WRITTEN FEEDBACK

Date published: **Friday, 10 August 2023**

Future Development Plan 2023 #46

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

I believe you should ask Tangata Whenua what you should do and where they would like ig, if so

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I agree to public transport especially train rails but not bike lanes or more sidewalks.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

The coasts by open ocean not waterfronts

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Give land back to Tāngata Whenua.

Future Development Plan 2023 #112

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Our current urban areas are already busy and by continuing to increase populations in already dense areas it has a flow on affect to traffic congestion, poorer living conditions and health concerns

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

but always in consultation with the community, there needs to be a balance maintained of community spaces

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

we need to work with the environment and reduce as much harm to families and their living spaces and livelihoods as possible

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

Future Development Plan 2023 #374

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Lack the infrastructure to support growth in urban areas. Mangere for example has so many new terrace homes yet buses are infrequent. There is no parking so it's all street parking and yet Streets have had road speed bumps installed, barriers to slow traffic. It's not conducive to the growth. Our town centres are run down. Facilities available are not up to standard. More needs to be done to improve the infrastructure before more zoning rules are changed to cater for more terrace housing.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Ref prev response

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Future Development Plan 2023 #445

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Most cities in the world have a focal point.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

A lot of people like to work locally close to where they live.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We don't want people to lose their homes due to environmental hazards. Lets keep Auckland safe.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Its lovely to see trees within a city centre not just buildings.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #467

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It is very concerning to see high quality arable land being swallowed up by houses and apartments with little or no land to grow food. One day there will be lots of homes but nothing to eat

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

It reduces the need for people to travel and if we are really smart the local centres could also become hubs for public transport

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Climate change shows that some areas will be a problem - sea front, flood zones

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

It seems as though no one is considering the social infrastructure. Just building homes is not enough - people need parks, greenspaces, leisure activities in their neighborhood. Not only would it reduce travel it will also help to reduce crime and social issues. There are many examples overseas of ghetto communities which were constructed just to provide accommodation. I am very concerned about Mangere West. The local school and the graveyard are the only places for the children to play and other venues are not in walking distance. The community needs playgrounds, a skatepark, a swimming pool, a cinema, a medical centre, green spaces to walk and cycle and shops including a supermarket closer than those in the mall. While these things cost money - its cheaper than the social costs later.

Not surprisingly locals take supermarket trolleys and dump them - because they have no car and its too far to walk carrying groceries.

I see no where where planning for the community has been included by the council. I have asked the local council to come to the school to meet us and discuss this but so far no luck!

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I agree we need to build up on what we have but as someone who lives in a development with 33 houses and not that many carparks, and knowing the council is about to put bike lanes on both sides of our road - WE CANT keep condensing without creating more car parks. Very few people want to bike from outer suburbs onto the city

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

We shouldn't have built on these flood plains anyway without making provisions for flooding

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We need to do what we can to help improve our natural environment

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #698

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Densification on existing areas is adding a lot of strain to current assets such as the ageing drainage infrastructure and roads. Traffic has become quite bad recently as more and more areas are being developed to accommodate denser housing arrangement. Development of greenfield areas should be done but within reason. Perhaps relocating migrants to other parts of the country rather than concentrating them all to Auckland could be something that is considered.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Neutral. Traffic times would be reduced by having housing developments close to key facilities however decentralisation would also aid in in achieving this and also mitigate the impacts of increased traffic in particular areas.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #753

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It makes sense but it needs to happen quicker. We need to have the infrastructure to allow this to happen.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We have seen the decay in our small townships or 'shopping centres' of old become non stop vacancies due to big malls being built nearby. Having people living in and amongst these smaller strip shopping centres will bring it back to life. Think Panmure, Henderson etc.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

You only have to rewatch the news of earlier this year in Auckland to know the reasons why this is important.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

You don't have the funds to be able to carry it out. No Mayor is going to campaign on getting it done because they will never be able to complete it. It is too large and expensive. Let the government implement their proposal for water and get this work we need done completed.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #805

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Specific fringe area should be targeted for development as complete local centre townships. Schools, medical, infrastructure being planned from the beginning.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

People like to live, work and play in the local area. It cuts down on transport and is more convenient

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

At risk area should not be further intensified. Those areas should have a phased out decommision

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

No further need for Maori enhancement. Nature based infrastructure is good though.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Removing Auckland’s heritage villas and bungalows is ruining our landscape.

Intensive housing and high rise buildings need to be planned for brown waste land . Concrete block cheaply built high rises will be slums if some beautification and green parks are not included in the planning.

Future Development Plan 2023 #955

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Auckland doesn't not have the transport system to build further out of the city. People would be travelling hours each day to get to work. Also for our environment we need more trees etc

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This would avoid more cars on the road and pollution

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

People can not keep having stuff like this happen to them.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

higher density results in over crowding, stress, anxiety, no parks or recreation or outdoor space, no parking

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

agree, housing near business development etc but that doesnt mean cram them in to existing limited space

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We got flooded for first time and we live halfway up a mountain and have lived here for thirty years. Flooding from extremely long grass (causing a barrier effect). I feel all problems of flooding and subsidence within auckland should be looked at and fixed if possible so that no further issues

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

We need to look also at our substandard reading system third world compared to Australia etc. Due to problems with not enough bus drivers and also breakdown or eternal upgrade of trains people have lost faith in alternative transport

Future Development Plan 2023 #1150

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Auckland is already spread out enough. Focusing growth in existing areas will allow for greater use of increasing infrastructure in a smaller area rather than increasing the area and then having to stretch infrastructure even further

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Congestion is crazy, would be less if people had to travel less to access services etc

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

No one wants their houses flooded anymore. Reducing this sort of risk of hazards should also lower peoples stress

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Anything natural is better than interfering with nature

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

More cycle ways to have less cars on the roads would help with pollution/climate change etc.

