Future Development Strategy

Whau Local Board

WRITTEN FEEDBACK

Date published: **Friday, 10 August 2023**

Future Development Plan 2023 #3

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Makes it easier to Improve public transport within our existing boundaries rather than trying to stretch it into greenfields areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Because RESILIENT and RELIABLE alternative transport methods should be the priority for development

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Because it's common sense to assess if development will result in damage or harm over the next 30 years……

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Would love to understand what decentralisation looks like in this context. But the goal is good for the future.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #35

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Increasing density protects crop land, allows for better public transport and therefore less traffic

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Giving people the ability to access most necessities by any mode will help get people active and spend less time in traffic

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Avoiding development in flood zones is an obvious way to prevent stress and economic losses and preserve vital natural environments

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

The more green space, the better the drainage and it also makes for a much more liveable city. The Oakley creek restoration is a good standard

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

More green space (trees especially), build up not out, improve public transport. Simple as

Future Development Plan 2023 #98

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

By growing into greenfield areas, traffic will increase substantially unless good public transport is added which can be quite expensive. So intensifying the existing urban area is better because of the existing public transport.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Not having to sit in traffic is a big plus.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Probably makes it cheaper as the council does not have to pay for yellow and red stickered homes when there are non.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

You said it yourself in your intro - 'Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.' Continuing to sprawl is what led to so many of Auckland's current problems with transport and infrastructure.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

For the reasons outlined in your intro. Accessible local centres help foster a sense of community

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Future Development Plan 2023 #156

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There are so many benefits to densification. Public transport becomes much more cost effective to run, which should lead to better services. More money can be spent on maintaining infrastructure where the most people can use it vs providing new infrastructure on the fringes, and people spend less time in cars between destinations.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Development should be cancelled in areas at risk of environmental hazards - the alternative is that the inevitable losses when events occur are socialised - it's ridiculous that I should have to contribute to paying out somone who built a house on a flood plain.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #159

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Close to public transport, walking distances to amenities such as supermarkets, shopping, dining, art & leisure. Less time spent on public transport or driving. Grey Lynn is an amazing area for redevelopment, it sits in the middle of everything. Not everyone wants to live outside the city. A lot of us like living close to the city [not in shoebox apartments we can't afford].

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

If I could afford to, I would live close to the city where I work, where my gym is and all the things I need in close proximity. My family lives in blockhouse bay which they love because its close to the

schools, the supermarket, the mall, the beach and both motorways. Housing developments near local centres is a great idea. The first one should be in the CBD, Grey Lynn, New Lynn, Mount Eden, Remuera. At the same time please consider bus only lanes.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Please don't build in flood prone zones, we've seen the effects of rain on these areas and it is devastating.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Add more drains please and be good to the environment. In the words of David Attenborough, the world will renew and nature will come back but humans will not.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think it is an amazing idea to build near urban centres like Auckland cbd but also create community hubs near local centres. At the same time please provide housing to beneficiaries and senior citizens within the area as well. Also improve public transport especially in Ranui, where there are multiple housing developments but there isn't a bus that takes you straight to the city or the train that breaks down alot. No one likes rail buses.

Future Development Plan 2023 #160

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Focus development more in areas with good rapid transit links such as near train stations.

Future Development Plan 2023 #179

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There's been numerous studies of how suburban sprawl has failed in other cities. It has terrible impact on the economy, the environment and the wellbeing of the population.
I recently watched videos on strong towns, a video essay regarding financially solvent growth of cities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This is amazing in terms of accessibility and removing barriers for the socially and economically disadvantaged.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

On one hand I think it's important, but further regulation on what and where things can be built may create barriers to creating walkable cities.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Creating low impact infrastructure is important, but creating high density mixed use neighbourhood will also help reduce the spread of infrastructure cost and impacts in a smaller footprint

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Build more bike lanes, and invest in public transport. The only solution to traffic is providing viable alternatives to driving.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #299

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

While this approach is good, I believe it can be done better.

Auckland needs far more mixed used developments, not just at exiting local centres. Combining medium density housing in combination with commercial, educational, recreational activities within walking distance of peoples homes should be the standard approach for most of the city. Over time, this will reduce the need for lengthy tidal commutes to the city and town centres

(which by its very nature promotes car use in Auckland) and will create communities where travel can be fast, sustainable and enjoyable - without reliance on private vehicle ownership.
In essence - council should seek to rezone significant parts of the city to enable mixed-use activities so that businesses and housing can thrive together.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Focussing most of Auckland's growth in our existing urban centres is the commonsense approach, supported by evidence nationally and internationally.
Our concern is when increased urban residential development is not accompanied by increased investment in public amenity and infrastructure. For longterm community wellbeing outcomes to be met, Auckland Council and your CCOs must commit to providing high quality, accessible, community centres, libraries, civic/town squares etc, green spaces, playgrounds and more.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Again, this is a commonsense approach and should be pursued. And again, our concern is that communities need more than easy access to workplaces, services, facilities and shops. We need easy access to free, vibrant community centres, libraries, civic/town squares etc, green spaces, playgrounds and more. This community-focused amenity and infrastructure needs to reflect unique local cultures and aspirations.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It would be irresponsible not to proceed with this approach. As the flooding and cyclone events of early 2023 have shown us; the cost to communities and businesses of growth in hazardous areas is huge. As well as halting growth in hazardous areas in the future, we need the Auckland Council family to enact duty of care for the communities that are already in hazardous areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We would absolutely support nature-based, regenerative and mauri-enhancing. I'm not sure how your approach can be decentralised. If that means you will devolve funding and other resourcing to communities, there needs to be appropriate support and guidance.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

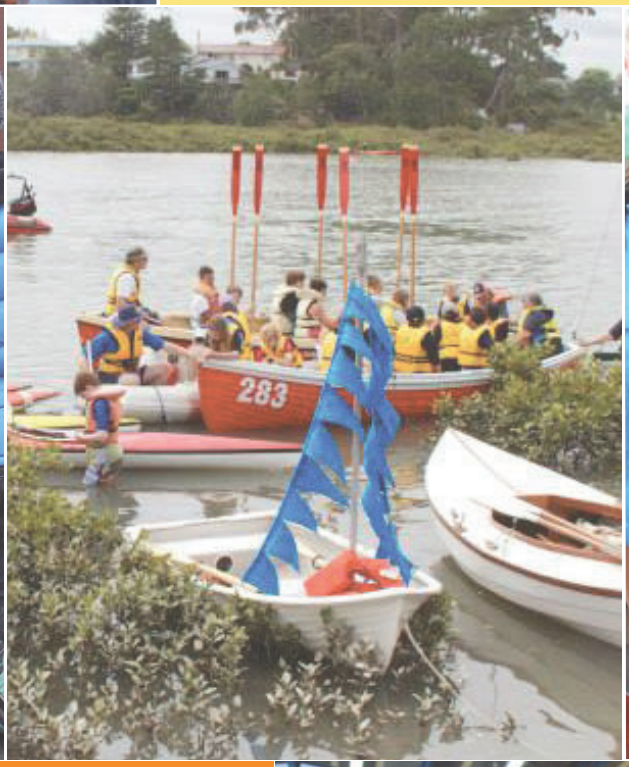

In Avondale, there is already a lot of public and private housing development. We support these residential developments, and hope that they will increase the existing cultural flair and diversity of our community. However, Avondale's public/community infrastructure has been under-invested in for a number of decades - under Auckland City and Auckland Council. It is hard to trust that Auckland Council and your CCOs will commit to providing the community centres, youth hubs, libraries, green spaces/parks and playgrounds, roading, pavements that are necessary for our growth and change to be equitable. Our existing social and economic disparities in Avondale could be exacerbated by more residential developments IF there isn't the appropriate - and urgent - levels of investment in core areas of community infrastructure and amenity.

Introduction

Our Future Avondale vision is a living document, and the ideas and aspirations are not fixed, but provide a start for ongoing discussion and collaboration.

This document has been produced with members of the Avondale Community to help them form a community-led vision for the future of Avondale.

Avondale is a town-centre and suburb where significant change and development is anticipated over next 5 – 15 years. This will include many more apartments and terraced houses, a new community centre, and upgrade works in the town centre. Redevelopment of several large sites is anticipated, including land owned by Housing New Zealand and Panuku Development Auckland, Auckland Council's urban development agency. Auckland Council related projects will include future community consultation, specific to each project, when work is underway.

The purpose of this vision document is to provide the communities of Avondale with a clear voice on what is currently important to them for the future of Avondale; and to help designers and decision makers to better understand community aspirations when new development is being planned. It is not intended to be a technical planning document, and priority has been given to reflecting the community's voices, and shared values that can be applied in a variety of ways to both public and private development projects.

The vision also provides the opportunity for new community-led initiatives to be identified, and existing organisations to know that they have support and interest from the wider community.

The workshop process and research also highlighted the important relationship between the Rosebank Peninsula and Avondale both in the past and in the present day due to the geography, connecting routes, residential and business areas, schools, sports and recreational facilities and this should be reflected in future development, projects and planning.

In the community workshops (August 2018) participants were asked: *When you think of an ideal future Avondale, what are the one or two words that come to mind?* These are recorded in the 'wordle' and the most popular words are largest. The most common words were **diversity, green spaces, safety** and **affordable.**

How was the vision produced?

This draft vision document was facilitated by Motu Design, through analysing and summarising the comments and ideas provided by people who attended the Avondale community workshop events. Three community workshops were held in August/September 2018. Although participants at the workshops came from diverse backgrounds there was less representation from the youth, migrant and Chinese populations of our Avondale area although efforts were made to reach out to these groups. Project limitations meant no specific child focussed sessions were held.

The initial draft document was then reviewed against a summary and analysis of 459 comments shared by people made on the I Love Avondale and Avondale Community Action Facebook pages between July and September included as Attachment A.
Additional comments received from a library display and via email, were also considered.

The draft vision document has been provided for further consultation with the Avondale community including at two public events before finalising. Key feedback resulting in additional changes to the final document included the use and interpretation of the term mana; the importance of trust to ensure a sense of belonging and social connectedness; the need to acknowledge the impact of the CLR link and Whau Low Carbon Plan along with the upcoming zero carbon legislation.

The project was enabled by the Whau Local Board, supported by the Community Empowerment team at Auckland Council and facilitated by Motu Design Ltd as an independent community project and not part of a statutory consultation process. Additional support to finalise, share and print the document was provided by Avondale Community Action. The project was also discussed and shared with Te Kawerau ā Maki and Ngāti Whātua o Ōrākei.

Community Working Group and Supporters
A community working group made up of a range of people who live and work in the Avondale community provided support for the workshops. This included providing advice on the workshop process, a review of the draft vision themes, and assistance with advertising, communications, workshop set up and hosting.

Workshop process

The workshops were held in August and September 2018. Around 200 people attended the community workshops that were hosted by individuals from Avondale Community Action, The Walking Samoans (Whau Area), Avondale Business Association, Avondale Collaboration Group and Avondale Union Parish.

Workshop discussions were based on six draft vision themes. These themes were identified by Motu Design through a review of what various community organisations had already recorded as being important to the people of Avondale. Attachment B includes information on the purpose of the workshops, the draft vision themes, and how they were sourced. Attachment C includes additional context maps and Unitary Plan information about the Avondale area.

The workshops provided an opportunity for a diverse range of people to discuss the draft vision themes within small groups. For each theme, people at the workshops were asked to share what would be important to them in the future of Avondale. Their hopes, dreams and aspirations were recorded on 'post it notes'. They also had the chance to discuss and share ideas about how these aspirations could be shared.

Some changes have been made to the vision themes to better reflect the comments received in the workshops before including them in this vision document.
A record for all the comments received in the workshops has been kept, and is available on request if groups would like to review them in more detail.

Avondale from the past

Avondale can be described as starting at Rangimatariki (Rosebank Domain) in the north. It is bordered by the Te Whau River to west and Motu Manawa marine reserve to the east. Avondale extends approximately to the ridgeline south-east of the railway line which forms the border between the catchments of Oakley Creek and the Te Whau River. Avondale is located on the edge of Auckland's main volcanic field with Owairaka (Mt Albert) visible to the east, New Lynn and the Waitakere ranges to the west.

Avondale has always been a place of movement and gathering. For seabirds it provides a crossing between the Waitemata and Manukau harbours. For Te Kawerau ā Maki, Ngāti Whatua and other Maori iwi (tribes), the Whau River was an important part of the Te Tōanga Waka portage route, used to travel between the harbours.

The Te Whau river is named after the Whau Tree that for Maori was an important resource for making floats for fishing nets. Along the river were seasonal villages and areas for gathering kai (food), including seafood, fish and birds.

When Auckland city was first established the area was known locally as 'the Whau' before being renamed Avondale in 1882. The town started as a staging post along the early trail route that headed west, and then Great North Road became the main road heading north of Auckland until the Harbour Bridge was built in 1959.

In 1889 Avondale Racecourse was established, serviced by the western Railway line that opened in 1880. The Rosebank peninsula became an important area of market gardens, orchards and plant nurseries. One of Avondale's early heroes is Hayward Wright who selected and propagated the "Hayward" cultivar of the Chinese gooseberry (today known as kiwifruit) that is still the main kiwifruit commercially grown in countries around the world.

Avondale intersection of Great North Road with Rosebank Road, 1963
Sir George Grey Special Collections, Auckland Libraries, 580-7643

Avondale today

Avondale's town centre, that is located on the historically significant Great North Road, is often *"seen as a drive through not a place to stop"* and since the 1960s the private motor car has been the primary mode of travel. Many people choose to shop outside of the area for a variety of reasons although the town centre retains a number of smaller independent retailers, businesses and services and is home to a number of community organisations.

The town centre and surrounding residential areas are not well connected to the railway station and pedestrian and cycle safety is a significant concern to residents because many people want to be less dependent on private car use. The future City Rail Link due to open in 2024 will also reduce travel times to the central Auckland and both the future Te Whau Pathway and Avondale to New Lynn Shared Path will also improve connections to both New Lynn and to the Te Whau River. Avondale is also highly dependent on the existing Avondale Racecourse for community sports fields and for the Avondale Sunday Market that is valued for its fresh produce, secondhand goods and as an important gathering place.

The Rosebank Peninsula area, that used to be market gardens before the north western motorway provided access to the area, is now home to a large area of industry as well as suburban housing. Most of the housing in the area is from the 1960s onwards. Avondale College is now one of Auckland's largest schools with many student coming from outside the local area to attend.

Avondale currently includes housing of varying type and quality and has a significant number of Housing New Zealand properties. Its population (2013 census) was roughly 10% Māori, 20% Pacific Island people, and a third each Asian and European people. As property prices have increased, the area's demographics have started to change with more professionals and new families moving into the area. The area is particularly diverse in terms of ethnicity/culture and socio-economic groups compared to other parts of Auckland.

The provision of affordable housing options, support for community health and well-being, and maintaining cultural diversity have all been raised as important issues for the future of Avondale. More recently, Avondale has become known for its creativity, local festivals, and great range of musicians and artists.

Avondale in the future?

Lots of change is anticipated in the future of Avondale. As the population of Auckland grows, so will the community of Avondale. More housing (including apartments and terraced houses), and taller buildings are likely to be built. New community spaces (including a new Library and Community Centre) are planned, along with improvements to the streets in the town centre, and more options for getting around including cycle paths. And over 50 years, all sorts of other changes could occur.

