Tell us why: Less collections, more emphasis on the consumer to reduce waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Perdectly reasonble

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Alot of good timber goes to landfill when it could be reused

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Better products that compost and recycle

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to be harsher on illegal dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: How much save to each household need to fix before, as Auckland council is a big spender, they may waste again tax payers money by reducing the collection!

NZ already well exceeded many countries on environmental responsibility, need figure of how much waste other countries on per person basic!

No confidence on Auckland council on whatever they handle, for the past six years, cost of living jump up but service quality dropped.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is another way to chest tax payers money, like the food scraps collection, result show less than half household participate but collection fee still collected, more, the way collection also not effective by two persons, why not like the existing collection by the truck or like other cities collect goods waste with garden waste! The simple answer is Auckland council waste tax payer money as its not their money!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Where the construction waste will go! Need to define this, are Auckland council such a stupid way !!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: It's just too general to say, need more information on how to do it, how much to spend, how much more to charge on the household. Auckland council has no credit on manage the money!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Why turn the problem to others, it's Auckland council responsibility.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Again, it's Auckland council responsibility, they need to regularly check and take actions. Auckland council are too lazy!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: .

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Where are you diverting these other items to? What do you propose to do with them? Need to be transparent!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Unclear, you're focusing on them, but what are you intending to do with them?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: This is a Band-Aid approach. The ppl who illegally dump are ppl who, for whatever reason, can't afford to take rubbish to tip out can't afford to pay for rubbish bags.

How does council propose to support these ppl so they don't dump illegally?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I understand that Auckland's council is looking at burning waste. Specifically in Kaipara

I want council to specifically rule out incineration as a disposal option for Auckland's mixed solid waste.

Council must keep front of mind the following:

Auckland has a goal to be a zero waste city by 2040 - it is actually a global leader in this space. And the waste plan sets Auckland on the right path towards achieving their zero waste goals. We need to ensure that Auckland Council hears loud and clear that incineration is not an acceptable disposal option because of the toxic emissions and climate impacts

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I think zero waste by 2040 is a headline and is just not possible, its nice for the marketing people and big sky thinkers but we have at least 100 years of built up goods and assets that at end of life will be waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food scraps is great and a very good addition to the waste service. My foods scraps is full every week, would need a larger bin or to keep the weekly collection of food scraps. Can easily live with recycling and rubbish at 2 weekly cycles

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The rubbish bins will be overflowed every two weeks. The Food scrap bin brings rats into the property and bad smells to the environment. The scrap bin is not sturdy and fall out easily. The scrap food bin doesn't get pick up often. We have to call out a couple times. I highly disagree with the food scrap bin! Use the food incinerator in the kitchen sink.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Recycling building materials will also lower the cost of building materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Ok. So what? We've been doing good for years!

We don't have to change it. We don't need to spend more money for bins.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: As a central city resident, I take advantage of local community gardens for my composting, and return my soft plastics to Woolworths. I endeavour to minimise my own waste production.

Clearly education is of the most importance, too many people still believe that their rubbish is someone else's problem. A city survives or rots on it's rubbish, as we know from rubbish collecting strikes in New York and other cities around the world. In part we have become too lazy, with wheels on bins, and motor vehicles making it easy to move our rubbish to somewhere else. A gradual push towards less regular rubbish collection and providing a food scraps collection is gentle education, and this is a good direction for our waste reduction ambition.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: When you can throw away as much as you like, you throw away more than you should. If a fortnightly collection means half the waste, then it is a good idea.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I worked for seven years in commercial construction and the inefficiencies of construction products and methods were obscene. This is very important for our city.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These damage our land, our air and our water. For our own health this is important.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Excellent idea. I am old enough to remember when containers were returnable, refillable, and caused no health problems. We need to encourage companies to be truly sustainable in terms of protecting our future selves.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I have a family of 5, we have a large rubbish bin already, we have a larger recycling bin and we're using the food scraps bin. We wouldn't be able to fit in two weeks worth of rubbish into our already large rubbish bin so would need to go get another bin from somewhere. This doesn't work for us.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I feel Fortnightly Collection will increase the illegal dumping of waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Support but feel it needs a bylaw behind it so that Companys that don't care are forced to do more not just say yes council we are and then carry on as normal.

Case in point Waste Management and green gorilla provided separate bins for different waste streams for a site in my local area but when emptying time for the waste was needed the trucks were seen dumping at a local transfer station who don't do any sorting.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS would mean the public are actively collecting and participating in waste reduction at home and in the public.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support but feel it needs a bylaw behind it so that Companys Like Woolworths and other supermarkets are forced to Collect their trolley's when taken away from their stores and dumped in streams for example.

Instead of a don't care and just say yes council we are doing it and then carry on as normal.

Also go out with volunteer litter collectors and see what they see i.e. areas that were fine, but a burnt waste bin means they are a Contance mess now.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Overall, the plan is good but needs bylaws to back it and cause real change not yes council we are but aren't.

4. Any other comments

I am deeply concerned about the push for waste-to-energy incineration happening in Aotearoa in recent years. I suspect it is a one-company core behind this push. Each district it targets eventually chases the WtE proposal away. I live in the Buller, where the first WtE proposal of recent years was mooted, and shot down in flames through incompetence in the 'pro' wing and scathing odium from the 'con' wing. There is no place for such waste-increasing proposals (the waste-hungry incinerator) in any district or city plan in New Zealand. I am concerned at the extant Kaipara proposal and that is why I am submitting on this Auckland WMMP. Please read my attached file for reasons to ensure WtE is not given any possibility to see the light of day anywhere in Auckland. Please ensure exclusion of any WtE proposal in your WMM Plan.

WASTE TO ENERGY

Waste to Energy is not renewable and it is devious to suggest it is.
Waste incineration is toxic at every stage of the process.
Of most concern are the emissions of dioxins and other highly hazardous volatiles. Then considerable volumes of highly toxic fly ash must be dumped somewhere. Bottom ash, which could be considered a renewable resource (but not from my viewpoint) if metals were removed, will end up where?
Burning needs to be a continuous process so there will be a lot of truck movement, for both rubbish and ash transport. There will be noise, dust, odour, new roading. There will be yet more light pollution to add to this light-satiated district.

Output product and process
Electricity, the intended primary output product, is only 30% efficient. WtE is a water-hungry operation, using heat to create steam to turn power turbines which produce the power.
What will happen with the remnant hot water?
Where and how will that remnant heat be dissipated?
How much water will be required?
How will it be treated to recycle within the process?
Where will the water come from?
Is there enough unallocated water in the district to enable this very water-hungry project?
How will the water requirements cope with increasing drought expected with climate change?

Ash

There will be direct chemical conversion of largely chemically inert waste into a plethora of bioavailable toxic wastes such as volatile heavy metals (cadmium, mercury, arsenic, lead, zinc) polyaromatic hydrocarbons (PAHs), other volatile organic compounds (VOCs e.g. chlorobenzenes, polychlorinated biphenyls (PCBs)), dioxins, all classed as highly hazardous waste which must be managed appropriately. Much of this will be found in the fly ash (excluding emissions). Where will this highly toxic waste be dumped? In Europe this toxic fly ash has caused serious problems in individual countries to the extent that it is

now gathered and sent to one central disposal place.
Will the plant be an excess air system (more fly ash) or controlled air intake?
Fly ash residues are bioavailable, meaning they can be concentrated into the food chain. Up to 40% of the residues being leachates, largely in the form of salts, is of great concern when considering disposal, especially when considering the rainfall rates of Auckland.
Modern standards are now requiring solidification of the fly ash before disposal.
Fly ash is only 10-20% of the weight of ash, most is bottom ash (the grate cinders). Bottom ash is full of heavy metals and other toxins which may leach from any product that includes it as an ingredient, definitely not a good option along seawalls. Modern methods require separation of the metals from this ash i.e. they are recycled into added value, with recovery rate around 80%.

Emissions control

Around half the investment is in pollution control measures, and keeping emission-reducing controllers in good working condition is a very expensive business. If we are told that emissions will be invisible, it needs to be noted that predominantly many lethal emissions are invisible.
It requires approximately 2 seconds at 1000°C to destroy dioxins/ furans. Optimum temperature will drop at times, there will also be system failure and shutdowns, no human-made process is infallible, and up to date research shows there are always failures with WtE plants.
Abatement equipment can largely eliminate emissions of:acid gases (including global warmer NO_x, heavy metals, VOCs, PAHs), and dioxins if kept fully functional, but practically, keeping the temperature at that level constantly in order to destroy the lethal toxins, is not possible.
There will be exorbitant costs involved in baseline soil, water, air, human health monitoring.

Global warming emissions versus drawdown

WtE produces more CO_2/ unit energy than coal plants do.

Options

WtE can entrench consumerism and resource exploitation. A WtE plant needs a continuous volume of rubbish to operate; if we are reducing, which we should be doing, the companies involved may put the case forward for continuing, or even increasing, the

volumes they need rather than reducing.
WtE is the most short-sighted and ugly option for waste, there is nothing renewable about it, and it can impede the emergence of waste conversion which is truly renewable, and zero waste, which is what we must aim for. Large companies such as Toyota, Google, Subaru have pledged zero waste. WtE is a regrets solution (Drawdown 2018), transforming into and concentrating some of the most toxic chemicals on the planet. It may draw down CO_2 (in certain scenarios) but has harmful and high social and environmental costs. Selective dissolution of plastics would be a more ethical waste option, where plastics are dissolved and then separated into their components to reconstruct into original plastics. Waste-derived fuels could be produced instead of incineration.
Incineration is the lowest of low methods of waste disposal, from a moral, aesthetic, environmental outlook.
We need to invest in wholesome, healthier industry.

WtE and cancer
There is conflicting evidence. A 2016 paper says there is no statistical evidence for increased rate of lung cancer at WtE sites, whilst others report statistical increase.
Liver cancer has a small but statistical increase. Very recent statistics are not readily available, but mainly due to this incidence increase, in 1996 new EU regulations set dioxin emissions at $1ng/m^3$, resulting in fewer WtE plants (Elliot et al; 2000) due to the high cost of installing and maintaining sensitive emissions control equipment.

Us, the people
Last but by no means least are disaffected residents. Shock and dismay is voiced by those living a clean, quiet life around the proposed sites. The direct cost to ratepayers, will be in new and existing roading, access, water, and sewage, yet our waste levies will not reduce. The only advantage to ratepayers appears to be some jobs, but there are too many disadvantages. We will inherit a legacy of toxic pollution, much worse than anything left to date. What about our fresh water? Will the ash dump, drift or WtE water contaminate it? where are the guarantees?

In overpopulated, consumer Europe there is a real need for a short-term solution to excessive waste, but in NZ we still have time to think and implement sound solutions to the

problem. We should not jump in with a short-term fix and profit, where the taxpayer will once again be left to clean up the resulting disaster. There is nothing flash or re-usable about all the toxic conversion products of a WtE plant except for the energy output. Waste to Energy is a clunky greenwashed, astroturfing dinosaur which should be parked and buried in the Mesozoic.

Some of the references used:

Material analysis of Bottom ash from waste-to-energy plants; 2017; Syc, M et al.
Fly Ash Characteristics From Waste-to-Energy Facilities and Processes For Ash Stabilization; ~2009; Kalogirou, E et al.
Lung cancer risk assessment at receptor site of a waste-to-energy plant; 2016; Scungio, M et al
Cancer incidence near municipal solid waste incinerators in Great Britain. Part 2: histopathological and case-note review of primary liver cancer cases; 2000; Elliot, P et al.

Bioenergy Association CEO, Brian Cox (Wpt News 25 Jan) does not seem to understand that it is ICI that Renew is targetting. By stating the negative he says that residual waste can be converted into re-usable material.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Waste is waste. Why bother with redesigning. It's a waste of resources.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly rubbish collections will support illegal dumping in our parks and other public areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If you want C&D to reduce waste, they might as well not construct anything. No more building homes in a housing shortage, no more roads and bridges for transportation. It's ludicrous to think that you can reduce their waste while there is great need for infrastructure in both areas.

Isaac Newton's third law states that for every action in nature there is an equal and opposite reaction.

