6 hectares. In contrast there are more than 80 houses in a residential space of approximately 70 hectares in Gracechurch Drive Inchinnam Road and Browns Lane. The difference in building density is massive.
iii) The apartments range from 1 to 4 bedrooms. Taking a conservative average of 4 people per apartment there is a village of more than 1600 people living in the same confined area. Allowing for a higher density of 5 residents per larger property (although this is doubtful as there are many retired residents and fewer families) this makes a total of approximately 350 people (less than ¼ of the

apartments) in more than 10 times the residential area. Like the building density, the population density difference is also massive.

b) The impacts of this intensification now being experienced by residents in Gracechurch Drive and Inchinnam Road are:
   i) Significantly increased traffic on Gracechurch drive. Auckland Transport should have a record of this. Gracechurch Drive is now being used not only by its nearby residents but also as an alternative route to avoid Stancombe Road congestion and to gain more direct access to Highbrook and its motorway access point.
   ii) There are two schools increasing the traffic at both ends of Gracechurch Drive.
   iii) There has been a significant increase in public use of both Point View and Gracechurch Reserves on Gracechurch Drive with increased traffic, dangerous road-side parking, increased foot traffic and no pedestrian crossing.
   iv) In turn this has reduced the safety of both motorists and pedestrians in Gracechurch Drive through not only much higher traffic density but also excessive speeding, dangerous overtaking and lack of streetlights. Many serious crashes have occurred in recent years.
   v) Police have recognised the problem and now employ occasional speed cameras and alcohol checkpoints on Gracechurch Drive.
   vi) The noise inevitably created by large numbers of people living nearby and travelling through the reserve is significant and frequently drifts over towards residents in the area including loud music.
   vii) Gracechurch Reserve has also become subject to gatherings of young people who illegally consume alcohol, listen to loud music and race unregistered and unnumbered motorcycles on the reserve. The resultant noise is very intrusive to residents. In addition there are no rubbish bins in this reserve with the result that quantities of rubbish including bottles, cans and thrown away takeaway food and containers are frequent, unsightly and dangerous occurrences.
   viii) The result of this intensification is that residents are no longer able to enjoy "Countryside Living" one of the core stated objectives of the Flat Bush Plan. The Plan recognised the need to preserve this experience for residents and catered for it by describing the (now) Large Lot Zone as a " "Countryside Transition" zone between rural and urban zones. Transition in this context should mean a gradual change from one zone to another so as not to intrude to any great degree to existing lifestyles enjoyed in each residential zone. This should mean that the zones between rural and urban should be gradually increased so as not to destroy an existing zone's lifestyle. In other words the zoning next to Large Lot ought to be a single house zone, followed by mixed housing suburban, followed by mixed housing urban followed by Apartment and Terraced Housing. In other words residential zones gradually increasing in intensity from lowest to highest. In this case the highest density zone is right next to the lowest density zone which is totally inconsistent with the "transitional" designation of the lowest density zone.
   ix) It should be noted that this is in marked contrast to a similar area in Point View Drive where at the southern end there is a gradual transition of properties from Large Lot Zone to Single House Zone to Mixed Housing Suburban Zone. There are no apartments anywhere near this area.
   x) This is how the Zone Planning ought to have occurred in the Gracechurch Drive Countryside Transition Zone but it was not. The need to preserve the Countryside living experience of Gracechurch Drive and surrounding area as required in the Unitary Plan seems to have been totally lost in the implementation of the Flat Bush Development Plan.

c) In effect, the Flat Bush Development Plan, adopted in the Unitary Plan has failed in one of its major stated objectives, to the significant detriment of the lifestyle experience of residents in Gracechurch Drive and Inchinnam Road.
d) It is not only the physical impacts described above local residents are experiencing. Current subdividing and building rules are depriving residents of the ability to develop their own properties. For example Large Lot owners require 10,000 sq. metres in order to subdivide once. And then can build on only a footprint of 400 sq. metres (only 8% of the land). In neighbouring Mixed Suburban Zone subdivision is possible into 400 sq. metre lots and in the Apartment Zone, 1200 sq. metres may be developed into 24 apartments on more than 80% of the land three stories high. Another example is Wyon Way where on no more than a hectare there are now 16 individual lots some of which have three story Terraced Style Housing.
e) This has led to a significant disparity in the respective value of land in the differing zones. For example the land at number 32 Carlos way of approximately 4,000 square metres now has a rating valuation of $4.65m while a similar sized lot in Gracechurch Drive has a land RV of $1.65m only 35% of the value of the adjacent zone.
f) This is not to say that such intensive developments are not justified. They are a core strategy and will continue to be a reality in Auckland. It is simply that they ought not to be right next to a Countryside Living Lifestyle area as they are totally inconsistent with each other.