Future Development Plan 2023 #1215

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

A prerequisite to density is infrastructure, roads, services, and even transport options (other than just public transport). Even in new developments, it's a last consideration causing chaos and making the existing problems worse. Previously proposed projects such as mill road, highways and airport connection have been deprioritized based on govt, cost etc. We are well behind in this space and which makes Auckland a painful place to live compared to other countries. This should be the priority over the consideration for more dense living or working arrangements. A 30 to 100 year plan for expansion into Greenfield opportunities makes better sense as you will be starting with a blank slate. Develop these for the future while you catchup on the existing problems.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Public Services and infrastructure within these areas are already currently strained and unable to handle the existing community. Intensifying the populace within these areas without addressing the infrastructure first will only highlight the lack and contribute additional pressure on systems unable to cope.
Greenfield growth has more potential for additional growth at a more manageable rate and also the possibilities of creating stable communities. Infrastructure and services are key. Schools, townships, potential for commercial operators such as local tradesman, etc and intensive public transport planning gor links with other communities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #1371

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

We are already congested right now. Adding any more to the urban areas, especially where there's already heaps like Mangere, is not good for anyone's wellbeing. The roads are smaller from vehicles, the roads are busier and it takes so much time to get anywhere. We've reached our capacity for safe, healthy communities in South Auckland and we need to keep a balance of the old green, spacious Auckland with modern populous Auckland.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

For the same reasons listed by this survey but they need their own local centres aomewhere other than what is already congested in the existing congested Auckland.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
For obvious reasons like not wasting money.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Because we've seen a nature based approach work overseas in highly populated Asian cities.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please do not dump anymore housing in Mangere as we have enough people and traffic. Spread it out to effluent areas if you really must intensify in Auckland.

Future Development Plan 2023 #1374

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

High density housing causes issues within itself. Shrinking green spaces also carries dangers. It's difficult to plan for growth which will be centralised to Tamaki Makaurau due to employment opportunities when the best way forward would be to spread the population across the motu. Lessen the pressure points on an already pressured city.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

The fact of the matter is people are employed where they can get a job. People travel great distances every day for a job they mildly like but need to support whanau. I don't know how you could guarantee employment within the surrounding areas especially with the wealth disparity in some communities.
Also with high density housing the supports need to be increased to reflect this. In my personal experience and the proposed pulling of funding, a number of community supports will struggle with the increase in their community. Also medical centres are struggling to manage with those they have now while offering any sort of level of care.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Auckland will be submerged in 30 years given the rising tide levels and the notable flooding over the last two years.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Im in two minds. I dont want to lose green spaces we have in urban areas but i know we need more housing

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

That sounds good. I think its important that people dont have to travel too far

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
It definitely needs to be looked at. We shouldnt be building in risky areas

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Nature based is important going forward. We need to be as nature driven as possible

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think green shared spaces are important for built up areas so people have places to socialise and play sports. Most people wont have back gardens

Future Development Plan 2023 #1469

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Central City Suburbs - yes where the transport infustuctre is avalible and travel times are short. In suburbs in South Auckland and the North shore no. Unless they are on Main arterial roads.
Eg Mangere Bridge - already major traffic as people use it to cut through to avoid the motorway.
not enough schools.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Needs to be where business and shops are not just shops.

or close to the central city, Manukau city and Takapuna, and Westgate.
not just every suburb with a mall. Needs to have office or manufacturing sites too.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Clearly growth needs to be within the existing boundaries and accessible by public transport. However it must be done in such a way that the good things about urban living are not lost. Parks and sports fields must be included

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We need people to get ot of their cars and use public transport, so work and housing need to be accessible. Businesses should be encouraged and required to be in areas that provide for the workers

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

vulnerable areas are also areas that could become recreational areas or areas of green thatenhance tree growth and reduce climate problems

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

The local community knows its area, centralised government tends to be theoretical, development needs to take in the views and experiences of those who have a lived experience of the local environment. Raidgerdens can be a lovely nature walk and get people out of their homes.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please don't repeat the mistakes that other nations have made, lets learn by their mistakes. Piling too many people into too small an area opens up the prospect for crime and other antisocial behavior's. Parents will not send their children to play in a park/garden that is out of sight. If we want our children to get outside and not just spend their lives on technology we need to have a broader look at where people live and what recreational needs they have

Future Development Plan 2023 #1972

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Auckland has a good rating for live-ability at present, but it is getting worse as more is being done with the same spce. intensifying the current urban areas will only exacerbate this.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

This will increase the congestion that is currently experienced.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

I'm not sure about what he council is trying to achieve. Take the Auckland Airport, the runways are barely above sea level but there is no talk of relocating them.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Auckland council needs to be coherent. How can it say on the one hand that it wants to chop down trees but on the other hand it wants nature based infrastructure. We are told that trees provide a vital function of giving stability to the earth and its surroundings. Yet the weather events have shown that trees are needed even more now. There needs to be some clear, lucid thinking.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

I understand your rationale, but equally I don't wish to see the character of our local area ruined with high rise flats, and my property value plummet as new housing destroys our privacy and puts us into permanent shadow.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

Again I understand your logic, but I think your reasoning is a bit simplistic. My employer isn't likely to relocate from their sole premises in town, and our local supermarket is too small and too expensive to do all except the smallest shop. I'll still be driving to work, and for my weekly shop.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Tell us why

I think this is largely an exercise in "appearing to do something", whereas in reality such measures will be quickly overwhelmed in the event of significant flooding.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I think that Auckland needs walk before it runs. We need to get it's public transport working for the existing city before expanding it, otherwise we're always behind the curve, and the appeal of living in the city will diminish. Most of Auckland drives because public transport is rubbish.

Future Development Plan 2023 #2287

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Infrastructure cant cope. E.g. Bader Drive Mangere, significant denser housing there, and increased traffic has been very noticable. Back streets were the way to travel when motorway is busy. Now backstreets busy too. Longer times in traffic on roads that wont change except the increased housing on existing streets. Natural hazards will be more frequent as existing infrasture cant cope. Light rail wont be ready in my life time, but can see more disruptions to our communities. Lot of these high rise apartments seem like a quick buck for council and not benefit the community properly. Traffic logistics is a joke in Auckland and its due to Councils freely accepting any apartment consents from developers.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why
Again its not working. Hate travelling to work due to time getting there. What ahould be 30mins takes 1 hour or more if theres an accident or roadworks....

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #2555

Refocus away from electric vehicles due to the lack of life expentancy ,reliability and hazard control with the fires from batteries and what is truely green would be to keep all the older small engine cars running, maybe a restoration programme not electric vehicle infrastructure. Road condition is a bigger priority than vehicle safety (you could drive the safest vehicle in the world and still die on our roads from the terrible road condition). Parking infrastructure and correct traffic light phasing. Drain maintenance and water line maintenance so we dont have major loss of an extremely valuable resource and we dont have flooded lanes on roads etc. Get rid of busses and focus on trains. When the rubbish trucks empty bins if they could not drop the rubbish all over the sidewalk without picking it up (piss poor workmanship).