What you put in is what you get out. If you put in a lot, you'll get out an equal amount to what you put in. If you put in a little, you'll get out an equal amount to what little you put in. You can't expect there to be major infrastructure while asking them to reduce waste otherwise they'll have to build little.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I partially agree with plastics, textiles, and biosolids. Food scraps should be self-managed amongst households that compost their own compost and not pay extra in their land rates.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Waste hierarchy means first starting with manufacturers of the unsustainable waste stream not trying to come up with alternatives that end up adding more carbon to the waste by transporting it multiple times for no benefit.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Creating solutions that dont involve adding more trucks or collection vehicles on the road increases congestion on the road and replacing landfill disposal with added carbon emissions from more vehicles on the road. ie food collections added more vehicles on the road and fortnightly refuse collection will add more vehicles on the road.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Again getting suppliers of construction and building materials to use better products is the first starting point then looking at minimising waste to landfill. In Council going to fund the collection and reuse.....no! Completely wrong direction to start with.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Incorrect information is being considered. If waste goes to a class 1 landfill with an effective gas capture system then is used an enclosed flare or generators to produce electricityt. The CO2 released from this operation is short-term carbon not longterm carbon as released by burning fossil fuel which is all of Council proposals rely on.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But do we have the infrastructure to deal with this process?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping needs to be addressed.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We do need to reduce waste. Sadly I have little control over a lot of the packaging that comes into my home and leaves as waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support diverting medical waste in particular. I live in a 4 person household and most of the recycling is generated by my health needs (paraplegia) and it is getting worse as I age. I use 1800 catheters per year plus. They arrive in boxes of 30. Along with my other medical consumables they arrive in cardboard boxes, with deliveries being spread out over the year as more items get added to my consumables list. Most of the other consumables like lube, creams and gels are in large plastic containers, often non recyclable. There is seemingly no incentive to consolidate my deliveries by Community Client Management Services and no pressure on consumables suppliers. Each box of catheters has a booklet that goes straight to landfill. This is true of other products too. Why is this information not made available digitally or printed on the boxes, they have enough room. Why should I be penalised for paying for this waste? Surely the manufacturers should bear some responsibility.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: What about building waste from our own property? We have a place to recycle e-waste which I use. Would love to take surplus planks and paints etc to a community run dropoff and would happily pay something to support it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We don't drink much apart from some milk. Very low alcohol consumption. Make it easy to recycle and we will do it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I spotted someone dumping. Stopped him. English was a second language. He needed education in his own language. Finding people from migrant communities to engage with migrants on dumping would be helpful.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Families with disabled children need an easy process to recycle. They already have a lot of costs. Please avoid burdening us with the cost of recycling rubbish, much of which we have little control over.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Its a good idea, but for many of our families they don't have time to use it a separate bin. Parents of immuno-compromised and those with disabled children who have long term health conditions consume a lot of medical waste which they have no control over, being high users of hospitals and medical consumables. Having a separate bin would be welcomed by most of these families, although there needs to be further consultation on what is appropriate. Giving choices on which bins families of disabled people use and the size and dates of collection is preferred.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Not clea are specific outcomes are proposed here

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps haven't been a success (in the current form it's pretty much a failure) and hardly used in our neighborhood so need better design for food scraps bins before introducing this

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will increase cost of infrastructure build which is not great for anyone, especially for those who already struggling to afford housing

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Not clear what "focus" means in this context

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The costs will just be passed to consumers and make it hard for small businesses so definitely not a good option

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In general support but the guidelines should be coming from central government

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Organisation (if applicable):

Local Board: Puketāpapa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The bin size has already been reduced, I really doubt that forcing rubbish to sit for another week will benefit the people and will possibly result in overfilling of bins and illegal dumping to overcome a full bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Encouraging alignment with the highest tiers of the hierarchy (including redesigning and switching out materials incompatible with a circular economy/zero waste) is critical to preventing waste, emissions, and all other negative environmental externalities.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Full support - The linear economy is particularly entrenched in this sector with some of the most challenging waste streams to address.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS and mandatory product stewardship schemes/EPR are essential to encourage the system-wide change necessary to realise zero waste aspirations and circular economy visions. In New Zealand and internationally, lobbying of vested industry groups has thwarted progress despite years of experience showing that voluntary schemes generally have low recovery rates.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: This direction is irrelevant to Kawau Island, as currently council provides no services for the removal of any waste from the island back to the mainland. As a permanent resident on the island, that means I am often collecting waste discarded from day trippers who discard waste in the bush and removing rubbish from our wharf shed that has been discarded by visiting boaties. This continued requirement to collect and take their rubbish to the mainland is why I have no issue with our rubbish being funded from general rates.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I do not understand why Auckland Council does not provide individual composting bins for residents of Kawau Island, to encourage on-island processing of food waste in a manner that aligns with Auckland Councils own pest eradication plan for the island.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: It is costly ($2k per barge trip) and impracticable for construction waste to be removed from Kawau Island, which is why construction waste on Kawau Island is reused and repurposed through existing community networks on the island. Council does not currently provide any inorganic waste removal services for Kawau Island.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: For Kawau Island, it is unnecessary to focus on these as current islanders already follow reduce/reuse/recycle as a necessity due to the cost of removing waste from the island ($10 per bag to the ferry company/$2k per barge). What is required, is for Council to address the historical issues and remove the dump sites that council created on the island decades ago. While no longer in use, these contain old fridges and other materials which are leaching into our environment. The DOC dump site on DOC land is a prime example of that - current use is for inorganic materials only, with these going on top of the inorganic materials that were dumped there when it was the island tip.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The day visitors to the Mansion House doc reserve need enforcement to change their behaviour of simply dumping their rubbish in the bush, rather than take it back with them. There are signs everywhere about taking your rubbish with you, but we frequently see families and visiting boaties throw their bottles in the sea/bush.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Enforcement on Kawau Island during peak summer and long weekends will significantly reduce the rubbish we are collecting from visiting boaties and day trippers to the

Mansion House reserve. To put that in context for you, immediately after Auckland Anniversary weekend 2024 we collected 4 large black sacks of rubbish from the doc land surrounding Schoolhouse Bay Road, and 2 large black sacks of rubbish from Emu Point (where Boatie rubbish ends up in Bon Accord). Outside of holiday periods, the odd piece of rubbish found can be easily carried in one hand.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Do not support

Tell us why: Permanent residents on Kawau Island pay the ferry company $15 each time to take our bins to Sandspit for collection by NorthWaste, or $10 per bag each time we take ourselves to the bins at Sandspit. Inorganic waste is self funded by the islanders at $480 per 1m x 3M bag. The opening times of the refuse centre at Warkworth do not align with my commutes off the island, usually to travel into Auckland for days in the office. $156 per household cost is minuscule for the time we spend collecting rubbish left by holiday people, day trippers and boaties. Reuse/recycle is already a dominant practise for those of who live permanently or visit regularly. In times gone by, a waste barge was anchored by Rabbit Island, which enabled islanders to place their bags/inorganics. I believe Council should provide compost bins for inorganics to be managed at an individual property level, and place a targeted rate on each property of $200 per annum, with that rate being used to fund the ferry company to collect rubbish from wharves for placement in locked bins at Sandspit. That would prevent the bins from being accessed by mainlanders and visiting boaties. That your plan assumes more education is required for reuse/recycle on the island, indicates that you have no knowledge of the current practises of the permanent residents, who are not currently represented by KIRRA.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Permanent residents on Kawau Island are easily identified as we have Private Bags for our mail through NZ Post (Wellesley St West holds that list). Factual identification of the extent of reuse/recycle that exists on the island is best gained through mail directly to residents. A recycling, glass crusher and rubbish collection point at Kawau Yacht Club and at Mansion House would make a significant difference as both those locations would service the boaties/day trippers that cause the current issues. Charging for that should be via a rate placed on the KBC and Auckland Yacht Squadron membership and solus ferry return tickets.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support But for larger families and those that have waste like diapers (adult and child) the last her bins shouldn't come at an extra cost. While appreciate that this initiative is being touted as environmental I have no doubt that this is a cost cutting exercise, one that a lot of people will stroggle with the extra cost

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think we need to eliminate junk mail, a lot of this is thrown into bins... Having an opt out system is confusing in regards to signage and can be ignored. For circulars an opt in system would be best. I have my letterbox signposted to receive addressed mail only which at

times is ignored. When my neighbours go away and I keep an eye on things for them they say just out the junk mail in the bin as they never read. In this day and age it seems wasteful to have printed advertising material given digital advertising is everywhere

Also making recycling symbols clearer as often hard to see... Or colour codedwven if there was a QR code you could scan to see what number it was

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A lot of waste reduction needs to come from manufacturers rather than pressure on the consumer. Packaging which creates an illilusion of size is so wasteful. Eg potato chips which have a large bag but only half full, beauty products which have containers half full and cardboard parlckaging with inbuilt shelfs to make it look bigger

Places like kmart which will ship one small item in a large box with excess plastic... I have seen on some social media pages where there is excess shipping packaging. There should be a reporting system where consumers can report excess wasteful packaging

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: BUT making sure there are bins in public spaces, seeing a lot of these are being reduced in parks makes it hard to deal with waste

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We should be reusing everything where we can

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I have serious concerns about this. Will impact on vermin and litter in communities. People will resort to dumping rubbish in residential areas. Will rate be adjusted/reduced if we are only getting 26 collections a year instead of 52?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Charge the large companies who are really to blame for this problem. Most people are tyring to do the right thing but you need to look at the Fletchers and those companies who continually pollute this countries waterways etc and get away with it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: ow are you goinog to do this - I cannot say I support this if I dont rally understand the plan and how it will affect us?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need the big recycling bins they have in Australia 'bottle bank' that give you a refund for each returned bottle. Whay don;t we already have these? Seems like a no brainer and must be a realtively simple thing to set up in communities?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Mattresses and sofas constantly left on the road side are unacceptable and dangerous to local communities - how will this be policed and dealth with?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Climate change is the biggest threat to humanity at present - the more we can do to reduce our emissions and waste, the better. It's good to see moves to reduce waste from construction and council.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: This will encourage people to use the foodscraps bin, which is good. One other thing that could be done is asking manufacturers of meat packaging to avoid those little juice absorbing packets at the bottom of meat trays.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to reduce our greenhouse gas emissions as fast as possible.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Producers need to bear the cost - consumers often have little choice.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

What do you think of this priority area?

Do not support

Tell us why: We can't get by with weekly. How would we cope with two weekly. By dumping in local bins

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: We live in multi tenancy property and don't get scrap bins

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Local Board: Franklin

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Key issues in the plan - incorrect or misleading assumptions presented: implication landfills contaminate groundwater. properly lines landfills do NOT contaminate groundwater. assertion that disposal is a lost resource. disposal to landfill generates enough electricity in Auckland to power well over 10 000 homes.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Reduction of collection frequency to fortnightly would mean waste is sitting for longer, increased odour would be generated and create impacts upon disposal. it is not yet proven that the food waste collection will have a meaningful reduction in waste volumes from all households. We need to gather more data on the potential impacts of this proposal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The extra cost to manually sprt this waste going on to our rates .

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You assert again that the breakdown of waste is not dealt with at landfills. this is alarmist language. landfill convert organis waste to electricity. properly lines landfills contain the waste.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Recycling only delays the eventual disposal. plastic break down over time. you would need to discorage plastic generation inthe first place. there are insufficient alternatives to plastics to make this an objective. eg plastic pipes, plastic cicuit boards.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am mystified as to if this is a priority why you are removing public litter disposal points (rubbish bins) - increasing difficulty to dispose only increases littering since people are basically lazy and cant be bothered searching for a rubbish bin. and they def wont take it home since they dont want to fill their bin up if you are onyl collecting once a fortnight.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reducing what is waste in the first place is the best way to reduce waste to landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps make up 41% of the rubbish in your rubbish bin. - this is not true. I have composed my whole life. It may be true of all rubbish collected across the region but it is not true of every household. I completely support the organic waste collection. weekly rubbish collection already gets stinky. Riding my bike to work on rubbish days sucks because of the smells. Fortnightly would make things so much worse.

If there is a want to reduce waste to landfill, then stop focusing on the 20% and triple efforts towards the 80%!! That is the issue. Not that 1.6 million Aucklander's produce 20% of the waste

Auckland already has large issues with rubbish dumping. This will make this worse.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this but why should rate payers be subsiding the construction and other industry. They create the waste, they fix it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Where can we deal with garden waste? Now that there is green organic collections, can a garden waste collection be added (like bi-monthly or something). There is no where for garden waste to go except landfill unless individual households pay for green collections themselves?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Now that less types of materials are being recycled in NZ and we have universal standards for recycling across the country - we now need FAR BETTER labelling of products when purchasing. A traffic light system on every piece of packaging. Let us make decisions on what to purchase - without the information we cannot make informed decisions.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Do most asap. Dumping is so gross and SO expensive for council (the rate payer) to clean up.

Removing public rubbish bins and reducing the amount of household collections will not help this issue at all.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

There needs to be an investigation into rubbish bin systems for mid to high density living. Townhouses and apartment blocks with 20 bins each, all covering the footpath is not good. We are so far behind other cities in this regard and this system is making our footpaths even more difficult to travel on let alone for those in wheel chairs, pushing prams or kids on bikes.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I do support this overall and am currently in a 2 person household where this would be ideal. However i have also lived in a flat with 5-6 adults and this wouldnt work with the standard bin size. -Also in this house we needed a larger recycling bin and it was very difficult to get as renters with an overseas landlord. You would need a good system to manage this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Makes sense we def need less waste going to landfill particularly plastics...good to have those goals but there is a significant lack of plastic recycling we can only recycle a small amount of plastics so there needs to be big changes in packaging from a government and council level. ordinary citizens can not make these changes government needs to put pressure on big business and industry to come up with sustainable packaging. Most citizens are trying to do the right thing but options are limited government needs to do more.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Good idea because fathered won't be as much food waste in bins if people use the food scraps service then the demand for weekly should be reduced

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is too much construction waste government councils need to do more to restrict this

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Anything which reduces harm to the planet has to be a good thing especially reducing green house gasses and micro plastics

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think there needs to be more free ways in which people can get rid of inorganic waste especially e-waste...perhaps more publicity around the inorganic collection should be done?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Council could look at e-waste and perhaps having free e-waste collection points or a yearly e-waste pickup similar to the inorganic booking system? Perhaps offer a small charge for e-waste pick up? Anyway some sort of solution tone-waste would be good to look into

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I have observed how construction produces HUGE amounts of waste - that often blow out of skips and into the street - blocking drains. Plus many apartment blocks and terraced housing builders often leave construction waste in 'garden' or courtyard areas and pave over the top...

While I can see the benefits to construction site staff having plastic wrapping around and over the building, this surely produces a large amount of plastic waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Having a glass bottle and aluminium can return scheme is a no-brainer... In Australia my daughter collects used bottle and cans and donates the money she receives to an animal charity.