8) Management of Environmental Issues.

a) Along with maintaining an appropriate Countryside living environment, the protection of the natural environment was given a high priority in the objectives and policies the Flat Bush Development Plan (refer I412.3.3 of the Unitary Plan. Briefly summarized they included:
   i) Requiring activities, buildings and structures to retain significant native vegetation and protect the ecological and landscape values of the area
   ii) Requiring riparian planting of native species within the conservation and storm water management area to maintain and enhance water quality and aquatic habitats and prevent stream bank erosion.
   iii) A specific issue environmental issue identified in these respects was the risks posed by the widespread use of septic tanks in the area.
b) Progress on environment issues since the plan's implementation:
   i) Many properties are now connected to Council Wastewater systems and remaining connections should be relatively easy to make available so there should be no need to use septic tanks into the future.
   ii) In the limited cases of subdivision since that time riparian planting has been required as part of the resource consent process in the relevant conservation and storm water management areas on private property. In addition, erosion during construction has been managed through special bunds and soil containment methods.
   iii) The majority of the native trees and plants in the Gracechurch Drive area are on Council land including Point View Reserve and Gracechurch Reserve and are managed by Council.
   iv) Private Storm water systems required as part of subdivision consent are very effective. They are based on storage and trickle into the environment via perforated drainage. This poses very effective erosion control and have a much lower impact on erosion than actual rainfall falling on the ground.
   v) While the area is not yet on mains water supply, the use of water storage tanks has a positive impact on erosion and the environment due to the fact they

capture significant rainfall which is utilized within households before the greywater being drained into the Council waste water system where it is currently available. This reduces the amount of actual rain which falls on the ground. This is not an insignificant contribution. A case study in point is 14 Gracechurch Drive. Water usage within the household and minor dwelling is 1000 litres per day or more than 360,000 litres per year. The tanks store 60,000 litres and surveys have established that it take 150mls of rain to fill completely from the roof. 360,000 litres therefore requires 900mls of rain to store which means almost 90% of the annual rainfall which falls onto the roof is captured and does not contribute in any way to ground erosion or drain into the Council's storm-water system which is already under pressure. In addition, it takes pressure off the City's scarce mains water supplies which have been a problem in recent years. Subdivision into smaller lots has the potential to increase these contributions.

vi) In contrast the biggest risk for soil erosion in the area is the ineffective street storm water runoff system described at the outset of this submission which causes frequent widespread flooding including eroding the roots of trees and causing the trees to fall. This is the most urgent environmental issue to address rather than continuing to restrict subdivision.

vii) It should also be noted that the 16 properties built in Wyon Way referred to in paragraph 7 (f) above and zoned for Apartments and Terraced Housing are built right next to one of the major exposed waterways flowing from Point View Reserve through properties in Gracechurch Drive and Inchinnam Road. The Council do not appear to have been concerned about the environmental impact and erosion potential of this high-density housing area which is right next to the Large Lot Zone properties and one of its main waterways.

9) Contribution of further subdivision to Government and Council Objectives for growth in residential properties in the area.

a) The original Flat Bush Plan recognised that the wider Flat Bush area was one of the last "Greenfields" areas within which to develop to house the rapid growth of Manukau City. The strategy was greater housing density and to go up rather than out where possible. This approach has now also been mandated by Government in its recent legislation requiring Councils to provide for higher density houses in most residential zones.

b) Restricting the Gracechurch Drive and Inchinnam Road and Browns Lane area to one house to 5,000 sq. metres has resulted in the construction of very large houses for one household with the possibility of a minor dwelling only of 65 Square metres. Otherwise there is a danger that the property will be undercapitalized. An example is 17 Gracechurch Drive where the house is 721 sq. metres over 3 levels. This is enough for 4 x 4-bedroom houses catering for 4 large families instead of 1 to 2. In addition, it defeats one of the purposes of the current restrictions of having minimally intrusive buildings to maintain the character and landscapes of the area. There are also other examples along Gracechurch drive.