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

With a housing crisis it is extraordinarily irritating to see empty shops & shopping centres beside houses with businesses. Houses are for people NOT businesses - they should be in a shop or shopping centre environment.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

I dont know that akl council actually understand where people prefer to travel to - I feel that there is a thought that people live just outside this circle so they must go left, when in fact it is often right - often due to traffic congestion

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

its not rocket science, you've been moving natural streams & rivers with little thought to nature and now nature is pushing back. Also stop consenting for people to live on cliffs or riverbanks unless they acknowledge they will not be entitled to council compensation if their house falls off - if they built or bought in the past 20yrs they shouldn't be eligible for compensation - climate change has been an issue for 40yrs at least - stupid choices are not every tax payers responsibility

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

Akl council don't take care of the streams, lakes and rivers that already exist - perhaps if they did MANY places wouldn't flood on a regular basis and the "mauri" would be substantially increased if some communities weren't left to deal with floating rubbish and blocked drains due to insufficient size and capability - you should fix what you have first before trying to win brownie points with new expense ideas. At my local stream we have an old man who is down there several times a week trying to clean it and AKL council have broken the last 3 arrangements to meet there to clean it up....

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

There needs to be fair distribution for street cleaning, field mowing and maitenance - I am sick of driving to my local sports field which still has a huge hole in the ground and a downed tree from the January floods - there are 4 schools on my road and only 2 rubbish bins - you aren't getting the basics right - stop building expensive infrastructure and go back to basics - everyone is happier when they don't live/work/go to school in a flooded, dangerous rubbish dump

Future Development Plan 2023 #3328

This makes better connections increase active and public transportation and reduces the need for car use on every trip.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

Using a blanket GIS system to predict this does not take account of real factors or conditions.

Easier implementation of sea level rise and inaundation should be supported by the council. Such as waiving resource consent requirements, providing free basic designs or something that an LBP could build like NZS 3604. So that a rock wall could be built with minimal consenting costs and time-frames

Some control measures would still be useful.
There should be away to remove hazards from your property either by design or if they do not actually exist then by engineers repor.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

In doing so we should be able to support the natural infrastructure to prevent erosion in valleys and streams.
Provide funding for removal pest plants and replacing with native wetland type plans

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Increased focus on reliable public transport.

Large shift to add connected cycle/scooter or shared paths to all suburbs, particularly poorer suburbs.

Increase in traffic control. Such as red light cameras, stop sign cameras and speeding cameras to reduce dangerous driving) someone nearly knocked me off my bike when they ran a stop sign.

Fine people for parking on pavements forcing pedestrians to go off the footpath on to the road.

Fine people for parking on shared paths or cycle paths.

Use the fines to fund more cycle ways or shared paths for safe active transport modes.

Create seaside walk connecting to Panama road esplanade and seaside park in otahuhu.

Connect otahuhu and mangere via seaside walkway like they have at orakei basin. Providing a safe route from otahuhu train station to mangere.

Start the new light speed rail from manukua to the airport to have an immediate connection to the train line in the city.

Connect the airport to the cycleway to pPuhinui - there is a large gap with no footpath on a busy industrial road.

Prevent the TMA from felling old trees on mountains around Auckland. Introduce more natives to the mountains.

Increase in dog friendly walks and allowing pets on all public transport on leash and under control.

Safer more secure bike parking options by train stations.

Future Development Plan 2023 #3512

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need innovative and sustainable options

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Innovative and sustainable solutions are required. Not the same old way

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why
Innovative and sustainable solution

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Sustainable and innovative solutions are essential

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3625

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

More houses in our urban areas are creating too much traffic. It is impossible to get anywhere these days.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Not every area is equal. What is in one supermarket is not in the other one. And where do you find the healthy stores in South Auckland? There are two many fast foods out these ways causing us to have to travel to seek better nutrition even with the supermarkets. Therefore it is unfair. If all supermarkets and areas that provide food and shops were equal then I would agree.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

And also invest in educating households to look after and tidy their own properties.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Stop putting the cost back on those who want to renovate their house in the way of making them buy their own water retention tanks. Also, invest in cleaning up South Auckland and making people accountable.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3742

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need to retain green spaces and productive farmland within the region.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Long commutes are stressful and time-consuming, and increase air pollution.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

It seems obvious that an area prone to environmental hazards should not be developed for human use.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Our built environment, with its overemphasis on concrete, is contributing to flooding, and our storm water drains are clearly not coping with current rainfall levels.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3782

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

The multi-level apartments are randomly built where there is space and they often look out of place among the one level houses surrounding them. I am concerned that the surrounding infrastructure such as parking, public transport, amenities are not keeping up with the sudden increase in population in a particular area/suburb

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

agree that this makes sense, but don't agree when the local centres themselves need an uplift and boost to the upkeep and maintenance of the buildings and amenities they offer, eg. Mangere Town Centre. This local centre is in much need of an upgrade!

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

We don't want a repeat of what happened to those who were displaced by the Mangere Floods. This was preventable, but it looks as though despite the information available clearly stating that this was a flood prone area houses were still built around and in these areas. Those involved with ignoring these risks and details should be ashamed of themselves for not doing their due diligence properly.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

We cannot ignore the impact of Climate Change especially with the recent weather events - Floods in January and Cyclone Gabrielle

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

More community gardens should be established/promoted/funded. We need more ways of living a sustainable life and not relying on processed foods to fuel our bodies. Create an environment that promotes walking, cycling, coming together as a community. Acknowledge and celebrate the different cultures in your designs. Promote art and creativity in areas that are rich in it such as Mangere - we have talented bomb artists fund them to fill up the blank canvas of walls around Mangere Town Centre. It'll be great to see a big Samoan fale at David Lange park where people can relax and hangout. Stop building multi-level apartments randomly around Mangere -have some control of the private developments. Some of them are looking like the projects. Yes we need more housing but we also need to maintain a beautiful serene looking environment that will help lift up our wairua/spirits to help us relax and balance our busy hectic lifestyle.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Anthropogenic climate breakdown is by far the number one issue to humanity has ever had to deal with. The decisions made today will set the course for decades and even centuries to come. They may even play a role in whether or not our civilization can continue, so it's absolutely vital that we do the right thing for current and all future generations.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

This is absolutely the sort of thing that we need to be prioritising and scaling up as much as possible.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #3993

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Coming from Germany, I like super dense city centeres and 'denser' suburban towns around the city with each having a clear boundary of like a couple km of just 'greenfield' in between. Allows for plenty of nature for everyone. Auckland is too spread out and interconnected already. I would like it to break it up a little bit, densifying the suburban centers and keep expanding but with enough green in between :)

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Yes, but it shouldn't intefere with it. And the city center itself should be (more) easily accessible by public transport. Also, going back to my last answer, if everything's interconnected like Auckland I feel like it's harder for communities. E.g. I lived at the 'border' (I was told, I couldn't see a'border') of Mangere and Papatoetoe, but I didn't feel like I belonged to either one. Sometimes I went there for shopping other times the other, sometimes I went down to Manukau. Having "towns" that are somewhat independent of each other and have *clear* boundaries is the only real way to form unique communities as you describe them.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

I don't know

Tell us why

Not sure I understand everything but sounds reasonable ig

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Again, sounds good.. but not at the cost of other innovations and developments.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Just note that for most people “facilities” = shopping mall. Having a street of shops nearby is handy, but especially young people (including me) need “malls” close by to really go shopping.