We absolutely need to have a return scheme as it would also (hopefully) reduce the amount of smashed glass on roads and pavements from people lobbing bottles from cars.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I also believe there should be more financially punitive fines for people dropping litter - on foot, in cars. Spot fines?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waiheke

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: most ratepayers already do this and this plan is unnecessary

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: because the majority of users do this already

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: seems to be working well

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: rubbish is rubbish and there are no priorities

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: our containers go into the recycling bin and are not dumped on the roadside

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: ratepayers do not litter and are far more likely to pick up rubbish and dispose of it properly

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Tell us why: stop producing glossy plans

4. Any other comments

this community has been through a lot of negativity from the council over the years to reach the situation where we now might have to pay again for what we have already achieved

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I find it ironic that Council which is a bloated, wasteful organisation thinks it can lecture us on waste minimisation. Zero waste is as stupid a goal as road to zero. Both are unobtainable.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You received professional advice that centralised food scrap collection was inferior to home composting and you ignored it. Having trucks driving all over Auckland collecting food scraps is madness and a waste of resources.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: In the midst of a cost of living and housing crisis you geniuses dream up ways of increasing construction costs. Words fail me.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You have lied to us for years about recycling. Far too much ends up in landfills because we have no capacity to recycle.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Costs will increase and benefits will be minimal. What we need is adequate roading, water and sewerage / stormwater. As usual Council spends millions on insane wasteful projects while completely failing to solve obvious issues. We need a city that does not flood and beaches we can swim in when it trains hard, not fools who think a coke bottle is going to end life as we know it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Are you too simple to realise that overcharging for rubbish collection and public dumps, and reducing the number of waste bins is likely to cause increased illegal dumping. Council continues to astound me with lunatic ideas.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Keep your incompetence away from our Hibiscus Coast rubbish collection. We have a very good weekly privately run service. As for plans to weigh wheelie bins, all this will achieve is morons dumping their rubbish in other peoples bins. Properly run landfills are not a threat to our existence. Try to base your decisions on genuine experts, not ideologically driven halfwits who think the sky is falling in. Refrain from 'improving' our city as virtually everything you do is a complete disaster.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Reinstatment of some publich rubbish bins that have been taken away, more dog waste bins at parks, collection to remain the same

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live in a household of 6 people and struggle each week with rubbish, we recycle and pay for an extra recycle bin but a 2 weekly cycle would be smelly and rubbish will flow onto the streets and move your issues elsewhere, council will have to pay to tidy streets because of all the illegal dumping, this plan is riduculous

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There needs to be a way for the companies to recyle rather than dump construction waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: You need to work with the supermarkets rather than the end user, we need to buy products to feed our families and we are penalised by how they are packaged, the model is the wrong way around, the supermarket owners and the big manufacturers get richer and they do not reduce their waste or provide better solutions. Plastic containers for takeaways and meat trays were meant to be faxed out? Why are you not following that up? You also need to increase the size of the recycling bins if you really want to reduce waste, ours is often full and rubbish gets put in the weekly bin.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: It seems to work in other countries, but if it is not easy ie curbside collection then there will be rubbish issues, the real problem is that council wants to save money and by doing so they move the problem somewhere, auckland and NZ will not have a clean green image any longer

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: While I support this the issue is policing, you will spend more policing this and you may as well looked at another option

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Removal of bins at parks and public places is ludicrous, see what happened at Okahu Bay, all the out of suburb people come and dump their picnics, takeaways, drugs, dog muck on our local beach it is appalling, it used to be a lovely clean area now it is filthy. I have called a number of times to get rubbish removed but itnever gets done, it is not safe to take children down there any longer I have found needles dumped. Pity that council is so short sighted. You should be adding dog bins at each park or walkway to ensure people are not dumping bags.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: 'Definitely - so important for us to transition our focus away from just a focus on 'recycle', and instead towards those higher up the waste hierarchy. However, can we also see efforts from manufacturers and product designers to provide citizens with better options? And not just rely on everyone on the ground to 'do better'. As a start,

- package free options, Goodfor / Bin inn are options, but the former is overly pricey; less heavily packaged products please!

- with refillable milk options as a priority, can manufacturers be incentivised to package in recyclable containers for those that need to? e.g., now that Tetra Paks are no longer accepted across the country, can we move away from offering this?

- well-priced products that are durable (can it be subsidised?! I know so many, esp students, purchase cheap from places like Kmart, and discard their products within a week or so because of

poor quality) - also people are less attached to these products, because they are seen as disposable

As per a metaphor used from The Workshop, 'to shift the balloon (policy makers), we need to shift the rock (public mindset / opinion)' - this needs to be done in conversations around waste in AoNZ, how do we create campaigns or stories that pull on helpful narratives? I don't have capacity to go into depth here, but please refer to mahi from The Workshop https://www.theworkshop.org.nz/

Also further clarity around recycling please, great work in comms! But still unsure around whether we need to remove the plastic sheet on the outside of (#1,2,5) bottles before placing it into the recycling bin? This is also a very high response effort required from time-poor people, especially those who actually engage...

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fortnightly collection may also offer people the opportunity to reflect on how much waste they produce! Or may it become a double-edged sword in that we see illegal dumping?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Definitely, reuse what's still salvageable in the C&D space!

We need to have conversations with those on the ground doing the mahi, why it's important and why we're doing this, it needs to come from a messenger that they relate to.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes yes and yes!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter

and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This needs to go hand in hand with addressing the root of the issue, back to the first point, the need to provide people with alternative options. Yes littering is not OK, but we'll see less of it if the upstream conditions are cleared.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More recycling, and using new and innovative technology to minimize waste to landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Need better bins (better sealed) to contain the food waste for lasting 2 weeks.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There are lots of items in the construction waste could be recycle, and sorting out different materials would be helpful too.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: i live in pukekohe and we don't even have bins yet! We are paying for bags that are only enough for 1 week in a small household. Most households would use at least 2.

Where are we supposed to keep these bags with a fortnightly collection?? imagine the smell, the dogs and birds getting to them and rubbish will be all over the streets.

until we have bins, we should not be included in the fortnightly rubbish collection

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will lead to increased dumping, pets and rodents being attracted to the dumped rubbish and household rubbish causing litter, run-off into streams and drains. Drive through lower socio-economic areas of Auckland and you will see bins already overflowing due to larger family sizes. Larger bins are not going to cut it.

The council will never pass on savings to rate-payers. Has it ever happened that rates have reduced?? The fortnightly collection is another example of the council reducing services and charging higher rates to pay fancy salaries to its own officers.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: How are you going to do this when the country and the city need more houses?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I've selected do not support for some of the questions above as I do not want you to take my feedback as in support of the plan.

Rubbish collection through targeted rates, rather than pay by use is a TERRIBLE step backwards for us as a city.

The goals set out above are all well and good, but the actions taken are so stupid it blows my mind. I actually cannot believe this is being proposed as a way forward to reduce waste as a city. Its like trying to reduce climate change by putting a tax on all vehicles including zero emissions electric vehicle.

Currently I use pre-paid rubbish bags, which results in one bag ever 5 weeks going to landfill resulting in us spending (approximately $40 a year).

We recycle and compost EVERYTHING we possibly can and buy items that do not result in a large amount of packaging. We are encouraged to do this by the cost savings.

If you go towards a targeted rates system I will be forced to use a bin which we will be paying to be collected every two weeks, which is far beyond our requirements. Ultimately, us as a low waste household will be subsidising higher waste households. I understand there are smaller and larger bins but that does not encourage the level of waste savings the pay as you use system does. We will still pay significantly more for our waste collection.

Please explain the logic behind this?

How on earth are we going to reduce our waste as a city when the incentive to reduce your waste has been taken away?

I am all for a two week bin collection strategy but it HAS to be managed via a pay as you use system, such as pre-purchased tags.

If the targeted rate system gets implemented it will be a travesty for this city and it we lose the biggest incentive to reduce waste.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: In Franklin urban areas, we are still using Rubbish bags unlike the rest of Auckland that Use bins. It would be unreasonable to Expect us to save up bags for two weeks, With leakage, vermin, etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides

and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: Are you able to explain more what you mean by "cultural costs"?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: In order for me to support this please may you provide the cost savings that will be passed on to rate payers who use less waste. I agree with incentives for creating less waste but need to see some hard facts/examples. I am concerned about bins overflowing. We first need to get packing of takeaway/grocery etc significantly down before even looking at reducing weekly service to fortnightly. People are seeing this as a reduction in services at same cost.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: The key is to make things easier and cheaper. For example disposing of asbestos is far too expensive so illegal disposal is rampant unless you reduce the cost. In order to support I need to see how you are proposing to do this.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: As long as it is easier and cheaper. Recycling stations that give you money like EU has. People are not going to go out of there way to go to a recycling station unless there is something in it for them. Treating Auckland as a whole is hard. If an area in Auckland is fantastic at recycling then they get reduced council tax fees. This way it makes people take more action/pride and get the community involved.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Only if by using the service you are rewarded

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need way bigger fines and in society today I see the worst offenders are the ones complaining the most. Very selfish people who think they are above everyone else because of who they are.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Please look more carefully at each community and adapt to their needs, one size DOES NOT FIT ALL

Have you spoken with rubbish bin collectors and big rubbish bin contractors?

They will tell you your mission of Zero waste will NEVER be achieved, minimize by all means but ONLY way is education to make the person who is about to put the dirty nappy into the recycling bin Know that they should not and Know the ramifications will be if they do, and I don't mean to them, I mean to those who have to deal with the nappy when it reaches them.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support fortnightly collections

I guess its relevant for intense urban areas BUT we live in a rural area and more than 90% of our Neighbours put their food waste back into the gardens and compost bins.

So don't charge us for any of this proposal as we don't use it

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Don't see how it will work. The proposals will increase construction costs.

Have you spoken to builders and construction companies? Please tell me who and what they said.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support but don't see how you will achieve your stated goals

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why: You wont shift costs from ratepayers to manufacturers etc,

They will pass the costs onto the consumers, that's us the ratepayers.

But that's okay provided there are tangible benefits and improvements. Toy manufacturers are some of the worst with the stuff they put around toys

So make sure they RULES you create actually encourage the manufacturers etc to reduce waste and cost and pass those savings onto us the ratepayers

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Generally I support.

Firstly large, instant fines need to be introduced for dumping. Say $2000 per instance as it cost heaps for council to pick up and remove the rubbish, which is often really yucky

As to litter, same thing, large instant fine say $500

By the time people are doing these types of things they are beyond caring, they need harsh punishment

But educate, educate also, make the kids learn not to dump and litter, it works if you try

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Other

Tell us why: I support PROVIDED you have extensively consulted with the local communities, and they have agreed with the proposals.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Other

Tell us why: I support PROVIDED you have extensively consulted with the local communities, and they have agreed with the proposals.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Other

Tell us why: I support PROVIDED you have extensively consulted with the local communities, and they have agreed with the proposals.

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: I support PROVIDED you have extensively consulted with the local communities, and they have agreed with the proposals.

4. Any other comments

Good thing to try and reduce waste but it will take time as too many people don't care. Education is key which will take time.

Good luck but you wont achieve zero, but worth the try!!

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Mostly support - it is a great idea to aim to be "Zero Waste" but I do not think it is achievable, especially through some of the initiatives Council proposes.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: In reality, it would not work. It is not a good idea for people to hold onto their rubbish for two weeks until rubbish day. What happens if I accidentally miss a collection? Then I have to wait another two weeks - that is disgusting. Imagine all the rats, cockroaches, seagulls and other pests and vermin. Our household is really good at using both the food scraps and recycling bins and yet we still need a weekly rubbish collection as we fill our bin each week. We are only a family of three and by no means generate a large amount of rubbish. To change to a fortnightly rubbish collection would be a mistake for private households.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I've seen different numbers - that construction and demolition waste is much higher than 40% of waste in landfills. We need to do better to try to reduce this number rather than try to put it back on the individual / private residential waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sure, most waste in general is generated by those five main areas. There are probably not many other categories of waste anyway. Bit of a stupid question.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again, why are you trying to put this back onto the individual and / or central government as a problem to fix? Why not regulate the big businesses that generate the "beverage containers" such as Coca Cola / Lion Nathan etc.?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Littering and illegal dumping really does need to be controlled / policed better.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I don't live on any of the Hauraki Gulf Islands and do not spend much time on any of them either, however they are just as important as mainland Auckland and I have no problem with waste management needing to be more expensive and region-wide rates having to fund this.