10) Summary:

a) The most serious environmental risk to the waterways through erosion is the substandard road storm water system which needs an urgent upgrade.

b) The current aged and inefficient road storm water system in Gracechurch Drive is frequently overwhelmed in heavy rain causing flooding, dangerous road conditions and environmental damage to the surrounding area through erosion and tree roots being undermined causing trees to fall.

c) Such an upgrade coupled with completion of the partially implemented mains wastewater system, removes the environmental risk of further subdivision in the area. The need to upgrade the wastewater system was identified in 2003 planning documents yet nearly 20 years it is only partially implemented despite connections being available nearby.
d) Other policies and rules in place (e.g. riparian planting and building erosion control requirements) are capable of managing the environmental risks of further subdivision to 1000 sq. metre lots in Gracechurch Drive Inchinnam Road and Browns Lane.
e) The impacts from the high level of housing permitted in areas neighbouring on Gracechurch Drive and Inchinnam Road have effectively destroyed the 'Countryside Lifestyle' living previously enjoyed by residents. This impact is permanent and cannot now be reversed. This is highly unfair and inequitable for residents who moved here and invested their money for a 'Countryside Lifestyle' which is no longer able to be enjoyed
f) Such further subdivision will provide significant benefits including:
    i) Providing the funding to upgrade the current storm water system, create proper footpaths and street lighting thereby improving resident and commuters and pedestrians' safety on the road.
    ii) Contribute to Government and Council goals to provide additional housing in Auckland.
    iii) Enable residents to further develop their properties providing resources to move to an area of genuine Countryside living.

11) Next Steps.

a) We are looking for a commitment from Council to fix these issues raised in this paper and request a timeline when we can expect them to be completed. Of particular urgency is the upgrade of the services requested to be made available to us especially fixing the storm water system and extending mains wastewater connections to all properties.
b) There is a process already established by Council for the implementation of Government Legislation providing for higher density housing to most residential zones in Auckland. The new provisions must be implemented by August 2022. While the legislation does not include the Large Lot Zone in its mandatory requirements, given the evidence cited above, we are requesting Council to consider the question of higher housing density in the Gracechurch Drive, Inchinnam Road and Browns Lane Large Lot Zone now long with the other intensification issues. Not to do so would inevitably make a bad situation for us now much worse with increasing intensification around us.
c) The process and the people established for implementing the legislation would be the ideal framework for this work although it is recognised that the timeframe to complete this for the Large Lot Zone may extend beyond August 2022.
We would like agreement from the Council to incorporate this higher density housing for Gracechurch Drive and Inchinnam Rd.

12) Consultation.

a) To date 14 households have responded to these issues. The only concern expressed by one household has been the potential for rates to rise for existing properties if further subdivision was permitted. Other feedback has been very supportive of this submission.
b) Many of the properties are tenanted with owners living in other areas and further efforts are being made to contact a wider group for feedback.

Thank you for time and consideration.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why
see attached

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why
see attached

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

see attached. Draft FDS has it wrong for Takanini north

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

only in so far as where you have the hazards correctly identified. The Draft FDS shows you have not gotten this correct for Takanini North FUA.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

see attached

#8088

Submission to Auckland Council on the Draft Future Development Strategy (FDS)

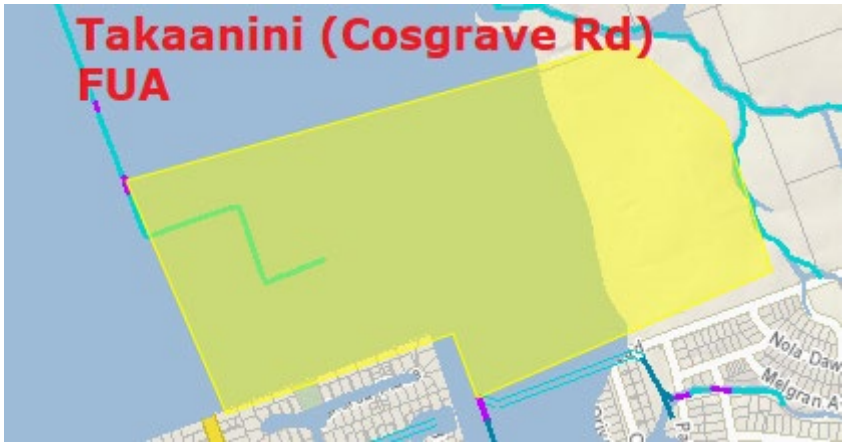

Submission

1. The proposed removal of a large portion of the Takaanini FUA, even for areas not exposed to any hazard risk is unfair and unjust to landowners who have purchased based on future urban zone (FUZ) and which Council have levied rates based on future urban zone. Council has happily collected elevated rates paid by landowners in FUZ to subsidise operational costs within other parts of Auckland.
2. The Draft FDS and FUA Evidence report for Takaanini has incorrectly identified the Northern part of Takaanini FUA as being exposed to hazard risk. Only the area south of the Papakura stream and the land immediate adjacent north of the Papakura stream is subject to the hazard risk. All properties to the north of Alfriston Rd do not have any hazard risk.

