

Making downtown streets work better for you

We are looking at how streets and intersections can be better organised, so buses, general traffic, deliveries and people can move through more smoothly and easily.

Simpler and clearer intersections

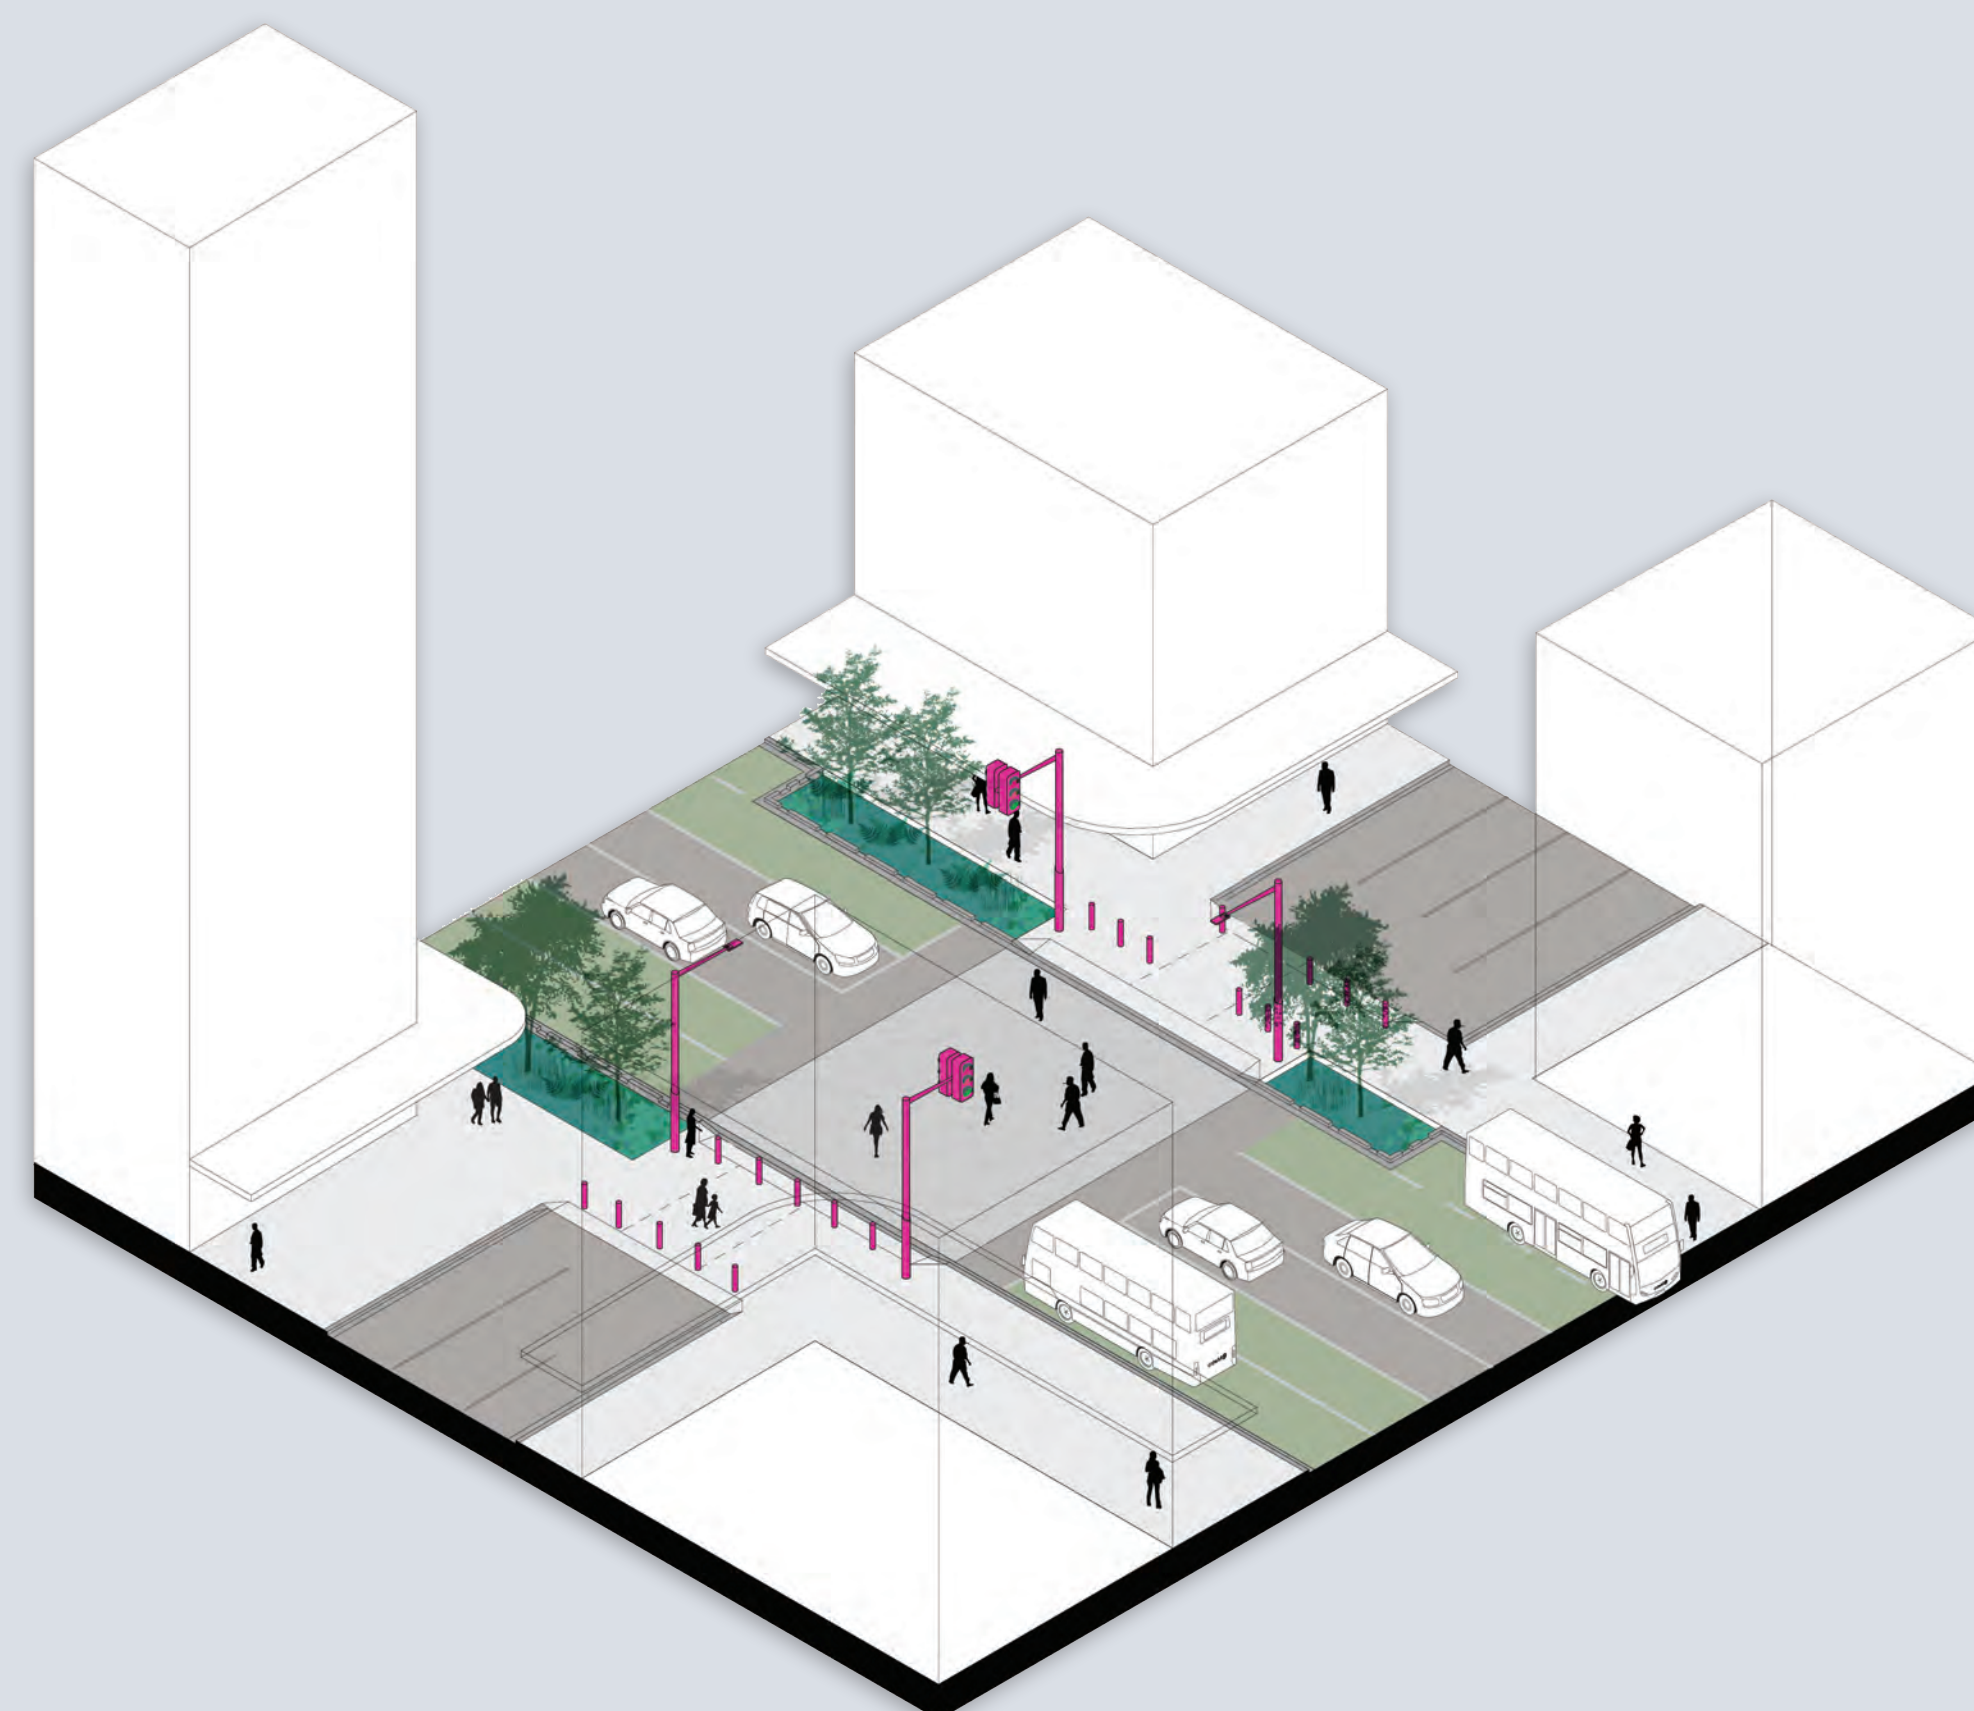

Fewer turning movements along a street improves traffic flow because it isn't held up by turning vehicles.

Redesigned pedestrian crossings

Streets can be made easier and safer to cross by reducing the distance people need to walk across the road. This also helps traffic move more smoothly because drivers will wait less time for people to cross.

Better organised footpaths

Wider footpaths, well-placed planting and street furniture will make walking easier, safer and more enjoyable.

One-way becomes two-way

To improve access and circulation we are planning to change some one-way streets to two-way:

- Sturdee Street
- Fanshawe Street between Albert Street and Hobson Street