#814

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would expect to see changes made to packaging produced by the large cooperations and restrictions put on how goods can be packaged.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Because rubbish that has been sitting in a bin in the summer for two weeks will stink and make our neighbourhoods smell disgusting.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support the direction and happily will comply where I can. However please consider the plight of people with disability who may have needs beyond the ordinary household. Incontinence products generate most of our waste. Please don't add cost to households with this issue.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support the idea of fortnightly and already use the food scraps bin every week. We also use the existing fortnightly recycling bin. I pay separately for private green waste bin and occasionally private inorganic bins as the annual council collection is hopelessly inadequate. They leave stuff behind for no apparent reason. My household would need a larger bin for adult nappies due to one member having long term incontinence. Disposable nappies are supplied by Te Whatu ora and take up most of our weekly rubbish bin. I would not like to see people penalised with extra cost for this as washable products are very expensive and too hard to source in NZ (only one supplier I can find) So please allow for this in households with disabled members. It would be easy to administer as we get the product from what was Auckland DHB so they have records that could be shared with Council with permission from us.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Kainga Ora has proven construction waste can be minimised. They have reduced their demolition waste to 20% to landfill or better.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: While I support reducing waste, moving rubbish collections for F/N and removing bin (that are used) in public spaces, doesnt solve the issue of increased waste

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: disagree with this statement. Our bin is not 41% food scraps. Everyday life is creating more and more rubbish, there has to be a meaningful way to remove this weekly to avoid pests and bad smells. People who look after babies, elderly or disabled people tend to have a lot of nappies/ Adult nappies, these need to be removed weekly. You need to explain how we are going to reduce this waste, when everyday consumption produces more.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: tell me how this is going to be done

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In general, I do support waste reduction. I do not believe the 'zero waste' mantra. Utterly impossible. Council somehow needs to make getting rid of rubbish easy for the population.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: For myself, fortnightly collections are fine. I am a one person household most of the year. As I walk the streets on rubbish collection days, I already see bins filled to overflowing and whether it is carelessness on the collector's part or inevitable, often rubbish is strewn on the streets once the truck has gone by. Council is ever reducing the numbers of rubbish bins on the streets and while I personally pick up rubbish every time I walk (daily) if I have to carry rubbish far to a bin, I leave it. Then you have to consider visual harm, lack of respect for one's community, further lack of respect for community and environment, further damage. It is like graffiti - remove it quickly, dont give the "artists" the joy of seeing their work and you see a reduction in that behaviour. I think it is a similar thing when it comes to rubbish being dumped/chucked without care. We need reasons to be proud of our city

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: We have the government trying to expedite development by removing stumbling blocks, including too much time for consents etc. Council would need to be very wary about creating even more issues by being too fanatical about building materials and disposal of the inevitable waste. Most builders would want to enhance their incomes by being smart with the use of materials. I would like the few careless builders to be much more careful about keeping wrapping or styrofoam rubbish from blowing around the streets.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I believe MUCH more has to done before you are going to get buy-in with the majority of the population when it comes to food waste bins. To begin, they are flimsy! As I walk around my neighbourhood, I see very few food scrap bins out on the road for collection. They are probably too small for family use. My green waste goes to a composting organisation. There has to be a way for people to get rid of old carpets, mattresses, furniture, appliances. Nothing lasts forever.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Until drink cans, drink bottles, vape rubbish etc can be successfully returned (no doubt with a monetary benefit) this rubbish is going to fill our street gutters or blow around on the footpaths and roads so yes, it needs to be done. There will be a lot more waste going to land fill now that we cannot put lids (for example) in the inorganic collection bins. A way needs to be found for getting rid of them to be easy as well.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: How is Council going to know who to give an instant fine to for dumping rubbish?

I report rubbish down the banks (eg, Oakley Creek), mattresses, suitcases, other rubbish left on the streets. Sometimes it gets removed. Sometimes not. Again, I think it is critical that council makes it easy (and cheap) for people to get rid of rubbish. In the long run, I think that would mean more people would be inclined to do the right thing when it comes to getting rid of unwanted rubbish. There will never be a perfect solution or result. And the more the grass is allowed to get to 'great heights' etc ... the more perceived lack of care for the city ... the more people will be less likely to care about just dumping stuff anywhere they like, so long as it is not in their back yard!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: There is too much focus on reducing household rubbish, with proposals that are not practical nor justified, and the focus should be on commercial waste which is 80% of the problem.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: 1. The small household food scrap bins in no way justify the deletion of the weekly collection of the much larger weekly household rubbish wheelie bins. They are not comparable in size. 2. Fortnightly collection is completely impractical for medium to large families. We fill our weekly bin every week - including our grandchildrens' nappies, our dog's poo bags (which we pick up and do not leave on council verges and parks) and it would be hopeless having stinking overflowing bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support that concept BUT the Council is causing illegal dumping by removing many public rubbish bins and it will greatly aggravate this problem if it removes the weekly household rubbish collection service.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: Most of direction is OK, but not all.

Often the rubbish produced need to start from the producer, they are the ones producing the packaging and plastic waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: My tiny red bin is often full. Having to wait 2 weeks for collection would be a nightmare. NO PLEASE.

I love my garden, I have looked into garden waste collection but most companies refuse to collect certain type of plant waste. It would be great if each suburb has a venue where we could bring our garden waste to dispose for free, then maybe I could think of 2 week rubbish collection.

Also, the council should charge other tenants for their rubbish instead of just landlords. Why should landlords need to pay for other people's waste? Seems so unfair! Tenants seems to get away fr paying day to day bills!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Not familiar how to reduce this as we can't use materials that will be unsafe for buildings.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good to reduce plastic overall for our planet's future.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Would help reduce waste and litter for sure.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Unhealthy and unsightly for everyone.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Collection of red bins weekly is sufficient . If collected every fortnightly the rubbish will pile up.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Ratepayers are already paying enough we do not need to pay for more things that's already working well as it is.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. 1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We just got food bins and more education on recycling. We need to educate about reusing stuff as well.

But if we do fortnightly sounds great it will as it dies already encourage illegal dumping of rubbish and this will cause a ndfstivd effect.

As rate Payers keep vying you'd rates are going ip and not a service is going to be stretched. It seems mrste Payers get hit the hardest.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Just cost cutting and causing the issue of illegal dumping and rares Payers really not getting much or the rates they pay

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: I know some try and be more green and think about wastes but we should give out credits or e dollars something to encourage this in the industry. Use the credits or e dollars to pay for mire products that are green etc.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: Need to invest in research to try and make and recycle more materials but aredo a great job as well.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Already outing them alot. Research and education on waste.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Yes and no. We don't have enough workers to investigate and also we could hinder production. We need positives on both ends.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I fully oppose moving to fortnightly collections. It will not impact the total quantity of waste being disposed of, therefore it is not linked to the target of reducing waste. Waste collection is a basic council service that is non-negotiable. If you want to save money, then I could save a lot more wasted ratepayers money without touching waste collections. The other issue with moving to fortnightly sollections is that it will increase the amount of illegal dumping - usually in parks, streams and woodland.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I would support a substantial reduction in the number of one use water bottles that get into circulation and end up in landfill. Drink manufacturers might need to be charged a cost for "the number of bottles they produce" less "the number of bottles they recycle". This recycling charge would encourage them to take ownership of the problem they create.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Typical poor council approach - fine people; stop doing this.

Use a carrot rather than a stick.

Also be realistic, who is going to police it, it won't be the police - as there are not enough of them and they are already overstretched. It will end up with the coucil having to clear up the mess - which will cost even more. Look overseas if you don't believe me. It is called fly-dumping and is a significant problem in many countries - particularly in Europe.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitākere Ranges

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Worst idea I have ever heard of, seems like a single 25 year old who lives in an apartment came up with this stupid idea. The bins will stink! And illegal dumping will become even worse. We pay rates for basics like rubbish, stop treating us with contempt.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Focus on manufacturers and sellers not home owners, most have little choice in what we buy and are price sensitive - we don't all shop at Farro.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Can't see this shifting costs at all, will privledge wealthy with more time on their hands, some of us work for a living.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The inorganic rubbish should be done more than once a year so that people don't try to put them in bins or discard of them illegally by dumping it randomly.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The amount of waste I have in a 2 person household each week fills my 1 small bin. After only 1 week it smells, having waste over 2 weeks would be disgusting and attract rodents, roaches etc. I can't imagine how larger families would cope with a fortnightly pick up.

Our community needs to be smarter with keep cups and using reusable shopping bags. There need to be incentives for people recycling cans and plastic again. People just throw them on the streets. Back in the day people would pick them up cos they would get money for them.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is so much construction going on in Auckland and it would be having a huge effect on the environment

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea! We were so much better in the 80s and 90s doing this and it makes a difference.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Once an area is dumped in and it sits there, people see it as an excuse to do the same. Having a clean community makes people want to keep it clean and maintain it that way.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Education is the best option rather than being dictated to by the Council. In addition, it would be much more useful if the Council operated more recycling centres that are easily accessible e.g. centres to dispose of used clothing, broken electronics close to suburbs.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Cost savings are never passed on to the ratepayers. Education is always the best way to change behaviour, not reducing choices.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction companies (commercial entities) must have an approved plan for construction and for the use and disposal of any materials they use.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: At this stage, the council has not demonstrated that it is equipped to deal with waste intelligently (for instance, most "recycle" waste in public spaces end up in landfill). I am not

convinced you have the ability to implement a coherent plan and this simply generates more angst for rate payers.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Well, we used to do it with Coke bottles in the 80s so you are not coming with a new solution, but good on you for using good ideas from the past.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I would only support this if the cost for the collections was reduced by 50% as the collections are reducing by the same percentage. If the reduction in cost for ratepayers is less than 50% then we should keep the weekly collection and the current charges. Being able to have waste picked up regularly is one of the few core services (user pays) that ratepayers actually value so unless we benefit cost wise we shouldnt change the collection regime.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. What do you think of this priority area?

Do not support

Tell us why: It doesn't take into consideration how big our family. We are a family of 9 living in a 3 bedroom home. It was a NIGHTMARE trying to organise a size upgrade because the bin collector broke our lid

The scrap bins are pretty good but even on the weekly collection there are maggots breeding! We don't have any freezer space to freeze food scraps let alone another $5 to purchase pink bags. It PAINS me that we are footing the cost for scrap bins yet not everyone is using it! If we move to fortnightly collection will we foot the bill for clean up of illegal dumping or trash strewn all over the community?!!!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: Is my cost savings from fortnightly collection gonna pay for this?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Do we get a small credit for returning these? Gas ain't cheap y'all!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sick and tired of low life's making Otara look like a slum with their irresponsible dumping!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I am concerned about sanitation. Leaving rubbish for 2 weeks breeds disease and is a haven for flies and other pests

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Some support but the zero waste vision does not feel at all practical in reality. It's a nice vision but not something we should be forcing on communities. There is absolutely no evidence or track record any supposed savings would be passed on to ratepayers at all.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not support this action at all. This is not what the council should be doing to address the waste issue. In the snapshot document you state that 65% of a rubbish bin could be recycled - well, that's great but then we need another 65% size recycling bin. Fortnightly recycling is already full the idea we can just transfer it to that is ridiculous. But more importantly it is removing a needed service - weekly rubbish collection - for waste that communities pay rates for. It's not up to you to dictate and force a target that we then have to suffer having waste for two weeks around. I strongly disagree with this action and think it should be removed. Highly dubious claim savings would be passed on to ratepayers.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: But it doesn't actually look like you'll do anything other than consult on this?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Just because other councils have made changes to weekly bin collections doesn't mean Auckland should. It would be better to show results of a survey of ratepayers from Christchurch to see whether they actually believe the service/change has been positive and manageable. Households are busy and stressful, the idea that busy families have time to sort and plan rubbish to the extent described in this summary is in my view fanciful. Your own research showed families could not cope, and it seems the weekly bin change would impact large and time poor families the most.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Don't support fortnightly bin collection

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If you miss bin collection then it's a four week wait.

Your percentage of waste description is generalised at not relevant to my circumstance

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: There is no reasonable reason to involve council in the business of waste collection. Simply let ratepayers contract directly with the rubbish removal services of their choice at the frequency they require.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There is no way our personal bin is anywhere close to 41% organic material. In addition the CO2e lifecycle costs of Auckland's poorly implemented scraps service are something many environmentally conscious persons would choose to opt out of if they could. Also bins can get pretty nasty after even a week with certain kinds of waste. Get council out of the business of wast collection and let ratepayers contract directly with private entities for the size, type and frequency of any service they require.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support any recycling efforts. but rather than being aspirational it also needs to be practical and cost effective.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: What kiwis can place in a recycling bin is quite woeful compared to overseas, and recent changes are actually a negative making it harder and more complex to recycle. There should be a focus on modernising the recycling system to take a wider variety of waste. That said council should not be involved in this process, leave this to third parties.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I still remember 'bottle drives' to generate funds for community organisations. I don't believe it to be any more effective than curbside recycling. Additionally promoting high environmental impact re-usable packaging is actually worse for the environment if that packaging is not effectively re-used. In any case these decisions are best left to consumers to demand more environmentally sound alternatives vs centralised, well meaning schemes with unintended consequences.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: If removal of community rubbish bins is the manifestation of the thinking of the group in council it's a bad idea. Better public bin availability and lower cost refuse collection at an appropriate frequency for its users is one of the best ways to reduce people's incentive to litter and to dump items. Enforcement is also appropriate but does need to be combined with reasonable public bin availability and low cost disposal services (ideally run for profit not by council) for other items.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Adopt a policy of getting council out of the business of waste collection and handling where at all possible. Running anything efficiently or providing diverse and customised services is not councils forte so should be avoided unless it is the kind of service that commercial businesses won't step up to provide. Except in the case of bins in reserves or council facilities waste collection is not such a service. Council should't even be debating what collection schedule or available bin types and sizes are appropriate for Aucklanders. Let people decide themselves if they need one, two or even less frequent rubbish collection for the various types of bins (general, green, recycling, compost etc) that they determine they need collected. Don't be charging households (directly or through the overheads of inefficient beaurocracy) for waste solutions they may not want or need. Simply let them contract on the open market for the services they require.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Either EVERY suburb pays for household residential rubbish removal

OR

Either EVERY suburb has free rubbish removal for residential households .

WHY?

Because it's bloody unfair that the Shore etc have to pay for rubbish to be removed, but other suburbs don't.

We don't have train services

We don't get the yearly dividend payment re power lines

We have to pay for residential household rubbish removal.

And it's not bloody fair.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Either EVERY suburb pays for household residential rubbish removal

OR

Either EVERY suburb has free rubbish removal for residential households .

WHY?

Because it's bloody unfair that the Shore etc have to pay for rubbish to be removed, but other suburbs don't.

We don't have train services

We don't get the yearly dividend payment re power lines

We have to pay for residential household rubbish removal.