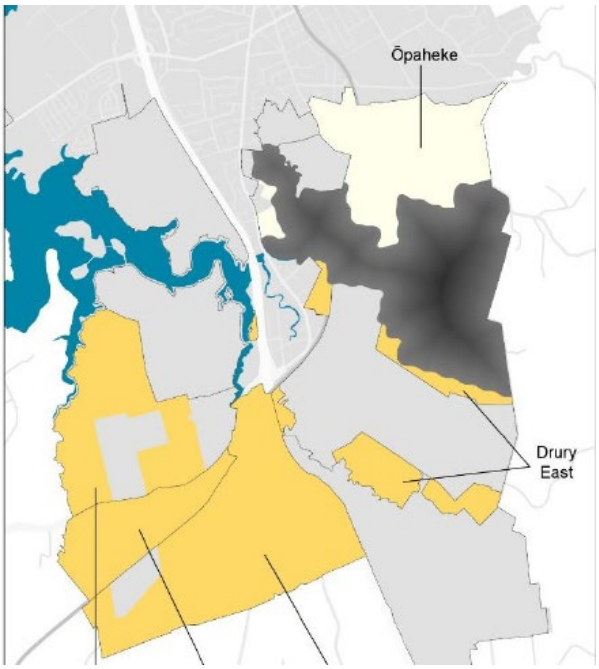

3. The Draft FDS's proposal to remove the whole of Takaanini FUZ is inconsistent with Auckland Council's own approach being proposed for other FUAs. Examples of these inconsistencies being applied to other Southern FUAs :
   a) Draft FDS proposed Takaanini (Cosgrave Rd) FUA is retained, even though the Takaanini flood plain covers 70% of this FUA

#8088

b) Opakehe FUA – Draft FDS proposed removal only covers part the FUA which is under the hazard risk - the Slippery Creek portion of the FUA only. The other parts of the Opaheke FUA not within the flood plain is retained as FUA.

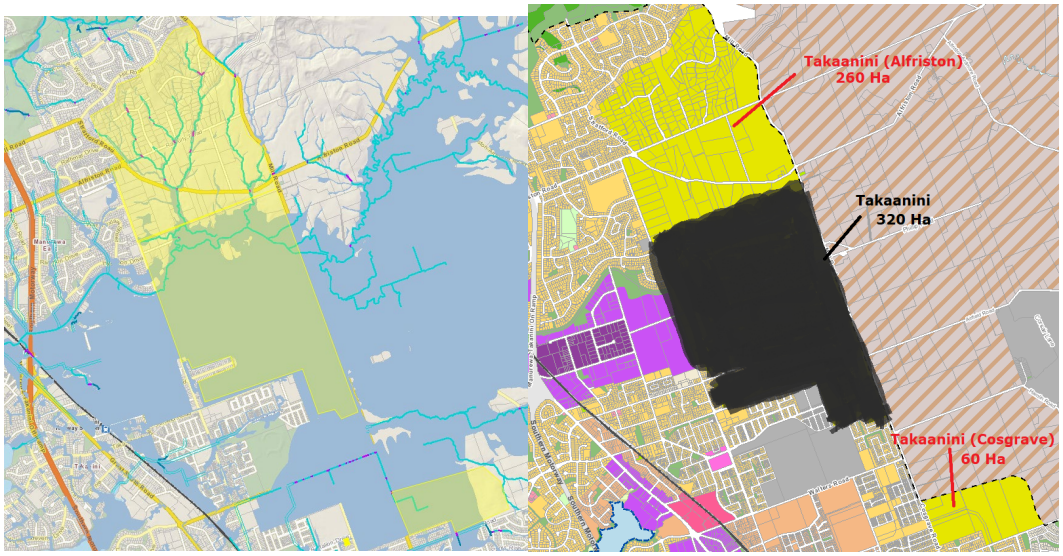

Ōpaheke *(previously named as Ōpaheke -Drury)*	Future Urban zoned	2028-2032	2050+	Timing delay Recommend removal of Slippery Creek portion of FUA

4. The removal of FUA for the part of the Takaanini is unjustified and causes destruction of land values unnecessarily without achieving any benefits or alignment to the principles set out in the Draft FDS
5. FUA Evidence Report – Council recognises that this FUA will lead to lower emissions and KVT when compared to other FUAs given its close proximity to Manukau and Flat Bush where there is an abundance of public transport, business, education and social services. This aligns well with the climate change and emissions reduction principles as outline in the Draft FDS.

