Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Instead of focusing on reduction of waste why cant we just get better at sorting it so it can be reused.

It seems that the whole focus is to get the problem solved by the end user instead of developing infrastructure that can fix the issue.

For example we are never going to find a solution to plastic used to package chicken, this is contaminated and has to go to landfill, which is increasingly expensive due to the landfill levy. A solution for this example would be some kind of waste 2 energy solution.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: for individual households this is fine. For apartments and multi unit dwellings this wont work as their are other factors at play such as common rubbish areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The idea is right but the methodology is wrong.

Again the proposed solution is for the end user to fix the issue, for example with textiles it appears we want to stop people buying clothes, why cant we let people buy more clothes and engage in "fast fashion" and for the regions infrastructure to develop ways to reuse the discarded clothing.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: it does not shift the cost to the producers

it shifts the cost to the user as the costs will be passed on.

This is another example of not wanting to put the right infrastructure in place and trying to find a way to get the consumer to fix the problem

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate.

When this was implemented what has actually happened is Auckland Council have made it more difficult to opt out of paying for the council service, even when the council service is inferior to the service being provided by private contractors.

The proposal was to allow multi unit dwellings to opt out of the council service and rates charge "if council cannot provide a suitable service"

The issue is that the council alone determine what is a satisfactory service, even when it is very clear that the council service is not of the same standard as being provided by the private contractor and would not be deemed as "suitable" by any impartial person.

The old Auckland Council region has for many years had an effective opt out process for multi unit dwellings with 10 or more units, it would appear that standardizing on this model would have been far more suitable for all ratepayers affected.

It appears that the sole motivation behind the change was to increase rateable revenue for the council regardless of the suitability of the service being imposed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less general rubbish

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Encouraging people to reduce their daily rubbish

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Re-use C & D as much as possible

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Cut the landfill rubbish as much as possible

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Money wise as well besides environmental protection

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Waste centre's needs to keep harmful waste separate from rest of the waste.I worked for I cleaning company back in the day and the waste centre's mixed everything with timber dust and send to landfill.we as rate payers do ouer bid but the waste centre's don't care.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There will be more rubbish dumping on side of roads.the food waste bins a waste of money and rates go up,just using this as a nother way to grab money from hard working people.less services from council but have to pay more in rates.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Where do you think the construction waste will go then.ones again on the side of the roads.ilegal dumping.it is already very expensive to take waste to waste centre.the waste centre's need to do beter with the ceperation of different materials.we pay for the service but looks like they want to do less for more money.this hole thing is a money grabbing steam .

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Money grabbing sceam.higher rates for all this services.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: All in all the waste centre's support to do that instead they mix everything together.no wunder the landfill is a desaster

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Fines will not work.people dump at night time.not cost effective to put up cameras.make it easier for rabish to be removed from sites.no.exstra charges.tjats why there is illegal dumping.to expensive.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Do not support

Tell us why: Waste centre's need to do there job,that they are getting paid for to keep different waste separate.and deal.with that.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Stop traying to grab money from hard working people and start deliver a service that rate payers pay for.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I notice there is no mention of rubbish collection of Auckland Council bins in commercial areas. Here in Glen Innes we work very hard to keep the environment clear of rubbish and have significantly reduced illegal dumping through the installation of CCTV cameras to capture number plates. A reduced commercial collection of rubbish will mean people will dump their rubbish in our service lanes.

A survey of 18 businesses in our town centre revealed that they all say reduced collection of Auckland Council skip bins is a bad thing, with many added that their small bins are not big enough as it is.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A tip / recycling centre re-established in Wellsford

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: That suits city areas only and not us on remote rural farm. We don't need food scraps recycling and certainly will refuse to pay for that service as ALL our food scraps are either fed to animals or composted

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It is outrageous seeing the volumes of waste seen generated on building sites currently

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes but it must be made easier for soft plastics to be recycled

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Support but concerned about dumping of waste in the natural environment as a result and the plans around this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Particularly advocating for products to have attached lids, given the recycling system.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Keen to focus on the 'collaborating with communities on local solutions for hot spot areas' as I'm concerned that some communities cannot afford fines and its not the right approach.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If, for some reason, putting the bins out is missed there will be 4 weeks of accumulated refuse to deal with at people's houses which, in most cases, is not an option and would lead to rodent infestations.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Inorganic waste should be better screened to ensure reusable/repurposed items are simply not crushed in the rubbish truck and disposed of in the land fill

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live in an apartment building and this course of action is impractical due to the available space and building infrastructure constraints.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this in principle but I suspect implementing any solution is going to increase the construction compliance and costs.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Does packaging include polystyrene ??

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this in principle but I suspect implementing any solution is going to increase producer costs which will just be passed on to the consumer.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Bigger fines need to be implemented as a deterrent but this is useless unless the enforcement agency is not resourced to carry this out.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Establish where the rubbish is coming from and direct proportionate attention accordingly.

Focus more on prevention of rubbish creation as well as disposal.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Once each two weeks is fine.

Charge a higher amount for larger bins for those who require them.

"Cost savings passed onto ratepayers" - YES, DIRECTLY. This will align the incentives correctly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Shocking how little building material is recycled in NZ compared with say the UK. Speak to the demolition people who have worked in those countries. They'll tell you our situation is dire.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Focuses on prevention and on the things that matter. Protection of the environment is a priority, far, far ahead of "climate change".

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Incentives must be introduced to encourage producers to use less packaging, more recyclable materials, etc. Focus on source, not just intermediaries and end-users.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Must be consequences for this behaviour. No exceptions or special treatment on the basis of need, ethnic background or any other factor.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Keep it the same

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Hardy anyone puts the food bin out

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is more buildings coming down.

Why isn't the wood / timber being used for fire wood

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Need to deal with the rubbish

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Bring in the cash back for bottles cans / glass containers . Gives adults / kids some extra money

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: It's not going to change anything

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Use the waste for heating .

Supermarkets and food manufacturers need to look at how much plastic they are using

4. Any other comments

Supermarkets and food manufacturers need to look at how much plastic they are using

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

Council has for many years not developed the infrastructure, and at one point in time sent waste to China, and existing infrastructure was run down.

More importantly, if the council focused on banning the the use of all single use plastics, this would have a greater impact.

Again all the focus is on the end user and not on the manufacturer, producer, retailer, etcetera.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Again all the focus is on the end user and not on the manufacturer, producer, retailer, etcetera.

For individual houses on a street this would be fine, but for large apartment and multi unit developments this does not work for many reasons. We are 113 units and the service the council provides is totally in adequate, we currently have an excellent service from a private contractor that removes general waste daily and recyclables three times per week. 113 units is equivalent to a whole street and there are factors such as size of common area rubbish room. we have 6 general waste bins collected daily, and 7 recycling bins/sacks three times a week, there is no way we could accommodate 84 general waste bins to be put out fortnightly, and 42 recycling bins fortnightly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Partially support, but again the focus is on the end use.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Again all the focus is on the end user.

The current council inorganic annual collection and organic weekly collection are totally inadequate for a 113 multi unit development, and there is no opt out of this service, we could use the same money charged for all units and have multiple inorganic collections throughout the year with a private collector, it is not as though each unit has a back yard to store stuff, not all resident change beds, televisions, etc all at the same time and are already paying private contractors to remove items in addition to the council inorganic charge. It seems council wants one rule to suit all properties and collect all the money and provide minimal or no service.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Partially support, but this will not ban single use plastics.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: There should be no illegal dumping of rubbish, however with the proposed council plan there will be more illegal dumping, as it makes it so difficult on the end user again.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The previous draft plan had talked about standardizing the ability for multi-unit developments to opt out of the refuse targeted rate, however this has not happened and we cannot even opt out of the council organic and inorganic targeted rates and use a much superior service.

Council does not provide a suitable service, it seems council determines what is a suitable service, but in no way compares to the standard of service private contractors can provide within the targeted rate cost.

It appears that the council solely wants to increase its rateable revenue regardless of the suitability of the service provided by council.

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate. This is essential but Council are assessing the opt out incorrectly.

Auckland Council have made it more difficult to opt out of paying for the council service, even when its obvious that a service by private contractors would work better - in fact is the only way it can work.

The proposal was to allow multi unit dwellings to opt out of the council service and rates charge "if council cannot provide a suitable service"

The issue is that the council alone determine what is a suitable service, even when it is very clear that the council service is not of the same standard as being provided by the private contractor and would not be deemed as "suitable" by any impartial person. The council can not service multi dwelling developments period and these should allowed opt out in their own discretion.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Zero waste isn't achievable, there will always be waste and with an increasing population and world of throw away appliances and and cheaply made products plus your 80% waste coming from commercial along with your unknown metrics around a lot of it.

Making it more difficult to dispose of waste isn't eliminating it, look at the huge increase of illegal dumping unless real issues are addressed, like making it easier to recycle soft plastics, even making it easier for building sites to give away many of their off cuts etc rather than just throwing them in the jumbo bin, this could go for many companies also.

Services being removed like the Hazmobile stations that we had haven't helped, aside from hide the problems and create illegal dumping.

Handing out food scrap bins and making us pay for them isn't encouraging people to compost them at no cost to anyone, yet you drive diesel trucks around the streets now polluting the enviroment rather than rewarding people who make changes and are already composting...

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: House hold waste is 20% of waste going to mixed refuse centres, more focus should be put on the other 80% of commercial waste and you are only proposing to try cut house hold was by 15% so only -3% of the total 20% for how much saving to each house hold, 50% of the cost charged in current rates? I don't think so.

If you moved to fortnightly collection you should have an option for people to dispose of overflow rubbish, maybe a council bag that can be dropped off to a bin at a transfer station?

You will need to encourage responsible rubbish disposal by providing options, otherwise you will get a rise in waste dumped in parks, beaches, rivers etc.

Look what happens when you remove 30% or park rubbish bins and this is cleared daily... what you are doing isn't working.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes needs attention and probably many ways to divert from landfill and have products recycled of reused

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Give better alternatives than small green bins that blow all over the place and don't encourage composting etc

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I believe other countries have this type of system, just don't blow the budget setting it up

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Provide better alternatives to prevent the dumping in the first place, i.e re introduction of inorganic collection(not the booking system) and Hazmobile, funded by the reduction in illegal dumping clean up.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The council is simply trying to provide less services to the rate payers whilst it is actually charging us more in targeted rates. It's a highly cynical policy.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This has been shown to increase infestations of insects and rodents in many other jurisdictions throughout the world. It will increase illegal dumping and It is yet another cynical cash grab from the rate payers of Auckland and MUST not change from the current 7 day cycle.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I only support the focus on microplastics packaging and toxic waste. Collecting food scraps from residents is a complete waste of time and our money and should be stopped immediately.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Why oh why dos the council keep re-inventing the wheel and wasting more money. Beverage container return should be included as a part of the fortnightly recycling scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Only support instant fines for illegal dumping. We do not need or want Geitapo services wandering around fining ordinary citizens for dropping a cigarette butt.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The council must do more with less and that means NO MORE targeted rates which are just rates rises in disguise. The council must stop meddling with ordinary citizens lives and stop following the WEF agenda. Co2 is necessary and actually good for the planet, without C02 plant life will die and so will humanity. The council should look internally to minimise waste and get rid of officers that spy on citizens parking habits, build speed bumps everywhere that actually increase pollution, and incentivise illegal dumping by moving the rubbish collection to fortnightly. Zero waste is a fantasy and the council makes itself look stupid promoting such a policy.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The food scraps service is a fantastic initiative. I do think it is very important to consider biohazardous wastes - particularly thinking of indoor cat waste (very important considering the protection of our biodiversity goals as well), which can't be disposed of down toilets but does create odour and nuisance in outdoor bins for two weeks.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction and demolition waste contributes a very large percentage of landfill waste and commercial waste. Greatly support reducing this waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: While we support this in principle, this relies heavily on the end user instead of focusing on developing better methods for dealing with waste. Reduction will also only take things so far - there will always be waste. We need to plan and provide options for turning waste into energy.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: This is fine for individual households that are motivated to sort and reduce waste. It does not work for multiple household situations or for those in low income housing, for whom this is not a priority.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to develop sound methods for dealing with these waste materials.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: However, it is most likely the cost of this for producers will end up with consumers, increasing cost of living.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate. However, the implemented process has made it very difficult to opt out and this needs greater consideration as a viable option. There are many complexes with multiple units where Council collection of multiple different purpose bins is not practical nor suitable for the residents or neighbourhood. The determinant of this is often built into resource consenting processes for units where it is not practical for Council collection. Once determined, the owner should be able to easily opt out of Council collection and the associated service and rates charges. For existing complexes where Council collection is also impractical, there should be an application process allowing owners to opt out and not pay the service and rating charge.