And it's not bloody fair.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support the idea of a reduced collection which will reduce ratepayer costs. I don't support having it on alternative weeks due to businesses in the cleaning industry that clean the wheelie bins and require both bins to be emptied together. That will majorly affect those businesses and increase their costs in an already volatile market and cost of living crisis. This will be extremely unfair and could cause major issues for them.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The alternative collection to recycling will majorly effect some businesses especially those in the cleaning industry that require the bins to be empty to carry out their service. Having them both in the same day will save households having to worry and stress about what week it is and will ensure all bins and recycling are collected and not missed causing some households to overflow their rubbish bins, thus increasing the likelihood of illegal dumping or placing rubbish into recycling bins or vice versa, which will be having the opposite intended effect that you are wanting to create. People already struggle with recycling weeks so alternative rubbish and recycling is really going to throw some people off.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: If this is implemented, I would like to see the food scrap bins extended to commercial premises. As a small business, we only generate a small amount of general waste with our 120L bin typically only being half full each week. However, during summer even after a week the bin begins to smell, after two weeks it will be pretty bad.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We are a family of 4, we would only typically get our 140 litre rubbish bin emptied once a month, if that. We are not minimalist. It seems very unlikely that most households would need their bin emptied every week. But why wait until 2026? The cost savings to long suffering ratepayers are available now.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: organics are not a priority, plastics are.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fines should be very high. No excuse for littering.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: I have concerns it'll just lead to people dumping rubbish everywhere.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The council should focus on reducing spend on non-core activities before they take rubbish collection away. Fortnightly collections will lead to people dumping more rubbish illegally. They often also forget to collect around our street and then say 'they'll collect it next week' - so I've seen what happens when there is a fortnight without a rubbish collection. I won't be voting for anyone who supports that proposal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: strongly support the proposed direction (Option 2) which:

affirms a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

I/We applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9

We suggest removing the decision to dispose line. This is unecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

We appreciate Auckland Councils commitment to invest in education and beaviour change (in house and by external provideders) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

We support the 7 principles that will underpin decision making.

Goals

We suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierachy

Designing out waste line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and beaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important o better understand the emisions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emisisons aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I/We support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I/We support priority 2 to continue expanding the resource recovery network and its services.

I/We appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, ‘Right to Repair’ and sharing models.

Typo p20 row 2 eleven CRC’s other parts of document say 13.

I/We support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council ahas been using for the Construction and demolition sector could be usefully applied to the hospitaility sector to address sincle use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. “....including the opportunity to add new programmes and to expand and diversify programmes...

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the “What it means for Aucklanders” column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

We support Priority 3 - see response to Q2B for detail

We support Priority 4 - see response to Q2C for detail

We support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community bulding and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of circular economy. They support the Governments Emissions Reduction Plan and Auckland's Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emisisons - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

We support Priority 6 - see response to Q2D for detail

We support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reparoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I/We urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

I/ We support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

We support to Priority 9 see response to Q 2A for detail

I/We support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around council leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own wasteminimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has it's own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging,

new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

We support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

We support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a

priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems

4.6. I/we would like to see this approach to source reduction consistently applied across all the priority waste materials.

I/we support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to create the circular economy. there is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

We note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

I/we support the recognition of the value of local scale and 'community-led' solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

We would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

We support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilence and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

I/We support the ambition go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the 'source reduction' language as it is more specific that 'reduction' whic often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in

rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending last part of 6.4 to read ' ... organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

I/We support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back sceme in Denmark. Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which over lap with this.

Textiles

I/We support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities like prisons and hospitals etc. As well as stream that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product

Stewardship and exploring the opportunity to reduce commercial and industrial texttile waste strreams.

New Zealand organisations like Usedfully are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see te link being made between the waste (tonnes) and supply chain and landfill emissions genrated across the textile lifecycle.

Bio-solids

I/We support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate “for actions to move up the waste hierarchy, including source reduciton, reuse and right to repair”.

I/We would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

We want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and Demolition and the five priority waste streams. As a core focus of working relationships with Mana Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocessors and composters.

See plastics section of this submisison for comments on expanding Action 6.4 Priority Wasrte Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

I/we support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emisisons reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

We fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven result in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for for central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship scemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill, durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

safe for people ecosystems and climate

Viable because they build in ways to cover the real costs

Accessible to everyone

Regenerative because they leave things better than they were before

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: upport Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I/We agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I/We think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Active participation and partnerships with organizations that align with the goals and have resources and knowledge to assist that are willing to help. I think finding partnerships with communities are very important and there are a lot of communities with good ideas and some need to be supported by council in order to have the best chance of success.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: a focus on education to local communities about how to minimise their waste, not only general waste, in organics, but also green & food waste options. e.g composting/worm bins, growing own food etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This is my area of expertise from being in the industry and supporting and investing this particular community for over 30 years with the focus on waste minimising in more recent years. it is a large issue and i think the industry leader need to buy in and take more action with supporting solutions. I think levies should increase for industry tipping due to the scale of their contribution and levies should decrease for household tipping due to discourage illegal tipping.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Increasing the waste hierarchy approach to waste minimizations. Implementing a mandate Waste Plan for construction sites/

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: this moves us closer to zero waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The construction industry want to do better but to enable this every business needs to be in it together so no one is disadvantaged by best practice. A mandated waste plan for construction sites is a must.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: the manufacturer must take responsibility then they will rethink their approach

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: when people are penalized they change their actions

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: great people need our support

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Māngere-Ōtāhuhu

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: More avenues required for recyling and waste reduction

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Keep weekly rubbish collection as it will only encourage fly tipping. Standardization of recycling in the Auckland region has meant less can be recycled (eg: aerosol cans, aluminium trays etc)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Support BUT - there needs to be a huge public education. You also need to understand that not all things are fixable. A poor family buys the cheapest jandals from warehouse. Of course those are going to break within 1 year or less. Those jandals are made of plastic, and sometimes if it breaks in a way that is unfixable, then they have to throw it away. It goes through the system. You also need to work with corporates so they supply good quality items. This is just one example.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: support BUT again, massive public education is needed. What about household that is unusual e.g. flatting with 8 people? Yes there are options for bigger bins. But is the biggest bin enough for household like this? There are multigeneration households too. Even with weekly collection, I have seen people sneaking out during the night to spread their extra rubbish into other people's bins that have been put out on the kerbside.

Your recycling needs to be better. We have changed the recent recycling to be more standardised, but I just don't understand why we can't put aerosol cans and carton/paper beverage containers into separate recycling and instead we are now told to put them into the general bins. They take up so much space. You the government needs to invest heavily into waste management to either contract with an overseas contractor to process things we can't process here, or build a facility here to be able to process them.

Third, is your public bins. I don't get reducing them. Because even now, you already see them overflowing. If you reduce them, you will have to increase the frequency of emptying them, then it will be the same cost and this means that you aren't actually saving any costs!! If you can't increase the frequency of emptying them and yet you are reducing public bins, littering and pollution of the waterways are going to be worse instead of better. Yet, you have this goal of reducing litter and pollution. Sorry, reducing public bins will not work if you want to achieve this.

4th. I've seen 3 coloured bins in offices, yet they do not make a difference at all. It's not just the household you need to educate. It's the companies too. Basic rubbish sorting isn't done. Put some kind of fine or audit maybe on these companies?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The vision resonates with me. While I do not live in Auckland, the direction our biggest city takes in terms of waste is crucial for the of Aotearoa. I agree with the overall direction of the proposed plan. In particular, the emphasis on climate action and the move to a circular economy are crucial components of future-proofing our political, social and economic systems of organisation.

I agree with the inclusion of the waste hierarchy. However, I think it needs to be clearly state that the incineration of waste (aka waste-to-energy) does not fit within 'recover value' section of the hierarchy. I have seen WTE companies argue that the incineration of waste can generate renewable energy. This is an absolutely ridiculous statement and I would like for the plan to state firmly that WTE is not an option for Auckland as it does not align with the city's zero waste vision. The document states that "the final disposal does not diminish the wellbeing of people, the land, air or water." I urge the Auckland to state clearly that the incineration of waste is not considered under this plan at any stage.

It is my view that the targets (30% reduction from 2022 to 2030) are not ambitious enough. We need to do more and should be aiming for a much higher reduction.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The evidence suggests that less frequent collection leads to waste reduction.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I do not believe that Auckland Rate Payers want the Council to be a parent telling them what to do. We want you to give us the resources that WE pay for and let us decide how we use them. If the majority want to reduce waste they will. By reducing bins you are just moving the problem to a different place where that waste will be left. Aka the ground. Bins prevent litter and assist with creating the clean city that we want to have.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is a terrible idea in my opinion. Removing waste from our properties in a timely manner is not an option for the council, it is a bottom line. If budget is an issue then look at your discretionary spend and remove the spend there. Your food waste initiative is a potential good example. I see so few bins out on collection day. This appears to be a virtue signalling policy rather than an effective one. I do not believe that the majority, or anywhere near a majority, of rate payers support it. This is democracy. Listen to the city's rate payers.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I do not believe that you can make a difference here.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I could support but I do not have faith in that you can have any affect on this.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Find and prosecute offenders. Add taggers to this. It creates waste and destruction.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: You didnt ask us about expensive scrap buckets we are being charged for and hardly any use,now you want to half our rubbish pickup for same money.Remember the 80/20 rule.Dont try to fix all at once.Food scrap last but yes do the construction decrease as that is one of our largest waste problems.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I want to see study that has 40% food waste because my neighbourhood doesnt find.Constriction waste is.Remember your not spending your money!Youve w/o consultation purchased expensive gimmicky waste buckets and dare to charge us for them.Now youve puy in place trucks and expensive pickup for them and dare to want to without consultation half our pickups

Again start with top 20% of landfill which is construction.Do not half our residential pickups without lowering costs!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: NOT FOOD SCRAPS-Fidally,costly,using gas to pick up etc. and not that much of landfill.All the others yes!

We do in recycle bins and are supportive.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Weekly recycling bins picked up

I'm head of a family of four the fortnightly recycling bin is not often enough and recycling overload is then put into house hold rubbish bin.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I already have the 240l larger bin and it is full every week ,so if it was collected every fortnight we would have overflow of 240l per week.

I have used private waste collections but waste management have emailed me to say they will not pick up rubbish in our street ever again in Auckland city zone?

So there is no other option for collection in my area in Blockhouse Bay

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Adding to the cost of building a home.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: with fortnightly collection, our bin will overflow as we have a big family. Leaving it uncollected will result in unpleasant odors

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: 'We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. ' you are just creating more cost for the household especially when many families are already struggling with the cost of living.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Do not support moving to fortnightly rubbish collection or having to pay for bigger bins through rates.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps do not make up 41% of our bin - that is ridiculous and if it were true then the food scraps bin would be 41% the size of our red rubbish bins! Most our bins is full of tissues, and nappies - unless Auckland Council is going to subsidise Auckland families the full cost of having someone not work so that they can spend all day cleaning cloth nappies, I object to this entire plan.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A big push to reduce our waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: With food scraps out of the fortnightly bin that will make things easier. Hopefully encourage folk to look at what THEY are doing

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The waste from a new build is large and it is so easy for the builders to just through it in the skip. Metal off cuts ,plastic and timber. This is an area that is about time and ease to get it off the building site.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I see those large plastic bins /bags (the types purchased from Mitre 10 etc) that are for household use on the road side full of boxes and many other items that could easily be recycled

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea and all these items are such a problem out there

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I recently so a TV doco from England dealing with this illegal dumping . They searched the rubbish bags set up cameras in hot spot area and made arrests. It currently is a problem and it can be commercial businesses doing this.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Growing area and with increased visitor numbers . I do feel that a lot of local residents are very good about their special island area.

4. Any other comments

When I go to a Waste Management transfer station it is so disappointing to see No area to drop off steel, glass,paint cardboard. How do they get away with this ? I know they are an Aussie firm and profit is a factor but why can't the council apply pressure on them to be a responsible operator This recycling was going on 30 years ago in CHCH and no doubt other places.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Support the goal - JUST DO JOT SUPPORT THE PROPOSALS TO GET THERE!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps roll out is misinformed and DOES NOT WORK. They stink under the sink prior to taking out. They blow all over the street on windy days. Dogs get into them when out or when stored in drive etc.

They were a total shambles of a decision that just doesn't work. Not enough consultation. If there was the sense would've been seen.

As it stands after a few months of them - see about 1 house in 10 using them now as they are useless things. That we have to lay more for them is criminal.

To say these will reduce use of the main rubbish bi. To fortnightly is deluded.

All for making a better solution but this program will lot do it.

Ask the other cities residents PROPERLY and you'll find a different story. I have heard from several Tauranga residents that it is all a shambles!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Support the idea.

However depends on how actioned. If is anything like food scraps and fortnightly collection idea it will be a big failure.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Support the idea - do not trust the methods that will be chosen.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Finally some smart thinking.

Cannot believe this was ever stopped all those years ago.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Fully support the idea - just do not trust how will be rolled out. Need better strategy people involved.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

What do you think of this priority area?

Support

Tell us why: I support this in full - my household puts out an 80L bin approximately every six weeks and have lived in crowded flatting situations who didn't need to put out 240L weekly. I find it challenging to believe that any family unit can need service that regularly with the options available.

Availability of getting a bin emptied if it's only half emptied (due to pushing down waste and jamming it in the bin) ought to be made easier however.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This is easily managed with existing commercial waste providers and should be encouraged in some way via council assistance.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this in full, it may also encourage more community cleanup.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support in full.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The rubbish will smell over summer if collected fortnightly. How. Any more services are the council going to cut. We will be paying more rates and getting less fir our money

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Also, while I understand the charge for upsizing a refuse bin, this should potentially be waived at the start of the new collection regime. Also, so as not to unfairly discriminate against poorer families, who often live in situations with more people living in a house, perhaps bin size allowance should be on number of people living in a dwelling. Also, I don't believe there should be a charge for downsizing a refuse bin, as this should be encouraged (I recently suggested to my parents they downsize to an 80L bin, but the balked at the $40 fee.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This should primarily be funded/enabled by the suppliers of the materials, and the bigger developers. Small contracting operators will find it hard to deal with the waste without assistance from the suppliers, while bigger developers should be able to to institute their own systems.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Additionally, a lot of green areas in the region are prime candidates for restoration to native bush - organic and biosolid waste could potentially be used to kickstart restoration efforts?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Additionally, more recycling bins are needed in public spaces - even just one per area would help keep down refuse.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Larger businesses of all stripes, from production to management to commercial, should have more pressure put on them to take care of their own waste, and make sure refuse in minimized.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: This is an utterly vacuous proposal. I feel like you don't want feedback on whether the idea is a good idea or not but on how it is achieved. Really the consultation should be on whether we choose a Zero Waste policy and frankly I do NOT support it. By all means recycle, but the way in which Council make adherence so complicated it become unworkable and not worth the public's effort. Another random proposal imposed on Auckland by Council (I suspect Council bureaucrats rather than elected officials).