Proposed Changes

6. Rather than have a unnecessary heavy handed approach to remove the FUA for the whole of Takaanini, Council should adopt a smarter, more nuance approach to Takaanini FUA by splitting off the area just north of the Papakura Stream which is not within any hazard risk, and reinstate this as Takaanini (Alfriston) FUA

Sub-region FUA cluster	Future urban areas	Status in 2023	FULSS 2017 timing	FDS New timing	FDS approach
South					
Takaanini	*Takaanini (Walters Rd)*	*Live zoned*	*2012-2017*	*N/A*	*Infrastructure review*
	Takaanini (Cosgrave Rd)	Future Urban zoned	2023-2027	2050+	Timing delay
	Takaanini (Alfriston)	Future Urban zoned	2043-2047		No change
	Takaanini	Future Urban zoned	2043-2047	N/A	Recommend removal of Takaanini FUA

a. Rectifies inconsistencies and oversight in the Draft FDS to by reinstating Takaanini (Alfriston) as FUA. This will be in alignment with the approach taken to other FUAs and aligns to principles set out in Draft FDS.

b. Does not destroy land owners' value without valid justification

c. The FULSS 2017 timeline of 2043-2047 is still over 20-25 years away and thus will not impact any of Auckland Council's infrastructure spend nor priority in the 10 year budget

d. Safeguard options for the future and allow pivoting to green fields development without undue cost and process to initiate Council-Led Plan Changes to unzone & rezone this FUA (e.g. change in central govt policy direction, mitigate unaffordable housing, reinstatement of Mill Rd extension project)

Takanini future urban removal ?

Why ? There are huge amount of land not in flood zone. See attachments.

If you remove flooding zone, we can understand. But remove the whole Takanini area. It’s unreasonable!!!

Please review it

Nature-based and mauri enhancing are mentioned above, I would hope to see this incorporated in all homes that are built, not only in communal areas - green walls and other nature-based and mauri enhancing design have been used in some vertical developments here and overseas, but for intensive living to be enjoyable, this does need to be ubiquitous (ie. not just high end developments). Large trees should be incorporated as much as possible into landscaping - I note the difference this makes to developments, for example the development off Marengo Parkway in Takanini, where trees line the roads.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8191

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Please refer to the attached document. I consider a balanced approach to growth to be a more appropriate approach.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Whilst in theory this is a good approach, the growth scenario models used by Council are inaccurate and flawed. Please refer to the attached document.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Whilst in theory this is a good idea, it fails to recognise that there are engineering solutions to some of these issues and a blanket approach to these issues is not the most appropriate approach. The recent 2023 flooding events did not impact new developments to the extent that it did to established areas, which demonstrates that the current approach is working. Please refer to the attached document.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Please refer to the attached document.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

A balance approach to growth is required, with both greenfield development and infill development. The models that Council is relying on in the Draft FDS are inaccurate and flawed. I request that the Draft FDS is withdrawn and is paused until accurate scenario modelling has been undertaken and more consultation has been carried out with the community.

#8191

SUBMISSION BY [redacted] ON THE DRAFT AUCKLAND FUTURE DEVELOPMENT STRATEGY

1. This submission is made to Auckland Council on the draft Future Development Strategy ("Draft FDS").

2. I am a resident of Auckland and have an interest in where, how and when development occurs. I also work in the development/property industry and have particular concerns with what the FDS is proposing. I do not support the draft FDS in its current form and consider the key areas of concern to be:

   (a) The draft FDS does not provide the area of land required in suitable locations and at the right timing for release of land.

   (b) The draft FDS fails to take adequate account of the diverse needs for both residential and business land. Providing sufficient development ready land is essential to provide for housing to meet the social and accommodation needs of the Auckland community. It is equally important to supply sufficient land to enable business to meet the service needs of the Auckland community, employment opportunities, and to stimulate economic development.

   (c) While the draft FDS acknowledges the need for housing land in future urban areas, the reality is the draft FDS significantly slows down the release of residential land in these areas. This constrains the supply of housing and diminishes the ability to meet the social needs of the community.

   (d) The draft FDS significantly slows down the release of employment land in the north, north-west and south. This constrains economic opportunity, employment potential and compounds the need for people to travel extended distances to work.

   (e) This land constraint will inevitably have a negative impact on affordability of land for both housing and business, which will drive up the cost to me.

   (f) The draft FDS inappropriately relies solely on urban consolidation to provide all new business and residential land through until 2030/2035. There is a need for greenfield residential land to provide housing in the north, northwest, east and south. The provision of greenfield industrial zoning in these areas will also better provide for employment in close proximity to residential development located on the periphery of the metropolitan area. The existing urban area provides limited new additional growth opportunity for industrial land.

   (g) The draft FDS is wrongly based on a premise that it is more cost effective to develop brownfields than greenfield. The efficiencies of medium and large-scale greenfield development give a more cost-effective way to deliver housing than an equivalent yield in a brownfield situation. This relates to the cost of retrofitting at scale an existing urban area.

3. If approved, the draft FDS will have major unintended consequences. It will stifle economic development and reduce housing choice and affordability.