This is an important area for consideration, as residential housing across Auckland city intensifies. The set up of household refuse collection will need to adapt and flex with this kind of growth.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Difficult to see how council can influence whether materials can be redesigned, reused or repaired. If that were the case we'd have a lot less cardboard packing around products, especially things sold in hardware stores.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps collection was poorly thought through. The bins are flimsy and blow all over the place and they discourage people from composting. Now council is trying to force the question by moving to fortnightly collections which is a cost saving initiative, not a rubbish reduction one. Pay attention to older people down long drives (like me!) who battle with their bloody bins each week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: How to enforce? Does council have a waste minimisation deal linked to consenting for building works? If not, why not?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Needs enforcement to make it happen. Also council needs to clamp down on rip off so called waste removal people. We had one guy come to take away some rubish and a fortnight later got called by a guy in Titirangi who had a couple of bags of our rubbish dumped in his bush. Fortunately we were able to propvide details of the so-called rubbish "service" and the guy got done.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Go seamlessly to collect rubbish, not bothering residents unduely

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: see above

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: what's the plan?

2C. Priority waste materials

What do you think of this priority area?

Do not support

Tell us why: Families should be able to have a weekly collection. Some of us don't mind fortnightly - some need weekly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I would like to see more consequences for Developers who pollute and destroy the areas they move into. We have one on 51 Sylvan Crescent who has dumped into the creek on multiple occasions and the red tape to get them to take ownership for this has been unacceptable. We have only managed to have them fined once despite knowledge and witnesses (no video or. photos) of them doing it. They also ruined our street with their heavy vehicles and caused thousands of dollars damage to our street. Sylvan Crescent. Our street has more developments proposed and I am very concerned that other developers do the same. I want them to understand their responsibility to leave the neighbourhood in a state fit for residents not just the entry way to their development. They have also blocked footpaths, parked hazardously, dumped rubbish not only in drains but on land also.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Good to set targets for minimising waste disposal through Council operated waste options, certainly reducing the amount going to landfill. Encourage residents to dispose of their organic waste by having compost bins and not charging these people for street side organic collections. Also make annual inorganic collection dates much clearer (i never know when these collections will occur in Birkenhead)

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I put out a breadback sized bag or rubbish each week, my recycling half bin once a fortnight and a 2 meter bag of non compostable garden rubbish each year.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Recycling and safe disposal of this rubbish is possible

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Encourage people to clean recycled materials and make collection easier

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely - it works well in Hawaii, California and other American states

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A litter education programme needs to accompany fines for people who dump rubbish in public places eg parking bays, parks etc

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: putting effective practices into place and not just proposing the idea that this will be done. it needs to be mandatory for food scraps etc to go into a bin for curbside collection, people to recycle their soft plastics. We simply don't have a choice in the matter, and half the time it's down to people not knowing about it or sheer laziness!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Potential for increased rats, seagulls flocking, illegal dumping and confusion of actual collection date if move fortnightly eg is it this week, what happens when there are 2 public holidays in between etc

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Especially plastic single use drink bottles!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: My family strongly support the proposed direction (Option 2) which:

affirms a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

I/We applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9

We suggest removing the 'decision to dispose' line. This is unnecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

We appreciate Auckland Council's commitment to invest in education and behaviour change (in house and by external providers) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

We support the 7 principles that will underpin decision making.

Goals

We suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierarchy

'Designing out waste' line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and behaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important to better understand the emissions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emissions aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I/We support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I/We support priority 2 to continue expanding the resource recovery network and its services.

I/We appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, ‘Right to Repair’ and sharing models.

Typo p20 row 2 eleven CRC’s other parts of document say 13.

I/We support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences, in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council has been using for the Construction and demolition sector could be usefully applied to the hospitality sector to address single use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. “….including the opportunity to add new programmes and to expand and diversify programmes…

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the “What it means for Aucklanders” column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

We support Priority 3 - see response to Q2B for detail

We support Priority 4 - see response to Q2C for detail

We support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community building and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of the circular economy. They support the Government's Emissions Reduction Plan and Auckland's Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emissions - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

We support Priority 6 - see response to Q2D for detail

We support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reporoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I/We urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

I/ We support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

We support to Priority 9 see response to Q 2A for detail

I/We support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around councils leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own waste minimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has its own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging,

new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

We support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: My family support Priority 9 and the staged approach for the shift to fortnightly rubbish collections.

Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

We support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support a focus on the 5 priority areas in order to prevent and reduce waste

I/we are encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I/we would like to see this approach to source reduction consistently applied across all the priority waste materials.

I/we support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to create the circular economy. There is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

We note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

I/we support the recognition of the value of local scale and ‘community-led’ solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

We would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

We support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilience and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

I/We support the ambition go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the ‘source reduction’ language as it is more specific that ‘reduction’ which often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending the last part of 6.4 to read ' ... organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

I/We support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Auckland Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back scheme in Denmark https://www.tomra.com/en/news-and-media/news/2024/tomra-launches-system-for-reusable-takeaway-packaging . Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which overlap with this.

Textiles

I/We support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities

like prisons and hospitals etc. As well as streams that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product Stewardship and exploring the opportunity to reduce commercial and industrial textile waste streams.

New Zealand organisations like UsedFULLY textilereuse.com are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see the link being made between the waste (tonnes) and supply chain and landfill emissions generated across the textile life cycle.

Bio-solids

I/We support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: we support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate “for actions to move up the waste hierarchy, including source reduction, reuse and right to repair”.

I/We would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

We want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and Demolition and the five priority waste streams. As a core focus of working relationships with Mana

Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocessors and composters.

See plastics section of this submission for comments on expanding Action 6.4 Priority Waste Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

I/we support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emissions reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

We fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven results in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for the central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship schemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill, durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

safe for people ecosystems and climate

Viable because they build in ways to cover the real costs

Accessible to everyone

Regenerative because they leave things better than they were before.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I/We agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I/We think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Please don't charge schools for recycling services. Please add food scrap collection services for early childhood, schools and other education providers.

Please continue to provide education around Waste Minimisation to our tamariki / Rangatahi. Council do excellent work through the Zero Waste Zone and the Sustainable Schools Team. Our whanau has benefitted hugely through our daughter having access to this service through her schooling since age 3 - to present day age 12. We all learn so much and have accessed opportunities to take action in our household and community in the waste space - thank you!! Keep up this wonderful mahi!!

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We believe in reducing waste and recycling to the last possible bit however even after that the waste we have is the bare minimum. It cannot be further reduced, only help the private companies

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: So many worms in a week, fortnight makes no sense. It will be a colony of maggots

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Organic waste should be kept to weekly. Any change will be disaster as would mean dealing with worms and infections

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: What's taking so long, refund value should equal the total cost to society of disposal with the aim to get as close as possible to 100% recycling.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The council already has by-laws for illegal dumping and I don't recall anyone being prosecuted. What does it cost us to clean up illegal dumping verse providing strategically located bins to collect this rubbish. There is also the question of illegal dumping of garden waste on council land, there seems to be a correlation between properties with gates in the boundary fence that back onto a reserve and garden waste. It doesn't take a rocket scientist to know where this garden waste comes from. Change the bylaws to make prosecution easier and proactively warning these properties. Allow the use of motion active spy camera's to catch offenders. Take a walk along the Hellyers Creek coastal walkway and you will see what I'm talking about, with some of the waste (palm branches dumped easily traceable back to the property it came from.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reasonable practicable steps taken to sustainably manage the amount of waste and maximize re-use/recycling wherever possible.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Would encourage potential dumping and larger bins would require greater maintenance to manage ourdours et al.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Recycling of this material ought to be a priority

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Provided it is financiallt sustainable - self supporting!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely provided those who are identified are meaningfully held to account - if they can't pay then work is required.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Please bring back the container return scheme. That would be a wonderful way to encourage people to recycle even more.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Foodscraps make up most of the household rubbish anyway. Would be also good to encourage usage of the food scraps bin even more. The flyer on what can go into the bin was really handy.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Alot of the waste they generate could be recycled or diverted from the landfill. Or we could create the infrastructure in order for those things to be recycled/reused.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Covers a large percentage of materials that can be diverted from the landfill to reduce waste

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fantastic idea that has already been shown to be very successful in other places around the world. Would reduce waste in landfills, provide incentive to encourage recycling CORRECTLY, and curb behaviors towards waste reduction, reduce littering especially in waterways and in turn reduced the amount of microplastics that end up in our environments. It would also technically reduce the need for Auckland council to have to clean up thier litter around beaches and waterways, potentially reducing costs.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

Tell us why:

4. Any other comments

Hi. Thank you for the opportunity to present a submission on the waste plan for Auckland 2024. I am Chair of a Body Corp (Parkside BC 341656) in the Botany area of Auckland. Our single, three level building consists of 6 apartments and 9 stacked town houses. We currently use a private rubbish collector who provides a weekly collection service using just three large bins in total, conveniently located at the rear of our building, and covering both rubbish and recycling. This system works well for us and we believe it meets our needs perfectly. However, there is a sense of injustice in a number of our members who resent paying for Council rubbish collection services, even though those services are neither sought nor required. Some years back, before I was involved in the committee, I understand the constant problems with managing individual waste and recycling wheelie bins (30 bins in total), being all jammed together on the limited kerbside available, and apparently with some blowing over and spilling rubbish, really forced the committee at that time to opt for the much tidier private service. This service uses just three larger bins in total. We strongly urge the council to do the right thing and remove the injustice of our members having to pay for council rubbish services that are simply impractical and cumbersome for our situation. Rate payers who choose to tenant out or live in an apartment or townhouses style of buildings should not be made to 'pay twice'. Time to right this wrong please. Regards Mark Shotbolt.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Feel rubbish has increased again with changes to recycling. This was disappointing. Should have increased others recycling plastics rather than taken back to the lowest common denominator. We are asked to reduce rubbish yet then what is acceptable for recycling is reduced. Makes it difficult then askig people to go to fortnightly rubbish. Will be very smelly for people with for example nappies in their bin

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Reducing rubbish collection doesn't mean minimizing waste. Naturally, waste production is only increasing with the raise of population, urbanization etc... important is how we manage waste. Waste collection needs to be regularly, manage properly. If no, rubbish will fill Streets etc as there is no proper/ reachable/ accessible place to put rubbish.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Not collecting rubbish for 2 weeks increases the chance of increasing development of mouses, insecs near household, especially in hotter/ hummid weather. Also this will affect health enviroment for house pets...

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: How do you suggest to reduce/ manage these kind of waste?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In general I support the idea of reducing the waste generated, however, I think focus needs to be on recycling options (including soft plastics) and/OR targeting supermarkets (and retailers and department stores) to only use packaging that can be recycled. Recently we have seen a reduction in what we can put in our recycling bins, this needs to be developed and increased (for example soft plastics, lids etc), not decreased!

"While kerbside services are an effective way for households to recycle, a lot of material is still going to landfill; e.g. only around 13 per cent of plastics (including industrial, commercial and household products) are recovered for recycling in Tāmaki Makaurau / Auckland." - this is absolutely unacceptable we need to recycle better and have more recyclable options. the fact that some of this is still going to landfill is what needs to be addressed as a high priority and this will in turn reduce what is going into the landfill!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Absolutely do not support. As a user and rates payer, we already recycle (including soft plastic recycling that are not included in curbside collections) and use the food waste bucket (which I love by the way - great work there). We also use inorganic collections, so the waste in our waste bin is legitimately waste - by giving us a larger bin just means we will be holding on to our waste for longer - the same amount of waste will be going to landfill. Making us hold on to it for longer is silly, cost-cutting madness (costs that we already pay as a ratepayer) and will cause an increase in vermin/rodents and other objectionable issues. I wholeheartedly do not support this change.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I didn't appreciate that construction and demolition waste made up 40% of landfill. If any of this material could be recycled then we should look into it (plastics, glass, paper).

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I am not a fan of the CRS scheme as it puts the onus on us to return containers. (is this an opt-in or compulsory scheme - are these containers still able to be recycled in the curbside recycling bin?) I think the council tend to forget that the majority of us work full-time, have families and commitments and already do not have a whole lot of spare time, now you want to add yet another task for us to fulfil while paying an increase in rates????? come on.

Have you considered those who do not have access to their own transport (elderly/disabled etc)? how are they meant to utilise this without great difficulty?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: In general I support this however we have seen a reduction in the number of council bins in our recreational parks - of course, this is going to cause an increase in people littering in these areas. What a silly idea to reduce the number of bins and expect the litter problem to decrease!!! wake up

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We believe that multi-unit dwellings should have the ability to opt out and employ the services of a private waste contractor who can collect rubbish on demand and avoid the roadside collection which would be problematic and create congestion issues.

We do not believe that council can provide a suitable service in multi-unit dwelling situations and we should not be put in a situation where we have to pay twice for our rubbish collection service.