My change would be the abandonment of this ridiculous notion in the first place.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No - you have FORCED a food scrap collection on us - and charged us for the privilege. Using bins from Australia and processing in Rotorua you are spending our money outside of Auckland in all instances. I despise Council's position on this and the dictatorial imposition which I imagine is doing precious little for reduction of either food waste or methane in landfills. Rather than Council trying to socially engineer Auckland, how about you do what we actually ask you to do and provide basic services - like weekly rubbish collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: I'm ambivalent - in my view C&D waste is neither helpful nor unhelpful to landfill - if someone wants to evaluate and try to make better use of it then they should feel free to do so, but Ratepayers should NOT be asked to pay for it - this is the sort of thing that, if viable, a business can do on their own (even if we divert the materials to them for free), but Ratepayers should not have to pay for staff for Council to do this.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I think the concept is preposterous - those items will release greenhouse gases whether in landfill or elsewhere - just moving them somewhere else where you don't measure the gases they release doesn't solve the problem it just hides it.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: If this can be done without increasing the price of the beverages sold in those containers then fine, but not if your plan is to add a fee on top that is built into the price and you get back when you return it, but I'm not overly concerned by this proposal.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: But YOU TOOK ALL THE BINS AWAY!!!! How can you look at add additional fines when people litter, but you've removed all the bins for them to throw their rubbish - this decision beggars belief and is nothing more than an orchestrated excuse for revenue gathering. Just put the bins back and let people use them and THEN you can fine people for littering, but I don't think

you should fine people for littering if you've taken all the bins away, or it's in an area where there are no bins.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Most households will struggle with fortnightly collections.

Will incouruge illegal dumping on public places.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Industrial waste can be recycled into new roading.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good future planning required for an expanding city

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Does support recycling

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I live in an area where illegal dumping is excessive

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: It's required

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: Improve current services

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: It's required

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: It's required

4. Any other comments

What do you think of this priority area?

Do not support

Tell us why: rubbish is already user pays - it has not been explained how this will reduce expenses - for example are the cost of the stickers reducing? If you pay for the larger bin will the price of the stickers reduce? very poor explaining in this document and a lack of detail.

Also I already have a compost so the compost bin is a waste of time - not to mention not practical for street pickup as the get blown around and waste is spread and that waste is not picked up - which creates more issues.

Also there is a large flaw in the thinking - it is noted that moving to fortnightly will reduce waste - but it is not explained how this is possible without a change in behavior.

It is also mentioned that the rubbish wont stink anymore due to the compost now being separate, but there are still things put into the rubbish that smell.

Also ironically, our waste has now increased following the alteration of the recycling rule around eligible waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I only do not support as you are forcing reduced home waste - which WILL lead to more dumping based on past behaviours in auckland.

Removing access to dispose items does not magically make the items disappear. The focus is at the bottom of the cliff. Not looking forward to the extra rubbish on Auckland streets.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I object changing kerbside frequency from weekly to fortnightly. We have a big family with 6-10 people plus pet of wastes & nappies to dispose. Current 120L bin overflow most times with smells & sometimes needs to leave disposal to next week. Fortnightly collection would cause more hygiene problems like bad smells, flies & also increase the risk of rat infestations etc.

We have been working hard to deal with the increasing living costs and skyrocking rate costs already. We are sick of being penalised with the reduction of services that we paid for & failure usage of our rates payers money. I wonder in the future we would be asked to poo every two days to reduce waste & conserve water.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I object changing kerbside frequency from weekly to fortnightly. We have a big family with 6-10 people plus pet of wastes & nappies to dispose. Current 120L bin overflow most times with smells & sometimes needs to leave rubbish to next week disposal. Fortnightly collection would cause more hygiene problems like bad smells, flies & also increase the risk of rat infestations etc.

Larger bins would costs us more which further increased our living costs.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly collects should be kept as not everyone has a small family and we need collections done weekly

Our family already has the 240l bin and we fill it weekly even though we also use the recycling and scrap bins so this proposal greatly affects us and many other large Auckland families

The bins will smell and encourage rats etc if rubbish is left uncollected for 2 weeks

I also believe poeple will just dump excess rubbish on the side of the road as is already happening now

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Tell us why:

4. Any other comments

Cost of waste services

$45,000

Total annual cost of services

Cost per property to deliver services

Point 1. The cost of Waste Services should not be paid by Mainland Ratepayers but by Kawau island ratepayers.

Changes to Kawau waste infrastructure and services

The waste enclosure at Sandspit Wharf was installed in 2021 as a medium-term (3-5 year) solution to replace the three Molok bins in the vicinity which were widely misused, attracting illegal dumping and waste from non-residents and commercial operators. The enclosure was designed as a medium-term solution while other solutions that might better protect the important values of the area are under investigation.

The enclosure is secured with a coded lock to deter dumping, and while waste volumes still naturally increase over summer due to the influx of Kawau visitors using the facility, there is less inorganic material being dumped than before the enclosure was installed. In addition, placement of the bins within an enclosure means that overflowing refuse is usually contained within one space.

A review of the enclosure in 2023, as part of the council's commitment to move towards a permanent solution, indicates there is still some misuse.

Point 2. It is commendable that Council has a commitment towards a permanent solution. However some actionable options need to be put forward to resolve the situation. Ideally Waste collection should be focussed on collection or internal cycling from Kawau.

9.3. Waste goals and actions for Kawau

The goals and actions below are based on the actions developed for the 2018 WMMP. They draw on priorities identified through engagement and will be pursued with a view supporting community-led solutions and initiatives and reducing waste costs.

	Goals	Key actions	
		Community will	Auckland Council will
1	**Find a long-term solution for refuse and recycling services.**	• Work with the council and mana whenua to consider options to replace the medium-term enclosure at Sandspit Wharf.	• Work with mana whenua, the Kawau community and other stakeholders to find and implement a long-term solution for refuse and recycling services.

Point 3. Create an on-island landfill for refuse and recycling. Or establish a barge service to collect Refuse and recycling for transport to Auckland facilities.

Kawau	• Discussions with the Kawau Island Residents and Ratepayers Association and chairperson • Discussions with Sandspit Yacht Club and commercial waste collector. • Workshops with the Rodney Local Board. • Information from the Department of Conservation.

Point 4. These are good objectives. However the Sandspit Residents and Ratepayers Association initiated the move and discussions to develop the Waste Enclosure. The Sandspit community is most affected by the impact of the Waste Enclosure. Therefore The Sandspit Residents and Ratepayers Association must be included in Discussions.

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: You can't minimise waste by just wanting it to happen.

Reducing items which can be recycled easily at kerbside increases waste which will be sent to landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Residents need to be helped.items which can be collected for recycling have recently been reduced at kerbside making things harder.

Our household recycling bin was always completely filled.

We currently manage to not completely fill our household rubbish bin of 80L. With the items for recycling being reduced we will now have to get a bigger bin for the fortnightly collection This will be more expense in addition to the $77 tax for having a food scraps bin we don't need.

We have minimal food scraps and compost what we can. It is unfair that recycling items are being reduced while making us pay more.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It will from what is quoted reduce overall rubbish to landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Anyth8ng which can easily be done by Council should be.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: How easy will this be for residents. No charge should be made for this.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ironic as public litter bins being removed. Some of these which not always be full but are overflo for ones which are. This could 8ncrease litter.

Illegal dumping May increase if rubbish not collected weekly.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Im happy for us to create less waste (but dont agree with forcing upon ratepayers a targeted rate for bin collections). I currently buy bags, and generate little waste. This is just another money grab by council

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I perfer to have the choice to buy bags as i need them and put out nbr i need. Forcing this on people through less collections and targeted fee through rates will cause more fly tipping. Clueless

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: .

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: .

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I've reported to council people illegally dumping in the past...council didnt want to know.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Allow people choice (buy bags as needed if want).

Last time I checked this wasnt a communist country...although some seem to be trying to make it that way, forcing their views on others

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Have a repurpose centre at the dump where people can browse and purchase items when they drop off their unwanted items.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree with fortnightly rubbish collections.

Food scrap bins have not caught on in our area, usually around 24 bins in our community (235 on Facebook). Ratepayers were not consulted on this so I would describe it as extortion, being forced to pay for a service we didn't want and don't use. Many people can't afford to buy food let alone generate food waste so to put this compulsory expense on them is unconscionable. Food scrap collection should be included as an option when we get to choose bin size before new scheme is implemented.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction and demolition waste should be presorted on site so that those producing it are more responsible for the direction it takes before it leaves the site and should make them more aware of the steps they should take to eliminate waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I agree with the idea of shifting the cost to manufacturers, but implementing the scheme might outweigh efficiency/ benefits expected.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is likely to become more widespread with the reduction of rubbish collection. Publicise the Snap Send Solve app more so that illegal dumping can be readily notified and rubbish removed before it becomes a hit spot.,

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: More emphasis needs to be put on producers and manufacturers to change their packaging- this includes products that we import. Waste and recycling from the construction industry should be a condition of resource consent. Also, bring back the "Be a tidy Kiwi" campaign to raise community pride.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: As long as there are options for people to get rid of extra waste if needed - maybe they could apply online for a waste bag at an extra cost (necessary if people don't have a vehicle with a tow bar) It may be necessary for bins to be able to be locked in the future to stop people from putting their rubbish in their neighbours bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: As said previously, make it part of the resource consent application if not already.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Organics - most people in my neighbourhood are gardeners and therefore compost.

Plastics, packaging and textiles need to be reduced at the source - put pressure on the government to action.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I do support the council in working on this, however an alternative would decrease this from happening...as mentioned in a previous comment, the ability to order a skip or bag from the council would be a great option.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: When transitioning to fortnightly collection, lower annual fees or a larger rubbish bin at the same cost should also be considered. Collecting garbage once every two weeks reduces government costs, but without any corresponding benefit for residents, this effectively amounts to a price hike.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Auckland Council should establish local locations for residents to dispose of inorganic collection or construction waste, which often includes unwanted wood/fence/timber or furniture. ps. not from companies, but households.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It will only lead to increased illegal dumping all over the place and we will end up with rubbish in parks, carparks and on the side of the roads.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Its a huge problem in South Auckland and makes the whole place looks like third world getto.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Focus needs to be on reduce, redesign and recycle. Circular solutions are the focus, not diversion from landfills - less waste is the desired outcome. Too much consumption is a large problem. Net carbon emissions must be the major decision factor.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You will end up with more litter and dumping of waste.

The food waste should be collected with green waste as it is in Christchurch.

Collecting food waste in diesel trucks to take to Reporoa in another diesel truck is nuts from a net emissions point of view. No one believes you backload trucks story.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Do better sorting on building sites.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Council has a long history of making bad decisions and poor project implementation. Any money spent by Council will be wasted.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Increase the cost of littering fines and increase compliance and enforcement of the fines.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why: Increase the cost of littering fines and increase compliance and enforcement of the fines.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Do not support

Tell us why: Council must come up with a better solution.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Do not support

Tell us why: Council must come up with a better solution.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Do not support

Tell us why: Council must come up with a better solution.

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Tell us why: Council must come up with a better solution. The current Council contractor is useless.

4. Any other comments

Explain the "why" of your actions. Use science, real facts and evidence when justifying decisions.

The current example of the extra emissions caused by the food waste collection and transport on a 500km round trip is crazy.

Auckland is serviced by landfills that that have good gas capture, so why are you causing more emissions by doing the service.

Sending clean dirt to a cleanfill is not waste and should not be included in waste statistics - it is very misleading.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No change, unwanted and unworkable

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Can be included into contracts, sustainable construction waste management is viable refer to Eastern Busway outstanding results

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Implement over a timeline that allows public participation to achieve success

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Incentivise is key to success

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Obvious way to communicate expected behaviour , penalties for non compliance and educate wider population

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The draft document outlines that 40% of rubbish is food waste yet the current food waste bins do not have capacity to take this amount of the weekly rubbish. It is unrealistic to think that households would hold onto food scraps or have freezer space for 2 weeks worth of food scraps. It's already a struggle keep recycling bins fortnightly. Once my recycling bin is full, I put excess recyclables in the red bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: At this time of climate emergency and increasing environmental degradation more than ever we need to be working towards preventing waste rather than just managing it, so we can protect people and our environment. I support shift to putting more emphasis on the top of the waste heirarchy: using less, rethinking, redesigning, valuing our resources, moving away from single use items, repairing - all those actions that lead to a circular economy and which put planetary well being at the heart.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It all's ties into the proposed Direction in question one: if we rethink and reduce our waste and use the council services correctly, like the recycling, inorganic, and compost or use the food scraps service, we will free up a lot of space in our landfill bins.