The vision for our future Avondale is described in the following section. It provides goals and aspirations for the type of place and community Avondale could be, and a direction for people to work towards. It includes a list of aims, design principles and actions under the following key themes:

- *Ngā Ara Whau – Safety and Accessibility*
- *Hauora - Health and Well-being*
- *Kotahitanga – Inclusiveness and Local Business Growth*
- *Taiao – Natural Environment*
- *Mahi Toi – Creativity and Diversity*
- *Mana – Character and Heritage*

Ideas for the future

“The area’s natural ecology is highlighted and cared for like a precious gem”

“All our young people are cared for and provided for"

“make Great North Road great again”

“Food is where we first meet other cultures”

“prioritise social exchange rather than financial exchange”

“keep the market”

“pride in our horticultural heritage - Hayward Wright”

“A destination for a fun and safe outing with friends and family”

“marae-type building for important cultural events”

“don’t be overly prescriptive … give us a flexible space”

“Te Ao Maori culture is part of everyday life”

“more than the spider”

“Intergenerational Knowledge sharing”

"People have a place to hang”

“Community Gardens. Access to good food”

“Whau= Learning Environment”

“There’s good support services so people don’t fall through the cracks…”

“Sense of sharing the physical space with nature- trees, courtyards, public garden space"

“be famous here before elsewhere”.

“Quirky things”

“Everyone feels welcome"

Avondale Community Workshops - 2018

IN OUR FUTURE AVONDALE #479

Everyone feels welcome, we celebrate the diversity of our people and places, and groups within our community are well supported and connected.

Avondale is a friendly and interesting place to live, with well maintained parks, creative public spaces and good things going on.

We value our land and waterways, honour our past and work together to secure a bright and healthy future for us all.

Ngā Ara Whau-
Our Avondale is the gateway to the Whau, safe, friendly and easy for everyone to get around

Our future Avondale is well connected to the Te Whau river, town centre, railway station, key destinations, Rosebank peninsula and surrounding areas.

Our streets and pathways are safe and pleasant places to walk or cycle, day or night.

As the area intensifies, access to public transport is prioritised, so that even our less mobile people can get around with ease.

We trust our community to look out for each other, in particular the young and the old.

Ngā Ara Whau refers to the many paths within the Whau area.
This theme focuses safety and accessibility.

Hauora-
Good health and wellbeing for ourselves, families and communities.

Avondale is a community of people that value their children, youth and elders.

Our future Avondale has a range of easily accessible community facilities, parks and public spaces that support a variety of different activities that connect us to each other and the natural environment, in support of physical, spiritual and mental wellbeing.

Our housing is of good quality, and supports the lifetime needs of people and our diverse communities.

Affordable healthy food and fresh fruit and vegetables is locally accessible to us all.

Hauora means fit, healthy, well and in good spirits.
This theme is about Health and Wellbeing.

Kotahitanga -
Our town is for us all. Great for meeting people, recreation and shopping, with a growing range of jobs, activities and services.

Our future town centre is a safe, family-friendly destination that is a creative and fun place to live, work and visit.

It has a range of quality buildings, public spaces, community services, facilities and businesses that support social connectedness and our local economy.

The local businesses, community groups, schools, council and mana whenua work together to support development in the town centre to create places of civic generosity and community cohesion.

There is always something to do, with options including shopping, food retailing, sports, entertainment, arts, learning, markets, bars and cafes.

Kotahitanga means unity, cohesion, togetherness and collective action.
This theme focuses on inclusiveness and local business growth in the Avondale town centre.

Mā pango, mā whero
ka oti te mahi

#479

With black and with red the work is completed

This whakatauki refers to different peoples or groups cooperating and combining efforts to achieve their goals.

Taiao -
Our land, waterways and natural environment are protected, restored and ecologically strengthened.

The Te Whau river is important to us, and so is Oakley Creek, the Motu Manawa Marine Reserve and the small streams and creeks that flow to these areas.

Mana whenua relationships to the natural environment are valued and we work together to ensure our parks and waterways are beautiful, protected and enhanced.

Both public and private development supports the cultural heritage and ecology of our place and there is a strong sense of being in and part of our natural environment, with lots of mature trees and planting.

In caring for our environment we aim to be a low carbon community.

Taiao means natural world and environment and is the focus of this theme.

Mahi Toi -
We are creative in what we do and how we do it.

In our future Avondale we continue to value and celebrate cultural diversity, creativity and independent expression. The arts are celebrated and accessible.

Our future Avondale has structures to better support learning, creative processes and the future impact of climate change.

Our creative scene encompasses a breadth of talent, interests, cultural practices and skills.

There are opportunities for children, youth and inter-generational learning as well as professionals, with spaces and places that encourage events, activities, and a mix of temporary and long term projects.

Mahi Toi means creative work.
This theme focuses on creativity and diversity.

Mana –
We respect and celebrate the achievements of our people, places and histories.

In our future Avondale, we respect the past, hold on to the good and embrace the future.

We continue to take pride in the cultural diversity of our communities, and te ao Māori is part of our everyday life.

Māori and more recent histories are visible and celebrated in our place names, buildings, parks and public spaces.

Our stories are woven into the fabric of our place

Avondale is a community that builds up the mana of all its residents- their self-esteem, confidence, influence and status.

Mana means prestige, status and authority.
This theme is about being proud of people and places in Avondale.

Ngā Ara Whau - Our Avondale is the gateway to the Whau, safe, friendly and easy to get around

Our future Avondale is well connected to the Te Whau River, town centre, railway station, key destinations, Rosebank peninsula and surrounding areas. Our streets and pathways are safe, friendly and pleasant places to walk or cycle, day and night.

As the area intensifies, access to public transport is prioritised, so that everyone can get around with ease.

We trust our community to look out for each other, in particular the young and the old.

Ngā Ara Whau refers to the many paths with the Whau area.
This theme focuses safety and accessibility.

Vision Aims

Public transport is easy, safe, frequent and pleasant to use with good connections between bus and rail, and to key destinations including Avondale College and the Rosebank Peninsula.

Our train station is a safe and pleasant place to use during the day and at night with a unique local identity, cycle parking and accessible routes to and from surrounding areas.

Great North Road is safe for pedestrians, and an enjoyable place to walk through, to sit and spend time.

Our streets are child friendly, and our children can safely get to and from school without a car.

Cycle and pedestrian routes connect to key destinations, including the town centre, parks, bus stops, schools, and the river; and are safe, easy and pleasant to use.

Vehicle access through the area, and car parking to key destinations, is well managed in particular around the train station, schools, and major activities, including our markets.

Design principles and actions to help achieve these aims:

- Good lighting, for safety and attractiveness, along key pedestrian and cycle routes that connect to public transport, and the town centre.

- Fun wayfinding signage identifies pedestrian and cycle routes to access the river, town centre, and other local destinations.

- Hills are tricky for people with limited mobility, so universal access routes should be carefully planned and signed.

- Creation of new safe 'short cuts' so walking and cycling is faster than driving.

- Safe areas to cross main roads, in multiple locations that are convenient for pedestrians and cyclists.

- Resting spots on key pedestrian routes, and seating for older people, included some sheltered locations.

- Well maintained streets, street trees, planting and footpaths.

- Safe wet weather paving, to prevent slipping.

- More safe cycle routes, in a variety of forms, including connections to the river, between main cycle routes, and to key local destinations.

- Sheltered, lockable and monitored bike parking at the train station and town centre.

- Additional bus services from Rosebank residential and business areas, and to the town centre and train station.

- Community ambassadors, Maori wardens, Neighbourhood Support groups and police work together to build relationships, social connectedness and community wellbeing.

- Traffic is managed to better support pedestrian and cycle safety, general movement through the centre, and access to key destinations.

- Parking and pick up / drop off car parking options in and around the train station, markets and schools are well managed.

- Easy access to the Whau River, to support water sports and transport, such as boats and kayaks.

#479

Hauora - Good health and wellbeing for ourselves, families and communities.

Avondale is a community of people that value their children, youth and elders.

Our future Avondale has a range of easily accessible community facilities, parks and public spaces that support a variety of different activities that connect us to each other and the natural environment, in support of physical, spiritual and mental wellbeing.

Our housing is of good quality, and supports the lifetime needs of our diverse communities.

Affordable healthy food and fresh fruit and vegetables is locally accessible to us all.

Hauora means fit, healthy, well & in good spirits.
This theme is about Health and Wellbeing.

Vision Aims

Our public spaces and places are safe and welcoming for socialising in a variety of ways, at both day and night and are designed to support a mix of ages.

Our people have access to activities and services that support their needs and interests including learning, arts and sports.

Quality physical and mental health services are accessible locally.

Our green spaces maximise opportunities to connect with the natural world, for contemplation and exercise, as well as play.

Markets, including our weekly Sunday market, continue to provide for community interaction and access to fresh produce.

Our community locally grows, buys and shares fresh fruit and vegetables, and has a wide range of food choices.

Our housing is of good quality and includes a mix of different types of units, and tenures that provide affordable options for life.

Design principles and actions to help achieve these outcomes:

- Provide a range of small and large gathering spaces with different seating options
- Places respond to the seasons and environment (sun, shade, rain, wind and views)
- Areas to sit and eat, for picnics or bought food
- Spaces and facilities for large community or family events including public BBQ's, grill pits, Umu/Hangi pits etc.
- Formal and informal play options for children
- A fabulous community centre and library
- Large scale residential developments include communal spaces and options for growing food in their design.
- Community groups and facilities (private and public) support a wide range of interests, including faith, music, arts, dance, culture, food, learning and exercise groups.
- Lots of exercise options, formal and informal including a swimming pool and community gym, good walkways, cycleways, public exercise equipment in a range of spaces including dog friendly areas.
- Destination play spaces, for children and youth, including water features, adventurous play, skate-parks and basketball.
- Safely lit walkway and open space options for after dark and early evening activity, that could include adjustable lighting options.
- Fruit trees in streets and public spaces and supported with bee hives.
- Community gardens and allotments are encouraged alongside healthy eating / local growing education programmes
- Local shops, services and events provide a culturally diverse range of healthy, affordable food options.
- Transport options enable youth, elderly and women to easily and safely access spaces, activities and facilities particularly outside of peak travel time

#479

Kotahitanga - Our town is for us all. Great for meeting people, recreation and shopping, with a growing range of jobs, activities and services.

Our future town centre is a safe, family-friendly destination that is a creative and fun place to live, work and visit.

It has a range of quality buildings, public spaces, community services, facilities and businesses that support social connectedness and our local economy.

The local businesses, community groups, schools, council and mana whenua work together to support development in the town centre and create places of civic generosity and community cohesion.

There is always something to do, with options including shopping, food retailing, sports, entertainment, arts, learning, markets, bars and cafes.

Kotahitanga means unity, cohesion, togetherness and collective action.
This theme focuses on inclusiveness and local business growth in the Avondale town centre.

Vision Aims

Avondale is a self-supporting township which caters for the day to day needs and preferences of its diverse communities, different ages, socio-economic and cultural groups.

Avondale is safe, clean, easy and enjoyable to walk to around with an active and creative street scene, and a range of large and small public spaces to explore.

It is also a multi-experience destination that attracts visitors to its markets including our weekly Sunday market, shops, sports facilities, playgrounds, arts, events and festivals with lots of options for entertainment, buying food and 'hanging out'.

Our histories and cultures of the area are reflected in the town centre, its buildings, streets and public spaces.

Buildings are well-designed and support a rich pedestrian experience and quality apartment living including a low carbon lifestyle.

Landscaping, mature trees, views and planting, support the creation of a 'green' town centre.

Design principles and actions to help achieve these outcomes:

- Public and private development, including community facilities and residential apartments, are designed to support local retail viability and business growth.

- A small supermarket, other food retailers, the Avondale Sunday market and alternative market options, such as permanent covered market or regular night market are all provided for.

- A range of small and large public spaces, and streets of different character support family friendly activity throughout the town centre, with options for events, markets, community and creative use including a 'central' town square.

- Generous footpaths are provided in addition to street trees and planting, seats, and amenities such as recycling bins.

- People are prioritised over cars at street crossings, with good connections to and from the train station and surrounding areas.

- The Whau River, Hollywood Theatre, Racecourse and Great North Road are recognised as important heritage features in the town centre.

- Quality public toilets and additional facilities such as free wi-fi and communal work spaces support the use of the centre.

- Parking, public transport and pedestrian routes are located and designed to support easy access to the town centre.

- Views to the west of the Waitakere Ranges and sunsets are preserved from key locations.

- Planting and landscape features support connections to the natural environment of the wider Avondale area.

- Heritage and character buildings are protected and new development is designed to complement them.

- Mana whenua and heritage values are acknowledged and reflected in the centre, its community facilities, landscaping and public spaces.

- Creative art and lighting also support local character and identity.

#479

Taiao - Our land, waterways and natural environment are protected, restored and ecologically strengthened.

The Te Whau river is important to us, and so is Oakley Creek, the Motu Manawa Marine Reserve and the small streams and creeks that flow to these areas.

Mana whenua relationships to the natural environment are valued and we work together to ensure our parks and waterways are beautiful, protected and enhanced.

Both public and private development supports the cultural heritage and ecology of our place and there is a strong sense of being in and part of our natural environment, with lots of mature trees and planting.

In caring for our environment we aim to be a low carbon community.

Taiao means natural world and environment and is the focus of this theme.

Vision Aims

We can swim in the waterways, with clean healthy water supporting native habitats and recreational activity.

Our parks and streams are connected with pathways and native planting form ecological linkages. Throughout the area native bird song can be heard.

Our green spaces are also protected and enhanced as places for recreation, interaction and learning to support the well-being of our communities.

Littering is socially unacceptable. Recycling and reuse is easy, and education programmes plus waste management services ensure that Avondale is always clean.

Future changes due to climate change including a rise in sea level, and flood risks are understood and addressed in future planning.

The Te Whau River and Te Whau Pathway is accessible from Avondale, with new activities along the river's edge. The Motu Manawa greenway is completed, and links to Oakley Creek are strengthened.

Buildings and public spaces demonstrate environmental responsibility, leadership and innovation e.g. solar power, water sensitive design, adaptive re-use, electric vehicle charging, underground utilities.

Design principles and actions to help achieve these outcomes include:

- Native planting along streams and waterways and areas of bush are protected, with new areas established to ensure bio-diversity is maximised and connected to the North-West Wildlife link.

- Existing and planned walkways along streams and coastal edges are connected with new links where required and landscaped to support biodiversity and wildlife.

- Creative and well thought out planting includes a range of approaches responding to use and location, including flowers and fruit trees.

- Mature trees are protected.

- Views to the Te Whau River are maintained, and activities that engage with the river are supported e.g. waka ama, swimming, kayaking, fishing, picnics.

- Businesses that border parks and waterways ensure they are ecologically responsible and support the safety of walkways.

- The Whau tree is celebrated as an ecological signature for Avondale.

- Waste management processes ensure ease of re-use, recycling, composting and rubbish disposal, and prevent dumping and littering in public areas.

- Innovative stormwater management ensures water quality is protected and improved in streams, rivers and the marine reserve.

- Pest management processes are developed, including management of weeds, rodents, possums etc.

- Education in schools and other learning opportunities, promote environmental initiatives and use local examples.

- New and existing housing is built or retrofitted to a high standard of environmental design.

- Large developments include communal areas.

- Community gardens support local food production and community well-being and celebrate the horticulture heritages of the area.

#479

Mahi Toi - We are creative in what we do and how we do it.

In our future Avondale we continue to value and celebrate cultural diversity, creativity and independent expression. The arts are celebrated and accessible.

Our future Avondale has the structures to better support learning, creative processes and the future impact of climate change.

Our creative scene encompasses a breadth of talent, interests, cultural practices and skills. There are learning opportunities for children, youth, adults and professionals, with spaces and places that encourage events, activities, and a mix of temporary and long term projects.