Future Development Plan 2023 #4121

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

More housing less parking, growing traffic affects everyone within auckland. I would love a house on the outskirts of auckland.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

More cars near facilities, means less customer parking (if auckland transport hasn't already taken it away) only school kids uses buses. They unreliable. Build in quiet areas. We don't wna be sitting in more traffic, that will definitely won't be helping with the emissions.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Disagree

Tell us why

If council think they can be Moses and move the sea on the outcome of their investigation, then I agree. I don't think council can do anything but put up warning signs. So i disagreeee

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

I think I agree, but there's not enough information for me to judge.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Make garage parking compulsory for new builds.

Future Development Plan 2023 #4911

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

We need better roads

Lower cost of living

Fuel

GST needs to come down
Balanced rates across NZ

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Better housing
Power & water, gas rates

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
Buy the land and close off living in those areas

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
More trees and produce cheaper produce

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5829

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

It is far more sustainable, will lead to better transport and use of infrastructure etc. Will make the city better overall

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Similar again. Lots of people I talk to want things spread out, but don't realise this makes it more difficult

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Seems like common sense for the long term

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Looking overseas, this not only works better on a practical level, but helps make cities nicer places to be as well

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Building up, not out, with a future focus and public transport would be great!

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

agreed lower household transport cost and need more businesses near local centers where people can easily access

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5935

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Building stronger communities

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #5968

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6023

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

easy to access

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6088

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6129

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6160

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6173

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6197

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6245

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6261

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Encourages local residents to support local businesses - easy access and saves petrol, reduces traffic congestion. Guarantee that local businesses will put in more effort for sustainable and affordable products.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6282

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

Agree

Tell us why

Good for families with aged family members. The proposed development will bring in services easily accessed by the vulnerable in the community

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6313

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Good for growing families and people and migrants relocating/settling in to Auckland city for employment

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6362

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I am in the healthcare and beauty industry. My clients depend on affordable transport to obtain the services we provide. The key for our business is accessibility

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I can only comment on my observations on the developementts in Sydney, NSW, Australia. There is a lot of traffic congestions and with high rent. For Auckland, they will need to improve public transport to urban areas with regular runs

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I can relate in person to what is proposed here. When my father in-law was ill we were able to place him in care at the local elderly care facility where he waa familiar with the town and if is setting. It was also within walkjng distance that we can visit him daily.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I support the proposal. I live on the border of Māngere and Papatoetoe North. I am still reliant on my car to get to stores and local services, I also take my children to church school which is getting a bit difficult now there are so many cars on the road and less parking spaces and it gets a bit dangerous at times to pick them up and to drop them off (lack of parking). Being able to walk to stores and more regular public transport will help a lot.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6382

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

I support this good proposal and its intentions

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

I don't know

Tell us why

I think this is a great idea to reduce vehicle transport and the carbon dioxide concentration in the earth's atmosphere that causes our biggest issue, Climate change. However, I vote for 'I don't know' because there are the negatives also of having an overpopulated issue in the local center and you know, Auckland, it could get messy.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Tell us why

Migrants and people relocating to Auckland will benefit from the proposed developments bring economic growth

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6439

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

more housing and businesses near us easy to access

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6560

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

My main concern is the the infrastructure that it is sustainable and hazard free from future harmful weather conditions. Development is neither good or bad as long there is proper consultation and thorough background work to take place for a thriving community.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6595

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

People need to enjoy the fruits of their labour i.e. tax payers and rate payers dollars put into good use

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6596

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Supporting local impacts the businesses significantly, this in return will be great customer service. This cycle relies on each other, customer to give boost for business and business to put food on the table.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6635

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

The cost of living has increased, the price of gas has incresed. The proposed plan will help our rapidly growing communities, and hope it is in a flood free zone

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This will be a great idea, new and clean developments will motivate the local people to support. Safe place for people to enjoy and socialize.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6666

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

This will benefit families

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

We live in a neighbourhood that is less then 15 years old. There is no regulates bus schedule and you do have to travel by transport to the local stores, schools, medical centres and church. I have 8 children, 6 of them are at school and the 2 youngest at a preschool. The morning routine is hectic to wake them all up early, prepare them all and drop them off myself through private transport.

Avoiding hazards

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

we need more houses and more facilities here in Mangere easy for us to go to one place

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6696

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

When residents and community work locally - saves money, time, and energy commuting jobs. Local jobs will encourage Neighbours to walk or bike instead of driving.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6728

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6791

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6808

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6843

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6879

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6880

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6898

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6933

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6954

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #6976

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7016

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7017

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7044

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7064

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #7087

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Greenfield is important to neutralising pollutions from the cities. Urban intensification requires the infrastructure to be capacitated to handle the extra population. I don't believe we have the adequate healthcare system, education system, waste water system, and police force to handle this. Also parking will be a problem. Overall strong lowering of the quality of life and my reason for moving back to NZ

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Depending on where you're talking about. I quite like the status quo where I do my shopping on my way somewhere; I plan my days ahead and hardly drive out for just single purposes. Although I have a medium size mart in my village centre which to you I could have biked to, I hardly need to go there because I'm so organised and conscious about planning my routes. I also believe human beings like to move around different places looking at different things

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

I love the nature but if you ask me I'd be keen to say I can do without all these new development if you could prioritise using the money on fixing existing core services eg the road and clearing the drain blockages etc

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I do not agree development in response to climate change should be a priority when there are so many aucklanders suffering from rising living cost including rising rates. I often feel my hard earned money is robbed by the council to be wasted. Also, I don’t produce enough food scrap to feed my worms, why are you forcing me to have a food waste bin and not letting me opt out of it?

Tell us why

I hate seeing the apartment boxes going up.

They look disgusting.

Whomever designed them is so unimaginative.

Anyway,apart from that,living in tight quarters as mentioned is NOT healthier for people at all.