With regards to weekly vs fortnightly collection residential home already have a choice whether to put their bins out weekly or fortnightly without it being compulsory.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support this in principle but are concerned about the reduction of plastic types suitable for recycling that will now end up in the landfill.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Long overdue. If manufacturers had to become responsible for the waste they create this would see a decrease in the amount of waste.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We believe that multi-unit dwellings should have the ability to opt out and employ the services of a private waste contractor who can collect rubbish on demand and avoid the roadside collection which would be problematic and create congestion issues.

We do not believe that council can provide a suitable service in multi-unit dwelling situations and we should not be put in a situation where we have to pay twice for our rubbish collection service.

With regards to weekly vs fortnightly collection residential home already have a choice whether to put their bins out weekly or fortnightly without it being compulsory.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Big families need it weekly. This is going to result in more dumping and more cost picking up the illegal dumping. Leave the way it is used common sense!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: However Council's overall solution does not suit everyone. We live at Fabric Apartments at 64-74 Victoria St, Onehunga and we already have a fully operational system for food scraps at a cost way below Council's charges which we pay for as part of our Body Corp. It doesn't make sense for us to have 161 food bins out on our roadway - in fact it would be dumb. So please let us continue with our existing plan, and stop charging us for a service we can't or won't be able to use. We are not asking for a refund, just simple common sense.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Again a great iniative from Council but again not suitable for our location - see above.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: All contractors should be held responsible for their waste product, both the transport of and the cost.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support your initiative but we also have recycling bins, cardboard bins and most of us take our soft plastics to the three local drop off points - in our case PNS Royal Oak, The Warehouse Mt Albert Rd or Countdown Meadowbank.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support Council but again won't suit apartment style dwelling. Responsible residents will already be recyling everything they possibly can. Doubt you will convince or change the mindset of some out there.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumpers should be hit with a very large fine and made to clear up any mess they have made. Responsible people should should take photos and care regos etc. and send to the authorities.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I don't know enough about the waste management of the above islands so won't comment.

#2142

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Soft plastics recycling made easier and more accessible, offer worm farm incentives as well

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: We already have a worm farm, so the food waste bin wasnt that much of a reduction for us. Soft plastics and restrictive recycling means our red bin is often full. We would still need to upsize our red bin as a family to manage fortnightly collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I am not happy about the proposal to transition to fortnightly kerbside rubbish collections. I am also sceptical about the suggestion that residents should take certain kinds of recycling items to Community Recycling Centres themselves – not all residents of Auckland own a car to transport items to those centres, and there is also a subset of residents who, for one reason or another, do not have someone they could call on to assist them to do so.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: 1/ One of the main causes of waste arising from construction is the demolition of perfectly liveable existing housing, especially wooden houses. The recycling of houses should be encouraged. Unless an unreasonable amount of repair work is required, it should be a condition of a new consent being issued that an otherwise liveable house should NOT be flattened merely to build a new one in its place – this would be a plus for both the environment and the heritage character of the neighbourhood. The wholesale demolition of a wooden house in good condition, particularly an old wooden house, strikes me as being the destruction of a forest all over again. If the new owner is insistent on building a new house where a liveable old wooden one exists, then let the old house be removed at the new owner's expense for relocation elsewhere.

2/ The wholesale removal of existing soil and its subsequent dumping in landfill is too often the unconscionable waste of a precious natural resource. That soil has developed over millennia and is ecologically specific to the area in which it formed. Besides being an important nutrient base for future use (in the form of gardening or landscaping, for instance), it also represents an important ecological record of the local flora and fauna that helped form it. Where possible, and so long as there is no chemical contamination, it should be kept for further use in the immediate area.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am all for imposing harsher penalties on those caught flagrantly littering or illegally dumping waste, but in light of Auckland Council's current stated intention to cut costs, I remain deeply sceptical about it going out of its way to pay to police such infractions and then punish offenders when caught.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I am deeply opposed to the proposal to reduce the number of rubbish bins in public places, such as parks. I predict that this will be entirely counterproductive and actually result in an increase of littering – which will only cost Auckland Council more to clean up.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already have plagued of rats and we've told you about this. Fortnightly rubbish collections will just go on to produce more. I'd say only half the houses down our street use the food bins. So you will have two weeks of rubbish including food waste sitting in 30 degree heat. The smell is bad enough with weekly rubbish collections. People already stuff their rubbish into our bins so this will seculars the problem.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Although I support this idea in reality it'll be worse if you make getting rid of rubbish harder and more expensive. Good luck trying to enforce that. Just look at the state of Britain. Rubbish everywhere.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support the proposal to move to a fortnightly rubbish collection. Since receiving our food scraps bin we have really reduced the volume going into our rubbish bin & are currently only putting it out fortnightly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this initiative as it would have such a significant impact on reducing waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These make sense & are easily identifiable and applicable to everyone.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I'm unsure how central government would be able to roll this out.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely support, the penalties should be harsher & council should have more support in identifying culprits.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Thank you for the vision and commitment towards zero waste. I believe Auckland Council leads the zero waste kaupapa from amongst all territorial authorities of Aotearoa. In fact you are doing more towards zero waste than central government. I have read the Zero Waste Network submission to this plan and fully support it's position. The plan is great and with a few tweaks it will be fantastic, as documented by Zero Waste Network. I am not a resident of Auckland but am trying to encourage my local Council (Nelson City) to follow your lead.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why:

4. Any other comments

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: It is stupidly hypocritical. Construction is more than half of what goes to landfill, however council encourages developers to tear down large houses and build wasteful new builds.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The numbers provided are factually incorrect, potentially flat out lies. No sources are provided for these statistcs

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The projects council is currently allowing are the MOST wasteful possibly. Clearly not interested in changing zoning laws.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Private industry has been doing a great job at reducing landfill waste. But council over regulates these companies. Encouraging monopoly systems

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will be impossible to enforce on large international companies, only making small business suffer EVEN MORE

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Impossible to enforce without expensive CCTV systems which will be a waste of ratepayers taxes. Good communities tidy their own litter. Housing developments destroy communities.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Do not support

Tell us why: Communicate with locals to build a plan around what they want and need and WILL DO. Council does not know what is important

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Do not support

Tell us why: Communicate with locals to build a plan around what they want and need and WILL DO. Council does not know what is important

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Private industry needs to be encouraged and prioritised. REAL PEOPLE will have better answers to the problems we face than council members.

Council systems are failing. This proves that MORE control from the council is the WORST thing for everyone, especially rate payers.

#2153

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Support for and expansion of community repair cafes etc

Better and stricter legislation on packaging, materials etc

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Currently only put out rubbish for collection about once a month, maybe less. But there needs to be good recycling collections, compost collections etc to support this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would like to see reduced rates of consumption of low quality products that rapidly end up in landfill. I would like to see council take a strong advocacy position to the government that minimum environmental standards for products sold in NZ should be introduced, and which put more responsibility onto the producers and importers of products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this because fortnightly refuse services is more equitable for everyone, as people on all income levels can experience the drivers to reduce waste as a container limit rather than a price signal. It will save money in the long term as collection costs will reduce, and mean fewer bins on the kerb every week (2 instead of three).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The construction and demolition sector is very wasteful in their current building practices, I would like to see better regulation of construction practices that drive high waste generation. We need better product design to force producers to make building products that can be dismantled and reused. Government has a key responsibility to certify and approve only those products and building methods for use in NZ that meet environmental standards. Stronger advocacy from council on this please!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The CRS is a non negotiable, we need all councils to advocate more strongly to government on this. It will also give the public an opportunity to see all of the direct and indirect benefits of product stewardship and be more receptive to further schemes.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Delighted to read of fewer trucks from competing companies in the streets- so reducing noise, bin spaces,and air pollution.

Delighted to be part of the food waste collection service and delighted that it is such a practical strategy to reduce greenhouse gases.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I use the recycle bin, garden waste bin and up to recently, a worm farm for food waste.

My household waste is minimal and could even be collected monthly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The huge waste bins beside construction sites into which all materials are loaded seems to be such a waste of diminishing resources such as timber, glass and metal.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

Debris enters the environment - washes up onto beaches and breaks down in water and sea water areas. Micro plastic contamination is so pervasive and especially of risk to young pepole over their expected lifetime.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Education and communication is an important component of reducing dumping - as is provision for local hubs. There could also be an emergency bin protocol for occasions when a household may exceed normal rubbish production (family gatherings, holiday festivals)

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

As a volunteer in Tiritiri Matangi, we gather a lot of waste materials on the beaches, especially following storm events.

Anything which can support maintaining the environment e.g. fish symbols beside storm water grates, to discourage disposal of dangerous chemicals, paint and cigarette butts would be helpful.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: 'I strongly support the proposed direction which:

- affirms a strong zero waste vision for both people and planet,
- centres the waste hierarchy as a guide for action, and
- sets the intention to prioritise actions at the top of the waste hierarchy.
- I support all 12 Priorities.
- I support the principles that will underpin decision making.

Methods to deliver on the objectives; Add the following to create a more comprehensive list:

- Advocating and incentivising for business to adapt business and service models.

- Add use Council procurement of goods and services.

-Add partnering with community groups to share waste minimisation goals and incentivise behaviour change i.e. inter-regional competition.

-Add increase marketing of campaigns such as Zero Waste 2040, this draft waste plan, compelling graphics such as the Eden Park pictures i.e. shared at an Eden Park game.

- Table 1 row 12 – would be good to add Māori, Government, other councils, and regional organisations to list of partners.

- Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services, and contracts.

I urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste.

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

- It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.
- Burning or burying resources means we must keep extracting new materials and energy to create more products which damages ecosystems and our climate.
- Investing in a large-scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.
- We are all working hard to reduce methane emissions from organic waste going to landfill, it does not make any sense to start burning fossil-based plastic, which creates CO2 emissions and releases toxic pollutants.
- Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a small amount of non-renewable electricity.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Support this change eventually for most households. I support strong investment in behaviour change before households who are not ready have these changes imposed.

Increased efforts are needed to counteract illegal dumping. Larger, overcrowded households may require larger bins, or weekly collection. Without this we risk a huge increase in illegal dumping.

I support Priority 9 and the staged approach for the shift to fortnightly rubbish collections. I support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support the reduction of C&D waste to landfill. I support diversion and alternatives for materials such as soil and better regulation and testing to ensure this could be reused. I support C&D material reuse being prioritised over recycling.

- Government, council, business and community organisation support and backing of this plan is paramount for implementation. From this plan, it is unclear how cohesive implementation will be across all these groups.

- Government and council regulated and for simplicity syndicated procurement and contract clauses around waste impacts the sector effectively. Where we can, we should be procuring suppliers who can deconstruct, demonstrate on site separation, have effective waste recovery and prioritise reuse.

- Auckland wide investment in reuse, repair, and recycling facilities for C&D waste must be prioritised. Investment in the C&D end of life sector provides opportunities for the local economy, rather than transporting materials overseas.
- Contract design and performance measures/check ins, along with performance bonuses could be included to bring along the private market to make sure goals are achieved.
- For effectiveness and a true circular economy, waste reduction should go alongside increased end markets available for reused C&D material. End markets may include local repair/training schemes, reuse/recycling shops i.e. CRCs with investment in space and yards to include C&D materials.
- Councils must allow for construction projects to use reused and recycled material.
- Transfer stations and resource recovery centres for materials must be convenient and competitively priced to ensure contractors utilise these services.
- Transfer stations and material recovery facilities (MRFs) for C&D material needs to be accessible rurally. They also must be worth the effort, and competitively priced for contractors to want to use them.
- Collaboration with governemnt is crucial in both incentivising and disincentivising material going to landfill, with higher landfill levies, bans on certain materials going to landfills, fiscal penalties for malpractice, regulation and monitoring of landfills and MRFs.
- I would appreciate clarification on the % to landfill numbers. There's reference to 40% and 30% which is confusing. We would be interested to know where this data comes from. Is it Auckland specific or nationwide data?
- Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the teams onsite, by the collection company and processing facilities.
- The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. Community maker spaces and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Supportive, on the condition soil be included in the definition of organics, due to the massive volume ending up in landfills from C&D sites. I work on site clearances for a large organisation doing 10s of thousands of site clearances (demolitions, deconstructions, relocations). The vast majority of volume and tonnage going to landfill is soil, managed fill, & clean fill. This ends up being a massive cost to the earth and economy down the line, and a massive loss to local economies or other construction sites which could have reused this material or onsold it, had the price point been worthwhile (or levies being enough of a deterrent).

I'm encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I would like to see this approach to source reduction consistently applied across all the priority waste materials, including C&D waste.

Actions need to include a specific reference to revenue models.

What it means for Aucklander's could include points on: economic development and community building opportunities.

