

Glenbrook Beach coastal erosion response options

Feedback must be received by **1 April 2022**

We are seeking feedback on options for the coastal erosion response at Glenbrook Beach. The objectives are to provide a suitable response to erosion while considering risks to the beach, the reserve, council assets and private assets. Secondary objectives are to maintain and improve public access to the beach and improve visual amenity and recreational connections.

Due to the shape of the coast, coastal processes, and location of assets, the shoreline has been divided into four sections. Refined options for each area are outlined below and we are seeking your feedback on the central, southern and First Ave sections.

We encourage you to give feedback online at [akhaveyoursay.nz](https://www.akhaveyoursay.nz), where there is also a short video that explains the options, as well as Frequently Asked Questions. Or you can:

Scan and Email your completed form to:

What we are proposing:

Northern section

Re-nourishing the beach using imported sand which will raise and widen the current beach to offset potential erosion. This will require the creation of groynes by extending the existing stormwater outfalls and possibly by creating two smaller groynes. This is the only option for this section.

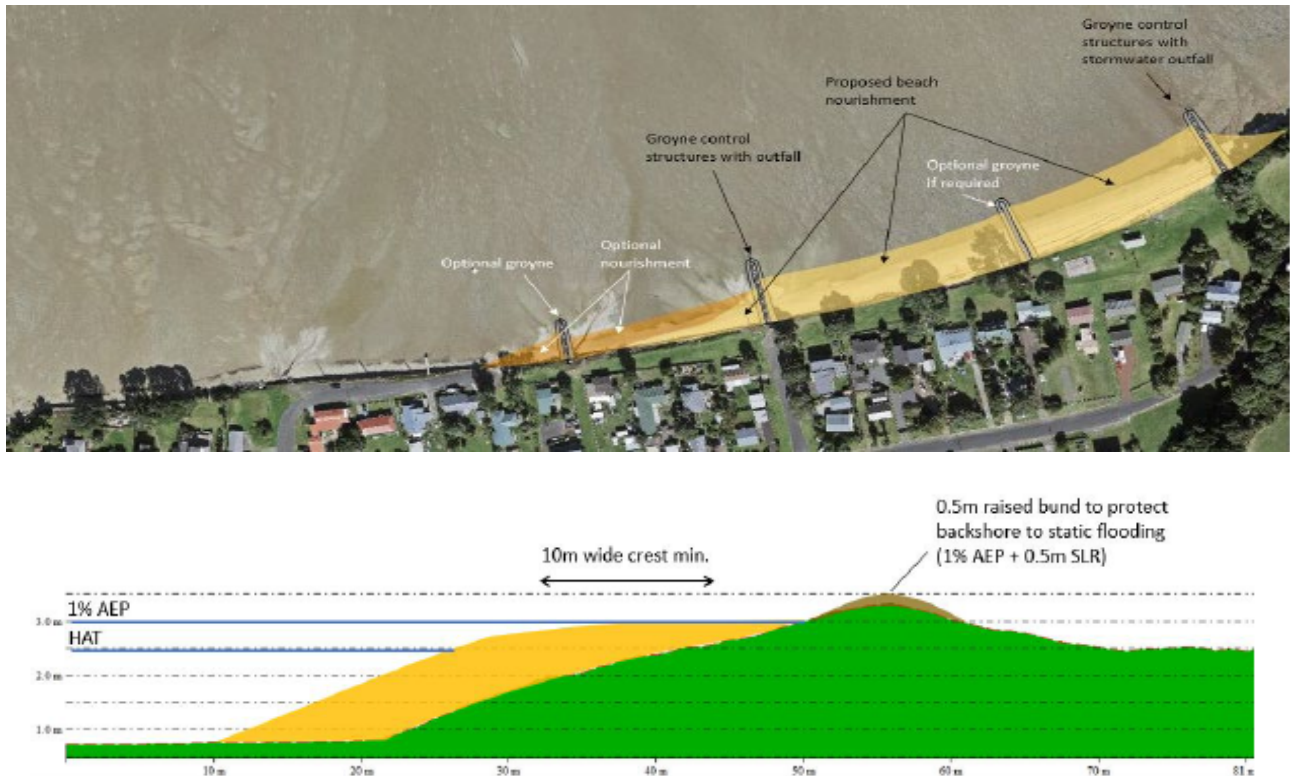

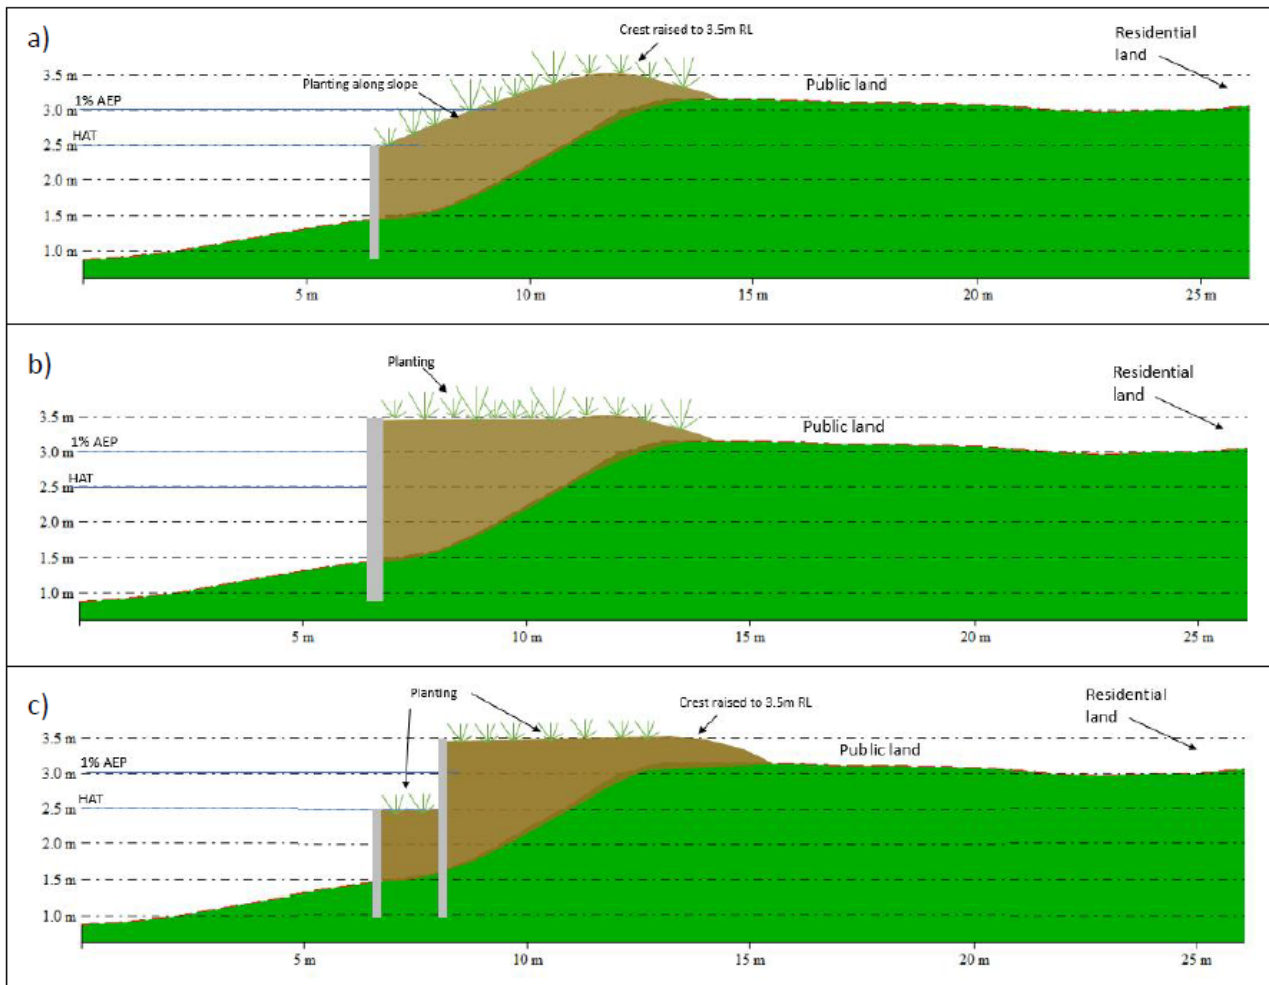

Figure 2: A typical beach cross section showing the imported sand (yellow) and raised berm (brown) relative to present day tidal levels.