Not bring able to go outdoors bare footed in your own yard is far from healthy,and let's not blame climate change,because climate is cyclical.

It has always changed since the beginning of time.

I've heard from people in countries where the media reports that it's in the 50 degrees,that it's not true.

I've spent time in Spain when it was in the late 40s and 50s since the 1970s (so 50 yrs off and on) and lo and behold,the climate changed as the seasons did....that's just pure common sense as opposed to fear mongering.

Many of us have our eyes wide open to the shenanigans and BS that's being shoved down our throats by govt, central and local,and it's time our intelligence wasn't insulted by in many cases....less intelligent beings!

Thank you.l

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

We're all rate payers.

Why just concentrate on where some of the rate payers live.
Yoh should be servicing ALL rate payers,otherwise,don't take funds from those you don't service.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

As I said before,the climate is cyclical FACT.

Notice that ALL elites have homes by the water?

Do they think we're stupid in believing their BS that climate change is going to drown the land mass and completely destroy us yet they live NY the seaside?

How about just getting rid of haarp in NZ.

They control much of the weather patterns,and recent flooding etc,shows they have really had a ball with geo engineering/weatger manipulation!

Yes it IS REAL and IS a thing!

Why does haarp do it?

To push an agenda for the govt!

That's an excuse to ask tax and rate payers for more money to pay for the BS climate change!

As I said there are some unimaginative people running our country and the world.
Let them dig in to their pockets to fund their climate change garbage!

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Other

Tell us why

Once again still pushing the UN climate change BS.
Yes nature needs to be protected,but don't blame climate change on the reason nature has been damaged!

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

If people want to live in boxes in the cities and urban areas,let them.

If people want to live in rural areas,let them.

Spruce up and fortify any areas that need to be done,and live and let live for crying out loud,and let's stop shoving climate change down everyone's throat.

Some of us have researched and studied whats been gojng on for decades,and climate change is just another propagandust idea as global warmjng was.

Notice how that died a very unceremonious death when Al Gore and co were proven to be absolute liars?.

Well climate change is the new global warming....same BS different name!

Time to stop BSing the people of NZ and the world!

Future Development Plan 2023 #7928

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

A more compact Auckland will assist with achieving the 15 minute city, reduce car dependency and promote local movements such as walking and cycling. We also need to green spaces for food production and recreation. Therefore, intensifying within the current already urbanised area will help achieve good outcomes for the environment on both fronts

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

As above, such centres will assist with reducing car dependency. It feels like the centre focus is already in place, if maybe unintended. I don't think this will be a significant change from what's been happening already.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

While I agree that future development (or redevelopment after a natural disaster) needs to occur in safer spaces, I consider that if a managed retreat is planned, the financial implications for those affected need to be carefully worked through to avoid hardship for people

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Great. Now just stop cutting down our trees on the maunga as they also take on lots of water, and stop allowing city trees to be cut down for developments. It's great to have these plans, but if you don't protect what we already have, then this is just greenwashing.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please grow a spine and push through proper infrastructure for cycling and walking without being bullied by the car lobby. Enable people to cycle safely - not just in the inner suburbs - and stop being pushed around by the vocal minority. Great the New North Road will finally happen, but there's a huge amount of unserviced area in Auckland that desperately needs this infrastructure. Please invest in this as well. No good having all the feel good big plans when you can't even close a lane on a road to enable safe cycling.. (or at the very least buses, without any parking at any time)

#7935

Fletcher Steel™

BUILDING ON TRUST

28 July 2023

SUBMISSION BY FLETCHER STEEL ON THE DRAFT AUCKLAND FUTURE DEVELOPMENT STRATEGY

1. This submission is made to Auckland Council on behalf of FLETCHER STEEL on the draft Future Development Strategy ("Draft FDS").

2. Fletcher Steel is a large Manufacturer and Distributor of Steel products who are embarking on a major investment strategy for its key Brands. Fletcher Steel are investing in new manufacturing facilities to continue providing Steel products to the industry and providing future employment across the board. Fletcher Steel are investing in building green field sites that comprises of new purpose-built facilities, comprising each of our sub brands within the Steel portfolio.

3. In Auckland, our business operations rely on appropriately zoned land (light and/or heavy industry) that meet our requirements. From a location perspective, this includes proximity to our supply chain, our employees and importantly our customers. Our activities also require land that offer certain features, such as large footprint size, good traffic access and provision of utilities with sufficient capacity and land that allows our permitted activities to be carried out without reverse sensitivities issues arising. We currently operate from Eight (8) locations across Auckland, including both leased land and freehold sites. With little appropriately zoned land available and historically low vacancy rates across existing industrial property, we have experienced significant challenges in meeting our property requirements in Auckland.

4. **FLETCHER STEEL** does not support the draft FDS in its current form and considers the key areas of concern to be

   (a) The focus on intensification across existing urban areas in the draft FDS fails to take adequate account of the diverse needs of business land users. This includes land size (ranging from <100m^2 premises to large multi-hectare footprint buildings) and proximity to employees in residential growth areas. It also does not consider the impact of the size and frequency of vehicle movements that business land use can generate. Providing sufficient development ready industrial land, that addresses a broad range of requirements, is essential to enable businesses to meet the service, production, and distribution needs of the Auckland community, which in turn, stimulates economic development and generates employment opportunities.

   (b) While the draft FDS acknowledges the need for business land in future urban areas "particularly in the north, north-west and south", the proposed new timing for release of business land in these areas is significantly deferred from the current Council proposed timing (in many cases in excess of 10 years). This will constrain economic opportunity in locations already experiencing growth in residential development and will compound the need for people to travel extended distances to work.

Fletcher Steel™

BUILDING ON TRUST

(c) Constraining land supply through a reduction of business land area and also deferring its release, will severely constrain economic opportunity, escalate land price, and add to land affordability problems which will impact businesses' future growth plans.

(d) The draft FDS inappropriately relies solely on urban consolidation to provide all new business land through until 2030/35. The historically low industrial vacancy rates[1] across the existing urban areas of Auckland demonstrate there are limited new additional growth opportunities for industrial land. This is particularly acute for business activities that have real or perceived reverse sensitivity issues with adjacent land users, such as manufacturing activities typically undertaken in heavy industrial zone areas and business activities requiring large footprints.

(e) Since the Unitary Plan became operative, Council has relied on the private sector to advance plan changes to live zone Future Urban zoned land. There have been no public plan changes completed by Council (PC5 in Whenuapai was promoted but subsequently withdrawn). All major rezonings have relied on the private sector. Given this precedent and as the draft FDS removes the ability for private plan changes, the private sector is very concerned that Council will not ever meet the deferred proposed timing for release of land.