Strategy should be expanded on in the commercial and C&D space in terms of how this will be implemented. Council opperated facilities of C&D material and waste are attractive to contractors due to lower levvies and fees.

However, 80% of landfill waste is non-residential. Policy, regulation, and links with government support should be linked into council plans.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes in Construction and Demolition and the five priority waste streams.

I think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3. Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be more effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems. For example: Reducing the amount of single use, disposable packaging.

Repair schemes in procurement contracts, take back/product stewardship should be included in syndicated council and government procurement.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support fines for most households. However, considerations must be made where financial hardship and social issues impact dumping. For example, an overcrowded, low-income household may require support rather than fines to prevent and treat the root cause of dumping. Education may be needed around drop off locations for inorganic waste/material and alternative options provided i.e. larger rubbish bins provided for large households or weekly collection for larger households.

Data on litter and dumping could be publicly available to incentivise litter clean ups and action between and within communities. Targeted intervention and community-based support in areas that need support specific to their needs (i.e. nappy or family support, or awareness of CRCs).

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

4. Any other comments

I live in a multi unit dwelling and want to preserve the use of a private provider for collection of waste without the duplication of cost for unused council rubbish collection. It should be up the MUD entities to determine whether the service is suitable re this proposal: Allowing multi-unit residential developments (10 or more units) to opt out of council's kerbside waste services and associated targeted rates if we cannot provide a suitable service.

What do you think of this priority area?

Do not support

Tell us why: I live in a multi apartment complex. 161 units. We have a private collection service. It works!!! 3 times minimum per week. Our refuse centre requires this frequency of pickup. Please also note: the food scraps bins service which I have paid for in my rates has not happened once since its beginning. We have not even had bins delivered.

We have a food scraps service in place and have had for over 3 years. Multi story units have limited space for collection per the number of tenants and square footage of refuse rooms.

Putting bins out for council pick up is not an option. We do not have a live in manager.

In my opinion multi story dwellings must be able to opt out of council collections. Our service is cheaper, more frequent, and works.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Costs must fall directly on the developer.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I live in a multi apartment complex. 161 units. We have a private collection service. It works!!! 3 times minimum per week. Our refuse centre requires this frequency of pickup. Please also note: the food scraps bins service which I have paid for in my rates has not happened once since its beginning. We have not even had bins delivered.

We have a food scraps service in place and have had for over 3 years. Multi story units have limited space for collection per the number of tenants and square footage of refuse rooms.

Putting bins out for council pick up is not an option. We do not have a live in manager.

In my opinion multi story dwellings must be able to opt out of council collections. Our service is cheaper, more frequent, and works.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is becoming worse. Primarily due to costs of dumping at refuse centre's. Fines would be great to discourage but need to be fast higher than the cost of going to tip. The team on the council must also be strengthened to actually investigate, clean up and prosecute.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Having less regular collections will create more curbside dumping as residents overfill their bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Component of WMMP involves only basic assessments of multi-dwellings on eligibility of target rates adjusted for private waste collection. Our multi dwelling requires private waste collection and their is a concern we would be deemed not elligible to opt out due to a lack of in depth assessment of our waste needs.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Batteries contain very nasty chemicals. I would like to see what Holland already does for batteries, small appliances, light bulbs... you sell it then you must be a collection point for waste of those items. This may cause sellers to rethink which product providers they select as quality products have a longer use cycle.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I now sometimes already only put my bin out fortnightly or less.

Education of neighbours where there are multiple young adults that are high consumers may be needed before they can reduce and recycle effectively

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Some is packaging that could be reduced or made of recyclabe substances eg cardboard rather than plastic

Construction sites should be incentivised to sort and recycle where possible.. eg soil and plant material, concrete rocks and rubble, off cut materials, metals

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support above but should also deal with toxic materials such as batteries and electronic waste, appliances

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: May be expensive to implement so fines should realistically reflect entire cost

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reuse seems to work well in Northland where they have a depot where residents can drop off items for repair or re-use.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Unless the system is very efficient and offers a bin cleaning service I can see these small bins being knocked over by animals or opened by street sleeps and encouraging rats. I live in an apartment block and this absolutely wouldn`t work here - imagine, an army of small green bins on a major pavement in CBD. Also difficult to allocate costs to each apartment and many overseas owners. We are happy to keep the status quo, we notice very little food waste in rubbish bins, majority is packaging and recycle waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There must be a huge amount of useful waste that can be used in new housing projects that is left over from CBD building projects.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support all apart from the individual food waste idea.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: the amount of rubbish from Fast Food outlets is all over the city, along the waterfront, the railways and falling out of the few existing rubbish bins we have left. It is an eyesore and offends me as a ratepayer and must give the cruise tourists a very bad impression of "clean, green, NZ"

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: good idea as long as it is enforced but only if there are sufficient litter bins to take rubbish as otherwise people will ignore it regardless.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

4. Any other comments

We will also standardise which properties can opt out of council waste services and charges, including:

• Allowing non-residential properties (excluding lifestyle properties) to opt out of council waste services and associated targeted rate charges at their request, effective from 2023/2024.

• Allowing multi-unit residential developments (10 or more units) to opt out of council's kerbside waste services and associated targeted rates if we cannot provide a suitable service.

#2167

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to move away from the disposable commodity ethos and embrace the concept of repair or repurpose. Less rubbish being sent to landfill. Set up more resource recovery centres and 'advertise' these more to increase people awareness.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The more we can slow the amount of rubbish being sent to land fill the better. I would be interested in seeing how council would divert nappies and medical waste from rubbish without yet another container.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Anything to keep this out of landfill must be a positive thing. Surely there must be some benefit from crushing concrete and using the rubble as substrate on roads and recycling timber and joinery

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: these five groups seem to be the biggest emitters of greenhouse gases and we need to focus on reducing these levels. We must do more to divert fabrics and textiles into other areas. Good used clothing should be offered to domestic customers or sent to third world countries for their citizens to use.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: support in part. There is already a levy on tyre disposal so adding an additional cost would be counter productive and may lead to more fly-tipping. Deposits are being charged in parts of Australia and yet cans and bottles are still being discarded on streets and on highways.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Seriously thinking that bylaws would influence a change in behavior shows a naive level of understanding of human behavior. There are some significant instances now of people fly tipping and yet there have been few cases of people being held to account. Enforce the current bylaws before leaping to more legislation that people will ignore.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I would STRONGLY urge council to keep the pay as you throw payment model and not go to rates-based collection. PAYT encourages people to think about what they are throwing away. The more you discard the more you pay. Rates based model encourages people to do exactly what the council DOESNT want to happen. This short sighted and lazy

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Encourage residents to be more mindful about what they throw away.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support this endeavour but think that the option for weekly rubbish collections should still be present as sometimes households accumulate a lot of rubbish in a week due to various circumstances (parties, moving, spring cleaning etc) so having the option to have rubbish collected weekly gives people options and will probably minimise dumping. If weekly collections are built in to rates, people can just put half full bins out every week and it will be overall more hygienic for all too.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support the idea for urban households with fully reticulated services and footpaths. For other areas they have opportunities for their own compost heaps, or the use of Throw As You pay rubbish collection (which should stay for them). It does not make financial sense to pay in rates for bin based services which households may neither need nor use.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Given AC's continual building programme and need for more accommodation, this is one of the residual waste streams that will most likely persist beyond the "dream date" of 2040. Reducing it is a priority to avoid landfill demand, and what can't be reduced, recycled or reused should be used to fill landfills and reclaim land in areas where land is expensive and needed. (See my suggestion for a landfill in the Manukau - attached)

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Seems reasonable...

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agree and increased landfill charges ($100/tonne) need to be accompanied by enforcement resourcces to prevent illegal dumping and heavy fines for offenders. Many New Zealanders don't have or come from a "take your rubbish home" mentality so education is important too.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: See last question comment.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Island locals should decide what goals and actions they favour and want to pay for.

See my comments in the attached upload.

General Comments on draft AC WMMP

I am not personally against landfills in principle. They are a relatively efficient way of capturing carbon, even if they annoy neighbours (however well managed). I don't think people are at all objective about waste disposal. The Wayby valley is just a poor choice for a location (geographically as well as environmentally and scenically as well as a potential water source) and there are better alternative locations, but that is not something the Commissioners or Environment Court is asked to make any judgement on in consent applications.

If Auckland is going to keep building, building and construction waste is going to be the major future disposal problem.

At the initial hearings I proposed using any new landfill creation and operation to offset the costs of remediating Manakau harbour's metal contamination, removing smelly mudflats and creating much needed cheap space though land reclamation.(We forget that mangroves are doing this for us all around our coastal estuaries - just more slowly).

Commissioners did not seem interested as undoubtably Manukau residents would hate it while operational (and its a bit too close to comfort for some councillors), but all would doubtless benefit afterwards (as much of NZ has from being built on reclaimed land, like Auckland).

So for me it's a pity the WWWP doesn't put out some waste disposal alternatives for Aucklanders to comment on and instead leaves it to the private sector to offer alternatives. It seems the anthesis of useful regional spatial planning to me, inconsistent with the intent of other planning legislation etc.

AC is supposed to be planning for regional disposal facilities, so confining itself to municipally owned or operated landfill is short sighted and arguable not complying with legislation. A proper draft plan for consultation would include the probable scenarios for residual waste disposal beyond 2040, not just pass over it by saying "there are risks for Auckland regarding developing alternative options if the Wayby Valley proposed landfill operation does not proceed."

And as an option some Aucklanders might actually like AC to have its own disposal facilities, thereby encouraging it to manage the waste process need to end more efficiently and in ways that Aucklanders want - not just another thing to complain about.

Kaipara’s WTE plant and AC winds up sending waste there when existing capacity gets more expensive to use, ratepayers might well ask why AC was not consulting on alternatives to its current policy of outsourcing disposal facilities….

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I would not use the food to compost box as it would be absolutely disgusting after 2 weeks.

I don't care about the fortnightly pick up because I am a 1 person family so only use half a rubbish bag a fortnight. Might be harder for bigger families.

I am concerned that Franklin already pay for our own bags and rubbish pick ups but we will be charged more for services we don't receive. The new system has not been positive for Franklin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The direction above is too vague. There is no detail on what materials will be reused, who is going to reuse these materials and what will be the mechanism for reuse. In principle it is a good idea, will this require extra staff to implement (sort) and distribute for reuse?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: If we end up with a fortnightly collection you will increase the risk of a public health incident.

Council already charges for food waste however I live in an apartment in Eden Tce and we do not have a food waste collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: What are you going to do with all the C&D waste?

Do you intend making the construction industry deal with it?

This will increase constructuin costs and impact on every household in the region.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: How are you going to make a difference with these priority materials?

In some countries the manufactures of goods are responsible for processing wast products from their goods, have we considered this in NZ?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You are asking the end user to fix the problem should be the producers if faced with the problem they will find a way to sell their products.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

This is a misuse of Council power, the Council decicdes if they are the best provider not the ratepayer. The opt out system we have works and the proposed change will be unfair for many Aucklanders.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think this plan is super exciting and encompasses many aspects of our waste management. i think we need to own and take responsibility for the waste we create and this plan is a considered and practical start. I like the redesign, reuse, right to repair approach and would expect the plan to provide accessible locations where this is possible and a lot more clearer guidance and promotion of what is on offer when things come online....a lot like the food scrap waste implementation. Good to see you tacking business waste! I would expect this waste to be accessible for reuse at refuse centres around auckland. This is an exciting prospect.

it makes a clear statement about what we value as a city and community....without just talking about it.

We also need to see how these changes are making a difference over time....good news, inspires change.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Makes sense and help reduce the overall operational cost to council. Encourages people to consider their personal waste management and I like that people wasting less get rewarded with lower rates. I think a select of bin sizes should be available to cater for peoples needs.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Makes absolute sense. Shame it will take 6 years to achieve. Potentially save many households on landscaping costs and dyi costs with access to these materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: got to start somewhere and these items are the highest contributors to our waste.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: not sure this will practically work - people are quite lazy when it comes to waste management...they just want it gone. its a nice idea but perhaps ignoring the human element.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If illegal dumping is illegal than penalises should be hard and fast. It makes a statement about what we value as a community/city. This is an easy action I would think.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: I think there should be smart solutions to management waste on island. It would incentivise the population to be considered waste manage. I feel they are privileged from the discussion because they live on an island.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: I think there should be smart solutions to management waste on island. It would incentivise the population to be considered waste manage. I feel they are privileged from the discussion because they live on an island.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: I think there should be smart solutions to management waste on island. It would incentivise the population to be considered waste manage. I feel they are privileged from the discussion because they live on an island.

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: I think there should be smart solutions to management waste on island. It would incentivise the population to be considered waste manage. I feel they are privileged from the discussion because they live on an island.