Mahi Toi means creative work.
This theme focuses on creativity and diversity.

Vision Aims

Our creativity is regularly seen, heard and experienced in many ways.

Our parks, public buildings, places and streets welcome creative expression in their use, as well as in their design.

Our culturally diverse range of skills are easily able to be shared and new ones learnt with a range of affordable spaces to support community use e.g. spaces for dance, music, wood working, robots and technology, traditional crafts, pottery, weaving, artist's studios, food, print making, glass blowing…

There are opportunities through our weekly Sunday market and other markets, galleries, shops and community events to support local artists and small businesses.

There are ongoing opportunities for community involvement, participation and leadership in events, education, town planning and public space design.

Design principles and actions to help achieve these outcomes:

- The design of public buildings and spaces include opportunities for community collaboration, and expression of local heritage and cultures.
- Our footpaths are wide enough for buskers.
- Our public spaces provide power points, water supply and other services to support events.
- Our murals are valued and tell stories of the area.
- The design and retrofitting of buildings integrates environmental responsiveness into creative design solutions.
- Artists are invited to contribute to the design of public spaces, and visually prominent buildings.
- Artworks in parks and public spaces are diverse including grass roots and big thought-provoking art.
- A diverse range of free or affordable community run events are supported, that include music, performance and a range of interests.
- A range of affordable and accessible spaces support community involvement in creative activities, including rehearsal areas and workshops.
- Galleries and performance spaces are integrated into the design of new public buildings.
- A range of local icons are celebrated in temporary and permanent projects.
- Mana whenua values and heritage are creatively expressed.
- Art is encouraged to be part of buildings.
- Local art trails are encouraged, and have the potential to be a tourism feature in addition to heritage trails.
- A range of markets including our weekly Sunday market provide opportunities for artists, craft, music, performance and small businesses.

Mana – We respect and celebrate the achievements of our people, places and histories.

In our future Avondale, we respect the past, hold on to the good and embrace the future. We continue to take pride in the cultural diversity of our communities, and te ao Māori is part of our everyday life.

Māori and more recent histories are visible and celebrated in our place names, buildings, parks and public spaces. Our stories are woven into the fabric of our place.

Avondale is a community that builds up the mana of all its residents- their self-esteem, confidence, influence and status.

Mana means prestige, status and authority.
This theme is about being proud of people and places in Avondale.

Vision Outcomes

Mana whenua relationships with land, water and natural resources are valued.

The Maori histories of the area, including the Rangimatariki (Rosebank Park Domain) and the waka portage route, are celebrated and acknowledged.

Stories, events, people and places from Avondale's past are known and shared throughout the area in a variety of ways, including our horticulture, racecourse and sporting heritage.

Valued buildings are retained and restored, including the Hollywood theatre.

In the town centre, our heritage, character and cultural diversity is expressed through the design of buildings, streets and public spaces.

We have events, activities and spaces to share and celebrate our cultural heritage.

People of Avondale are connected and share a sense of belonging.

Design principles and actions to help achieve these outcomes:

- Our horticulture heritage and knowledge is expressed in our planting and landscape design in public and private places.

- Landscape design is appropriate to the location, and reflects Maori heritage and cultural values in environmentally and culturally sensitive areas.

- The natural heritage of our rivers, waterways and coastal edge is preserved and restored.

- Old mature trees are protected.

- Art that expresses the diversity of our histories and communities is supported, including murals and graffiti walls.

- Activities and events showcase and celebrate the achievements of our people, past and present.

- Heritage trails, artwork, signage and plaques record sites of historical significance.

- Maori place names are known and used, and te reo signage is supported.

- A range of old buildings, of good character are protected.

- New buildings, in particular within the town centre, are designed to respond to the character of older buildings and Avondale's past.

- A diverse range of community organisations including schools, sports clubs, cultural and religious groups are respected, connected and supported.

- Communication and promotion of local people, community organisations, businesses and events are supported, including local notice boards, newsletters, and social media.

- A local museum and gallery spaces are encouraged.

- Local history is supported by education programmes and able to be experienced by children and youth, potentially through schools.

A BIG THANKS TO...

Everyone who has helped make this project possible.

Ka mihinui kia koutou.

Attachment A - Summary of Facebook Comments

459 social media posts from the 'I love Avondale' and 'Avondale Community Action' Facebook pages were collated and analysed. These were collected from 27 July to 2 September and relate to both media coverage on Avondale, and specific questions posted by the facebook page hosts seeking comments.

The most talked about topics related to the Avondale town centre (Kotahitanga), Mana (Pride) and Ngā Ara Whau. However, these also reflect the angle of the host's posts and the time period that they were made in that included media attention referring to Avondale as a third world suburb, the announcement regarding the uncertain future of the Racecourse and recent Housing New Zealand projects in the neighbourhood. A spreadsheet with all the raw data, methodology and a table showing some figures is available on request.

Below is a summary of the main comments:

- The Kotahitanga theme was the most prominent, with 155 comments. Conversations were mainly around the town centre (eg better shops, shopping in general) and recreation spaces (eg retaining the racecourse sports fields).

- Mana was the second most common, with 126 comments. There was a lot of pride expressed in Avondale as it is, especially with respect to its cultural diversity. The appearance of the town centre and retaining the Avondale Markets were other prominent topics within the Mana theme.

- There were 103 comments relating to Nga Ara Whau. This included conversations about traffic – especially regarding planned housing intensification – and other modes of transport, especially active modes. There were also comments about feeling unsafe in the town centre or in parks.

- The Taiao theme was especially prominent on ACA's page. Many people supported the idea of a new indoor produce market with the caveat that it was plastic-free. Other ideas were about 'green' infrastructure – harnessing solar and wind, capturing rainfall etc.

- Mahi Toi (13 comments) and Mauri (5) topics were discussed far less frequently than the others. I'd suggest the main reason for this was that the angle of the posts analysed didn't encourage these responses (aside from a single ACA post specifically about the creative arts here).

- The Mahi Toi comments that did exist often acknowledged the number of creatives here and/or celebrated the street art here, including the historical murals. There were many comments about retaining green spaces for recreational use, but without a solid link to health and wellbeing otherwise there would have been more Mauri-related comments.

Facebook Community quotes

Sourced from the 'I Love Avondale' and 'Avondale Community Action' Facebook pages

"Walk through the town centre and exclaim how attractive all the shops are".

"Lights on at night and CCTV at eastdale reserve so we have a well lit safe place to exercise after work in winter. And more use of the council installed outdoor gym! And improve the pathway - very slippery".

"We're lucky to have Whau the People, Whau Arts Festival, Whau Pacific Festival, The Creative Souls Project, Arts Whau, Avondale Art Park etc. Wouldn't say no to more! Bring on all the colour and expression - public murals and sculpture, light installations, pop-up performances on main street - keeps Avondale different and interesting."

"I like the murals with a nod to the historic nature of the area. Be nice to continue to celebrate the old and new".

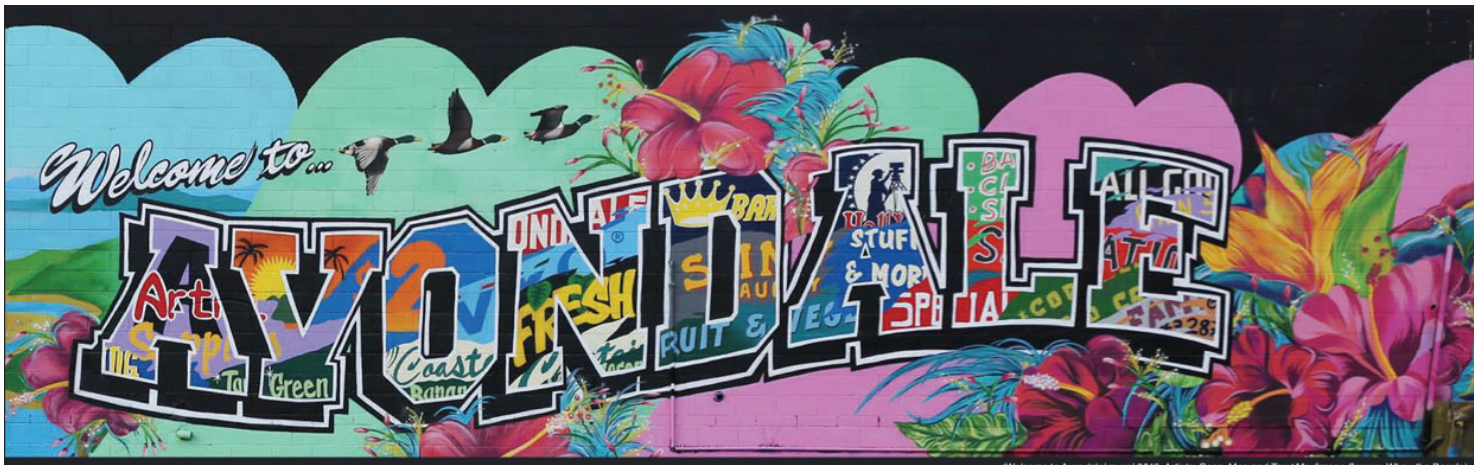

"Maximise sun and shade, create places that make people feel good and want to stay a while, relax, socialise. Incredible opportunity ahead with Racecourse to retain the lungs of Avondale and open up the green for more people to enjoy".

"We have such great bones in the town centre - there's hardly anywhere else in Auckland that has shops, places for gatherings and events (the community centre, the square by spider, the school), places for sport & rec (the racecourse, courts and cycle park) all within the same few blocks. - maybe Māngere Bridge is the only similar place with such a mix. We just need a bigger range of shops and some other places to eat / drink and it would be A++. I agree it's been getting better over the last few years too!"

"maybe our main street is a bit crap - yet it is definitely improving with the arrival of Cain, Woodworks, Subway, the posh new dentist building(ugh), the new laundromats etc, and what about our community? Our vibe? Our whanau we have built? Our free book shop in Victor Street? Our parks? Our lovely whau? Our schools and kindergarten where several generations of families have attended? Our fantastic diverse multi-cultural residents who we all learn from? The community support to look after and feed our less fortunate? A place is more than just a main street.....and what about the fact that you can walk into most shops and be greeted like an old friend by the shop owners and that those shop owners appreciate our custom as much as we appreciate their friendly smile?"

"I've lived in Avondale for 15 years. I've been to Avondale primary, intermediate and college. I just love the location and the friendly people we have here".

"Unity in a community is very important…a sense of unity is still vibrant in the people of I Love Avondale"

'Welcome to Avondale' mural 2016, Artists: Gasp, Mac and Trust Me (Image Source: Whau the People)

Help shape *our* future AVONDALE

Purpose of the Workshops

- *So that different people from Avondale can get together, to talk about our values and ideas for the future of Avondale*
- *So that the many voices of Avondale can create a community-led vision document*
- *To help designers and decision-makers know what is important to us, and to help to shape the character of future development in Avondale*

What's different?

- *The proposed Vision document builds on feedback that has already been done before eg. Stand Up event, Local Board plan, ACA survey, I Love Avondale, I am Auckland, etc.*
- *The workshops aim to develop and add to this information in a way that will identify key values of Avondale to help inform and influence real change*
- *Aims to seek input from a broader range of people from our Avondale communities*

How is the vision being made…

- *3x Community Workshops*
- *Comments from Facebook and Library Display*
- *Discussions based on vision themes sourced from community documents*
- *After the workshops a draft vision document will be made by Motu Design and shared for you to comment on before it is finalised*

The Avondale Community Vision document:

- *Will be given back to you, and the community groups who have taken part;*
- *Be shared with the Whau Local Board, Panuku Development Ltd, Auckland Council, HNZ etc*
- *Will help you with future projects and plans, including input into Council projects that you will be asked about when work starts on these.*

At the workshops we will talk about:

A Community-led Vision
What could *your* future Avondale look like?
Design Principles
What do we need to make this happen?

MOTU design

Enabled by: Whau Local Board Auckland Council

#479

WHAT WE'VE HEARD DRAFT VISION THEMES

A lot of feedback has been provided by people over the years, on what is important to the community of Avondale. This has informed the values and aspirations listed below, that we will discuss at the community workshops, as part of creating a shared community vision for Avondale. We will also discuss ideas about how to achieve these aspirations and to help identify some key principles to guide designers and decision makers about what the community would like Avondale to be like in the future.

Mana - Pride in our people, places and histories[1]
(Values: Heritage, Character and Landscape)

Mahi Toi – We are creative in what we do and how we do it[2]
(Values: Creativity)

Kotahitanga – Our town centre is for us all. Great for meeting people, recreation and shopping, with a growing range of jobs, activities and services[3]
(Values: Diversity, Inclusiveness and Local business growth)

Taiao – Our land, waterways and natural environment is protected, restored and ecologically strengthened[4]
(Values: Natural Environment)

Mauri - Ensuring good health and wellbeing for ourselves, family and communities within the places that we live.[5]
(Values: Health and Wellbeing)

Ngā Ara Whau - Our Avondale is the gateway to the Whau, safe and easy to get around.[6]
(Values: Safety and Accessibility)

---

[1] *"Showing love for Avondale people, places, events and history"* I Love Avondale Facebook page (July 2018) https://www.facebook.com/pg/ILoveAvondale/about/ (July 2018). Also reflected in: Mana Whenua Aspirations, Te Whau Pathway Volume (2 June 2017); Avondale Business Association Strategic Plan 2017 – 2020; and the Avondale - Waterview Historical Society Inc.
Mana can be translated as *pride or authority*

[2] As reflected in: Whau the People Charitable Trust (2018) and the *'Stand Up'* Avondale Event Feedback (2018).
Mahi Toi can be translated as *art, craft or creative expression*

[3] *"A thriving and local town centre. A town that is an economically and socially responsive- a good place to shop and use services, socialise and integrate with people"*. The Vision, Avondale Business Association Strategic Plan 2017 – 2020. (May 2016)
Kotahitanga can be translated as unity, cohesion, togetherness and collective action.

[4] *"Taiao – Our natural environment is protected, restored and enhanced"*, Mana Whenua Aspirations, Urban and Landscape Design Framework, Te Whau Pathway Volume (2 June 2017)
Taiao can be translated as *natural world, environment authority*

[5] *"Supporting good health and wellbeing for self and family" "The participants' hopes, dreams and priorities were mostly centred around family connectedness, health and wellbeing and achieving financial security."* Avondale Random Household Survey Report, Avondale Community Action (2014)
Mauri can be translated as *life force, the essential quality and vitality of being or entity.*

[6] Adapted from Central West Area Community Needs Assessment and Facilities Investigation, Point Research (July 2016). Also reflected the objectives of the Te Whau Pathway (2 June 2017)
Ngā Ara Whau can be translated as the pathways of the Whau area / river catchment.