5. Accordingly, **FLETCHER STEEL** requests that the draft FDS is withdrawn and is postponed until consultation has been undertaken with the development and business community to better understand capacity in the existing urban area and the land supply needs of Auckland.

Yours faithfully,

[redacted]

Head of Operations – Fletcher Steel

Future Development Plan 2023 #7958

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

New Zealand is bigger than just Auckland; the infrastructure in Auckland is not exactly coping with the current amount of people in Auckland. I'd much rather see a push for people to go to rural places and create work and a living there

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

It should be focused on everyone as we all together make up New Zealand's ethnicity, not only Maori

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Please work on upgrading the waste water and sewage pipes so we won't get so many problems with this in the future

Future Development Plan 2023 #7959

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Disagree

Tell us why

The main points are good but it should not be focused on Maori

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Stretch out to the north and south with industrial areas and the people will follow. There is so much space in NZ, why do we all have to be cramped into an crowded city where the infrastructure cannot cope as it is.

Future Development Plan 2023 #8179

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why
See attached submission

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

SUBMISSION ON DRAFT AUCKLAND FUTURE DEVELOPMENT STRATEGY

TO: Auckland Council ("**Council**")

SUBMITTER: Auckland International Airport Ltd ("**Auckland Airport**")

Summary

1. Auckland Airport welcomes the opportunity to submit on the Draft Auckland Future Development Strategy ("**Draft FDS**"), which proposes changes to the vision for how and where Auckland is to grow over the next 30 years.

2. Auckland Airport is a strategic infrastructure asset of local, regional and national importance. As the primary gateway to New Zealand, the Airport is a significant contributor to the regional and national economy and is critical to New Zealand's trade and tourism industries.

3. It is fundamental that Auckland's planning framework adequately provides for the Airport's operations and ability to function efficiently. Any future development in the areas surrounding the airport must not hinder the airport's operation and ongoing development. The nature of Auckland Airport's operations is such that land use change and intensification must be proactively managed to protect the Airport from reverse sensitivity effects.

4. Auckland Airport is of the view that in its current form, the Draft FDS supports development which will generate adverse risks for Auckland Airport going forward. In particular, the Draft FDS:

   (a) does not adequately address current or future management of reverse sensitivity effects on infrastructure;

   (b) promotes additional development within the Airport's effects areas that may be inappropriate; and

   (c) fails to appropriately incorporate Auckland Airport and its assets in the integrated infrastructure planning promoted for the region.

5. Without amendment to appropriately reflect Auckland Airport, its planned growth, and the necessary management of surrounding development to protect its operation, the Draft FDS encourages development in areas which risks undermining the future operation and development of Auckland Airport. This must be amended to achieve the best outcomes for integrated infrastructure planning and a well-functioning urban environment.

Key statutory requirements

6. The National Policy Statement on Urban Development 2020 ("**NPS-UD**") provides the legal basis for preparing the Draft FDS.[1] The NPS-UD clarifies its purpose to promote long-term strategic planning by setting out how the Council intends to achieve well-functioning urban environments in both its existing and future urban areas and provide sufficient development

[1] NPS-UD, clause 3.12.

capacity as required by the NPS-UD over the next 30 years. The NPS-UD indicates that regard must be had to the nuances of specific environments, including the appropriate type, scale and location of housing, depending on the particular context.

7. The Draft FDS is intended to assist the integration of planning decisions under the Resource Management Act 1991 ("**RMA**") with infrastructure planning and funding decisions.[2] Once an FDS is prepared, the Council will be required to have regard to it when preparing or changing RMA planning documents.[3] The importance of the Draft FDS to the future planning of Auckland is therefore fundamental and will have significant impacts on both housing, but also existing infrastructure like Auckland Airport.

8. In developing the Draft FDS, the Council must consider a number of critical national and regional planning documents. These include infrastructure strategies or any other relevant plan or strategy; national policy statements; and any other relevant national policy required or issued under legislation.[4]

9. Auckland Airport does not consider the Council has adequately provided for the relevant policy and planning directions for infrastructure in Auckland, particularly in respect of Auckland Airport. Specifically, Auckland Airport considers the Council has failed to appropriately consider Auckland Airport's planning and existing controls already in place to manage the appropriate growth of the Airport and surrounding development.

Planning for infrastructure – reverse sensitivity

10. The future development of Auckland is a critical issue for New Zealand, and it is appropriate that the Draft FDS looks to appropriately identify the best locations for a growth in business and residential development. However, it is important that essential infrastructure that supports well-functioning urban areas, such as Auckland Airport, is not adversely impacted by new, intensified housing, and that future residents are located in appropriate living environments.

11. Residential development built in proximity to large-scale infrastructure, such as airports, has the potential to give rise to reverse sensitivity effects, which can lead to constraints being placed on that infrastructure. Reverse sensitivity is a well-established concept and an adverse effect for the purposes of the RMA.

12. In the context of Auckland Airport, reverse sensitivity effects can arise when new activities sensitive to aircraft noise[5] ("**ASAN**") are proposed in proximity to the Airport's lawfully established activities (within its designated aircraft noise contours). If not appropriately controlled, this results in large numbers of people being exposed to high levels of aircraft noise, generating annoyance to the effects of aircraft noise. In turn, this has the potential to give rise to complaints about the Airport's operations and submissions on planning processes seeking constraints on the Airport's operations.

13. The nature of aircraft operations means Auckland Airport cannot fully internalise all of its effects within its landholdings. Any increase in development of ASAN around the Airport (both in numbers and density) means more people are receivers to adverse effects of airport

---

2 NPS-UD, clause 3.13(1).
3 NPS-UD, clause 3.17.
4 NPS-UD, clause 3.14.
5 ASAN include residential activities, educational activities and healthcare facilities.

activities. Auckland Airport is therefore focused on ensuring that future planning for Auckland appropriately manages the development of ASAN around the Airport. The primary way in which reverse sensitivity is managed for Auckland Airport is through the controls placed on new ASAN under the Aircraft Noise Overlay within the Auckland Unitary Plan ("**AUP**").[6] These place varying layers of restriction depending on the level of aircraft noise – from controls on the density of housing and requirements for acoustic insulation, through to prohibitions on new ASAN establishing. This overlay is an integral part of Auckland's planning framework and impacts the types of activities which can occur within it.