4. Any other comments

Good work!

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I fully support insisting that most items are able to be repaired.....manufacturers should be pressured to ensure that this is the case

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This rubbish is often smelly & therefore it needs to be collected weekly

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Often, under the current conditions, much of the "C&D waste" contains good materials that could, with a little effort, be reused

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This option has proved to work well in many countries

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this idea, however there do need to be options available for getting rid of large items such as mattresses & couches , TV sets etc.

I would like to see the responsibility of disposing of such items passed to the retailers & manufacturers. For example, when a retailer sells a mattress they should be responsible for collecting & taking the old mattress away & the same for such items as a fridge. {I believe they have a scheme like this in Germany?}

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I want to comment specifically on waste management for multi unit dwellings.

As an owner of a multi unit dwelling we fund a private rubbish collection that includes waste, recycling and organic rubbish collection.

However through our rates we also pay for the Council rubbish collection which we don't utilise - because it's simply not practical. There is not enough kerb space to have 60 bins (or 120 in a recycling week!) out on the road each week and the chaos it would cause as the rubbish truck tried to collect these from the narrow main thoroughfare we live on (Kepa Road, Mission Bay). And we're just one of many multi unit dwellings in the same block.

We've been told it's very difficult to get an exemption from the Council rubbish programme, and getting harder. My gripe is that you're incentivising the wrong behaviour.

Because we are utlising a private rubbish collection we are able to create a bespoke service that works for us and encourages improved waste reduction. e.g. more frequent organic waste collection, larger reycling bins etc.

The current structure of not being able to opt out of the Council service and related charges does not encourage the behaviour you are trying to influence.

1. If we opted into the Council service it would require an additional 180 (plastic) rubbish bin - instead of the 12 larger metal bins currently in use. And this from one multi unit dwelling!

2. We are able to structure our waste collection to the specific needs of our residents and encourage waste reduction behaviour - e.g. Large organic collection and recycling bins emptied frequently, small 'rubbish' bins

3. Opting into the council service would create weekly disruption for the wider community as road (main thoroughfare) would be blocked for a long period of time while the large number of bins was emptied.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Similar schemes (e.g. in Australia) have demonstrated limited value vs the results - i.e. containers being returned.

To be successful/impactful it requires a huge behaviour change from a large portion of the population alongside serious investment in NZ recycling capability.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: It would be good if there was more direct support (funding, planning, etc) from Council for on-island composting or processing of food scraps and organics on Aotea / Great Barrier Island (this is especially due to the high haulage costs of trying to take waste off the island). Further to this, it would be good if as much waste material as possible could be kept on Aotea / GBI for reuse and recycling by ensuring the CRC is very well supported and by ensuring the future Transfer Stations are designed/operated with retaining material on-island in mind (as much as is practicable), rather than the Transfer Stations potentially only being a transitional facility to store waste prior to haulage back to mainland.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Our household only places out a refuse bin once every 4 or 5 weeks (if that). We currently live in a bin tag area and this works well for us to save money and encourages us to minimize waste. So, the move to rates funded refuse will lead to potentially increased costs for our household (by placing costs in our rates which are disproportionate to our actual use of the service). It would be good if there was an option to have our rates bill reduced because we are a low waste-producing / low-user household.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: This is yet another tactic by the Auckland Council to cut operational costs to benefit their profit margin at the expense of their consumers. Instead of wasting money on ridiculously high salaries for council bureaucracy who bring little to no value to Auckland City, the council should invest this on improving waste management instead of shifting the responsibility on, surprise, surprise, the end user. Circular management should be the least preferred option!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly rubbish collection is an absolute no go. I strongly suggest that the Auckland City Council earn their pay and do their own research: Instead of regurgitating unsupported nonsense, they should drive around Auckland suburbs the night before collection is due. You will find households struggling to fit all of their waste in 1 bin, collected weekly! Shifting collection to happen fortnightly will only encourage littering, and Auckland is already full of litter as it is! Additionally:

1) What evidence do you have that "food scraps make up 41% of the rubbish in your rubbish bin." This is definitely not the case with my rubbish bin. Sweeping, unsubstantiated generalizations to push your agenda is not evidence.

2) "Cities such as Christchurch, Tauranga, Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection." - The NZ cities you have listed are far smaller than Auckland. What evidence do you have that they are comparable? Unsurprisingly, you have also failed to list any of the supposed non-NZ cities. Again, sweeping, unsubstantiated generalizations to push your agenda is not evidence.

3) "We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers." - Yeah right! So we pay more to you for larger bins! And you expect us to believe that cost savings will be passed on to us? I have lived in Auckland for decades and this has never happened.

4) "We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste." - So you will waste millions of tax dollars on meetings that either end up not solving the issue, or like this proposal, make things worse for the Auckland ratepayer.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a

priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Stop building leaky homes and buildings that need remediation and pushing unnecessary roadworks to inflate yearly budget requirements. Should work a treat reducing construction and demolition waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Again, don't waste money on bureaucracy and spend it on better waste management. This should be the "MOST PREFERRED OPTION" and not the least preferred one.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Yet more nonsense to justify raising costs with little to no benefit.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: 1) Your plan to reduce rubbish collection to fortnightly collection will only increase litter. As you clearly know, litter is a problem in Auckland and nothing that could increase littering should be actioned.

2) Invest money on more bins and better rubbish collection, instead of reducing the number of bins and rubbish collection. You want Auckland to be clean, invest money. Don't waste it on rubbish schemes and bureaucracy.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Auckland City Council provides poor service for exorbitant prices to its rate payers. This proposal is only going to make things worse and to try and squeeze this through without public consultation (not this time limited nonsense) is shameful. Less money spent on bureaucracy and more on actual action will make things better.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I especially support the focuses of targeting C&D waste and on expanding the Resource Recovery Network. The Community Recycling Centres are a fantastic resource. We need more centres in new locations to close gaps in the network.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fewer collections should mean fewer truck movements and a reduction in carbon emissions. I support the option of larger bins for larger households, so they are not unfairly penalised.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It's important to target the largest waste stream, but especially significant with the quantity of construction and demolition to be expected in the Auckland region over the coming decades (new housing).

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support a polluter pays approach in principle. I also support incentives to reduce waste to landfill and littering. CRS schemes are effective and should be introduced to New Zealand.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Waste is a huge problem which will affect us greatly in the future if we do not act at once to reduce it and to deal better with what cannot be reused/recycled.

I support the intention to focus on reducing commercial/industrial waste and building waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food waste is not good to have in landfill so it is great that has been separated. I hope the bin is large enough for all households.

I support having two weekly collections for household rubbish. Currently our household only puts out our small bin about once a month or less. I support offering larger bins for larger households.

I support ideas for dealing with disposable nappies and medical waste separately.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Building waste is very space consuming. Much of it could be recycled. Higher charges to send building waste to landfill might discourage extravagent use of materials. Over the last 2 years I have been appalled at the amount of wood put in skips by a single house being renovated opposite us - much of it used for temporary purposes then thrown out.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The externalities of waste are devastating, we need to urgently change behaviors, so that 'waste' is a rare exception. Even from the narrow view of economics, we are and will pay the compounding impacts of transferring our resources to waste for generations. Councils is limited in its reach, but I support these goals and we need to 'fast track' these initiatives into the fabric of urban and rural living. Be good to see council enabled with some tools to enforce where education fails to deliver.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I fully support this, we should provide flexible support that incentivizes people with less cost in relation to the targeted rate if they move say to a monthly rubbish collection (without creating additional volume). Plus provide support for large families where potentially they might need support and education around minimising waste, or if required additional bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Fully support this. We should with urgency move on ensuring that the building and resource consent process has requirements for minimising waste and that the compliance for those conditions are funded through the consenting application. We should not be hiding the true cost and significant environmental impacts of construction waste. I am also sure that placing more controls on construction waste then builders will use materials more consciously.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fully support this. Difficult one if we don't have buy in from producers and central government policy and legislation to support council in this. e.g product stewardship and container return scheme. We need to do better than recycling which in my mind encourages producers to keep pumping out materials with limited and toxic recycling capabilities.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fully support this. However I dont think the current government will support, but support anything we can do in this area via council/community and commercial participation.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely. Why have we waited so long to do this. Its also a revenue stream for council, but more particularly we need to realise our role as kaitiaki and that unfortunately communities sometimes only respond when there is a instrumental mechanism such as fines.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Imperative that we move away from "want it....throw out when sick of it"

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: This can be done provided folk are educated on where they can divert their rubbish.Soft plastics is a big bulk filler of landfill bins.

Great that we have places where soft plastics can be collected.

But the reliance on packaging been in soft plastics, more affordable refill options are necessary, so less items are wrapped in plastic.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Fast efficient demolition companies need to be supported to divert as much as they can from landfill, like Siteco.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Limiting the toxins we put into the earth the better the earth can provide to us.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Producers/manufacturers and consumers bearing the financial brunt will as suggested will drive more reuse and recovery actions

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Often dumping is because folk dont have the financial means or know how to get rid of items to a waste facility eg:where they take it, access to a trailer or van.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Waiheke is becoming more populated with full time residents who commute to work or leisure from there.

Robust rubbish diversion systems need to be in place, and a facility that items can be stored for reuse/breakdown of parts....so would need to be translocated to places on the mainland.

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: include body corporate dwellings in food collection

encourage ongoing home composting etc despite food collection being available

Reduce single use, still a lot of single use in food/cafe/take away places; encouragement of BYO

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Personal changes and reducing waste have led to my rubbish bin needing collection less then once every two months; encouragement to reduce and separate waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: yes, please make better use of materials; lot of commercial waste (even for small home renovations) get dumped but most of it could be recycled or used elsewhere

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: huge contributors to landfill and hence gasses.

Also need to consider lot of plastic packaging from items purchased online; seems single use plastic no longer allowed in shops but online shopping appears exempt; needs to be onus on those companies to use sustainable/reusable packaging

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Makes complete sense, stops putting the ambulance at the bottom of the cliff

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As you explained

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

great goals, particularly like focus on hierachy.

What will be done to address ongoing contamination of recyclables?

#2228

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Precinct Properties

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Strongly support this scheme based on the success in select Australian States. Commercial properties can potentially act as a collection point for this service.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We would support private waste contractors being able to tender for multi-unit residential properties under the same tender conditions as non-residential properties. Many new multi-unit residential development projects have bespoke operational waste management plans created to best service environmental objectives. Should council not be able to meet these plans, the multi-unit residential development should be able to opt out of council waste services rather than paying double if there is a gap between what council deem suitable and the environmental outcomes sought within the building specific operational waste management plan.

See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I currently live in an apartment building and we are all paying for a waste collection service (organic) that we can't and won't use. Our collection is done privately but yet I still pay for it in my rates. This is not fair.

We do not have the green organics bin that normal households do and we couldn't use them anyway as there are over 100 apartments in our block.

We've opted out of the other waste collection but the organic bins we can't for some reason. Please change this.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support the reduction of waste. I put our rubbish bin out fortnightly as I have a waste disposal so all scraps go down except banana skins, avocado stone and bones. I put this in a plastic container or plastic bag in the rubbish bin - the old way Aucklanders use to do it. The compost bin I didn't take due to rat issue. We have had rats around the excess water flow into St Helier for quite some time and they come our at night around 9pm. We need to encourage the tax payer to get a waste disposal and how to use it as maintenance is minimal and the scraps help with the waste water to bring costs down. I put my recycle bin out monthly - we need to encourage rate payers to only put bins out when minimal 3/4s full. if not 3/4 full. Rate payers need to be encouraged to clean their recycling, 3/4 min full bin out and what they will get out of it if they do it.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: the food scrap bin has definitely made us the Bin City. See question 1

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: I would need more information on this. We use to use Construction and demolition and put this in big cavities to make the land usable. The problem we had was chemicals and products bad for your health leaking from the soil.