UPDATED - 24 August 2018

AVONDALE MAP + IMAGES

This pages illustrates the different areas of Avondale

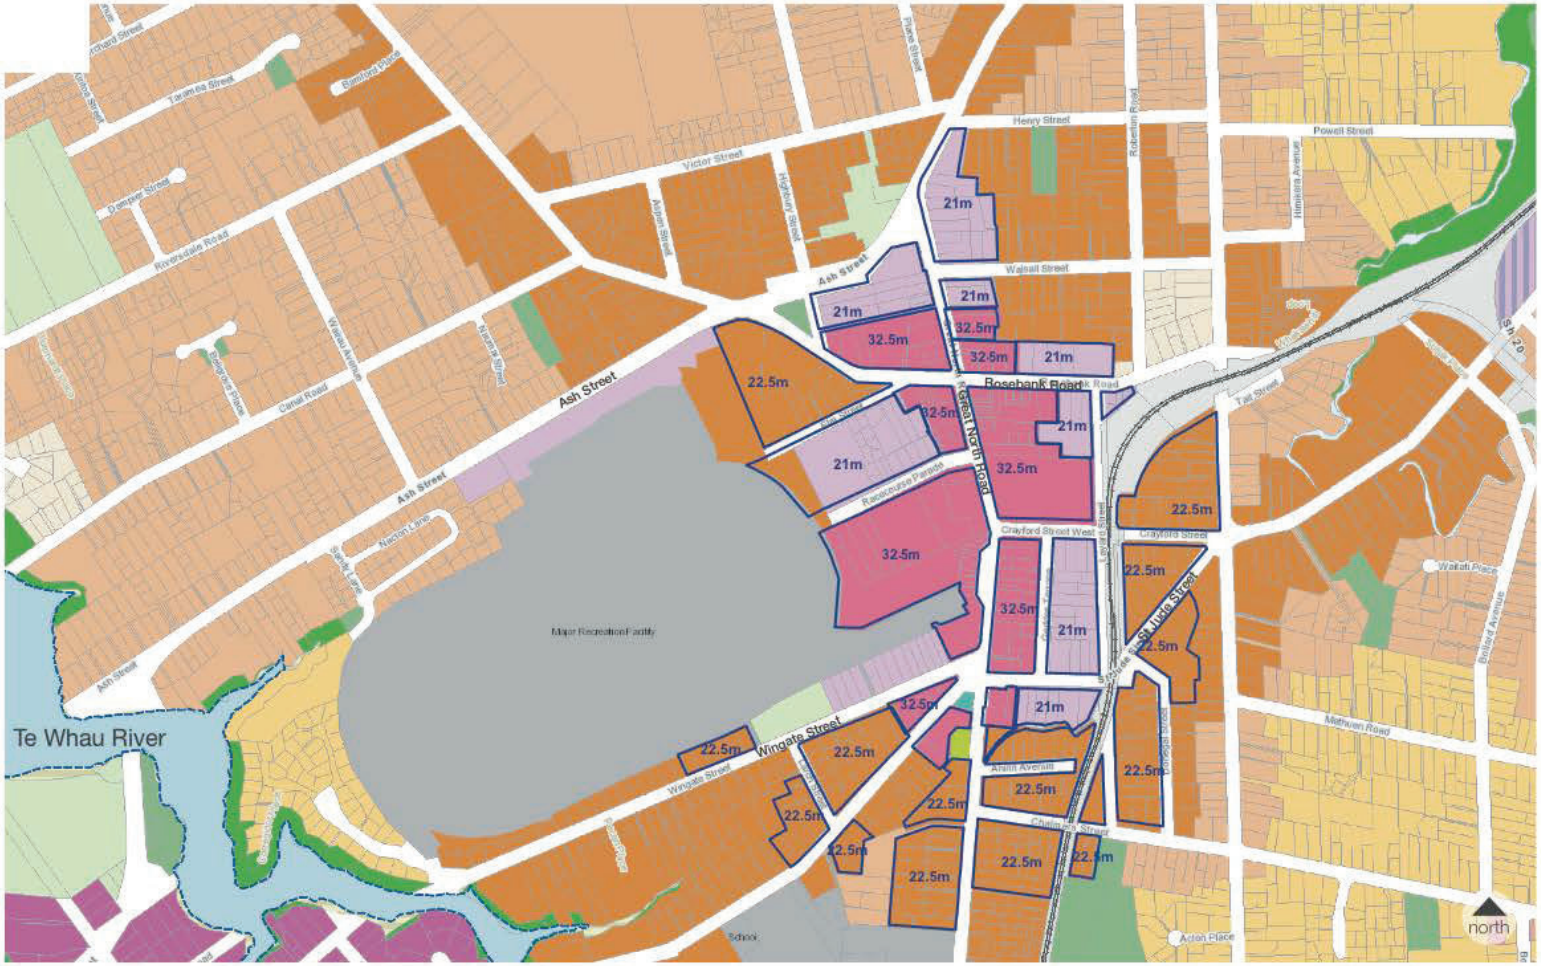

AUCKLAND UNITARY PLAN

This map shows the new types of buildings and potential heights of buildings that can be built in Avondale.

- Residential - Single House Zone - 8m (1- 2 storeys)
- Residential - Mixed Housing Suburban Zone - 8m (1- 2 storeys)
- Residential - Mixed Housing Urban Zone - 11m (2-3 storeys)
- Residential -Terrace Housing and Apartment Buildings Zone - 16m (4 storeys) and up to 22.5m (7 storeys) in some areas
- Open Space - Conservation Zone
- Open Space - Informal Recreation Zone
- Open Space - Sport and Active Recreation Zone
- Open Space - Civic Spaces Zone
- Open Space - Community Zone
- Business - Local Centre Zone - up to 32.5m (10 storeys) in most areas
- Business - Neighbourhood Centre Zone
- Business - Mixed Use Zone - up to 18m (6 storeys) and 22.5m (7-8 storeys) in some parts
- Business - General Business Zone
- Business - Business Park Zone
- Business - Heavy Industry Zone
- Business - Light Industry Zone

* building storeys are indicative only.

Mix of 3 and 6 storey apartment buildings being built at the Racecourse Parade site by the Ockham developers.

3-5 storey apartment units proposed for St Georges Road.

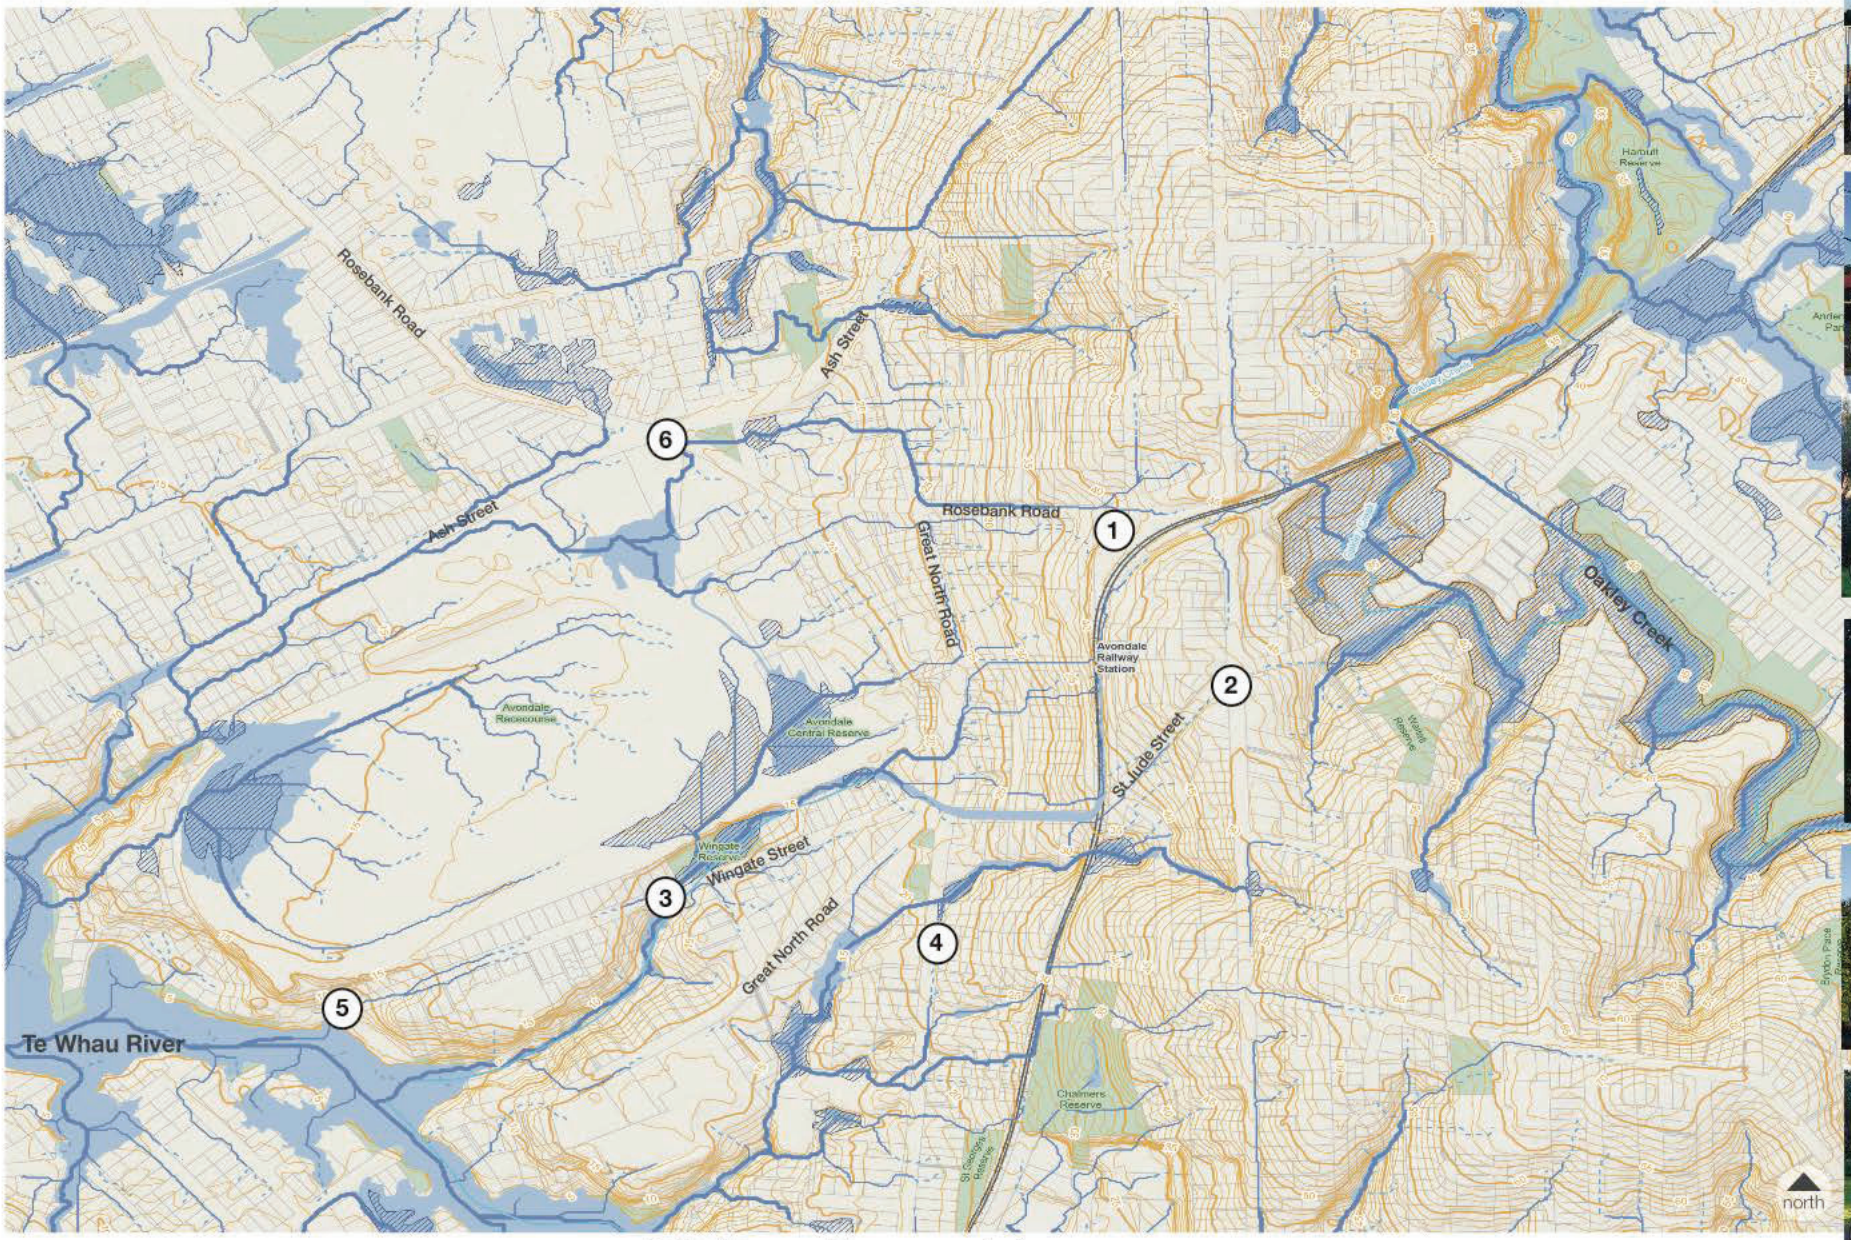

3 storey terrace housing planned for Holly Street.

Future Development Plan 2023 #501

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The existing urban area requires more construction repair or maintenance.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

more convenient for people.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
To avoid dangers.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Nature-based is important

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #560

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Lack of public transport within the city has already created a traffic horror, without bringing more people together who will need transport

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

Surely the facilities (transport, housing) should come first

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #575

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Our infrastucture has been underinvested in. Spreading this out over a bigger area seems inefficient. Our goals to improve public transport, reduce car reliance, and meet our climate change targets will be accelerated by better urban intensification.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop allowing NIMBYs to oppose climate, and people focused developments that spread the burden equally across our communities. For too long have wealthy suburbs opposed intensification, putting more pressure on poorer, less accessible suburbs. Consultation is important, but not when it just results in opposition to improvements for greater society, at the benefit of a few priveleged individuals.

Our city desperately needs large & consistent investments into infrasturcture and public transport, as well as better amenities for densely populated areas.

Build infrastructure to cope with current population first. Stop all development until we catch up. Then only allow housing development once infrastructure has been built first. No more raw sewage in the harbor.

Cap the population to a livable standard. No need to build another Hong Kong

Future Development Plan 2023 #708

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Its a no brainer to stop building in areas prone to hazards however on the flipside where development has already taken place we cant pay people out who are already in these areas, people choose where to live and they should also be insured for the likelihood of an issue, if there is no insurance then so be it, council and government cant bail people out otherwise why should we be insured at all

Resilient infrastructure

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I worry about the intensification of housing. Children are growing up with no or very little outdoor areas to play in. Adults have to accompany them to parks. Free unfettered play is essential for children to explore and develop. Any wonder they are roaming the streets and looking for thrills. They're bored.

I have no objection to townhouses - just multi storied blocks stuck where there is insufficient outdoor areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why
Local facilities are essential for communities. However these communities must not be overwhelmed with multi storied housing units.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Logical in light of recent events. We've damaged enough of the environment.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
We have manipulated the landscape for far too long.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #719

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Car parking on property needs to be built into development plans as congested roads from parked vehicles are a significant hazard to vehicles, pedestrians and cyclists.

Future Development Plan 2023 #779

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

increased infill / high rise housing causes psychological and emotional stress, not to mention parking and noise issues. Also, there has been totally inadequate upgrading / enlarging of the infrastructure required, namely sewage and storm water drainage.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

as I am opposed to infill housing, I can't agree to this.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Because it makes for a more livable city - better public transport services - more community feel - everything closer at hand.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As above - more livable and sustainable living - also it's crazy to build on fertile food growing ares - eg Pukekohe etc

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This is a no-brainer!

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

A above we must ensure Auckland is weather-disaster ready.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

More intensive housing and communities, better drains and other infrastructure, better public transport.