Reverse sensitivity and the FDS

14. Despite the well-established and directive framework for the management of reverse sensitivity and ASAN in the vicinity of Auckland Airport provided by the AUP, proposals frequently arise for residential intensification in the Airport's Aircraft Noise Overlay. The Draft FDS provides an opportunity to reinforce these key directions and better protect the Airport from reverse sensitivity effects while ensuring appropriate living environments for the community. Auckland Airport is concerned the current draft does not utilise that opportunity, and instead undermines the current management of reverse sensitivity in the AUP.

15. While the Draft FDS addresses infrastructure in a variety of ways, the focus is around Council and standard network utility infrastructure (eg stormwater, roading). The Airport is concerned that the Draft FDS is silent in relation to Auckland Airport's infrastructure and the planning approach required to protect it (such as the Aircraft Noise Overlay). This omission is most notable at section 3.2 and Appendix 2 of the draft FDS, which identify a number of AUP overlays but omit any reference to the Aircraft Noise Overlay and the important protections provided by the controls within it. This is particularly concerning given the critical role Auckland Airport will play in helping Auckland achieve the purpose of the Draft FDS.

16. These concerns are reinforced by the Draft FDS promoting a strategy which has potential to significantly increase reverse sensitivity effects on Auckland Airport, for instance encouragement of:

    (a) the extension of mixed-use areas to align with transport corridors[7] including transport projects such as Airport to Botany. The Draft FDS currently suggests such projects present opportunities to support high quality residential growth along transport routes;[8] and

    (b) co-locating residential capacity with employment.[9]

17. Without appropriate recognition of the reverse sensitivity protections already in place under the Aircraft Noise Overlay, the Draft FDS does not provide adequate direction for future planning instruments when considering residential development in specific areas.

18. Most worryingly, the Draft FDS specifically identifies three areas (Manukau, Māngere and Oruarangi) for focused future development which fall partly within the Aircraft Noise Overlays (and in particular the High Aircraft and Moderate Aircraft Noise areas ("**HANA**" and "**MANA**" respectively) which impose controls prohibiting or limiting residential intensification), without any reference to the Airport, including the Noise Overlay and impacts of reverse sensitivity.

---

6 AUP, Chapter D24.
7 Draft FDS, page 47.
8 Draft FDS, Appendix 9, page 51.
9 Draft FDS, page 47.

The identification of these areas, in line with the matters noted at paragraph 16 above, results in the Draft FDS encouraging business **and** residential growth in the Manukau, Māngere and Oruarangi areas.

19. This does not align with the supporting evidence behind the Draft FDS which specifically identifies that the Manukau node is to be focused on significant employment and business growth, and not residential growth.[10] The proposed approach also does not align with that adopted in the AUP (even as amended by Plan Change 78) which discourages and in some areas prohibits residential development in the HANA, MANA and industrial zones that fall within those development areas. By conflating encouragement for business and residential growth in these areas, the Draft FDS fails to have regard to the supporting evidence documents and existing AUP controls.

Relief Sought

20. The Aircraft Noise Overlay must be acknowledged within the Draft FDS as a relevant factor for development. The Aircraft Noise Overlays must be added to the identified constraints table within the supporting evidence documents to the Draft FDS,[11] and associated amendments made throughout the Draft FDS to reflect the Overlays as a constraint.

Development Areas within the HANA and MANA

21. The Draft FDS identifies three development areas which are located within the Aircraft Noise Overlay to varying extents. These areas and their location in relation to the aircraft noise contours are depicted at **Annexure A** and discussed further below.

Manukau node

22. The Draft FDS identifies three urban "nodes" where significant growth and investment are needed.[12] It is suggested that these identified nodes will engage with medium density housing,[13] and will bring together housing and employment.[14] Manukau, as depicted in **Annexure A**, is one of those identified nodes. The majority of the Manukau node is zoned as Light or Heavy Industrial Zones (the purple shading in the underlying zoning).

23. Auckland Airport is not opposed to the identification of Manukau (inclusive of the Auckland Airport Precinct) as a focus for future development, provided the focus within the HANA and MANA remains appropriately targeted to commercial and industrial development and not residential development. However, at present the Draft FDS indicates the node, including the areas within the noise contours, is expected to undergo a significant amount of business **and** housing growth over the next 30 years.[15]

24. It is entirely inappropriate for these areas to be the focus of increased housing development for Auckland. The Draft FDS must clarify that the large majority of the Manukau node remains a focus for commercial, industrial and infrastructure growth (and the employment opportunities that come with it) and not co-located residential growth.

---

10 Auckland Council *Overall evidence report – for consultation* (Auckland Council, 2023) at 70.
11 Auckland Council Overall evidence report – for consultation (Auckland Council, 2023) at 139.
12 Draft FDS, page 47.
13 Draft FDS, Appendix 9, page 22.
14 Draft FDS, page 32.
15 Draft FDS, page 35.

25. Failure to do so will make the Draft FDS inconsistent with the AUP, including as proposed to be amended by Plan Change 78. This risks encouraging unrealistic development expectations in the area, or directing future plan changes to undo the protections which have been in place for the past several decades.

Relief sought

26. Those sections of the Draft FDS which set out direction for the Manukau node must be amended to reflect the focus of development being on business and commercial development. These amendments must also explicitly note the constraints on residential intensification within the HANA and MANA.

Māngere / Oruarangi development areas

27. The Draft FDS identifies two other areas close to Auckland Airport which could raise similar issues if not appropriately addressed in the Draft FDS – specifically "Oruarangi 2" and Māngere. The location of these sites in the context of the noise contours is depicted at **Annexure A**.

28. Oruarangi 2 is noted as a future urban area which is recommended for further investigation as to its development potential. The Draft FDS outlines that although a Special Housing Area was approved for Oruarangi (also known as Ihumātao), its implementation is dependent on how it responds to the aspirations of iwi.[16]

29. Māngere is also identified as an area for future investment.[17] Māngere is located directly north of Auckland Airport. The Draft FDS acknowledges that there is a potential for large scale redevelopment of the area[18] and that there is expected to be significant residential growth in the area.[19] Māngere has already witnessed redevelopment with the increase in multi-units being built on single sites.[20] Māngere is also being prioritised for development as part of the Kainga Ora's Auckland Housing Programme.[21]

30. Those areas of Oruarangi 2 and Māngere within the HANA and MANA should remain outside of the scope of residential intensification beyond that provided for currently in the AUP for the reasons already explained.

Relief sought

31. Those sections of the Draft FDS which set out direction for the Oruarangi and Māngere must explicitly note the constraints on residential intensification posed by the HANA and MANA.