We are very low users of the landfill bin and quite happily only put out our bin once a month, sometimes less, and I would like to see that behaviour valued by a reduction in cost for those people through a rate linked to a reduction in kerbside pickups. But also being mindful that some households are large and they may need support to cope with the volume of waste with bigger bins. However, I think those households need to do some education in order to qualify for the bin (along with meeting household size criteria). Perhaps one of council's online courses like Are you WasteWise? Education has been shown to impact positively on waste minimisation and correct use of existing services.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It's a no brainer - it's one of the biggest waste streams in Auckland, and although council doesn't haven't control of it, by putting resource into this area, demonstrating best practise in council's own C&D projects and working with those in the sector who are keen to change and innovate we can hopefully change the dial. It would be good to see some mandatory measures in this space tho - like mandatory site plans. This is not a nice to have - there needs to be some teeth!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As set out in the draft WMMP based on data estimating the volume and emission profiles, these are our biggest and most impactful waste streams. It makes sense to focus on programmes to rethink, redesign and reduce them.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's absolutely critical to achieving the zero waste vision and reducing our climate and environment impact that we work on change at a systemic level. The emphasis needs to move from individual consumers to the systems that support the current unsustainable model of product design, manufacture and consumption. Individual consumers cannot continue to shoulder the burden alone. I strongly endorse council advocating for change to central government in this area, and generally to ensure that it has some legislative support and grunt behind shifting behaviour and making systemic change.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Enforcement in some circumstance is vital. If there is no deterrant illegal dumping & litter is very hard to get on top of. There also need to be fines for companies whose products/ packaging are constantly being dumped/ littered. They need to rethink / take responsibility for their packaging (e.g. polystyrene, big fast food outlets) and this links to product stewardship.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: Zero waste is impossible if you provide multiple possibles to have waste. We are not living in a conservative mindful country we have access to lots of future waste. Looking at what you're bringing into the country and what your allowing to be sold and a lot can change from there.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It works better the way it is now with people paying for the rubbish use. Removing the option to have it weekly you will likely increase littering or illegal dumping. Looking into other options that meets the needs of the community

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Not sure how I feel about this one

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I know of situations where it's become a last resort having alternatives able and known could be a simple change. Knowledge of what illegal dumping is and the consequences, ways to legally remove rubbish ie, services, dump locations. What was well known as few years ago is not the same for today. Knowing in schools these basics will set them up for the future and then people who willingly ignore what they've learnt should be meet with consequences

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why: Didn’t see much info on this in the snapshot but it is a limited area and one that needs to be treated with such respect. Being mindful of the land is a good idea but it’s treated as luxury islands and that’s fine as long as they are also environmentally respectful

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Stop people dumping goods on the berns. Ensure that people are aware that there is an inorganic collection every year. Fine those who dump stuff.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: By collecting rubbish every fortnight it might encourage people to use the food scraps bin. Few of our neighbour's use the food scraps bin while we use ours every week and it is full each week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Industrial waste shouod not be in landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: There shoukd be minimization of rubbish going to landfill

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sounds a good idea. There will be people who are too lazy to return their bottles but thus will give others the opportunity to collect ghem and return them for a reward.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The amount if littering makes everywhere so dirty and unattractive. People heed to be educated about the need to dispise of their rubbish and fining them for luttering woukd be excellent - if you spot them doing it

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Put the onus back on manufacturers and corporations selling these products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The savings get passed onto ratepayers but the responsibility and hassle is usually on renters who will never see a cent of the savings. With households generally run by mothers, the mental load of organising rubbish sortation as well as being stuck with pungent rotting waste for two weeks at a time in an ever increasing hot climate every summer is quite sexist imho

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Make the businesses deal with it. The front the costs and responsibility of disposal l, recycling and reduction of waste caused by their own money-chasing endeavours

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I see what you are going for but this is too limited/limiting

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This feels like a small step and no doubt it will require more commitment from the consumer than the polluter with moneybags

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Fines only affect the poor. The rich won't give a hoot about paying a fine but are also less likely to be monitored than poor folks in the first place and god forbid you're a brown or black person who accidentally drops a pie packet or something.. Karen o'white will be right on the phone to get someone fined

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Look, have iwi/hapu/marae leaders even been approached w open dialogue and the offer of substantial resources to propose an indigenous led plan, you know, as tangata whenua? Cos that should have been the first plan of action unless your commitment to Te Tiriti is all lip service

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Stay staunch. Just do it, why is so much consultation needed. I support waste minimization.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Encourage people to take responsibility for their own waste. People cannot have everything for free.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Incredible how much waste generated by our modest bathroom renovation.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Are these cost effective measures?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Excellent. This will encourage people to pick up litter from our streets.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good concept unless it costs more to implement then just picking up the mess. Some people just don't seem to care.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Shoul take local responsibility for your waste.

4. Any other comments

Our streets are filthy. There is so much litter, it's very sad. I don't think we can change individuals so maybe any cost savings from fewer collections could be reallocated to litter collectio from streets and parks.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Live on the North shore. We have only had fornightly collections for the re-cyclable bins anyway. This is not enough. the present weekly collection of household waste bin has to be accompanied with a "PAID FOR STICKER". This is ok, but smelly anyway. The food scrap bins are a FAIL, due to the BIO-degradable (pink) bags, dissengrate in about 3 days in summer at the initial kitchen collection point. This apart from attracting flies and of course maggots, creates a huge mess and foul odour. I having been a ratepayer/property owner 44 yrs now....

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Nip it in the bud at source. Have been in management positions at NZ manufacturing plants in the past. Often felt let down with higher up (national LEVEL) response to actually recycling materials etc.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: read the snapshot.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This system works. As a young fella growing up in the "70`s", we would religiously search out waste refundable coke bottles/cans/containers and take them back for the refund of course, which supplemented your fuel costs or whatever.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Do support your ideals/philosophies. But sadly cannot say I trust/believe in central goverment to provide this platform. Needs to be done at a council level. Also bring back /provide decent areas for imorganic collections, no truer saying than 1 mans rubbish, is anothers treasure.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Food scrap collection can not be a viable operation. Observation on my street shows very low take up

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps make up Less than 0.1% of my rubbish bin. Observation on my street is food scrap uptake would be about 1% os rubbish waste.

Your 41%i is absolute rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Seems a good idea

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Keep it simple complexity will not get support

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: 60 years ago recycling glass bottles was a worthwhile activity, I can not see it working today

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: a good idea but is it enforceable

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Of course you should have the red bins and food scrap bins weekly. This is one service that should not change. You are giving very little service to any household. This is basic and should remain the same.

We are getting very little from our rates.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: People need places to put their rubbish. Do not take bins away from public areas.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I pick up after other people - seems to be arrogant young people. Do not reduce household weekly collections. You are asking people to dump.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More CRCs pop up across Tamaki, more support for community-led waste diversion initiatives

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Lesser frequency the better

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: huge priority

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Organics alreadh a focus, lets aim towards plastics/packaging/ textiles as well as keeping SOIL out of landfill!!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: huge priority! need epr scheme for ewaste asap - especially batteries!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: more use of glass over plastic containers, and setting up fixed locations to recycle used batteries

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: the food scraps collection does not change my amount of weekly waste because I've always thrown the scraps on my compost heap. In fact it's ecologically unsound transporting the scraps 250 km away for recycling when they shouldn't leave the owners property

the service is only useful for people living in flats (i.e. without gardens)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: a goal is pointless without a solution

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: a lot of virtue signalling without any actual solutions

e.g. the majority of "recyclable plastics" either aren't commercially recyclable, or contaminated so get binned anyway

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: the problem with fly tipping is that it's done in deserted places at night, unless you plan on covering all over Auckland with infra-red cameras you can't stop it, it just moves around to another spot

studies have shown that there is correlation between the dramatic reduction in legal inorganic collections, and subsequent increase in fly tipping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: provide facilties for recycled clothes and products free at auckland rubbish centres

provide recycleing /upcycling facilities or supply chain opportunities maybe even a profit share between council and upcycle makers

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The volume of rubbish is the same for one or two weeks. if people have less rubbish do they only put out the bin weekly? No they wait until it is full and pay for that. this makes no sense!!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: These wastes are taken up in consents. The council is supporting this by all the building consents. and then taking in rates from new buildings. How is this an efficient supply chain for council revenue ?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: what is the percentage inbound and percentage outbound reusable. This is the same for e-waste and plastics

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This is third world backward ideas . shall we have a 5c per can refund programme?? are all cans created equally. This has all been done overseas

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: the Uk have free visits to the dump.

how about allowing free visit here.

It would also save on inorganic rubbish collection

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Reuse but also grass clippings could be added with no branches Timaru council has food and green waste bins combined

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Builders waste etc good to follow up involve the building industry

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: It will drive further ilegal dumling & cross contamination of recylcling

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly is bearly manageable now wil 240L bins. Food scrap are unhygenic & will create pitential for investation. Likely drive illegal dumping & issues with conjestiion on a firtnightly basis witb greater volumes on a bigger cyclic basis. This will lead to false sVings & economy costing rate payer moew overall.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: False saving, just displacing the costs.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Over complicated for most of us

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Go woke go broke

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Long over due. Look at singapore. Auckland is paying the price of council reduction is local rubbish bins

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have 3 generations in our house because cost of living and house prices are too high. Our rubbish bin gets full and it stinks every week despite having a organic compost bin for our veggie garden (those green bins are also useless to us as we compost food scraps as I've just mentioned). Fortnightly rubbish collection won't work for us using the small bins. We would have to order the larger bins but wouldn't that mean more plastic will go into making these bins? There will be alot of people requesting to have bigger bins I'm sure. Will have to pay for the 240L bins? Will we pay less rates since there will only be labour for rubbish collection every second week? It's not fair to pay the same rates when it only gets collected every second week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Concept is fine, however leave weekly rubbish collections alone, focus on reducing packaging and providing better means to recycle, reuse and repair.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The number of people in an household is increasing with higher rental costs, this means people are already making careful consideration about what they put in the bin. To reduce the collection further will be extremely unfair on the young, poor, and Maori who are all over represented in number of adults in a household.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: As one of the largest producers it makes sense to focus on this, there is also good commerical opportunities for coinvesment to create means to reuse some of this waste, i.e. reusing polystyrene as insulation etc

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Levels the playing field for all businesses

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Constantly seeing illegally dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: MAke the industry come up with reusable packaging

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Unless you're allowing dead rats and soiled nappies in the Food Scraps bin, these smelly items end up in the rubbish bin and smell even if you wrap each individual item in a plastic bag (which is counter to the idea of minimising plastic waste anyway). Please keep the rubbish collection weekly. It's not the size, it's the smell.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would support it but its up to waste Management to sort not the general public as they are already paying for waste management service.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will cause major diseases holding on to scraps and not everyone want to sink out their freezer . I already have had feedback that not everyone is using them thru the summer because of maggots, flys and smell.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: As long as Waste management sorts it as we are paying them. They work for the public

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Well honestly let's look at this with commonsense...your first proposal is to collect rubbish fortnightly so..I can add up 1 plus 1 equals 2. Of course your going to get more dumping cause your cutting the service down....what idiot can't count?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: There is quite a large community there now. you could improve it by collecting there in organics by barge once a month

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Better and more clear recycling systems. Encouragements and awareness of more niche recycling systems - food waste, batteries, e-waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I think food scraps should be widely encouraged more and majority of waste is food scraps so yes push this out to encourage usage if food scraps bins

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need a CRS I think it would be so great! If this was implemented it would help to reduce rubbish in streets and encourage proper recycling. I think the machines should have the option to receive the money or donate it to a charity. When travelling overseas in countries that had this you saw people leave their plastic bottles outside of bins for those who needed the money to collect and cash in and I thought it was such a lovely idea.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People think they can just dump stuff on the side of the road and it will be collected, stop this

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less waste to landfill. Less rubbish on the streets. Fewer products in the shops that can't be recycled.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Cheaper. Encourages people to use food scraps bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support. But I think we could be more ambitious.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: you're just applying ideology without considering the consequences.

most people cant afford a home in auckland. most people have to flat.

are you suggesting everyone has to cook together now?

seems like you're looking at households as families by default, because of your own myopic, privileged, viewpoint. wake up. look at whats really happening in auckland.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: theres nothing wrong with food scraps in landfill. the composting helps degrade the non organic components of landfill. you're just greenwashing, to funnel money away thru contract rorts.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: yes, but you should operate demo recycling and advocate for appropriate demolition strategies so that people can re use materials where appropriate.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: you're intentionally skewing your data collection by making foregone conclusions, and preventing submission on actual solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: this is actually a good idea.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: agree, so why in the hell are you taking away public rubbish bins. remember the "be a tidy kiwi" campaign? "put it in a bin"? on one hand you're saying you wanna fix a problem then on the other creating a problem that will cost both financially and environmentally when you have to go clean up the mess you've made by taking away the public bins. are you idiots or do you think the public are?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

the council is constantly complaining about not having any money, but you seem to be determined to invent new ways to erode services, whilst spending capital to do so, including consulting materials, and contracts. how much did those food scrap bins cost? how much plastic is that? how much do the trucks cost? how much does transporting all that waste cost? its greenwashing, its impractical, and long term you're just going to have to rollback the change unless you're so obstinate as a group that you really are willing to push ideology before sanity.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already divert all food scraps to our own compost. We place all recycling correctly. We also dont put green waste in our red bin as we have a separate service for this. So our bin is probably 95% general rubbish and we fill it every week. If you go to two weekly collection ill just use council park rubbish bins to remove overflow. Just by reducing bin size or collection doesnt reduce our need for rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: All well and good by saying "we would like to see" refunds in place but if you havent got it in place then dont reduce to fortnightly as the mechanism isnt in place yet.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: You are going to create more problems of illegal dumping if you go to fortnightly collection. So by offering a "stick" of fines instead of a "carrot" of other ways to reduce household rubbish is a poor way to go about it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Tell us why: Waiheke is a suburb of Auckland. Dont treat them any more special.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Keep rubbish collection weekly

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not believe that 41% of rubbish is food scraps. Your silly little food scrap bins that virtually no one uses is not 41% of the size of the regular red top bin. Keep rubbish collection weekly

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not enough is done to stop this horrible practice now. Theses illegal dumpers need to be dealt with

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: If you reduce collection to fortnightly, then halve the fee we pay for it in the rates too. Less rubbish to collect will also mean less money needed to provide the service ay?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: 3 bins and the latest one being pushed onto all ratepayers without an option to opt out and you want to push out even more bins with no option to opt out.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Again this will make things more expensive and ultimately the cost bearer of this will be the fhb and lower socio economics who work in construction.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: If these are making so much bio gas why not put in a facility to extract and sell it to europeans? Our friend need much gas to use. Looks like a missed opportunity there.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ahhh finally a sensible proposal, am all for this one because it does make sense.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: We're no singapore mate. What we need is not more fine for illegal dumping or litter but services to clean these out. Create more jobs in the process.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We had large yearly rates rise. If you propose service cuts, also actually reduce cost for taxpayers. Pretending any of this is to save the planet is greenwashing and a bad way to do it.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I hate that waste guilt is pointed towards consumers, when it is manufacturers who use packaging that is excessive or non recyclable. The pressure should be on the manufacturer not the end user. Its a corporate sham.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps are a good idea, yes. But the fortnightly collection or the "zero waste" proposal is punishing consumers for the behaviours of lazy corporations.