Future Development Plan 2023 #861

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Please, no more greenfield growth. It destroys the environment and intensifies the effects of climate change.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I'd love to see my local centre be revitalised. I live walking distance away but rarely visit because the shops are mostly closed.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Housing intensification is ridiculous and short sighted. It negatively impacts residents when you give permits to people knocking down existing housing and putting up awful 2-15 storey apartment blocks in residential, family orientated neighbourhoods. The existing sewer system cannot cope as it is, the worst flooding was in high intensity housing areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think there is plenty of land that can be used.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Closer to work, less fuel use.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
We can only do what we can.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
No one is perfect.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #991

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We cannot continue to support urban sprawl into some of our most productive land and need to start retiring some the land that our cities would naturally "sprawl into" back to nature to allow it to compensate for our carbon production footprints.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Compact areas are better able to meet the transport and social requirements of the population and build communities and safety (if done well).

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We have overbuilt in many areas, and not thought creatively enough about how we can reduce the "water catchment" footprint of our buildings. Hence we now have a scenarios where large areas now easily turn back into the flood plans that they actually were before we built on them. These areas eventually need to be returned to wilderness so that they can soak up water and carbon to sequester the excess of both that we can now expect to commonly see going forward.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yes that is now needed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Our cities need to turn into a collection of foci/hubs with strong public transport connections between them and increasingly be buffered by and interspersed with natural areas that occupy previous flood plains, mangroves and the like.

Future Development Plan 2023 #1012

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Densification is how Auckland can have a future. We need walkable neighborhoods, world-class public transit, and affordable housing - and we need to keep as much arable land near the city as possible for the fresh produce we need to have a healthy, vital city.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As much as possible, Auckland needs to become a city where people can walk, cycle, or take public transit instead of driving. Climate change, the need to densify, and the imperative of providing every Aucklander with a good quality of life require this.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The need for more housing has never been greater, but if we don't do this right, the next storm could be worse than the last.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

It won't be easy, growing in place while becoming more resilient and sustainable, but if we get our priorities right, these things will complement each other.
If we're keeping the golf courses, we should look into whether they can be made to better function as retention ponds.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1021

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

To make a system where people can easily and cost effectively use public transport it needs to be where the pole and sprawling the city out makes public transport harder to meet the needs of the people.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I agree we need to make our local communities a hive of activity that serves the community around it. However, if more intensified housing (apartments) are going to be built they need to a

well constructed, serve the needs of those that live there and be architecturally lovely, like some of the examples we can see already being built.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Agree, why add risk to people's lives and livelihood. However if such risks can be mitigated we should consider that too. Look at Stonefields - in the heavy rain that area seems to do okay, we can build in these areas if the risk can be mitigated and the builds are thoughtful and sound.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Great, a win for all.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1031

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The increasing intensification of neighbourhoods without prior improvements to services/access is causing issues. If this is left unchecked the negative impacts on current occupants will become unsustainable.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As long as the intensification is actually close to the hubs this will work well. There is currently a large development near my house where the nearest hub is a 15-20min walk and is too far to be a usable distance without needing a personal vehicle.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The infrastructure currently is not strong enough to take things like rain. Too much concrete, not enough thought to green space around new building. Sections completely covered with house and impermeable surface

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

In theory it is a good idea, unfortunately in reality our local streets are full of cars from houses with no off road parking, in NZ you still need a car to get most places in a reasonable time.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Only sensible option

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

A new approach is definitely needed, very few area currently take the above into consideration

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Start thinking differently

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It sounds like commonsense, to not build where floods are prone to happening.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Protecting the environment should be a top priority, the health of humans depends on it.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Intensify the central urban suburbs, it's closest to where the amenities are.

Future Development Plan 2023 #1133

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It makes total sense and protects our elite soils which are far more important for growing our food than for putting buildings on

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It just makes sense!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Managed retreat and similar policies are the only rational response in such situations. It's hard and expensive, but it's the definition of insane to carry on as if climate change isn't happening, and that is many times more expensive in the long run.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I think it totally depends on each individual situation. We should be doing a lot more of the above, but prioritising it in all cases is just as silly as never doing it.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1165

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Not encroaching on fertile areas like pukekohe is a good idea. Auckland will need large fertile areas like pukekohe to grow food in the future.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Not allowing construction of buildings in areas prone to flooding is a good idea. Councils to better evaluate future growth areas to avoid future natural hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Is cost prohibitive? How much will it cost the tax payer or local community?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

How does every Aucklander park & charge their electric vehicles. There are no charging facilities at the majority of house holds & apartments/units this will be a big problem in the future.

Also some users of public transport don't appreciate it. Defecating/graffiti/rubbish/verbal abuse etc, thus people don't want to use public transport.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I can see some benefit, but as I look around at the quality of design and build, and particularly note the lack of off-street parking, I despair. I very strongly feel we are building slums for the not too distant future. There also seems to be little care or concern about the 'normal style' houses in between the sections being developed. That coupled with the reduction in street rubbish bins, the lack of care for the streetscape (street cleaning/unmown grass verges/lack of care for street planting) makes me want to move far away because I no longer feel pride in my city nor that it is a desirable place to live.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

again, it comes down to the lack of off-street parking (first of all) and then we do NOT have decent public transport - not reliable at all. No ability to purchase one-off trips on a bus - what to do when I have guests with me? DRIVE!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

yes, the issues need to be sorted before building is permitted. AND where permits have been given, despite council etc knowing there are risk factors (eg, flood zones) then there has to be a possibility to get those buyers out of the situations they are in.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I agree in principle, so long as it is done with respect for the people living in the affected areas.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Sort the public transport. I very much doubt the inner city train service will be of much value to the city over-all. I definitely dont think the slowing down of traffic (anywhere and everywhere) is of any value. At peak times, it is not possible to drive at the normal speed limit. The proposed 30km sections (eg, Symonds Street) should have variable speeds rather than a blanket 30km limit. People are going to drive. Make it possible to do so efficiently, effectively. Until we have many more millions in our city, there will never be sufficient public transport to even begin to meet the ideology which is being delivered to us with worse than religious fervour. I know we have debt issues. I agree they need to be dealt with. BUT when do you see CARE for our city being part of the programme again?

Tell us why

Hence, don't cut the existing exotic trees on our maunga down either.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There appears to be a disparity in prioritisation of resources. Takapuna for example has had a beautiful new playground built, Hurstmere Rd completely repaved with a new cycleway, and their new town centre is currently under construction. Meanwhile in Avondale - NOTHING. A plan to do something that looks to be a PPP and meanwhile the pavements fall apart.

Can anyone explain that to me? Or is it simply racism?

On another note I suggest watching the youtube video from RMTransit from 8 February 2022 entitled "Why You Shouldn't Put Light Rail in Tunnels". He even goes on to suggest a better solution for Auckland.

Just sayin.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It's better to conserve and maintain land for agriculture and instead build infrastructure in areas that are already urbanised.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It makes sense to centralized services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We need to future proof our development projects otherwise they will continue to be rebuilt in reaction to natural disasters.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yes, we need to build climate resilience communities.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1346

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1418

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

This might be the least environmentally damaging option

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

For public transport to be viable we need people to live near hubs. Public transport is essential to reducing emissions.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

I think you have been very vague. Hard to disagree when the wording is so open to interpretation.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

What do you mean by decentralised? nature-based, regenerative and mauri-enhancing sounds good.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We need step change solutions to climate crisis. This doesn't go far enough.

Future Development Plan 2023 #1479

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Lack of infrastructure

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

You don't no each individuals needs and you get is so wrong

People need to work where they work, live where they live
Just because the council change things doesn't change the individual needs

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

There needs to be further investigation, also the plan to intensify the city will contribute to the flooding and other disasters etc

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

More research is needed and stop intensifying the city

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop intensifying Auckland

Look around the world and see what other cities are doing

Stop rushing to fix Auckland's problems

Stop with the wasting of rate payers money

Future Development Plan 2023 #1519

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1531

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

There is insufficient infrastructure such as drains and water pipes to support intensification in exisiting suburbs esp the older suburbs.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

It's absolutely ludicrous to expect 20 min centres that people don't have to move out off. Socialistic idealism is not for Auckland

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Only a fool builds on flood plains or unstable cliffs

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Stop cutting down trees and start cleaning gutters and flooding will not be a problem

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Auckland needs to be a city that responds to how its citizens want to live not one where councillors decide how they want us to live.

Future Development Plan 2023 #1542

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Urban sprawl is simply unsustainable, and comes with huge efficiency and environmental costs.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need to grow where infrastructure already exists.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I also think you need to consider buying out homeowners in vulnerable locations.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Great! More of this please!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Find ways to promote mixed use developments, and hurry up and build Avondale a community Centre!

Future Development Plan 2023 #1581

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Intensified housing where proper consideration or thoughts to multiple things is not necessarily a good idea!!

Such things as: sufficient off-street parking (most dwellings have at least 2 cars with often only one or no carparks), access to public transport or cycleways. Building out smaller lower height dwellings and casting these properties into shadow. Properties built maximum to the boundaries with no/small outdoor living space. Is sufficient infrastructure being put in place to cope with rain water run off etc!!

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

If this means upgrading and working within existing local centres - ie. Mt Roskill Shops, Mt Albert Shops, Avondale Shops, etc then yes it is a good idea, and will also help revitalize those existing local centres.

If this means creating new local centres and not developing existing local centres (if they exist) then I do not think its a good idea.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This makes sense.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I like this concept. However it may not always be possible to be, nature-based, regenerative and mauri-enhancing.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1640

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We need better bus and train services. These should be completed before more development. Particularly in the suburbs

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Good idea, but not every can get a job within walking distance. Industries need to congregate in certain areas. Build better access to them. Better transport to those areas.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Loaded question when you think about it. Of course is the right answer. But don't be fooled by worsening climate projections. The past will show where flooding occurs and slips happen. keep those areas clear of high density developments.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Again a loaded question. The question is what in particular will you do?
What areas will you close off- what research will you do?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Give up this obsession with low carbon emissions. It makes no difference to the global position- concentrate on coping with natural floods and climate events. Use footpaths for bikes (rider to be sensible) Few people walk anywhere. Open up roads to more bus lanes not cycle lanes. Build cycle ways away from the roads.

Future Development Plan 2023 #1676

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Less individualistic transport reliance, i.e. cars. More efficient public infrastructure.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Decreases the reliance on cars and decreases road congestion.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Obviously reducing the risk of any damage to infrastructure and development is a good thing.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

making strides to reduce emissions is a good thing and using materials with that in mind would be better than not

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1694

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Auckland is already too sprawling. Higher density and upgrading existing infrastructure should be prioritised over developing new urban areas

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Livable, walkable or easily accessible neighbourhoods where people can live and access all the services they need are much more human friendly

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We need to build and develop our city in a way more sensitive to nature - including retreating / removing development where there is heightened risk

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We need to include more eco-conscious solutions

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Prioritise developing modern, convenient and reliable public transport infrastructure and stop giving private cars priority

Future Development Plan 2023 #1743

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Rain gardens and swales are needed- but what are you referring to when you mention 'decentralized"?

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1752

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

The high density housing is bringing higher crime, more rubbish, huge parking issues, & traffic congestion. I don't see how this is good for the environment, or how living in cramped conditions is any good for mental health and social growth. There's not much to do in our neighborhood to support people who live in cramped housing. And what about people with pets??

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I feel the govt love spending money on new ideas and building new "facilities " when there's plenty of places that can be repurposed with a bit of creativity and kiwi ingenuity . Im sick of seeing our

taxes being wasted on things dug up and built again. Just to be torn down in 10yrs time and repeat.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Common sense. About time. The world is facing a water shortage within the next few generations, why not plant water reservoirs in these flood prone areas for future harvesting.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Also offer "green rebates" or subsidies for new builds that use appropriate design and technology.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Public transport will be used my more people if you offer appropriate parking near the train station/ transport hub. Not everyone lives within 10min of the station so plan ahead and offer cheap parking!

Future Development Plan 2023 #1755

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why
satellite towns are better than sprawl

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why
Hub and spoke works

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

...but...the building process itself alters the landform and creates more man-made hazards. These are not static natural hazards. We are making them by upstream development.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

see above.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Resource management cannot guarantee good design. You can't legislate for good taste or imaginative design. You need the best designers to overcome all the contradictions. We still don't seem to have a way of putting a dollar value on high-value soils and urban trees. My suburb used to be and urban forest but it is turning into a slum with bad design, no trees and abandoned building sites. Who's making the connections?

Future Development Plan 2023 #1763

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I come from Germany so I grew up in more condensed cities and I prefer it. I was able to cycle everywhere and never owned a car, where as living in Auckland I need a car and don't feel safe to ride a bike most places.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As per my above comment, I very much appreciate town centers where everything you need is within a 10 minute bike ride distance. It saves time and is overall healthier for people rather than 1 person sitting in each car and driving everywhere.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Well we don't want to put peoples lives and their assets at risk. This would happen if we'd allow people to live in areas at risk...people would lose their lives and livelihoods in floods and cyclones and the overall well-being of people would decrease in Auckland.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
We need alternatives to piped infrastructure that can be retrofitted to cope with high volume rain events and improve water quality in urban areas

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Make biking and walking easier by creating more direct “cut through” paths in residential areas with cul-de-sacs and meandering roads so we don’t have to use busy arterial roads. Lower speed limits.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

agree but with a lot of reservations as to how this is to be done as a lot of land in the west that could have been high density around transport hubs has already been filled with inaproprate low density housing crown lynn area of New Lynn a case in point and still other areas are only getting tiny medium density housing that should of been high rise with plenty of parking cause anybody who thinks cycles or public transport is effective in people getting to work or play are out of their tiny minds Also how about people with disabilities that cao only get out to the shopping centres by car?

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

this is a load of rubbish . Tell me do all the councilors cycle to work or council building? No of course they dont . Do they catch public transport ? No they don't. How can someone walk from Henderson to new lynn ? Easy you say . But what if they live away from henderson central? hOW CAN SOMEONE LIVING IN gREENBAY GET A BUS FROM GREENBAY TO PENROSE? This is getting rediculous . Aukland has been built on the car for so many years the only answer is like the overseas major citys , Underground rail network or similar

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

am unsure of how to answer this . It seems that everytime the council decide to do something they bugger it up by too many consultantes and engineers and waffle .
I agree it need looking at . But wouldnt it be better to start with why do these particular places flood and is it possible to alter the streams and drainage to deal with the problem and also could these areas have the ground raised so the water flows in dadiated gullies around the housing area, also the houses should not be built directly on the ground but say 1m high foundations ?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Increasing urban density is a much more efficient and socially equitable way to cater for increased population growth (see below for my thoughts on what I don't agree with sprawl). I believe the existing Unitary Plan zoning was doing the job required to increase urban density around existing services (main public transport routes, commercial areas, etc). The AUP allows for large areas of densification and the amount of densification development that has been completed/is underway is testament to that. I don't agree with the blanket densification of the Medium Density Residential Standards which would be a more haphazard approach and could result in densification in unsuitable areas (away from existing transport/commercial hubs, areas difficult to improve/increase infrastructure, coastal hazards (erosion, sea level rise etc), etc).

Further urban sprawl into greenfield areas is not a good idea for a number of reason, including:

- Using up valuable productive lan (food).

- Less available property for land area which contributes to higher land prices, ie negatively affects house affordability.

- Massivelt expensive to construct all the infrastructure (noting significant investment in existing infrastructure is still required for densification of existing urban areas).

- Inefficient transport, likely more car use/congestion, longer drive times, increase in emissions.