Ensuring appropriate integration and investment in transport infrastructure

32. The Draft FDS proposes infrastructure development and investment should be coordinated across agencies to maximise collective investment and get the best outcomes.[22] The Draft FDS proposes for a regional and "whole of society view" of the costs and benefits when

16 Draft FDS, Appendix 7, page 35.

18 Draft FDS, Appendix 10, page 53.
19 Draft FDS, Appendix 5, page 22.
20 Draft FDS, page 35.
21 Draft FDS, page 51.
22 Draft FDS, page 20.

making long-term decisions in respect of development and associated infrastructure, including transport and roading.[23] The Airport to Botany Rapid Transit and Auckland Light Rail are identified in particular as key projects for the coordination of development in that they enable people travelling to and from Auckland Airport, and to the employment opportunities the commercial area at the Airport Precinct provides.[24]

33. Auckland Airport supports the intent of this coordinated approach to infrastructure development, including public transport to provide better connections to the Airport and surrounding areas. However, the Draft FDS and its development has failed to engage with key aspects of Auckland Airport's activities as a critical infrastructure provider in respect of both air and road transport networks. The Draft FDS only refers to Auckland Transport, Waka Kotahi and KiwiRail when referring to those infrastructure providers responsible for delivering future transport projects for the region.[25] This gap is reflected in the evidence reports supporting the Draft FDS, which highlight that the transport evidence utilised for the Draft FDS was developed in collaboration with Waka Kotahi and Auckland Transport.

34. This omits the importance of Auckland Airport as a critical link for the region in respect of regional and international travel, as well as its role as road controlling authority over the 1600ha of land captured within the Airport Precinct – a crucial section of Auckland's roading network. Without explicit and engaged consideration of Auckland Airport's role in the region's transport networks, the Draft FDS fails to meet its development and investment goals. Extending a coordinated development and investment approach to Auckland Airport and its supporting infrastructure networks is fundamental to the ongoing planned development of Auckland and must be reflected in the Draft FDS.

Next steps

35. Significant amendments are required to the Draft FDS to address the above concerns. Auckland Airport is concerned the document will be fundamentally flawed, and out of sync with the planning which has occurred to date for the region without these changes. Auckland Airport requests to urgently meet with Council to speak to this submission, and engage directly on updates to the Draft FDS to address its concerns.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Other

Tell us why

It depends on which existing urban areas you are talking about. Mangere and Otahuhu are two of the most deprived areas in Tamaki Makaurau, so 'growth' tends to look like ad hoc, last-minute intrusions, relying on apathy from the locals, who are more concerned with basic survival. Build more housing, which can house 5+ people per household humanely and without risk of flooding.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

You also need to make decent space for cafés, resource centres, parks, and other greenbelt spaces. Linking up and building protected cycle paths is crucial for me and my family. This is not evident in Otahuhu where are we live.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Other

Tell us why

Well, that is bloody obvious. It's quite rich for Council to use this information retrospectively. What is needed is for council staff, including the Mayor, to be

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

A good idea is to ASK the community to get involved in planting, planning etc. if possible.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Prioritize climate action that is cheap, fast and safe like cycling. Invest in bike acquisition that is easy and bike safety like D-locks, chain locks, helmets, lights, chain lubricant, etc..

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

If we build up it is still not suitable for our pacific families. We should improve on existing structure first. Too many people to add more.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I don't really use public facilities

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

A lot safer to assess any enviro space first.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

I don't understand this Q's.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Future Development Plan 2023 #8325

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

I don't know

Tell us why

If we do this what does it mean for my family who live in low income areas? Will we be able to afford the new development costs?

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Other

Tell us why

I don't use public service that much but it might help my other family to get there easier.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

For the safety of people. The flood was a example to learn from.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

If its make the environment clean and safe.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

The question hard to understand for me.

Future Development Plan 2023 #8338

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

Doing this will add pressure on already strained services. increase on population density + further strain on facilities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Disagree

Tell us why

Focus on the existing problems now. Access and transport that already exist.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why
This should already be standard practice.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

Agree

Tell us why
Healthy air, clean environments.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

Focusing growth

Denser, more compact cities result in improvements to the environment, the economy, and people's wellbeing.

Auckland's urban area is made up of neighbourhoods, town centres and business areas that are interconnected and that support where most Aucklanders live, work and spend their leisure time.

We propose that most housing and business growth will be focused within existing urban areas and that this growth be more intensive. This means less growth in greenfield areas at Auckland's edges. What greenfield growth there is will be phased over 30 years and longer.

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Agree

Tell us why

I hope this approach encourages residents to increase use of public transport, public places and facilities.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Increase public transport. More active.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Safety of people and whenua

Resilient infrastructure

1. What do you think of our approach to focus most of Auckland's growth in existing urban areas?

Disagree

Tell us why

I feel existing urban areas are already packed enough. I do not like town houses. Feels like being packed like sardines. You can hear everything that goes on next door.

Accessible local centres

When people have easy access to workplaces, services, facilities and shops, communities become more resilient and connected. It also helps to reduce travel time, emissions and lower household transport costs.

We propose focusing housing and business development near local centres where most people's daily needs are easy to access by walking, cycling and public transport.

2. What do you think of our approach to focus development near local centres?

Agree

Tell us why

Being close to the train or bus stop or countdown is good.

Avoiding hazards

As our climate changes, the frequency and severity of hazards such as flooding, sea-level rise and coastal erosion will worsen. Where and how we plan for growth, and how we adapt to these hazards is increasingly important.

We propose that known areas constrained by significant natural hazard risk should be looked at to see if further development is appropriate.

Where development is already enabled in potentially vulnerable locations, we will further investigate appropriate actions.

3. What do you think of our approach to avoid further growth in areas which are exposed to significant risk of environmental hazards?

Agree

Tell us why

Of course people don't want to live somewhere their house would be flooded.

Resilient infrastructure

Infrastructure across Auckland needs to cope with ongoing change, such as the impacts of climate change and evolving technology.

Nature-based infrastructure, such as rain gardens, swales, and detention basins, is better able to respond to ongoing change. This can help protect communities from hazards, as well as protect and restore the natural environment.

We propose prioritising investment in infrastructure that is decentralised, nature-based, regenerative and mauri-enhancing.

4. What do you think of our approach to prioritising nature-based infrastructure that responds to the impacts of climate change?

I don't know

Tell us why

I don't believe in climate change but using nature is a plus.

Other feedback

5. Do you have any other feedback on our approach to how and where Auckland should grow and change?

I feel that no matter what happens it won't benefit those that don't own a house. All this will be built but someone that already owns 5 houses will end up buying it. Still making it extremely hard to own a house anyways.