1. Do you have any comments on the northern section?

Central section

A combination of single or dual timber seawall, sloped or flat infill and coastal planting. We are seeking your preferred option from the three options below:

2. My preference for the central section is:

a) Single timber wall with sloped planting

☐

b) Single timber wall with flat planting

☐

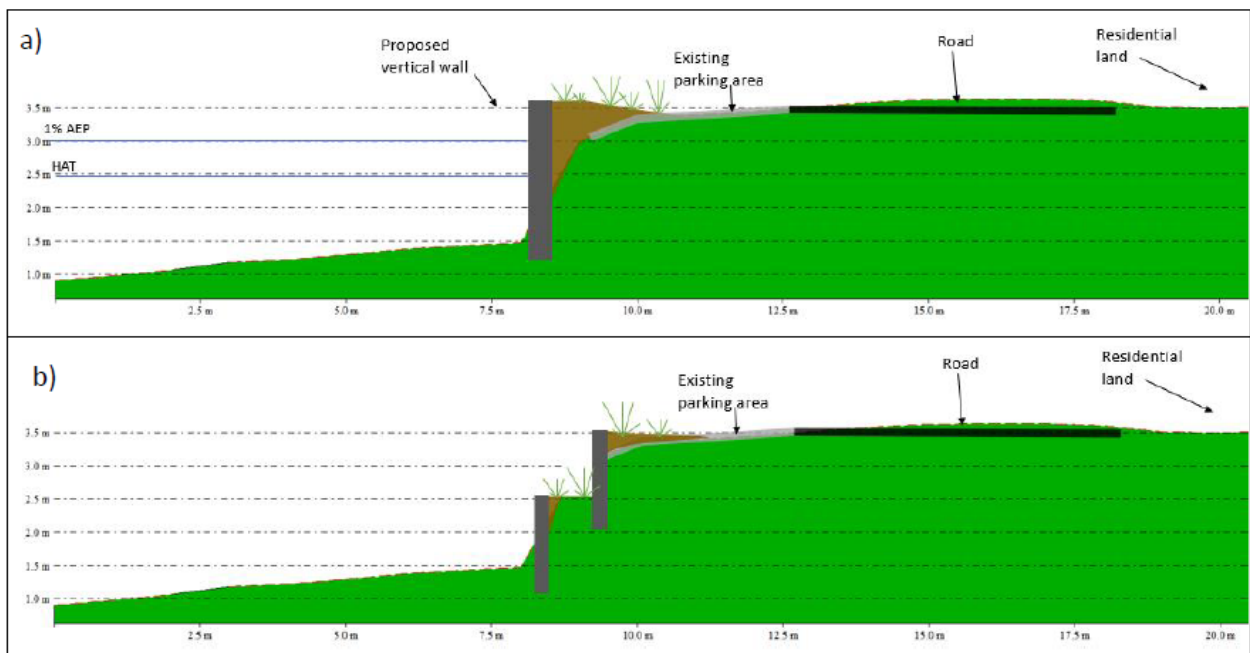

c) Dual timber wall with flat planting

☐

3. Do you have any comments on the central section?

Southern section:

A combination of single or dual timber seawall, infill, and coastal planting. We are seeking your preferred option from the two options below:

4. My preference for the southern section is:

a) Single timber wall with planting ☐

b) Dual timber wall with flat planting ☐

5. Do you have any other feedback on the southern section?

First Ave section:

A combination of timber seawall, infill, and coastal planting, with the same options as southern section (above). We are seeking your preferred option.

Please note, delivery of this project includes the northern, central, and southern sections only. For the First Ave section council will develop the detailed design and seek resource consent, however construction of the preferred option for the First Ave section is not part of this project.

6. My preference for the First Ave section is:

c) Single timber wall with planting ☐

d) Dual timber wall with flat planting ☐

7. Do you have any other feedback on the First Ave section?

Beach Access

We are proposing beach access via a 'sand ladder' in front of the existing toilet block and just south of the playground:

Wooden stairs will be located at the end of Fleet Street and Beach Road, as well as two additional stair access points in between these streets. The existing pedestrian ramp at the end of Beach Road will be upgraded.

8. Do you have any feedback on proposed beach access points?

9. Do you have any other feedback on the Glenbrook Beach coastal erosion response options?

Need more room? You can attach extra pages.

After the consultation period closes, we'll review the feedback received and report back to Franklin Local Board, who will give direction on the final design at a future business meeting. We will then further develop designs and apply for the resource consent needed for construction to get underway, expected in 2023.