- Isolated urban satellites and a less socially/culturally connected city.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why
Makes a lot of sense to make the most of/allow for growth of existing commercial areas by focusing densification around these areas. Do need to allow for plentiful well thought out green space too though.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Allowing growth in areas of significant environmental risk is negligent pure and simple. If modelling shows sea level rise/inundation risk, regular flooding risk, erosion/instability risk (etc) then allowing increased development puts people's lives and livelihoods knowingly at risk. Also the money and resources spent facilitating such development would be better directed to less risky densification.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

If we can use natures ability to absorb environmental hazards then that makes a lot of sense. I don’t think a blanket approach to this is best though, some areas may not be suitable for this and other areas very suitable

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I would reiterate that the AUP planking provisions already allows for significant densification in places where it should occur. Will likely need tweaks to increase development opportunities in the areas of main transport routes/commercial areas etc and avoid areas of environmental risk.

Massive investment in infrastructure will be required and Central Government has a big role to play in this too.

Future Development Plan 2023 #1862

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Please stop storing poor people in areas that flood! Please ensure that development occurs in line with expected natural events - flooding, heat, wind, earthquakes etc.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Climate is going to do what it is going to do. humans are naturally wasteful and destructive. Building infrastructure that plans for these things is pragmatic.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please consider buildings with underground parking, solar farms on roofs, encourgaing safe cycling - this will be unpopular, but has been achieved overseas. I would leave my car home more and cycle more if it wasn’t a death-defying exercise. The train to the airport seems to be a fools project - transport is changing with autonomous vehicles and ride shares becoming more common - keeping options flexible is sensible. Also, please encourgae local vegetable gardens, maybe plant fruit trees instead of oleanders - again i think this will take a while to become accepted, but we want to cultivate an environment where people expect to have access to healthy food and are expected to take responsibility for their health - including healthy eating and exercise. It will take a culture shift, but along with dry warm homes, these expectations need to be normalised.

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Makes lot of sense

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Absolutely, can't agree more on this

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Agree with, what is suggested.

Future Development Plan 2023 #1897

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Greenfield growth is inefficient, costly, and locks people into long commutes and high emissions lifestyles.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Infrastructure can't cope, no quality of life for existing residents whose rates are paying for it all, new developments strip climate change mitigating trees and green spaces, new intensive developments are predominantly investment properties and not for first home buyers.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

See above

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

If you had not destroyed over 60% of Auckland's mature, climate change mitigating trees and green spaces these provisions would not be necessary. Reinstate tree protection rules NOW!!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop destroying and intensifying Auckland and build a new town south of Auckland.

Future Development Plan 2023 #2018

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The existing infrastructure, particularly roads and drainage, is clearly struggling with the massive influx of apartment dwellers, (especially those living in apartment buildings without adequate provision for car-parking). There needs to be a ceiling on population growth - we have enough people living here already, we don't need or want more.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Walking, cycling, and public transport is fine for the fit, young, active, beautiful people. We already have enough local building and facilities to fill the available space - the only necessity is for improved vehicle access.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

If 'once a century' storms are to become more frequent, then ongoing and future development should be deemed to be inappropriate, until it's location is proven to be safe. Restraint should become the default setting.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Resilient infrastructure is not about topography or about ecology; it is about demographic pressure. Fewer people = fewer problems. (By the way; what is 'mauri-enhancing'? If you are using Maori, then use Maori, If English, then use English. Don't mix and match.)

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Reducing vehicle emissions would be better achieved by enabling vehicle journeys to be shorter and more fuel efficient. Loose the bus lanes, judder bars, and wide footpaths. Replacing excessive traffic lights with roundabouts, and ensuring adequate off-street car-parking facilities will improve traffic flow. Cars are not the enemy; blinkered and eco-dogmatic street-planning is.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Timetables for strategies and projects that reduce carbon emissions and mitigate the effects of climate change are too slow. Despite the obvious climate crisis we are facing including in Auckland, emissions continue to rise, not fall. Becoming carbon neutral by 2050 or thereabouts as a plan is highly likely to be missed as a target and will become harder to achieve the longer that action NOW is delayed. This includes (inter alia) uptake of EVs, shading waterways, installing swales, increasing public (electric where possible) transport, encouraging 'working from home' and 'shorter working week, perhaps with longer hours per worked day', and even limiting growth deliberately -- not merely 'responding to market demand'. Ensuring the physical and mental wellbeing of the citys residents by safeguarding areas of public greenspace, and encouraging urban planting and re-forestation within even the most intensively developed area should be seen and valued as one of the strongest determinants of perceived quality of life. It is not all about GDP per capita.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I think this is a good idea but not at the expense of areas where people are already living. I.e these areas still need support. For example the Piha / Kare Kare area and other West Coast beaches. The repairs to roads after the cyclone is taking an age with locals left to do work themselves to make it accessible for their survival. It's taken an insanely long time for these repairs to start and although I get that there was a lot of damage to be repaired so a lot of pressure on infrastructure and contractors who provide these services it seems the remoteness of these communities has meant they are being missed and dismissed

Resilient infrastructure

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2122

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Save green spaces. and ensure city and town centres don't become neglected

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As previous answer

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I don't agree with the idea that properties near public transport don't need off street parking.

This is causing too much chaos on our suburban streets. eg near Avondale train station

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think all growth should be in existing urban areas to ensure travel is kept to a minimum, public transport is effective, productive land is not urbanised and Auckland natural heritage and iconic landscapes are protected.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

But Auckland Council does not do this. It agreed to CostCo at Nor-West Centre with 900 carparks. You need to stop approving malls and dispersed retail and town centres. Unitary Plan needs tightening.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Thats why Drury is such a mistake.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Storm events need to be dealt with by mirroring natural strategies such as wetlands. However, it may be too late to turn back the clock from catastrophic effects of claimte change.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

My main comment is you have to improve the quality of intensificatrion. Small scale projects on one or more sections are delivering future slums, devoid of architectural merit and lacking outside space for children, gardens and community meeting. You also need to invest in far more open space/parks so children can get outside safely and run around. There should be a quota system for parks according to the degree of intensification. Many of these new developments are too small-scale to deliver well designed living spaces. Council need to incentivise bringing together blocks of land to enable larger scale development and therefore better quality living areas.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

More intensification results in more congestion and poorer living spaces for people. We have ample land in Auckland to spread and have more town centres.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This reeks of the "15 minute city" plans being pushed overseas. New Zealander's will not be happy to be caged into small areas like this so don't even think of going down this path.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Obviously it is common-sense not to build on coastal cliffs, floodplains etc but there is very little solid evidence that climate change is causing increasing severity and frequency of natural occurrences.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

All a bit wishy washy, not really sure what you're suggesting. How about fixing up the stormwater system, keeping them and gutters clean and clear of debris to help flooding issues? Deeper gutters would be a good idea rather than the almost flat new build type. Again, there is no solid scientific evidence that climate change is causing weather events

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Do not like your approach as stated above at all.

Keeping things nature based is a good idea

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I strongly agree with having people living close to amenities and services. I see this as the way forward

Future Development Plan 2023 #2359

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Current existing urban areas are having multiple dwellings on small sections ranging from 4 moves to large Kainga Ora developments. Driving a car along many existing streets is becoming impossible without having to stop and allow other cars through. On street parking is becoming very congested. There are no free park and ride facilities at bus and train centres to alleviate congestion.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

It is all very well to congest housing but elderly people can't walk everywhere and there is very limited parking for large mobility mini motorbikes. People are reluctant to walk especially in wet weather whereas examples I have seen for free park and ride services in Scotland allow people to drive then catch public transport to shopping centres etc.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Agree

Tell us why

It is becoming essential to learn from past natural disasters to avoid further flood prone areas, better drainage and culverts are a minimum to assist, some areas designed pre 1960,s are no longer sustainable to modern weather patterns. Home insurance should be compulsory so disaster effects can be shared accordingly.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

Cyclones will continue to hit Auckland and natural swains and rain gardens will become swamped and ruined. If put in place these would have to be very well located and have sufficient storage to

manage overflows. They also take up a large amount of space with limited results in managing large storms.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

A well defined risk management approach to define do we understand all the issues and what mitigation measures can be put in place to succeed and not fail again. For example putting power underground to homes significantly reduces the number of poles on streets which will help the road traffic to zero strategy now being advertised. This should include better land use and correct species of trees used to avoid erosion.

Future Development Plan 2023 #2376

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The existing urban cities are already crowded and terrible traffic jam from weekdays to weekend even. I do not want further intensification. I would prefer council to consider developing surrounding towns and cities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
100%

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
This is important, but not your priority at the moment. Fix traffic jam is your priority. Fix unreasonable road design is your priority. Fix those bus lane/cycle lane, T2/3, which barely any car is using during a grid lock traffic jam is your priority. It would be more carbon emission for those people stuck in traffic trying to fix the lake and gardens.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If you are building new infrustration, eg. school, etc. think 10 years ahead. put some eletric charging poles everywhere because electric car will be more common in the future. If you are planning to put more cycling lane, please do not affect the existing roading,put it on side walk, etc. Use our tax money wisely. not hundres thousands of dollar just for a design or consultation. It's rediculous.

Future Development Plan 2023 #2400

This is really important and needs to work in conjunction with intensification

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2511

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Auckland is already full, with no more space to build. The fact that Auckland is situated between two oceans exacerbates the issue. However, it's important to remember that New Zealand exists beyond Auckland, offering ample space for development. The national government should prioritize making Northland and Waikato more appealing for businesses to establish themselves, leading to sustainable growth in these regions. Still, if building in Auckland continues to be pursued as a goal, it is crucial to plan for viable transport infrastructure, such as light rail, right from the beginning of the process. Numerous inspiring examples can be found in both developed and developing countries.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I wouldn't consider what we currently have as "public transport" when buses are consistently canceled without notice. If workers cannot depend on the so-called "public transport" for commuting, they are compelled to use their cars, further contributing to traffic congestion. Please take action and address the issues with Auckland Transport. Additionally, implementing incentives, such as tax refunds, to encourage the purchase of electric bikes would facilitate Auckland's transition to modernity.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I agree that supporting construction in environmentally hazardous areas is a recipe for disaster. However, instead of completely halting it, one might consider exploring feasible solutions such as constructing drains and sea walls to mitigate the risks.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yes, resilient infrastructure is needed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

In recent years, the deregulated and insufficiently taxed property market has led to a "gold rush" for foreign investors, for which Kiwis are now paying the price. When a house is purchased by property investors who already own multiple properties, it diminishes the availability of homes for first-time buyers and induce more young families to resort to renting for more extended periods due to high property prices. Implementing a substantial tax on property investors would not only generate funds for national and local services for Aucklanders, but also contribute to establishing more reasonable and affordable property prices.

Future Development Plan 2023 #2513

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Intensification is the best way forward, utilising existing infrastructure & public transport

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

So long as we also care for and protect urban tree forest and public green space, allowing for new green space where significant building intensification occurs

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It's just plain stupid to continue to develop in areas that are likely to be devastated by impacts of climate change

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

So long as we do this in a sensible way. Rain gardens & swales etc won't work in flood plains or where sea level rises

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2586

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We saw through the floods that green infrastructure works to reduced flood risk to homes. Plus it looks nicer and provides green space!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2649

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We actually need green field. More reserves. Garden and green space. Why we not making our auckland more green by installing recycle centre where we can put bottles, cans and plastics and get 10c or 20c back tp encourage people to dispose in right way

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need good public transport and more cycle and walking lane. First of all we need good roads without patholes.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We need weather proof roads and gutters. Please main thing is rubbish on the kerb side . People are throwing more eubbish on road like mac d and other junk food packs and bottles and cans. That block the drain and make road dirty. Also we meed good quality of materials for making roads as there are pathholes and peeling everywhere. Even new roads are peeling off. Why you not investigate contractors for using cheap materials?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Need more eco friendly city for living healthy life for growing population . We need to control now otherwise people will used to with this to make city dirty.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Auckland waterfront needs more attraction. Port areas need to be more attractive. Avondale town centre has to upgrade as it has very old shops and lots of land are dirty ,dead. Avondale area needs to develop a lot as it is centre of attraction. Spider is looking dirty and need washing and remove all shoes that hanging there.

Future Development Plan 2023 #2767

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I don't think we should stop expansion, but I also don't think we should stop improving our existing infrastructure where people are in now. Cramming more people in our current residential areas without first addressing the infrastructure leads to more issues down the line.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Making Auckland less car dependant would be a great start. Cycle ways and shared roads, improved public transportation would definitely be a great improvement to our city.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

There are so many places that are in danger of the more frequent natural disasters. Stop further development and help the MOST affected to relocate is the right thing to do.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

A more holistic view on infrastructure would benefit the city, instead of laying more concrete water ways we should utilize natural ways to divert, and or strengthen our waters to improve the city landscape.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2770

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It's harder to do public transport further out. It's nice to have friends and activities close by public transport.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Focus more on bringing culture to Auckland cbd too

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
It will cost less

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

More safe cycle lanes asap

Future Development Plan 2023 #2778

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

Future Development Plan 2023 #2785

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Too much intensification causing issues as infrastructure isn't there to support it e.g. lack of parking, lack of public transport, issues with overflow when it rains. In my suburb of New Windsor, there's a lot of intensification, it is causing lots of issues with lack of parking on streets, lots of congestion as houses aren't built with realistic parking facilities. Kainga Ora developments lack parking also. Too much intensification also completely changes the character of suburbs. There's a complete lack of consultation from developers too.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Only if the required infrastructure eg good public transport, bike lanes, stormwater pipes and parking options are there to support it are built.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The January floods of 2023 completely changed the game. We need to stop allowing growth in natural flood zones. It is simply negligent and immoral when this is allowed to occur.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Areas where such things are built eg Hobsonville Point didn't get impacted by the floods as much. This must be a priority!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We have to be aware of the needs of tomorrow, rather than fixing the problems of yesterday. There's not been enough of a future-proofing approach when it comes to growth in Auckland.

Future Development Plan 2023 #2790

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need to strengthen infrastructure and amenity and the only way to do this is if there is sufficient demand. We need to focus on building good medium density housing within the city's existing footprint.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need to reduce journey distances and as such use of private vehicles to ensure we meet our climate pledges and our quality of life. Less time spent commuting and stuck in traffic equals better quality of life.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We should not be building in places where new buildings and infrastructure are either at risk or need major intervention in the natural landscape to be viable.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Nature based infrastructure is resilient. We need to adapt to the land and climate we have, not try to change it to suit our agenda.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

This is a very positive approach and I am fully supportive of the directions asked about in this questionnaire. I strongly discourage growth of any type on and beyond the urban boundary. Please continue to improve the use of the resources we have already claimed for our city by making current urban and suburban spaces more sustainable to get around and live in. This will result in improved quality of life for many more people.

Future Development Plan 2023 #2791

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Partly agree. I would like to see heritage and character areas preserved but do support intensification in areas developed post-1950.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Nodes, yes. Targeted intensification, no.
We already have housing development between spaced shopping and facility areas.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

While i agree developing urban areas is a good thing (most of the time), building 3 cramped, shitty houses where 1 house was isn't a solution as we already have droughts and those houses aren't cheap but are some of the cheapest, forcing family's to grow without back yards. Also the housing development houses are usually pretty bad looking, made pretty cheaply, and just un-needed. We do need more affordable housing but by making those the cheapest option at still really high prices, it makes getting a decent house more expensive as they are more desirable.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

While I agree developing around local centers is a good idea, it definitely shouldn't be exclusive, more on a 2/3rds kinda scale

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Denser housing, with little or very small areas of grass or gardens for each home being built, is detrimental to children and families mental health. There is not sufficient space given to children to be able to play outside within their own properties on a daily basis, to expend energy and to be away from all types of screens. Parents do not have time every day to take their children to a 'maybe' local park for them to play at, particularly as usually both parents are working and by the time they get home from work, there is little time left in the day to take kids to the park. This type of housing does not promote healthy living.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

This will only work if the business development has the diversity of businesses that are suitable for communities. There are many communities that currently have too many liquor stores, $2 type shops and other businesses that do not provide the range of options for shopping for communities. There are also communities that do not have adequate or efficient public transport at the moment and so people can not use this to commute to work. This is an area that is needs serious work done on it for communities to be able to rely on and use the public transport networks.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

YES - This is long overdue as was shown in the January Floods and February Gabrielle cyclone, houses were allowed to be built on flood areas that should never have been consented to. There are too many instances of consents being given to developers to build in areas that are NOT suitable. When did Councils decide to ignore rules by previous councils to not build in these areas. A lot of work needs to be done to remediate the problematic areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This would be a very good approach to take. There are communities where this has already been undertaken and has been proved to be very beneficial.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Research and analysis needs to be done on the impact on people's mental well being and lifestyle by allowing increasing smaller sized pieces of land to be built on. I would welcome an investigation into this.