4. Accordingly, **I ask** that the draft FDS is withdrawn and is postponed until meaningful consultation has been undertaken with the community and there is a better understanding of capacity in the existing urban area and the land supply needs of Auckland.

Yours faithfully,

[redacted]

Develop a train line between howick and the city

Future Development Plan 2023 #8277

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Apartment development in city area is a better option but not terrace housing as rubbish collection create blockage along the walk path. Terrace housing should be allowed in low income area where affordability is a prime factor. Sewerage and storm water upgrade should go hand-in-hand as recent flooding showed the lack of coordination while above ground go rapid development, but underground being overlooked.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Majority of the New Zealand workforce are sole traders e.g. builders, electricians, plumbers, truckies, couriers, filers, carpet layers, and the list goes on. Every day, they travel around the city to carry out their work, you're planning is ideal, but not practical and achieve little. Please check the workforce statistic as it does not match our planning requirement, I only can say naïve.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

New development plans always came with approval in all aspect of required compliances, so what is the problem? But intensify existing area without upgrading existing sewerage and storm water system, you are creating more flooding in Auckland area. Both development should go hand-in-hand like before as upgrading the underground system need a long-term planning and financial support.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Climate change bring more heavier rain than before. Flooding partly due to man-made factor. Intensify development is good but did you asked yourself you had planned the above ground development and had coordinated properly for the underground discharge as well?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Both Greenfield and existing development should go hand in hand. City traffic jam will continue as long as high-rise apartments continue to grow. As a city, we accept it as normal. So don’t blame others to jam up the city roads. While thousands live in the city, in an out, the other people need to go to work and coming home into the city. How many people live in the CBD now, the council know better than anybody. Lower down speed limit is an inefficient way to improve productivity. The area I lived had road resurfaced every year even has no potholes, while other area had road not been resurface for many years and is in bad condition?!!

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Just retired. Rates + coastal living going up?? can i afford to live in urban centers all. everyone should have access to transport etc. human right. I may have to move to outer areas to survive. Transport without a car is necessary.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Elderly are increasing in age. Baby boomers lots of us. No transport- electric cars too expensive. Need to be close to all amenities. Walking is ideal fitness. All suburbs should have all amenities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

looking at what is happening in the present needs to be addressed urgently. Looking in our backyard we need to have new housing. example. Gaoges standards. floors have no increase in height to stop water running down drive. Where are the channels and grills to stop water of driveways going straight into homes. Could become an insurance problem why are council too slow to sort out cheap housing developers from overseas corrupting our standards ie. removing items after checks been done. No Standards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Treaty of Waitangi States we should all be equal- no segregation. ? Mauri enhancing should be secondary to prioritizing funds to nature based infrastructure. We are multi cultural- all need to be respected.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Transport: There are going to be areas where there is a small need. Outer in inner suburbs. Large expensive buses have been bought. Covid came ? 50% work from home. Start prioritizing on smaller scale vans to pick up 1-10 people. Do not need bus drivers license but can have these driven by responsible people licenses regulated at certain times when demand low covers outer suburbs. start using funds wisely. Money is root of all evil. Everyone needs equal service PTO. Retired people on low income - housing should be respectful of older age pensioners - look at housing similar to what has been created by salvation army - small communal areas stops poverty in all suburbs.

Future Development Plan 2023 #8461

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Much of the growth should start to shift to suburban areas as most urban areas are already saturated. To further Auckland's development, it is crucial to expand into different areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Might be important to expand to more areas of Auckland to increase growth and development.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

It is important to ensure hazardous areas are in check, however, the development of the locations should not be restricted solely due to this premise. The solution should not be restriction but control.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

It is important to have secure and safe infrastructure that responds to climate change as well as for people to be working/living in.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8488

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Focusing on improving the urban areas with the most population would prove to be beneficial because it would impact and develop the majority of people's lives.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

I think instead of focusing on development on local centres, we should focus on the public transport taking us to these local areas as they need a lot of proper, focused improvement.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This would be beneficial in the long run, preventing further emergencies and hazards for people in less developed areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Good idea.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

I believe that the advantages and disadvantages are equal.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It becomes more easily accessible.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
It stops major hazards that could affect a lot of people for a long time.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
It further betters the world and helps to prevent from climate change consequences.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8490

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

While I agree with this that our suburbs should all be developed, I don't think that we need constant growth in already urban areas. Auckland is already crowded and urban areas already have a growing population and congested.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This is important as this allows for less pressure and congestion. More climate-friendly too.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I agree with this especially as effects of climate change are more prevalent.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I agree that this is important but a lot of there ties in with number 3.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8491