The reduction in waste collections has also just forced many people to just illegally dump waste and it's destroying our city which is in a disgusting state.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes demolition processes should be regulated more so diversion of recyclable or reusable products is mandated - rather than current demolition methods which predominantly folds the entire house into a skip.

Again, this is not the fault of aucklanders or consumers, it needs to be regulated at a corporation level.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes methane creating waste should clearly be a priority for landfill diversion. Plastics and other packaging waste needs to be regulated at a corporate level and not blamed on the consumer.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Its a good strategy as long as its convenient for consumers to use, and doesn't increase consumers carbon footprint returning the reusable goods to inconvenient locations.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The waste minimisation strategy for consumers, and these punitive measures seems to be an ambulance at the bottom of the cliff approach.

Consumers can't be expected to support the economy in an increasingly "over consumption" driven capitalist society, while pretending that those things consumed magically disappear.

Corporate legislation needs to be developed so that consumers are not blamed for poor decisions by manufacturers- eg polystyrene packing vs paper based.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Makes sense. Not a lot to add, I agree with it.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Should provide savings that could be used elsewhere, and no point making the most expensive way of disposing easier. We don't fill our bin each week, or even close to it as we recycle/bokashi/worm farm/council green bin etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Product stewardship schemes for new construction material is needed. Make the better option to do the right thing.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Makes sense for the reasons outlined.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need product stewardship for more than just these things, but it's a good place to start.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agreed with, but stop taking away bins. Don't be surprised if you remove bins in an area then contractors have to come back and spend thousands more cleaning up illegal littering. It's peanuts in savings removing the bins, yet costs us far more in littering.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Going in the right direction. More focus on product stewardship schemes and stop removing bins in parks as it's counterproductive to stopping littering. People do the right thing if they know it and it's easy, make it hard and they won't.

Also not happy about removing stuff we can recycle with the national strategy, would prefer it as well.

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is just a council saving plan. Will we be paying a reduced amount for a reduction in service. It could lead to more rubbish dumped in our streets.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: What are your plans to get the construction industry to stop wrapping buildings in plastic.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: All of those aims are worthy

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think getting manufacturers to rethink their packaging from soft plastics etc is a win win.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The problem would be you have to catch them first before you can fine them.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support under the condition that council provide us with larger recycle bin and extra food scrap bin in order to cater for my extended family with no added cost to my rates. Currently am paying extra in my rates for a larger rubbish bin.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Anything I can save in terms of money and keeping our environment clean and healthy.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Lot of the construction waste end up by the roadside as dump. I think responsibility and strong consequences should go to builders to sort out construction waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Strongly support this because some neighborhoods are just not responsible enough to keep their streets clean. There should be some kind of protocol and code of conduct when it comes to putting rubbish bins. I can see lot of the rubbish bins sitting in front of the house unprotected and quite often open lid for rubbish to fly of easily on the streets. I think rubbish bins needs to be put by the side or the back of the house. It should come out only on the pick up days.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Council repair centres. Bylaws to eliminate single use plastic items particularly those still in use at some supermarkets.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Weekly collection is unnecessary. Changing to fortnightly could reduce CO2 emissions from vehicles and reduce operational costs. Our household struggles to fill up a 120L bin in 1 month.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The building industry in NZ uses a huge amount of single use plastic wraps for large pellets of timber etc which are not necessary.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is already in place for items such as paint tins and motor oil bottles. It makes sense to expand this to other single use materials that become hazardous as they degrade.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Companies should provide goods with more recyclable or durable materials.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It will stink, plus there are larger households who need bins to be emptied weekly. Also bring back the street bins you took out.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is how it should be. Consumers can't always distant the products they can by due to price or geography. But companies can choose to use certain packaging.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Our street always has illegal dumping, it's really frustrating. Once someone dumbed their whole renovation rubbish. Including a toilet... it was disgusting. When people see a large council berm they somehow think it's the most perfect place to dump rubbish.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Make it easier to recycle - not harder - the recent changes are silly. Most people are lazy and don't understand the rules, thus invest in smarter recycling plants to cater for this.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is just nonsense and will have a bunch of unintended consequences. For goodness sake, this is a critical service that the entire city uses don't reduce it. Less collection does. It mean less waste - it means more inconvenience for the electorate.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this - but make it easier to recycle- not harder as you have done recently.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Because people are harder to change - not corporations that are made to change.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Illegal dumping, yes fine the heck out of those types. Fines for Littering feels like a poor tax and lazy policy.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why:

4. Any other comments

Please start at the top of the waste chain - the corporates that create the hard to dispose of waste - not the bottom of the chain, because it is much harder to change people’s behaviour. Forcing it by changing the weekly red bin collections could make things a lot worse and will have unintended consequences.

#965

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Free community programs to teach people how to reduce waste. I have been to a few Auckland council sponsored events on reducing food waste and reusable nappies, but they had a small cost which makes them inaccessible to some people.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have a newborn baby and our bin is now full every week. Prior to this we had only a single rubbish bag per week plus the food waste bin. I would support this if there were an alternative introduced for nappies and medical waste BEFORE the fortnightly collection is implemented, however I do not have faith that it will be.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I previously lived in Central Europe where they have such schemes, and they were very effective in reducing litter.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I do support this in principle, however many of the public bins have been removed in our local area and waste is overflowing in the leftover bins so I understand why people litter. These services need to be reinstated first.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Unrealistic view of how much rubbish a household goes through - this will lead to further costs to renters having to pay to get excess rubbish removed. Our standard bin is full at the end of each week.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Unrealistic view of how much rubbish a household goes through - this will lead to further costs to renters having to pay to get excess rubbish removed. Our standard bin is full at the end of each week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Absolutely ridiculous proposal. This proposal shows the lack of perspectives and considerations for auckland households.

How is this feasible for households with larger families?

What about households with newborns/infants who will produce waste more beyond their control?

What about people with health issues that might produce wastage beyond their control?

What about detrimental health impact to communities and people with lingering rubbish smell?

Have you provided alternative options to households that really need the weekly collection?

Those proposal will allow force households that actually need collection on weekly basis to be dumping rubbish elsewhere publicly.

There is also a lack of consideration that auckland will be filled with lingering rubbish everywhere, this is an eyesore for tourists, visitors and local communities.

What about the smell of the waste lingering for 2 weeks? Not everyone has big houses that can afford to keep their bin away from their house.

The so called savings is actually costing everyone else more elsewhere, including health and environmental factor.

This proposal is short sighted. It also punishes families that produces rubbish beyond their control.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Rather than reduce this waste, why not focus on infrastructure on how to handle the waste instead. This proposal will eventually force some commercial wastes to be dumped illegally

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Focus on infrastructure to handle, not prioritization

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is good, give people incentives to not litter rather than punishment

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: People litter and dump illegally alot of the time due to the ease of access to dispose wastage. We should be thinking about making easier access for people to dispose wastes legally.

If everyone has easy access to dispose their wastes legally then illegally dumping will be reduced.

Introducing ridiculous proposals such as changing rubbish collections to every 2 weeks will dramatically increase the illegal dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I have a disabled son. He wears nappies. They are atrocious, to the point that even keeping them outside in a sealed bin isn't quite enough. Being able to throw them out at the end of the week is manageable. Having to wait for them to fester in the hot Auckland sun for two weeks over summer is a stomach turning thought. I am sure that there are many households in a similar situation.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No way 41% is food scraps. Most waste is the non recyclable packaging that everything comes in. The recycling takes even less than previously. They no longer take caps and lids. Make soft plastic recycling available from home.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I think collecting food scraps is a massive waste of time. The resources required to run the scheme far, far outweigh whatever the benefit is.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps do not make up 41% of the rubbish in my bin. It's non-recyclable packaging. I'll need a bin twice the size. This is a terrible idea. I want my rubbish gone each week and not piling up at my house.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It sounds reasonable but demolition and construction waste is generally usable. I don't know who you expect to use it, or what for.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Seems reasonable.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Making recycling worthwhile seems like an obvious scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think catching people illegally dumping is a bit hopeful. There are more important things to be policing than that.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Will never have zero waste

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Retarded idea, will create more illegal dumping

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly waste collection is required because of the small bins we are given. Those other cities that have fortnightly collection all have larger bins. I know this because I have family living there. Those other cities have large recycling stations that mean they don't have to wait for the fortnightly collection of recyclables, taking up space in their homes. Crucially they also have access to proper waste transfer stations where people can dispose of larger items properly. We don't have that in Auckland, there are just a few small transfer stations for hundreds of thousands of people - and they aren't cheap. This means either people break down that rubbish and put it into their bin or they dump it. You might think that reducing bins will reduce waste but it doesn't work like that. You need to reduce consumption first. People will just dump rubbish if they don't have somewhere to put it, this is evident the world over and should already be in the council's focus given their ridiculous idea to remove many public rubbish bins, resulting in piles of rubbish forming, causing rats and contamination. Do not reduce the weekly rubbish collection, it will only lead to dirty suburbs and fly tipping, as is the case the world over.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It won't reduce waste, people will just start dumping their rubbish

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Reducing the frequency of rubbish collection will not magically reduce our rubbish production. On the contrary, it may introduce other myriads of problems such as littering and illegal dumping or backyard burning.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It's not that simple, plus who's gonna pay for that increase in cost to accommodate this change? Tax and rate payers of course.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Support solutions that allow high-volume household waste such as nappies, medical waste to be disposed sustainably - prefer recycling nappies, oppose landfill

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In particular, advocate "packaging tax" that pressures companies and consumers to avoid single-use packaging, or other reductions of packaging waste

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Producers of single-use packaging have, until now, externalised the (environmental, economic etc) cost of packaging onto consumers and councils, not paying for it themselves. If producers received negative financial feedback for these types of packaging, that would allow those companies to adapt to a more sustainable model, that is fairer for consumers and councils.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Request stronger advocacy towards reversing the recent recycling changes that limited types of plastic that can be recycled in Tāmaki Makaurau. Alternatively, request advocating for bringing other regions up to Auckland's recycling standards so that more types of packaging and plastics can be recycled in all of Aotearoa, so that local residents here can continue to recycle as much as possible.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Remain the same frequency. It is outlandish to claim that food scraps make up so much general rubbish..I live in a very eco conscious area and know myself and my neighours put our bins out most weeks.

The ad hoc impact of decreasing frequency is that there will be a build up of rubbish on people's properties which also increases the risk of illegal dumping, roaming dogs eating rubbish and getting some of it pollute local roads.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I see no evidence to support the claim that 41% of a households rubbish is food scraps, its certainly not correct in our household of 5 adults. If that is correct then why are the food scrap bins size less than 10% the volume of the rubbish bin, and not closer to 41% of the volume. This is evidenced first hand by continually not fulling up the foodscrap bin before collection, whereas the rubbish bin is full every week. The core issue is the types of rubbish in the rubbish bin, the largest percentage of rubbish in our household is packaging (food and products) which would be 50% of our rubbish. Until this is addressed by suppliers there will be no meaningful reduction in our rubbish output each week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I work in construction and can see the amount of packaging and excess product that goes into the skip bin. There is a large opportunity to reduce this.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It will increase cost of building.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: We should burn everything and get energy from that.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It will work only if fines will be very high

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: I live in Auckland CBD and I noticed the trashes especially in hobson street is becoming more and more. I guess it would be worse with the proposed changes. The CBD would probably be smelly. People throwing trash anywhere should be penalized. It's just not pleasing to see especially with tourists. How I wish New Zealand could be as clean as Japan.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Not sure with others but that is true with me. My trashes are mostly from food scraps.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Auckland CBD is full of construction. Thats probably the reason why it's full of trash everywhere in CBD, cigarettes trash/ food scraps on the streets even when the bin nearby is not even full. Construction workers must clean after their mess, and it's just in Auckland that it takes years for their construction project to finish contributing to more traffic and a lot of trash in CBD streets. Not good when you're paying a lot of tax >33% and getting the quality of living same as in a third world country.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This should be addressed long time. I noticed it's just becoming worse considering NZ has a smaller population compared to other developed countries.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Make it easier to tecycle bigger items like bikes, electronics etc

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Anything that encourages people to hink about what they throw away is good. I still see peole throw ryclable items into their bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I don't know if it is possible to recycle building rubble but anything that can support it is great

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Textiles are a big issue, particularly when they are too tatty or stained to be donated or sold. What to do?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why: I would like to see manufacturers made to take responsibility for the end-of-life management of their products and to contribute to the cost of waste management. (as in Germany)

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Make sure it includes dog poo. I passed 4 little steaming loads on the ffotpath in a 40 minute walk today

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024