Future Development Plan 2023 #2994

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The main reason is that building out just compounds our present problems with car dependency. Even if I live closer in to the centre of the city, any car journey I take is likely to be impeded by the clogging of the network with cars driving in from new peripheries. In a more compact city, it's easier to walk to where you want to go, and I presume that there are economies of scale with transport infrastructure. I live in one of the suburbs that's rapidly intensifying (New Lynn). the traffic is miserable, but the intensification of housing is not nearly as bad as all the rich people in the leafy inner city claim.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This seems to be going well in New Lynn where I live. More work needs to be done on making the suburb a less stressful place to walk and bike, but the public transport infrastructure is excellent (when it's working).

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The only answer to this is: what rational alternative do you have? It doesn't look as though climate change is going to wait patiently.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

These don't just make good sense in terms of resilience, but give us the opportunity to create excellent new recreational spaces like Oakley Creek.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3006

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Significant portion of funding needs to go into developing areas that people want to go to. These are malls, food and entertainment places like takapuna, botany, dominion road. People actually want to go there. The area is nice and things are more affordable.

Stop investing into the CBD. Nobody actually wants to go there. People only go there because most offices are there. No one will go there for leisure or in their spare time. Getting there is a nightmare and the area is not pleasant. Most shops are closed and the ones that are open are overpriced.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Aucklands huge already - a pain to get around, and one of the largest cities in the world by area I hear. Allowing it to spread further is nuts: for travel time and cost, infrastructure, emissions and of course builds over our food growing land.

In terms of flood resistance, we need to keep infrastructure costs good value to afford SW upgrades, which means no expensive sprawl. We need great walking, cycling and public transport which (only comes with good density and compact form), so that we can reduce the massive impervious area cars take up to store and move.
No more sprawl please - in fact bring in the current urban boundary

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It minimises journey lengths, and encourages high walking, cycling ant PT modeshare.

We also need to improve our PT walking and cycling networks quickly so we can increase the amount of Auckland which meets the above criteria and can be densified.
We live in Avondale, possibly the quickest densifying part of the region. Its great - more like this please

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

we'll only keep up with the funds required for this if we concentrate on efficient, dense urban form, and if we concentrate on efficient transport and making the most of the streets we already have through prioritizing walking, cycling and PT

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I feel like we've gone through this exercise before, consulting on development. Im sure aucklanders have a lot of consultation fatigue, and fewer are actually answering, which is not a good thing for 'genuine consultation'.

On that note, please sort out the disastrous people who pull the strings at AT - nothing creates consultation fatigue like the way they design and consult on so many projects, then endlessly delay or cancel like 90% of them. What a waste of community time, energy, and of course rates. Even massively popular and sensible ones, eg the central west cycling projects are 6 years late and counting. These unacceptable blunders drag down the rep of the whole council family, especially the 'council' supposedly ; 'controlling' AT

Also, remember that most people submitting on this are not experts at planning, development etc, and peoples instincts on what will and wont work often dont align with what actually is proven to work. This isnt a 'popularity contest' as people often dont know what they want or need to get to their desired outcomes.

Future Development Plan 2023 #3093

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I think we need to clump and densify rather than spread, so that we can make our public transport more effective. We also need to invest a bit more in infastructure (eg waste, water, etc) to make sure that we can support the density

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

part of meeting our carbon zero goal has to be making it possible for people to access basic stuff via walking cycling public transport and having housing close to these needs is a huge part of that.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This is a no-brainer - particularly following Gabrielle I think we should be selective about where we choose to develop, otherwise it's more costly in the long run, for people and the environment.
We should be careful about anything coastal for sure.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

amazing! I want to know more about these initiatives and see them happening.
We should increase support to take care of our waterways, too, like whau awa

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Don't listen to the haters in rich suburbs - we have to densify our housing for this city to work; we also must have a functioning public transport system.

Future Development Plan 2023 #3096

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Too many multiple unit blocks tapping into existing resources and ugly to look at with no parking facilities forcing these people to park on the road.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

The Council is focused on pushing people onto public transport which at its best is unreliable and making traffic flow difficult for cars. How ridiculous to be spending money on judder bars before traffic lights!!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

I don't belive in climate change.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop allowing these multi units to be built and make car travelling easier.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I have lived in Europe for a few years, and 3 or 4 storey apartments are the norm in many cities. If done nicely, they actually make the city more lively and appealing than huge sprawling suburbs.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

You can't suddenly relocate large numbers of people to where there aren't enough services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

This seems obvious, and should have been happening all the time.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Yes. Be more creative and find solutions working with nature instead of trying to dominate it. Find local and appropriate solutions for local problems.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Look at the successes and failures of overseas cities, don’t give rich people all the power if they want to hold up progress, and make this lovely city even more wonderful. Don’t be timid!

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I agree with the concept, but not the way it is happening. Infill housing and intensive development of small sites is a disaster. A better approach would be purchase of substantial land holdings and careful design of buildings allowing for soakage etc.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Local shopping areas need to be improved. Every small shopping block needs to have shops which focus on everyday food items at reasonable prices, not vape, alcohol and takeaways. Change this, and you change the need to drive.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Parking on suburban streets needs to be changed. Roads are becoming one lane with vehicles parked on both sides of the street. This is a hazard for entry and exit from driveways, driving and emergency vehicles. No-one should have the right to permanently park on the street. While this is allowed, householders will continue to own vehicles regardless of whether they have off-street parking. We will not meet climate commitments unless this changes.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I agree BUT infrastructure needs to keep up, it does seems lacking. Part of this is public transport and cycling infrastructure. All of the extra dwellings likely have at least one car (possibly more?), where do all these cars go? More roads is not sustainable (unless they're for bikes only!). Need investment in cycling and public transport (and really a cultural shift among Aucklanders) to take up these options. Public transport must be RELIABLE.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We must become less car-dependent. The city must evolve in a manner that offers a selection of transport options. Cars will be one of them, but it should also (eventually) be possible to walk, cycle, or take a bus or train between any points A and B in Auckland.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This helps residents to become less car-dependent. It also fosters more of a sense of community.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is a difficult choice, but I believe it is necessary. Sensitivity must be employed in dealing with those affected.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Nature-based solutions are also a more aesthetically pleasing part of the environment.
The solutions selected must be proven effective.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I am encouraged by the vision of the future outlined here. I feel that Auckland made a mistake, albeit understandable, in the middle of last century when we designed and remoulded the city with the assumption that transport would be centred on the car in the future. The motorways carved through the city and the town centres in the city became less walkable as this mode of modernisation progressed.

I feel that the future lies in a city that is human-sized - A person can walk or cycle to buy their groceries, visit their doctor, or have lunch at a local cafe. Streets are small, and are low-speed ways of moving short distances. Pedestrians feel safe and are able to use the environment without always having to be on edge (due to fast moving traffic on wide roads).

Many will see this as a challenge too large, or are simply unable to picture this type of city. There will need to be strong politicians with vision and mana, that are able to show the population that it is both worthwhile and achieveable. The project is large, but so was the project to build the motorways. It concept is not alien to NZ - our towns used to be human-sized. And there are numerous examples of cities around that world that have succeeded. We can do it if they can, and better yet, we can learn from their experiences.

Future Development Plan 2023 #3611

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

There is space within Auckland for smarter more dense building. This shouldn't be left to developers to build crap like has been built on Hobson street. You need well designed livable buildings.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Smart development should not allow developers free reign. The design of the bunnings in grey Lynn was appalling. Compare this to the countdown which is much better integrated into the community.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

No brainer

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Cars are a fact of life for now in Auckland. The bus system doesn't work. I have tried to use it but to get from my house I have often needed 1hr when I could drive in 15min. You need to stop punishing people who drive.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

It is crucial to make the most of our city's resources and infrastructure. However, I have concerns regarding the impact of this approach on our city's infrastructure, particularly in relation to traffic congestion and living crisis. More importantly, it is crucial to ensure fair treatment for all residents, including those in rural communities who also contribute through taxes and deserve a better living environment.
The current crowded living conditions in many areas of Auckland, combined with the outdated infrastructure designed years ago, pose significant challenges. Merely extending roads or restructuring existing infrastructure may not effectively address the growing traffic congestion. The presence of buildings and structures in these areas makes it difficult to create additional road space or redesign the city layout.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

it's important to strike a balance and consider multiple factors when planning infrastructure development. While nature-based solutions to infrastructure design can provide added benefits, the resilience, and durability of infrastructure are also crucial, for long-term sustainability. we need to create a more robust and adaptable urban environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Our public transport needs to be more reliable before we encourage our people to use public transport. and I suggest we build more local centers towards the rural area and develop the rural area around Auckland.

Future Development Plan 2023 #3797

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

NZ has very little quality soil and so any of this that can be saved and used rather than paved over and 'developed' is vital to being able to meet our agricultural needs. Less sprawl is also vital to allow us to be as close to a 15-minute city as we can be. City is far too large for any possible genuine public transport options to cover all the varieties of commutes we all have.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Yes, this is win-win-win, just as Carlos Moreno has advocated for the 15-minute city. Better for life-work balance, far greener, and also with more people around living near where they work and shop, far harder for petty crime and the like to take root.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Best to huddle up with insurance adjustors and, I suppose, developers if they are willing to engage in relative good faith and realise that it is not sustainable at all to build on any slip-prone and/or flood-prone areas which sounds obvious and yet look where we are. Need to think far longer term, people, stop thinking in election cycles only.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This sounds incredibly smart, a refreshingly progressive plan that ought to be stock-standard going forward. Love it.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Thanks so much for seeking feedback and taking things on board. Very much appreciate all of your hard work and the tough decisions you must make.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I see many urban hubs struggling and believe that investing in these areas will bring community together and increase the quality of life for those living near those hubs.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I've enjoyed living overseas in areas with great resources near by. It's a quality of life I miss.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The cost of expanding/developing areas where there is a clear hazard that it going to reoccur is a waste of resources.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

I am less keen on nature based and more interested in science and engineering based to respond to the impacts of climate change.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We have a lot of existing infrastructure that isn't being fully utilised. Why would we want to spread ourselves thin when we can improve and build upon what we have?

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

The more we reduce the need to travel between centres the less we need to think about traffic issues and the like.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

More water is evaporating than we've ever seen before. That water gets dumped on the land. We have seen areas that are flood risks. We shouldn't be building there because that just means more money will be spent on upkeep when we have those now-quarterly "once in a 100 year" storms.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We need to sort out our transport issues. Local centres are all well and good, but without a decent network linking them they are significantly less useful. I'm not talking about adding another lane for more cars, but having a well thought out, safe, and user-friendly public transport system will make our city infinitely more bearable.

Future Development Plan 2023 #3995

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Mixed feelings... better for reducing travel, but other concerns around dense housing ... social issues, accessibility like lack of single level housing for elderly or disabled

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Great for reducing travel

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Help needed for those in flood prone areas now

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We need more cycle lanes bike parking facilities and better public transport

Future Development Plan 2023 #4044

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Aucklanders are suffering from compact intensification. It is certainly not healthier from a physical or mental position to live in compact areas, particularly away from cleaner air and natural environments. I would propose you assess how land is sought and divided, and dissuade property developers from producing more shoe-box homes which have no green space, limited sunlight, and lack privacy. Aucklanders should all have access to healthy land and community. It is not in human or kiwis nature to be boxed up in apartments, and it proliferates inequalities across the socioeconomic spectrum.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Community and connection is key. If intesification does occur by way of terrace and apartment living,, let it be done in true connection. Access to all services should be standard for residential developments.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Totally agree. But let it not be superficial - true environmental health starts with the health of the ground. Start there and priorities true green space.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When planning intesification, I would propose the questioning of one thing - as a condition to their development moving forward, if a mandate for a developer was that they'd personally need to also live in one of their (let's be honest - small) 1-2bdrm apartments or terraced homes indefinitely - would they still go ahead with the development? Or would they cancel it? Or would they change the plans to make it a larger, sunnier, greener, better living space? What would they do?. The reality for housing in AKL is that small, disconnected apartment living is allowed without much thought of exactly what impact it has on people's wellbeing, and one needs only to travel overseas to see how poor apartment living does for the connectedness and health for it's residents. Intesification does not currently lead to healthier, more equitable outcomes, and right now in AKL at least ends up lining the rich man's pocket at the expense of the desperate buyer. AKL council would have a greater body of genuine support if they were to regulate developers or investment property owners to create true living spaces, and put an end to short-term, money-driven ingenuous intent. If our health as kiwis is important, then we should be more connected to the natural environment, to social and health services, and each other. This is extremely difficult to achieve in high density areas.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I believe there are other ways to provide required housing levels for a city, outside of the model of intensification being allowed on just about any residential site across the city.

Intensification should be limited to locations with sufficient infrastructure, schools, reserves and other facilities to support such development. In my view this would see concentrations around public transport nodes only (as was part of original unitary plan circa 2018). Outside of these core nodal areas, residents should be allowed to enjoy the relative peace of their quarter acre sections without the spectre of a multi level development next to ones home, which places undue stress on people, not to mention on services, parking, roading etc. To allow this to work, there has to be meaningful planning and investment in hyper-efficient public transport links. When i can drive into the city from Avondale quicker than i can train, for less money, where is the incentive to switch mode? Train level crossings need to be re-worked so trains can travel at faster average speeds, and also so that car traffic doesn't have to back up waiting from trains at each level crossing. So essentially, decouple the two by undergrounding sections of line or by making cars go over bridges. Second point is to create dual lane arterials into/out of the city. For example, all parking along great north and great south roads should be permanently removed so that these become true arterial two lane routes. Another suggestion is to either incentivise bicycle use thru a ride to work scheme, i.e. subsidising new bike purchases (similar to that of the EV scheme), or disincentivize personal car travel via congestion charging, travel day restrictions, or incentivizing car pooling somehow. If flow in/out of the CBD is massively improved, all these initiatives would

basically mean people can live further out in satellite communities rather than trying to force more people together into the existing land area on the isthmus. The travel distances aren't all that great, but at current average speeds of 30kmhr round Auckland, its little wonder there is appeal for intensified central-ish city living.