We need to be creative and productive and seek around the world on how to do this better. This is the key collaborate with councils around the world see what they do as there might have a better way that we haven't thought of. We need partnerships with other councils around the world

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I agree but we are putting products in the waste that could be recycled like duvet that is down/feather. The higher the Down this is expensive and there is a shortage but there is money in it. Fairydown use to produce these duvets in Dunedin. This is know owned by Pacific Brands. Can't we investigate if they still have machinery here and recycle could collect this. Rate payer could clean and pack in plastic bag to protect it.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I agree but we have opened the global world and we have sub standard product which is not workable in our recycle process. We need to bring standards in with concessions for Companies Buying these products. What they could do firstly is add duty back on to sub standard product to make it not worth using. It depends what you can push thru with concessions as this is a big process.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Agree but we need to look back at history. Was there less dumping when we had kerbside rubbish day. Is the rate payer contacting Council for their kerbside rubbish more expensive. This really needs to be looked at. I prefer the rubbish day where your area put their recycle out as the community got into taking things they wanted and used. In the end whats the most feasible.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Other

Tell us why: It's an island. I have been there and it beautiful. We shouldn't be transporting waste or recycle to Auckland. We need to make them accountable for their waste by doing what will make them clean and green. Products sold there need to be able to be processed there if not they shouldn't be sold as they have no way to clean up the back log. The are on power partly with back up battery and if they want more they need to pay higher rates for this support. They need more solar panels for electricity as this is the direction The Great Barrier should go and support on back up for water

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: They have a massive influx at summer. But Waiheke needs to pay higher rates for waste transport or they need a mini plant their to process. But we need to stop pre-packed and plastic bottles that we can't recycle so this leads back to concessions and Duty charges

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: I'm sure stopping a lot of the new town house builds where most of the old houses (esp ones still in good condition) go straight to the tip would help stop a lot of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I think having better restrictions on the building site waste from a long time ago would have been a super smart idea. Watching townhouses sprout up almost every where and watching the houses, gardens, fencing, and all other rubble just mostly be bowled and scooper up and straight off to the tips, its no wonder theres full dumps now. So many of those houses were still in great condition, had really good parts on them that could have been taken to demo yards, separated before the houses were demo'd given away to people that can't afford to do up their houses, sold off etc, but no the developers don't care about the waste they create or the damage they do to the streets they are on, or to the environments around them. (we've had a LOT of issues just on our road due to developers) also being able to put lots of houses on flood prone land, so more issues in the future (not creating proper drainage so that their new sections within their builds create more water run offs to flood existing neighbours land when they didn't have issues pre these new builds. But watching how much waste they create is shocking.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: Support the bottle return scheme, thats an awesome idea, I remember back in the day being able to return cans for cash.

don't know enough about the other schemes yet to have a say, but do agree better things should be in place as long as it doesnt cost the consumer more.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: again in the snap shot it doesn't have all it info on what the longer version is proposing. but I do agree that more needs to be done about litter and illegal dumping. I think bringing back the park rubbish bins (or at least some of them - I can give you an exact location of one or two to bring back) especially when in populated areas, where lots of people are walking, biking, running through and esp near waterways to help protect the environment. people are lazy, if you have bins in the right places people are going to use them, if you make them carry it all home they wont and they will drop it and it will harm and pollute the environment. But I'm def over the illegal dumping, the kids and adults sitting around in parks and outside community

builidngs doing their drugs, the noz in the balloons, and their whatever else habits leaving their leftovers for other people to pick up and deal with. its disgusting and super lazy

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It's past time Aucklanders (and Kiwis) caught up with diverting food waste as a mandatory, nearly-subconscious activity, out of the landfill waste. Different sized food scrap bins should be available for larger families or those with various nutritional needs who create more food scrap waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: NZ is decades behind in this and finally must play catch up. We're too far removed from any truly scaled recycling facilities to keep having as much junk put out by manufacturers. This should also include supporting a mushroom packaging material operation for regional vendors, to replace styrofoam in their packaging, which would then be able to be put in the food scrap bins.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Around Spray Rise and surrounding streets of Albany near Westfield mall is a great example of ongoing problem zones, and is a blight to local residents, visitors, and only supports rat nests and the like.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why: My biggest concern & there will be hundreds of people in this same position

RATES FUNDED RUBBISH COLLECTION -

I live by myself, I put out ONE orange bag approx each 5-6 weeks, this keeps my rubbish collection cost to an absolute minimum with the orange bag costing approx $4.50, therefore this is approx 10 orange bag collections per year with an approx cost to me of $47 per year

WHY THE HELL SHOULD I BE CHARGED TRIPLE THIS AMOUNT PER YEAR BY HAVING A WHEELIE BIN & THE COST ADDED TO MY RATES !!!!!!!!!!! DISGUSTING PROPOSAL, THIS WILL INCREASE MY RUBBISH COLLECTION COST MEGA, WHY THE HELL SHOULD I PAY MORE FOR SUCH LITTLE WASTE?????

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

My biggest concern & there will be hundreds of people in this same position

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Aiming for reduce waste is good, but lots of plan are not practical, lots of them will have negative impact on our current quality of life.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If general rubbish collection reduced to once every two weeks, will the cost in rate also drop by half of the charge? The food scraps bin is a good idea for some, but not practical for others, it should be optional, the extra charge for this every year is just another unnecessary cost for us! Also the bin post such a risk on public health issues, such as increased rat and bad insects population.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Auckland City Council do not practice what they preach. Again treating we ratepayers like idiots.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I live in an apartment Complex, we pay private Contractors to remove our rubbish, both landfill and recycling weekly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Why is it going to take so long to implement, and at what cost.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why: You propose to focus on this,I find that very hard to believe. You have lied about your public triple bins around Auckland City with the words: " Recycle Waste, other " on them, they are all sent to landfill.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I'd like to see packaging reduced on many items sold. Manufacturers should be more accountable for disposal of packaging.

I'd like to see clearer information about what can be recycled and what can't. There's lots of confusion about this.

I'd like to see encouragement of community and small business initiatives to create recyclable packaging and recyclable products (eg using wool, which has so many desirable properties -- fire resistant, water resistant, insulating, warm, compostable, able to be used for so many functions, etc)

I'd like to see a clear and helpful communication programme that encourages Aucklanders to help reduce waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The introduction of the compost collection makes it possible to reduce general rubbish collection to fortnightly. I'm delighted with the new compostable waste collections. Thank you, Auckland Council!

I already put out my general waste bin once a month at most.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This area of waste disposal seems to need urgent attention. I'm especially concerned about the huge plastic sheets that envelope many leaky buildings and building sites. Also the packaging on building materials and leftover building materials. I'm sure that big improvements are possible. What is done overseas? I feel as if New Zealand fails to learn from overseas successes and failures in many areas.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We seem to be drowning our planet in organics, plastics, packaging, textiles and biosolids. The council obviously can't control what's brought into the country by retail businesses. Maybe the government needs to control and prohibit some items that are so damaging. The council can however reward organisations, businesses and individuals who take the trouble to use recyclable materials and environmentally safe processes.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I totally support schemes to pay for drink container return and to reduce unnecessary packaging.

I'm delighted to see the recycling centres being set up by Auckland Council, including the new centre at Western Springs. It's great to have somewhere to take items that still have life left in them but may need small repairs, instead of throwing them away in this built-in obsolescence age.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support probably needed for community initiatives to discourage people from illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support differential charging based on bin size.

I also support reduced charging for reduced frequency of collection - we only generate approx 10L of general waste/week so would be comfortable with paying less for collection only every second month

I do not support the targeted rate for food scraps collection - We compost to our garden so do not and have not used the food scraps service so should not be filled for something we have no use for.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I support the fact as a society we want to reduce waste. But that needs to come from the national government so that packaging etc is reduced. Often families don't have enough options to reduce rubbish when purchasing. And collecting rubbish up less often is not gonna reduce it. In fact rubbish has recently increased due to the new recycling rules. Seems more like a cost cutting exercise to me. Would we not rather be able to recycle more things?! If it remains true that the savings will be passed onto rate payers by reducing rates then great. However, I remain sceptical this will happen. Something else will probably increase in the rates.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this. The question is how this is done?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It's good to reduce waste via circular economy and reuse or repupose the waste and make them into useful things instead of going into the landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Collecting Red Top bin fortnightly can drive people to use the food scrap bin for their kitchen waste and organic waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Many C&D materials actually can be reuse and once a property is demolished, a lot of waste will be created. It is important to priority this waste immediately.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes, the 5 priorities are the problematic materials in our landfill.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Container return scheme and other mandatory product stewardship schemes should be implemented as soon as possible.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Instant fines or other kind of penalty for littering, Illegal dumping should be imposted widely in Greater Auckland.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Waiheke is the most densily populated off shore island. There must be a lot of waste created everyday. If we have to shift the waste to the landfill near Auckland, a lot of manpower and energy will be wasted.

4. Any other comments

Submission about Auckland Council's waste Management plan

I have read Auckland Council's new draft plan on Waste Management. The Waste Hierarchy way to sort out the waste and drive most waste into circular management is a very good. Idea. Actually, Chinese Conservation Education Trust(CCET) is helping with some of the work.

The ideas are all good, however, some ideas like "container return scheme and other mandatory product stewardship actions" needed to be done as soon as possible. I don't see any problem of implement them in New Zealand. Many countries had done it. New Zealand has models to follow. We need to collect as many recyclables as possible and as soon as possible.

In order to get the general public to support Auckland Council's plan, we need to know how the public think and what help they need when carrying out the plan. For example, using the Food Scrap Bins is a smelly and dirty job. If there is nothing to police people's work, people will gradually stop using the food scrap bin. We need to have some kind of monitor and enforcement to make sure everybody uses the bins.

Recycle Regulation Change is another example. Both the English and Chinese pamphlet don't make it clear to people. People has to read every word on the pamphlet before they know lids of containers are not to be put into the recycle bin. There is nothing in the pamphlet to remind people "Plastic bottles are not supposed to be squeezed". On the pamphlet it says, "To discover the correct disposal methods for items that can't go into your recycling bin, simply scan the QR Code below or search " unwanted items" on our website. I tried. After scanning the QR code, I ended up on Auckland Council's "How to get rid of unwanted item" page. There is nothing about Recycle Regulation Change. The page is only in English. People are confused and frustrated. The suggestion of "Throwing the item into Red Top Bin if in doubt" will encourage people to throw many things into the Red Top bin. Many recyclable stuffs will be wasted and when ended up in the landfill, will pollute our environment.

CCET saw the frustration. We created a B&W leaflet (one in Chinese & one in English), detailing what can and what can't go into the recycle bin. Many Chinese organizations requested CCET to do talks about the new Recycle Regulations. After people attended the talk and got CCET's leaflet, their responses were very positive. They told us that they have the confidence to do the recycling now.

There are a lot of changes in the Recycling Regulations. To gain the trust from the public. Auckland Council has to do a better promotion on it.

Estella Lee

Chair of Chinese Conservation Education Trust

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Its going to be too difficult to manage . The small food scraps bin isn't working as its stinky and fiddly with too many steps needed in an already busy household. I already reduced my family sized bin to the smaller ones to try and save money when we were FORCED to pay for the foodscarps bin (via our rates) I dont use it. Vege scraps are used in my worm farm and I don't want other food scraps stinking up those little bins and attracting flies and maggots.

the restrictions on the recyling bins keep increasing and now no lids or tops! so into the big bin they go, they can be recycled so why cant they go in the recycling bin. Make water free so we can wash all the bottles and jars properly and then maybe Id put more things in the recyling bin.

The bigger waste bins are fine how they are with weekly collection , why should we have to pay more to get a bigger bin . Keep it as it is please.

Instead of seperate food scraps bins why not provide colored food scrap bags that can be placed in big bins. Then there's one less bin to remember to put out and bring in before it gets blown around or ravaged by dogs.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: construction is a sign of a good economy , i hope builders and construction firms are not going to have huge compliance costs which will ultimately be passed on. Incentive rather than punishment is a better option.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We used to return aluminum cans at a recycling place and get money back so that needs to come back too. For many products like glass bottles, plastic containers. Motivates people to want to collect then return for money.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: sometimes away on collection day, that would mean a monthly or 6 weekly collection which would be great for rats

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Weekly collection of food scraps is must because of fruit flies in and around the bin. The bins collection fortnightly is great idea.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes that's right. I have so much of that waste going into rubbish.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I totally feel that, because as a household I am sometimes confused what to do with some of these things. I will people should be kept informed. Thanks

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Blue Borage Ltd

Local Board: Outside Auckland

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In the waste hierarchy, I would like to see Anaerobic Digestion put lower than composting - downgrading would be appropriate, given that the resulting products cannot be used to grow certified organic food.

Within the context of minimising harm to the environment, please also put more focus on eliminating the need for trucks to collect waste, especially food scraps and garden waste, which can often be turned into soil within walking distance, or by using existing car/bicycle journeys.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I think food scraps needs to be managed completely differently, giving each household/business/dwelling autonomy in the frequency of collections. It is possible to compost all of Auckland's food scraps and garden waste within the city, yet this does not get mentioned in the draft plan.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: It's hard to support this plan when there is little mention of how garden waste will be managed.

Please include consideration of herbicide residue - perhaps this is the opportunity for Auckland to become an organic city, and create exquisite compost from all garden waste and food scraps.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Within illegal dumping there is mention of invasive pest plants, and the 'war on weeds' weed bins supplied in parts of the city.