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I don't really think we have the infrastructure to support growth in urban areas. Thinking of Auckland City for example it can become quite congested so more growth in this area will lead to more congestion without proper infrastructure. However I don't think urban sprawl is a good idea because it can be hard for emergency services to respond.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Better for the enviroment.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think the radial approach of Auckland suburbs is appropriate, as transport networks developed in these regions are positive in accessing the CBD.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I think that reinforcing existing suburbs and access to services is great, but development has to occur in new developments and housing to form communities and prevent urban sprawl.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Definitely needed given previous events, particularly reinforcing existing and creating new drainage systems in future development planning.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Particularly in highly built areas with little natural drainage, this is essential to adapt and respond to changing climate conditions.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8500

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Good to have everything in one place, while preserving greenfields for longer.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Definitely easier for everyone.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Acting on these issues are important.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
This is more sustainable and far more effective.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8504

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Especially after suffering the consequences of recent floods/extreme weather.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why
Should not be priority.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8506

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It sounds like thought has been put into both the people in Auckland and the environment.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Makes it easier to access different areas, focusing on areas that are busy in the long term helps others access things better such as employment.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is good that these hazards are made aware to stop further danger which could lead to other hazards such as a house falling off a cliff due to erosion could cause blockage at the bottom of the slip on a road.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I think it is good using nature to help the world combat some of the negative effects of climate change.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8508

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Urban areas are becoming overpopulated and there is not enough infrastructure to support water usage etc with overpopulation.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It makes living more accessible and reduces carbon emissions.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is important to address the impacts and upcoming effects of climate change before people lives and property are lost.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

it is good because it will reduce the effects of extreme weather events on local communities.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8509

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

More compact cities may be able to help improvements in public transport systems. So environmentally any technology this could benefit but it could also improve peoples sense of community socially due to proximity. This could also lower transport have and therefore harmful environmental effects potentially.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I believe that this would benefit the people living in these areas and would be a lot more convenient.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I believe all development locations should be elevated to see the impacts of such actions.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

The environment is something we must invest into as it is our future.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think public transport is a system that has room to develop. The youth are key for future development plans as it's there future so increasing the feedback for young people will allow informed decisions to be made.

Future Development Plan 2023 #8510

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Neutral- has its positives and negatives. Perhaps a bit too much Ormiston and Botany town centers being so close to each other is almost redundant, for example, not many people choose to go to Ormiston. Some urban area growth needs better public transport to go along with it.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Definitely useful and convenient to get around etc. However areas like Pakuranga need relivening.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

I am too uninformed to make a judgement.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Good- but maybe more improvements need to be made in terms of efficiency. Some infrastructure projects taking way too long. Perhaps

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Public Transport. Efficiency of expansion. Traffic (redundancy of bus/bike lanes because NO ONE IS EVER ON THEM WHILE MAIN ROAD TRAFFIC IS AT STANDSTILL. Either add more buses to use them, cancel less busses or make them public access lanes.

Future Development Plan 2023 #8511

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Prioritising this will be beneficial in the long run to the environment, as well as also potentially creating more of these spaces in urban areas.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8513

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I agree because urban areas typically tend to have higher population densities that require more work to maintain, which ensures that these areas are still functional.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Local centres, like Botany, are very convenient when it comes to living because it enables a much easier lifestyle, therefore we don't need to drive every time we need something, which is why development is quite important.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

I think it would be good to ensure that areas that are at more risk, that people still live in, are more safe against risks and have policies in place to bounce back a lot faster, so people's lives aren't too impacted.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I think it is good because it allows us to better adapt to a changing climate, however, addressing the problem at its root is also equally important by taking steps to prevent the climate from changing even more.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8514

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Tell us why

Protecting green life is needed to expect a better outcome in the future.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8520

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

On this approach I am more 50/50 split. I feel like this approach is a good idea to help with climate change, and improving travel times. I also think this helps us to maintain the countryside aswell. However, I think building up takes away the community feel of an area and means many cars are clogging up the roads.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I agree with this because it limits the travel time and makes my day easier. Also, helps with climate change.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

So many families have been heavily affected by the floods, so I think we should do whatever we can to prevent this from happening again.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I think climate change is bad and fast approaching, so we should try to stop this.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8522

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think our approach to focus on Auckland's growth in existing urban areas is good as long as we appropriately and quickly develop our infrastructure, most especially public transport to cope with this development. However, this is currently not happening.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I think this is a good idea because I believe everyone should have easy access to public services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It will be more expensive in the long run if we don't.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We need to prepare for public transport.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Infrastructure, especially public transport needs significant improvement.