I'm also concerned that intensification permanently removes green natural spaces from the city, which can have negative ramifications on peoples general well being, local fauna, plus places more pressure on stormwater controls.
Greenfield development must be included in the proposal with emphasis on areas that have a plan to create sustainable communities, including infrastructure and employment opportunities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people’s daily needs are easy to access by walking, cycling and public transport.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need a plan like this to move forward the development in central towns and improve transportation in our areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is helpful to lower the density of residents and the transportation needs.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Risk prevention.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Infrastructure investment is essential to improve transportation and natural disaster prevention.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We do need a good plan to develop our fine city Tamaki Makaurau Auckland

Future Development Plan 2023 #4548

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4581

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

2. What do you think of our approach to focus development near local centres?

I Don't know

Tell us why

How to define area centre? In Auckland west, there are CBDs such as New Lynn, Henderson and Westcity. I hope the focus can be palced on those area centres as well.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The risks if development is to be introduced in high environmental risk areas are noticeable. Housing and other infrastructure projects should be conducted under the priority of safety. Therefore, those fatal disasters which impacted us last time would no longer happen. Risk prevention is a better practice than rebuilding after a disaster.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Though I agree with this, it would not be practical in New Zealand because we, the taxpayers, do not know about the technical improvement or punctuality of the project processing time. We have yet to learn about where the investments were placed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We need to exercise our rights to obtain official information. Please make your plans more transparent and understandable, including explanations of the terms such as "area centres" and "infrastructure". We need to find out what they mean.

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4707

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4736

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4737

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I agree it's important to ensure that further growth is focused in existing urban areas to avoid further spread. We need to both keep the the green spaces we have left and avoid further transport issues (plus emissions).

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I agree as things need to be accessible to everyone plus we need to avoid even more cars on the road and the extra emissions etc.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I agree it is important to prevent further building in areas of high risk of natural hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I definitely agree with protecting and restoring natural habitats along with the advantages of protecting communities from hazards.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4881

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Definitely community development need to be looked at, facilities, parks sustainably, green space need more focus.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Not something that I have seen within the poorer communities

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Also not something I haven seen within communities witching lower social economic areas where funding from other directions and volunteer hours seem to be keeping these communities alive.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Low funding and minimal support from council!!

Future Development Plan 2023 #4970

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

It's also important to address existing issues occurring within existing urban areas than focusing on development there. Issues surrounding gentrification can also occur.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Having amenities and facilities closer to where people live. People won't have to travel as far. Good for the environment, mental health etc.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Obviously, don't carry out developments where it could put people of risk.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Make it known where/how these rain gardens etc. are going to influence + benefit the local community, signs, activities etc.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #4972

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

More specifics on what will happen to non-priority areas. Think that priority areas should be more broader

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Incentivizes more sustainable cities, encourages people to be more efficient and increase accessibility

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Good to focus on safety of individuals. Don't want what happened in Gisborne to happen in Auckland

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Unless there is legislation put in place to enable these changes I don't think stakeholders will implement them directly as they are on the expensive ideas so have to enforce the change

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

'- Questions too broad

- Have more consultations in person or have less quantitative data rather than quantitative

Future Development Plan 2023 #4974

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need to keep land on the fringes for growing food. The city has sprawled too far already.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is more economical and more environmentally friendly to have daily needs within walking distance. More people walking is also healthier and affects the health services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Doesn't make any sense to keep building in unfit places.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Our future depends on this.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

increase local based community activity and learning classes that used to be held in local facilities - used to be called night classes. It helped people connect with others within their own community. Lifelong learning makes for healthy motivated people.

Future Development Plan 2023 #5016

obvious, isn't it

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

accepting that Auckland will never have a functioning public transport and always suffer from congestion leaves only one way to go, which is intensification - hopefully done well with real town planning and not random ghettos build by dodgy capitalist interests.

Future Development Plan 2023 #5051

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Greenfields developments increase load on private transport and can be disconnected from public amenities. Medium intensification within urban boundaries provides diversity of living spaces, mixes up demographics, intensify demand for local services which supports local business, and drives demand for public transport.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I live and work locally using cycle ways to get to work and shopping. I benefit from reduced travel time and incidental exercise with zero carbon footprint. I utilise my neighbourhood shopping

centre as it's walkable and convenient. I live in a town house community of 43 residences and have been exposed to different ethnicities and demographics and community pride - something I wouldn't have experienced in a stand alone kiwi dwelling.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

This strategy is insufficient. The Council needs a more holistic climate resilience strategy that builds in green sponges for all new residential developments. Council needs to halt all medium density developments that do not have green space to reduce run off and the current deforestation and use of non-porous concrete is evidence Council has poor mitigation strategies.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

See previous comments. I live in a medium density community where nature-based infrastructure was left in. Not only does it mitigate heavier precipitation but has created attractive communal spaces and a more liveable space.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The population growth of Tamaki continues to exceed planning forecasts. At some point there needs to be a national population strategy to encourage people to live outside Auckland. The assumption that growth is inevitable needs to be debated. Auckland cannot grow unrestrained because of intense pressure on infrastructure, ecology and quality of life. As mentioned, growth should be contained within urban boundaries and not spill into absorbing vital agricultural land. Even Prof Paul Spoonley concedes that there needs to be policy planning around its growth, including the impact of continued record migration.

Future Development Plan 2023 #5455

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5460

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Most development should be concentrated in brownfield sites and existing urban areas. This will support the development of a more comprehensive public transport system, and reduce the need for private car ownership.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I like the idea of making local centres more accessible, especially for pedestrians, cyclists, and people with mobility impairments. This will make transport modes other than private vehicles more attractive, which will reduce emmisions.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Concentrate housing development within existing areas. Greenfields development should be minimised as much as possible, due to the negative effects it has.

Future Development Plan 2023 #5764

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need more homes in "____"

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need funding for community and local businesses.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
We need to prevent flooding and earthquake. Faster emergency response.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
We need buildings that are strong.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5782

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Houses affordable

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Develops strong communities

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6005

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Don't want people to know where you live, enemies or stalkers could follow you home, more risks of kidnappers and all

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6105

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6277

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

It depends on the type of housing proposed. Given the limited land available within the local centres, I am against multi-storey apartment type housing which will make our local centers look like cities in south east asia.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

More Job opportunities for our community, saving time and money.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

need more houses

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6582

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Need to consider the following - wheel chair accessibility, disability friendly & senior friendly development - strategically placed toilet facilities, resting chairs around town centre, cover for bus stations.

Need also consider parking facilities for high rise buidlings as currently most are parked on the roads, narrowing the road and causing congestion & is unsafe for commuters.

Safety is important - most seniors and young families need greenery or space to garden, to rest & enjoy nature, but far from loud music & gang violence. CCTV & Lights everywhere - use solar options s there are no dark unlit places at night. Parks are important to maintain as cities are developed.
What is this going to do to cost? Our rates are already at its highest ever!!! National government must do more for Auckland to lessen the burden on Aucklanders who are carrying the rest of NZ.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

To be built in floodfree areas

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6717

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

yes need more facilities near local centers where most people daily needs

Avoiding hazards

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7004

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7005

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7180

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It is the only way to achieve quality homes for new people without the expense and degradation impacts of greenfields growth.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Our local centres will grow in dynamism and business opportunities with increases in density of people who can walk to/from through them.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The costs of attempting to rebuild and defend areas susceptible to environmental damage are only going to increase. It is critical we consolidate away from those areas.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Natures solutions will help us achieve a healthy symbiosis with our environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

REsist those who will pressure for new greenfields development. It just makes no sense to keep building cheaply outside the existing city area - the transport and utility infrastructure will never keep up with that.

Future Development Plan 2023 #7273

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

If you build up then don't go into the green areas at all. Stop that now especially as often building has been done on the most productive land around Auckland.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This is a ploy to bring in 15 minute cities.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Of course building out not to be where there is potential flooding ie near gullies etc. But to say that the sea level is rising is unscientific. And you know that. Of course with a heavy downfall of rain, such as in January this year, erosion of the coast will happen. That has always been the case for thousand and thousand of year as there has always been climate change. To make it sound as if it is a new phenomena is just rubbish. And you know that.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Disagree

Tell us why

The capacity of stormwater discharge and sewage disposal in existing urban areas would hardly catch up rapid growth of high density housing development. The repeated flooding issues this year have obviously reflected this problem.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stop high density housing development in existing urban areas and encourage housing development in suburban areas with well developed new matching infrastructure.

Future Development Plan 2023 #7740

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Concentration of resources

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Makes sense, maintains community focus

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Auckland Council has approved much work in at risk areas. AC should not be mitigating their responsibilities through risk aversion and neglect what it has effectively put into place.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

AC should not be passing it responsibilities onto individual homeowners to provide solutions to make up for Council failures.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please do not let this be at the expense of community and society. Make sure that the economic benefits are still focused on communities and society.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We should stick with MDRS and also look into reducing the size of special character areas. Density should be increasing in the inner city areas first - the likes of Ponsonby and Mt Eden should build up before Te Atatu Peninsula. Density increase also needs to go hand in hand with road space reallocation to enable reliable fast public transport.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Not just building up town centres to be highly walkable neighbourhoods, but also connecting between them with reliable public transport.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Stop all building in flood plains and in the long term look to convert them back into wetlands and reserves to increase our resiliency.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Auckland already feels congested, the traffic is bad everywhere I go its overcrowded.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This will save me time & it is easier for me to access if I need the services.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This helps preserve natural environments, avoids further damage.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Provides more sustainable situations.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Nothing, but the words in the form should be easier to understand for people who English is their second language

Future Development Plan 2023 #8331

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It can help maximize the use of existing infrastructure, reducing urban sprawl & promoting sustainable development. It may also lead to more efficient transportation systems, improved resources. However, its important to consider the potential challenges & impacts such as increased population density, strain on resources potential displacement on communities. Public participation & careful planning are crucial to ensure that the approach is balanced & beneficial for all stakeholders.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It can create more vibrant & walkable communities, reduce the need for long commutes & support local business. However, it is important to ensure that adequate infrastructure & services are in place to accommodate the increased demand in that area.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It is a wise approach to avoid further growth in areas that are exposed to significant risk of environmental hazards. By doing so, we can help protect both the environment & communities that reside in those areas. Its essential to prioritize the safety & wellbeing of people to take proactive measures to prevent or mitigate the impact of environmental hazards.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

I think prioritizing nature-based infrastructure as a response to the impacts of climate change is a wise & forward thinking approach. These nature based solutions not only help mitigate the effects of climate change but also promote a more sustainable resilient environment.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

It would be beneficial to continue involving stakeholders, including experts in environmental conservation & urban planning, to ensure the most effect & comprehensive strategies are implemented.

Future Development Plan 2023 #8349

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

As a teenager living in Auckland, I already feel that Auckland has too much going on as It is. We should look at growing more on the boarders of Auckland.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As a person who catches transport this is a awesome idea.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

I hope that one day when I buy my first home, would have been checked for natural risks hazard.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Anything positive toward climate change I'm a fan, love the idea

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Nice one!

Future Development Plan 2023 #8356

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Increased density and congestion.
Pressure on housing affordability, displacement and gentrification.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Reduce the use of cars if services are more accessible by other means of transport. People more inclined to use services of within their reach.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The flooding crisis was a prime example where housing developments and families impacted were from the most vulnerable communities.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I use public transport a lot to attend uni and I already think Auckland is overcrowded. If we build up I don't think the size and space of such structure caters to our Pacific community.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

We should look at accessibility to the already existing facilities we have now.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This should already be happening for the care and protection of people and the environment.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
If this creates a greener cleaner environment then I agree.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8475

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I agree that development should be focused in the most populated areas, however that doesn't mean that more Rual areas shouldn't be developed, especially since we priorities agriculture.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Same as last question as well but I agree more.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Climate change is happening. There is no point building buildings that will be wreaked before its time, it will save time and money in the long run.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Again, build buildings that can withstand nature same reasons as the last question.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8480

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

A lot of people will then choose to live in those areas and it will create more traffic in those areas. Costs will go up also.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As a student who also works part time, I think it'd be really ideal to be located near facilities. It'd be easier for me to balance my work to school life as I live super close.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Doing further investigations on places with such environmental issues, will help prevent further damage and danger to occur to the people of NZ.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Economics of scale with intensified development. Denser urban areas facilitate better public transport and necessary facilities closer to where you live.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Agree, having multiple intense local centres allows for higher quality of life.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Makes sense to rethink development in hazardous areas, especially with climate change.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Nature-based info is likely to be most future proof and cost-effective in the long run.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8533

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

The RBA supports this approach as it reduces urban sprawl, optimizing the use of existing infrastructure, which is often more cost-effective than building new facilities. Furthermore, this strategy allocates more greenfield areas for recreational purposes, promoting the wellbeing of the growing population. However, the success of this plan relies on ensuring that the planned intensification is backed by the provision of purpose-built infrastructure necessary to enhance current urban areas adequately. This will enable Aucklanders to live, work, and enjoy leisure activities within their local communities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

The RBA endorses this approach because it reduces the need for excessive commuting between home, work, and leisure activities. It aligns with climate action targets and fosters a sense of belonging within local communities. However, to achieve the desired outcomes, it is crucial to provide adequate infrastructure that supports alternate travel modes.
Additionally, affordable public transport must be available to reduce vehicle mileage travelled effectively. The RBA recommends conducting local campaigns to educate residents and employees about the availability and benefits of alternate modes of transportation, thereby reducing car dependency.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The RBA supports this approach, as recent natural disasters have demonstrated the vulnerability of certain areas in the region. Swift action is necessary to protect communities and prevent businesses and households from enduring severe impacts. The RBA urges prioritizing the assessment of development-enabled vulnerable locations and implementing
necessary remedial work to mitigate risks and support adaptive measures in these communities. These assessments should occur before considering future development in areas with significant natural hazard risks.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

The RBA generally agrees with this approach, provided there is adequate investment in day-to-day infrastructure necessary for intensified urban communities. It is essential to maintain traditional infrastructure for clean water, stormwater, wastewater, and roadways, along with alternate mode pathways. Striking a balance between nature-based and conventional infrastructure investment will lead to better outcomes for current and future communities. The RBA is actively involved in a pilot project focused on food waste, showcasing our proactive stance in this area.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The RBA appreciates the intent to prioritize investment in areas with significant needs, addressing disparities in the region. However, we recommend not dismissing development opportunities, especially for business growth, in other areas where local communities could benefit from such initiatives.

We also welcome the acknowledgement in the Consultation Document Principle 5(c) of the inequities in business land distribution and the commitment to safeguard business sites for long-term needs. Additionally, we acknowledge the statements on page 31 of the same document, recognizing sufficient region-wide plan-enabled business capacity, with potential shortfalls in the short to medium term. The RBA urges the Council to expedite the provision of additional business-zoned land in the medium to long-term plans to mitigate this risk.

In conclusion, the RBA largely supports the approaches outlined in Auckland's Future Development Strategy. However, we would like to draw attention to the various caveats expressed in this submission. We request the Council to duly consider these points while making future development decisions.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The existing public facilities, such as water supply, drainage, parking spaces in the areas cannot accommodate denser population.
The existing areas of Auckland are low-density, narrow streets. Unless large-scale demolition and renovation, these areas can't become denser residential areas.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It is a feasible way to develop suitable small businesses and retails for the people in the existing area.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

When some low-lying areas in West Auckland were developed, some people in the construction industry pointed out that there was a potential risk of flooding in that area. But the city Council and councilors ignored the warnings from industry insiders and insisted on developing the area. House prices at that place were lower than elsewhere at that time, and buyers benefited. Now that the consequences have emerged.It has been proved that the place is indeed a high-risk area of flooding. But it is unfair for all taxpayers to bear the consequences and buy-out the damaged properties.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Don't put political correctness first. It is necessary that policies are formulated based on actual situation.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

When working on development plans, we should also take into account the preservation of historical and cultural relics in some areas of Auckland. Leaving the country's characteristics for future generations, rather than blindly pursuing "modern" high-rise buildings in every area. This will be more beneficial to the development of Auckland's future tourism, economy and cultural landscape.