Please reconsider how people are taught to view these plants, and refrain from war terminology in your campaigns.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I applaud you on the commitment to circular economy principles, and hope you will strive to allow for decentralised, community led, localised solutions to waste. There are numerous consultants able to assist with your targets - please seek their advice on how to make Auckland truly circular, and make best use of all resources.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Do not want to see bins move from weekly to fortnightly collection. The smell of rubbish will attract vermin. People will start dumping rubbish. And adding the cost to rates means you're paying for more or less than you're using so it's not fair

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less people putting the wrong things in their rubbish bins.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: People who don't compost need to understand that there is a better option for food waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: What we saw from our recent build disgusted us. Builders have no idea of recycling.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The numbering system for plastic is unwieldy. We can't be bothered trying to work out why which is acceptable And in Auckland we have gone backwards with the new set up. eg no longer can recycle tetrapaks. How bad is this? We should be adding recyclables not reducing.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Any extra recycling is good. Not like in Auckland where we have reduced options with the new scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

Increased inorganic collections during the year

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Reduction of rates or to support initiatives to recycle these waste products, encourages people to use places like Resene to drop off paint pots, supermarkets for crushable plastic bags, Bunnings for used batteries

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Reduces land pollution, size of land area used for depositing of waste, offensive smells, reduces fire risk

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: All these materials may be repurposed. Plastics should be all recyclable. At the moment we can only recycle 1,2 and 5. Therefore only 1,2 and 5 should be used in all packaging. Food waste and biosolids may be used to fertilise land used for grazing and planting. Money saved on reducing collection of waste bins from weekly to fortnightly could be used to further support development of these initiatives.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It teaches people to take more responsibility for their rubbish and engenders a feeling of "looking after" the environment

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Perhaps council should take more action rather than relying on central government. Get rid of advertising in peoples' letterboxes. These papers may help people to shop economically but unfortunately they get blown around in the wind. If rubbish is being dumped on the berms, maybe the truck drivers collecting the waste bins could report the rubbish left and the council do something about it being collected. Also the drivers could take care when replacing the bins after they have been emptied. It is also difficult to balance bins on overgrown berms, maybe an order to get the grass cut regularly would help everyone using that particular berm

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Evidence of uncollected waste and litter

Abandoned bin full of rubbish

Broken food scraps bin

Litter in Driveway from unsolicited flyers

As above

Overgrown Berm – possible vermin hazard

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A clearer list of acceptable items and greater clarity on public knowledge via forums.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Rubbish removal must be weekly unless larger food waste bins are provided at the same size as the current rubbish bins. The removal of rubbish must be removed on a weekly basis similarly with recycling. I would push for support on receiving weekly recycling collection even if it meant rates surrounding rubbish and recycling had to increase to support the drivers collecting the rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: All building materials can be repurposed a small bin for housing purposes based on renovation to properties or extensions made to properties. Should have the ability to have the council to provide a waste disposal for these applications for consent. So general waste doesn't get used for disposal of construction waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: There should be a greenwaste bin provided alongside the existing three bins. To control the disposal of household greenwaste.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I'm sure to whether this will make a significant enough impact to the waste system in place currently.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping and littering should be finned at a higher rate and more frequently

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: To offer similar services as the central suburbs council offer. To create a cohesive structure.

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It's a positive direction to reduce waste through appropriate measures. Those creating large and consistent streams of waste should be involved in reducing that output and supported by local government to do so.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Our household produces very little general waste for collection as we aim to buy few items that are packaged in non-recyclable material. We also compost our food scraps so a less frequent rubbish collection is not an issue.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I am often shocked by how much waste is produced in construction, even renovation works where it would seem that more material could be easily used rather than dumped

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Textile waste is a real problem for consumers as well as manufacturers. There are no viable options for disposing of textiles in a responsible way, so this would be a great benefit.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: At last we're back to returning our containers! This has been a long journey to get people on board with such a simple idea. I love a bottle drive.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People who dump rubbish and leave piles of unwanted trash and furniture on roadsides are trying to absolve themselves of responsibility for their possessions. That's not ok and it's time to let people know how they should be behaving.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Organisation (if applicable):

Local Board: Franklin

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Ability to split our waste ourselves to help reduce the cost of waste processing and change the culture of our people. I believe we did this better years ago, now we have no opportunity to do this.

To follow the program you have of centralised collection of everything, trying to split it up yourselves is bound to fail as you do not bring the people with you. If you use our people, they will feel good about doing it as a win.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: You and other councils are responding to our wasteful practices at home which I believe are largely related to buying in bulk and a lack of education. For example, buying in bulk, then half of it goes off and they would never have eaten the food in the first place and the overall cost of the product ends up more because of the loss. Education would help hugely here.

Also people are unaware of how long different foods can last, causing people to throw out food when not necessary. My daughter has a younger friend who she has educated into how long food can last in a fridge and freezer. Now she throws out much less food.

This can be done at council level and should also be at Govt level.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Absolutely support, this has been an obvious area to handle for years. It also need Govt legislation to force firms to process correctly.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agree with priority.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agree.

To me this is largely returning to what we did a number of years ago.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We only put our rubbish bin out once a month, so fortnightly collections are fine. Hopefully fortnightly collections will encourage people who currently put their rubbish bin out weekly to make better use of the recycling and food scraps collection services to reduce what they put in their rubbish bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Placing a value on used containers will hopefully act as an incentive for people to recycle them instead of littering or putting them in landfill. I support product stewardship schemes.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think we should clamp down hard on littering. Once the whole region is receiving rates-funded rubbish collection (no more pay as you throw for some areas) there should be no cost barriers to residents doing the right thing. At present the cost of bag tags may be a barrier to some residents. I would support instant fines and even stronger penalties for littering - let's be more like Singapore.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I think Auckland Council needs to better integrate its waste messaging with its other messaging about actions that are important for tackling climate change. Potentially, Auckland Council (and other councils in NZ) have done too good a job in promoting waste minimisation, which has contributed to NZers overestimating the climate benefits of waste minimisation compared with other more impactful climate actions like driving less.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I strongly support the proposed direction (Option 2) which:

affirms a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

I applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9

I suggest removing the 'decision to dispose' line. This is unnecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

I appreciate Auckland Council's commitment to invest in education and behaviour change (in house and by external providers) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

I support the 7 principles that will underpin decision making.

Goals

I suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierarchy

'Designing out waste' line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and behaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important to better understand the emissions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emissions aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I support priority 2 to continue expanding the resource recovery network and its services.

I appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, ‘Right to Repair’ and sharing models.

Typo p20 row 2 eleven CRC’s other parts of document say 13.

I support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences, in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council has been using for the Construction and demolition sector could be usefully applied to the hospitality sector to address single use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. “....including the opportunity to add new programmes and to expand and diversify programmes...

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the “What it means for Aucklanders” column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

We support Priority 3 - see response to Q2B for detail

We support Priority 4 - see response to Q2C for detail

We support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community building and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of the circular economy. They support the Government's Emissions Reduction Plan and Auckland's Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emissions - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

We support Priority 6 - see response to Q2D for detail

We support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reporoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

I support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

I support to Priority 9 see response to Q 2A for detail

I support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around councils leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own waste minimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has its own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging, new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

We support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I/We support Priority 9 and the staged approach for the shift to fortnightly rubbish collections.

Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

I support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a

priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support a focus on the 5 priority areas in order to prevent and reduce waste

I am encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I/we

would like to see this approach to source reduction consistently applied across all the priority waste materials.

I support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to create the circular economy. There is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

I note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

I support the recognition of the value of local scale and 'community-led' solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

I would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

I support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilience and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

I support the ambition to go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the 'source reduction' language as it is more specific that 'reduction' which often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in

rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending the last part of 6.4 to read ' ... organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

I support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Auckland Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back scheme in Denmark https://www.tomra.com/en/news-and-media/news/2024/tomra-launches-system-for-reusable-takeaway-packaging . Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which overlap with this.

Textiles

I support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities like prisons and hospitals etc. As well as streams that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product Stewardship and exploring the opportunity to reduce commercial and industrial textile waste streams.

New Zealand organisations like UsedFULLY textilereuse.com are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see the link being made between the waste (tonnes) and supply chain and landfill emissions generated across the textile life cycle.

Bio-solids

I support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

I support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate “for actions to move up the waste hierarchy, including source reduction, reuse and right to repair”.

I would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

I want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and Demolition and the five priority waste streams. As a core focus of working relationships with Mana Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocessors and composters.

See plastics section of this submission for comments on expanding Action 6.4 Priority Waste Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

I support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emissions reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

I fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven results in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for the central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity

area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship schemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill, durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

safe for people ecosystems and climate

Viable because they build in ways to cover the real costs

Accessible to everyone

Regenerative because they leave things better than they were before.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live in FABRIC Onehunga and we already have our food scrap service in place at the fraction of the cost

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I live in FABRIC Onehunga and we already have our food scrap service in place at the fraction of the cost

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Emphasising the waste hierarchy is important. Promoting this and ways in which it can be achieved. Eg, simple things like buying low waste products, eg. a cleaner concentrate that eliminates the need to buy a plastic bottle. so simple and yet why aren't more people doing this or know about it? It shouldn't be just the concerned few doing this. Can Council promote this more. There are good resources on how to recycle, how about how to reduce and reuse?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fantastic. Please promote why it's a good thing to have fortnightly collections, ie. cost savings! People need to know about this, bring them on board. Divert nappies and medical waste - yes! How about batteries and light bulbs? it's great places like Mitre 10 can take these - promote this. Should this service be in supermarkets, where it's much more accessible?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Great, go for what will have the biggest impact definitely. Reducing the number of 'holes in the ground'. Been able to recycle or reuse this material would be great. Again a good news story, which people need more of.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If these make up significant volumes then 'yes' I support (backed by research). Having more alternatives of what to do with textiles would be great. There aren't many options currently and it isn't practical or environmentally friendly (car miles) often to recycle fabric.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes, yes! Fingers crossed and good luck!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes I believe people need to be responsible for their waste. At the same time there needs to be a convenient, well known and affordable alternative to dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly is not often enough and waste will just be sitting for 2 weeks and a lot of households need weekly as most people these days need to flat with up to 6 people in a house and fortnightly bin collection would be ridiculous. Keep weekly we it makes sense since most bins are full within a week especially these days with cost of living people need to flat to survive

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The main problem is moving our largest city to fortnightly kerbside rubbish collection. Auckland has a fast-growing population and is our most international city so we should have services that are on par with major global cities.

You also want to reduce illegal littering and dumping of household rubbish, yet your proposal will exacerbate the problem if kerbside collection is every 2 weeks.

The food scraps bin is insufficient, smelly, falls over in the wind and dogs/rats get into it.

We would support other aspects of the plan but not reducing our service of weekly collections - unless you wish to halve our rates?

You have said that households are only 20% of rubbish so why halve the service to them by moving from weekly to fortnightly?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: As above:

The main problem is moving our largest city to fortnightly kerbside rubbish collection. Auckland has a fast-growing population and is our most international city so we should have services that are on par with major global cities.

You also want to reduce illegal littering and dumping of household rubbish, yet your proposal will exacerbate the problem if kerbside collection is every 2 weeks.

The food scraps bin is insufficient, smelly, falls over in the wind and dogs/rats get into it.

We would support other aspects of the plan but not reducing our service of weekly collections - unless you wish to halve our rates?

You have said that households are only 20% of rubbish so why halve the service to them by moving from weekly to fortnightly?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Your proposal sounds a bit vague, not sure what you are proposing as "support", unless it's people advising the industry?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Many beverages may be made offshore so it may be difficult for producers to reuse them?

Overall could be a good idea if it's doable. Certainly glass bottles can be reused by our wine industry etc.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter

and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: I dont understand what you are concretley proposing by:

"continue our advocacy for better regulatory tools to act as

an effective deterrent"

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to be doing what we can to mitigate climate change.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Don't generate enough waste to justify weekly collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Need to find better ways to recycle or reuse construction waste products.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Would depend on how the incentive might work, but hard to see that this would change general behaviours in this area.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Too much waste dumped on roadsides hoping that someone else will take it away. Don't mind recycling useable items, but much is just rubbish.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: '- Only plastics that can be recycled should be used by manufacturers and reduce the use of plastics that go straight to the landfill.

- Two separate bins should be side by side in parks and by shops. One for landfill rubbish and the other for recyclables. We see so many recyclable cans and bottles in the main rubbish bins near shops and in parks. Often overflowing. Also lots on the streets.

- Recycle bins need to clearly marked with what is now allowed to be put in them. Old bins have information on them that is not current.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Agree that once a fortnight for rubblish collections will be enough if recyclables are taken out and recycled.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Items that can be reused should not be going into landfill as commercial waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: '- Plastics especially need to be controlled better. Cash back for bottles and cans would remove a lot from going into landfills.