Future Development Plan 2023 #8523

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Strengthening our infrastructure seems like a reasonable priority as of right now.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Less fuel & travel costs will help NZers recover from inflation & Covid-19

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This is especially important after recent flooding and natural events. Although, budgeting for this should probably be limited at the wider level.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

This is important, however, considering that this is a less frequent problem for Auckland perhaps focus should be on other aspects of infrastructure that inhibits accessibility at greater frequency.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

This is a specific issue but the bus routes to Macleans such as 712 are highly congested during before and after school hours so perhaps larger buses can be allocated here or increased frequency during this time period. The 420 school bus doesn't take students from Macleans home either. Other school buses also struggle to fit students.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Auckland should retire the existing large public buses in each district and replace them with medium-sized buses. Bus routes in each district should be more conveniently connecting people to the major bus stations.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The roadside is too congested, with cars parked on both sides of the road. If disasters happen, fire trucks will not be able to come in to put out the fire. Moreover, it is very dangerous for residents to enter and leave their homes. You can imagine that there were originally 30 families on a street. But then the street have to bear 120- 150 new families, one family has two or three cars. There will be no extra space on the roadside that can accommodate 300 cars, causing problems for each family to fight for parking space after returning home from work. I personally agree development outside the city areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

In the short term, you may only invest in the city center, but for the long-term, development of a city needs to expand to the outter region. The government must build new railways or new bus lanes as soon as possible to cope with Auckland's future development. The government must have a long-term vision, instead of only seeing a short period of 10-20 years. The sooner the new construction is done, the lower the cost, and the later the cost will be higher. We must learn more from the city of Brisbane. The government must have an asperation for development. Then common people and large developers will follow in the footsteps of the the Council. Only then will this city have vitality and a future, And all residents will have confidence in the Council.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

Auckland CBD is in the middle. There are railways to the city center from west and south Auckland, but the residents in the North Shore can only drive private cars via the Harbour Bridge. There are huge traffic jams every day. I strongly recommend the Auckland City Council to learn from Sydney's Harbour Bridge, which has trains on both sides of the bridge back and forth to help transport the residents in North Shore into the downtown area.

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

East Auckland

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The roads connecting East Auckland to other areas should be upgraded and expanded. You should not just construct the roads in the north and west Aucklank.

Future Development Plan 2023 #8680

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

This will cause over-dense population, more congested traffic and higher house prices.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Under the current Council Unitary Plan, the existing urban housing and population density have been increasing day by day. The traffic in the downtown area and surrounding areas has been congested already. For example, parking has become a huge problem. It is difficult for public facilities and infrastructure to develop on these areas according to the new strategy. It should be carried out in the surrounding areas. The planning function of the Council must be strengthened, and the planning must be forward-looking. At the same time, the Council/Government and developers can work together to develop a new district with sufficient public facilities in the new regional areas and solving the funding problem.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We should release more land

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

We should use more future urber zone to build new house

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Takaanini and Drury are very good location, They should not remove from future urber zone, Also the landlord spend big money to purchase as its zoned future urber zone by council, it will make them very big lost

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #10077

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Prioritise development of areas in the future planning.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The business in the central areas cannot meet the development needs.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Prioritise development in risk-free areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Now the increasing number of housing development has created greater traffic jams. There are more tenants on same roads. I've had enough of Auckland's traffic jams.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

There is no guarantee that you will find a job near your home. Unless the strating place and destination are very close to a bus stop. Otherwise, to be honest, Auckland public transport is currently inconvenient and much less reliable (frequent service cancellations, especially during morning commuting hours).

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Of course we need to assess whether the environmental risks are accidental or frequent.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

But please keep your budget in check. My feeling is that no government project can be done within its budget.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The Council should have long-term urban planning. However, so far, I really haven't seen the Council's long-term planning for housing and urban development. Hope our Auckland is getting better and better.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #10214

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

It will make the existing urban area more congested. Traffic and parking will be even more difficult. Housing prices in the current urban areas will be higher, making it unaffordable for buyers.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Housing density in urban centers increases. Transportation is inconvenient. People's quality of life declines.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Reducing risks and benefiting the country and the people.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Benefit the country and its people

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The centre of Auckland is already very crowded. It should be developed towards the southeast areas. The terrain here is flat. The development cost is low. And it is close to the airport.

Future Development Plan 2023 #10239

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #10264

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There are enough land in existing city area to build houses for all people. Just the developers want to build very cheap houses in far areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Don't need to invest more for news community centers far far away.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Farm areas mostly have such hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Improve current facilities are better than build new facilities.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Eastern auckland including Howick district must be improved in transportation in the coming 10 years. Thus it’ll greatly release more lands to build in this area.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We obviously don't have enough funds. Therefore, it's better to focus money on developing the places with the largest population to meet the needs of most people.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Reduce the time that people could waste in traffic

Avoiding hazards