- Companies like Coco cola should take more responsibility for cans and bottles that they sell, as so much of the waste we see on the streets comes from them.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea. Hope it will happen sooner rather than later.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Already put out small bin fortnightly

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Must be ways to recycle these materials

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Makes sense to do this. Also could be fundraiser for different groups

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is a problem area now. People need to know their is a consequence for their actions

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Initiatives to reduce waste and prevent pollution

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The current situation does not reflect the cost to the environment. Manufacturers profit without any responsibility to these costs.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

I strongly urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps bin for weekly collection is a waste of money for many including myself because I have a Waste Master in my sink and I put my food scraps into the Waste master which grinds them up and flushes them into the drain. I live on my own. Thus my food scraps are actually very Minimal each week. I do have a foodscraps bin. the inner container which sits on my bench. I hardly put anyt6hing into. Thus it is not put out every week and what is in it begins to small. Reason why I prefer to use my Waste Master.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The reality is that a percentage of building material are recyclable and can be turned into something else.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As you have stated, these materials do not easily break down. You need to find a way to recycle them, which I believe can be achieved.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Years ago we used to have recycling of Drink Bottle. People used to bring back their empties to the local Grocery Store or MilkBar/Dairy an d th bottles were sorted and put into containers and returned as empties to the Supplier for reuse. In fact on some bottle you actually got a small refund on when you returned the Bott;e. This also applied to Beer Bottles. I do know what I am talking abut here because in the school hoildays I used to work for a grocery store (we did not have Supermarkets then) and my job ot the back was to sort the Drink Bottles and put trhem into crates for return to the Drink Manufacturer. Could this not be introduced again.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes definitely this issue need to be addressed. However unless you catch the Culprits Red Handed .What else can you do about it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The theory is great bu your strategy is lacking with no enforceable/effective changes to tackle the top of the hierarchy instead focusing predominantly on punishing those at the bottom (e.g. households)

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I put out both a full food scraps bin and a full rubbish bin each week. I consider myself an avid recycler (don't agree with the new reduced recycling options FYI) and savy shopper, e.g. bulk buyer, and I'am genuinely stumped as to how I could further reduce waste. The idea of paying for an extra large rubbish bin is particularly grating when it was the council that proposed reducing them on that basis that such a large bin wasn't needed when its collected every week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: ideas are practical but effect is/will be minimal

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: yes, this is standard/bar minimum practise

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Papakura

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fewer items are now permitted in the recycling bin - these must now go in the red-topped rubbish bin. More things have to go in this bin but it is proposed that it be emptied fortnightly rather than weekly. That does not make sense.

Dirty nappies and soiled incontinence pads should not have to stay in a bin for two weeks. That is very smelly and unhygienic.

There is a rat problem in Auckland. Overflowing rubbish bins will attract vermin.

Collecting rubbish is core Council business - it is a necessity, not a "nice to have".

Auckland will become very untidy with overflowing rubbish bins littering our streets on collection day.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Make it accesible for everyone to be able to get rid of the inorganic items during the year not just the very limited time when you have to book it. In England they have lots of FREE drop off areas and they are sectioned off for like whiteware, electronics, furniture etc and you can just drive up and unload things for FREE. that is the key cos the station can then on sell for very CHEAP low cost to public OR to places like Habitat for Humanity and cover the running costs. The reason for illegal dumping is cos ITS COSTS lots to go to transfer stations and they close to early why cant you drop off rubbish after 5pm?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: FIRSTLY you dont say how much the rates will be reduced by this should be halved if this stupid proposal goes ahead.

Next if this goes ahead then the standard bin should be larger like 140litre like Coromandel. TCDC rubbish collection maybe fornightly but they gave out 140 litre general rubbish bins, they have a 240 litre recycle bin BUT they also have used the OLD recycle small tubs/buckets for glass bottles and tins all this plus the food scrap bins.

The examples used in the summary draft plan to help support this only show one side for example a country that uses reduced bin collections may show reduced amount of rubbish going to landfill but they dont say that those same countries have not seen any increase in illegal dumping or rubbish going into public bins. There will be an increase in illegal dumping.

If you want to reduce waste then address where the waste is coming from like food ie cucumbers being wrapped in plastic, fruit in plastic containers and bags, remove plastic milk bottles and replace with glass and cardboard.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I have seen first hand the construction and building materials that get put into skip bins and its sickening to be so restrictive with normal house rubbish yet construction rubbish is a million times worse. I have seen perfectly good carpet, vanities, toilets, cupboards, timber windows, corrugated iron bricks , you name it it goes in the skip. ALSO a lot of tradies use theses bins for their own rubbish from their homes cos their bins are full and they dont want to pay at the tip. It is ESSENTIAL AND THE FIRST PRIORITY TO REDUCE THIS BY MAKING IT very expensive for

construction waste as this will encourage more people to find other homes for these materials. I do know that most sites with items that can be reused or given away will end up in the skip bin cos it is usually a pain and time consuming to find a home for things. Their could easily and very inexpensively be a website created for authorised people to list their materials that need removing from sites for free. This would be monitored (without telling the public how or scope) to ensure that this would not get abused by tight and sneaky people taking these materials and then selling them for a profit. So they would only be allowed a certain amount or if they owned a business they could not get things or something like that because again this would be to help those less fortunate not to allow people to get money and rich off it. EG if someones house needed a few things repaired or a roof that was leaking or a kitchen was in bad shape ALSO habitat for Humanity. KAINGA ORA is bad for demolishing ENTIRE houses that could be transported and relocated to Hawkes Bay or Northland for people in need or more state housing up north. They would only need to insulate them later on. My neighbours house got demolished and it was a very well built timber weatherboard house that would have made a family happy up north just need insulation. That got bowled and the entire house went to land fill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The litter that is found on roadsides and waterways is not all from people throwing things out the window etc I believe that this comes also from that fact the recycle bins get so full that a lot of rubbish blows out of the bins and onto the streets cos i have seen this happen every rubbish day its a bit windy. Also i see rubbish littering the on ramps and sides of motorways, roads and parks and reserves everywhere this is the job of the council to keep these areas clean. Why cant the lawnmowing people pick up rubbish or take note of where needs cleaning and send a job to the right part of council.

Also we used to have the people that had PD or community work picking up rubbish on sides of roads and parks etc why dont we bring that back it helps the community it helps them feel good about helping and it stops rubbish blocking the stormwater drains etc from flooding.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Instead of dishing out fines (unless its toxic waste) for people that probably cant afford it (thats the reason they are probably dumping it) make it alot cheaper to get rid of general rubbish and free for recycling.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Good direction, managers must be hands on and truly competent to educate, implement n achieve real results within stipulated conditions.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Skewed argument. The chain starts from manufacturer, let's look into their responsibilities!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Involve all contributing agents to participate, no outsourcing or consultants, you waste you clean, not right to pass all burdens to the general public!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Good but as a layman , too much generalisations about household garbage, no specifics...the implementor doesn't understand enough to teach n educate the public much less follow up!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Easier to talk, suggest management walk the talk, be on the field!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Good, where's the start n end? Get the locals involved n to take responsibility!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Living on a unit of 20 connected town houses

It would be impossible to have fortnightly curbside rubbish collections

Currently we opt out with the rubbish direct collecting 2xstandard and 2x recycling rubbish bins several times a week

They are efficiently placed on our driveway to share and do not clutter the curbside getting in the public way

As expressed by a resident in our unit community I want to continue to opt out of council waste management policy for the comments seen below

We will also standardise which properties can opt out of council waste services and charges, including:

• Allowing non-residential properties (excluding lifestyle properties) to opt out of council waste services and associated targeted rate charges at their request, effective from 2023/2024.

• Allowing multi-unit residential developments (10 or more units) to opt out of council's kerbside waste services and associated targeted rates if we cannot provide a suitable service.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We fill our large bin most weeks even with recycling & composting. Bigger families would struggle even more. Weekly collections are far better.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I don't support anything that is mandatory, but if it were voluntary, made easy & encouraged that would be fine.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Hopefuly encouraging reuse,repair etc will reduce the need to throw things away

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Actualy I never throw any food out,I can't afford to waste it so I'm fine with fortnightly collections as i have never filled my bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Good move!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Better for the environment in the long term

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Are people actually going to return items when they can be just put in the recycling bin?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this but how are you going to know who dumped what in rural areas?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Unfortunately we no longer make most of the manufactured items we use and invariably discard.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: At present RED Bin is almost empty

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: More of this should be reprocessed for reuse as some is at present.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: seems appropriate

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As a kid we had such schemes

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People being people are basicall lazy and need activation

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Encourage people to bring rubbish bags with them to minimise litter, as in Japan. Changing behaviours is the ultimate and necessary goal in the face of climate change. Unless behaviours change, private businesses have little financial incentive to not be wasteful.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Need more/integrated data collection on waste type, grade, etc.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Consider reusable packaging startup/initiative grants and a site tracking which products can be returned and where. Also more/integrated data collection on bulk imports.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Consider partnerships with food industry's existing food recycling initiatives/organisations. Raise awareness of responsible waste practices using city-wide campaigns e.g. tie-ins with public holidays or adopting some bus stops as 'public noticeboards' (though this likely requires Waka Kotahi partnership).

#2311

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I strongly support the proposed direction (Option 2) which:

affirms a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

I applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9 I suggest removing the ‘decision to dispose’ line. This is unnecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing. I appreciate Auckland Council's commitment to invest in education and behaviour change (in house and by external providers) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

I support the 7 principles that will underpin decision making.

Goals

I suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierarchy

‘Designing out waste’ line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and behaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important to better understand the emissions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emissions aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I support priority 2 to continue expanding the resource recovery network and its services.

I appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, 'Right to Repair' and sharing models.

Typo p20 row 2 eleven CRC’s other parts of document say 13.

I support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences, in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council has been using for the Construction and demolition sector could be usefully applied to the hospitality sector to address single use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. “….including the opportunity to add new programmes and to expand and diversify programmes…

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the “What it means for Aucklanders” column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

I support we strongly support the proposed direction (Option 2) which:

affirms a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

I/We applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don’t have to pull as many resources out of our environment into the economy or create emissions to turn resources

into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9

We suggest removing the ‘decision to dispose’ line. This is unnecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

We appreciate Auckland Council's commitment to invest in education and behaviour change (in house and by external providers) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

We support the 7 principles that will underpin decision making.

Goals

We suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierarchy

‘Designing out waste’ line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and behaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important to better understand the emissions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emissions aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I/We support Priority 1 and celebrate Auckland Council’s commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I/We support priority 2 to continue expanding the resource recovery network and its services.

I/We appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, 'Right to Repair' and sharing models.

Typo p20 row 2 eleven CRC's other parts of document say 13.

I/We support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences, in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council has been using for the Construction and demolition sector could be usefully applied to the hospitality sector to address single use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. "....including the opportunity to add new programmes and to expand and diversify programmes...

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the "What it means for Aucklanders" column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

We support Priority 3 - see response to Q2B for detail

We support Priority 4 - see response to Q2C for detail

We support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community building and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of the circular economy. They support the Government's Emissions Reduction Plan and Auckland's Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emissions - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

We support Priority 6 - see response to Q2D for detail

We support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reporoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I/We urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

I/ We support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

We support to Priority 9 see response to Q 2A for detail

I/We support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around councils leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own waste minimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has its own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing

staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging, new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging. I support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail Priority 3 - see response to Q2B for detail

I support Priority 4 - see response to Q2C for detail

I support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community building and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of the circular economy. They support the Government's Emissions Reduction Plan and Auckland’s Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emissions - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

I support Priority 6 - see response to Q2D for detail

I support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reporoa, Watercare’s wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I urge Council to specifically rule out Incineration as a disposal option for Auckland’s mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging, new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

I support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support Priority 9 and the staged approach for the shift to fortnightly rubbish collections.

Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

We support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support a focus on the 5 priority areas in order to prevent and reduce waste

I am encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I would like to see this approach to source reduction consistently applied across all the priority waste materials.

I support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to create the circular economy. There is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

We note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

I support the recognition of the value of local scale and ‘community-led’ solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

We would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

We support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilience and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

I support the ambition go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the ‘source reduction’ language as it is more specific that ‘reduction’ which often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending the last part of 6.4 to read ‘ … organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

I/We support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Auckland Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back scheme in Denmark https://www.tomra.com/en/news-and-media/news/2024/tomra-launches-system-for-reusable-

takeaway-packaging . Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which overlap with this.

Textiles

I support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities like prisons and hospitals etc. As well as streams that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product Stewardship and exploring the opportunity to reduce commercial and industrial textile waste streams.

New Zealand organisations like UsedFULLY textilereuse.com are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see the link being made between the waste (tonnes) and supply chain and landfill emissions generated across the textile life cycle.

Bio-solids

I support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate "for actions to move up the waste hierarchy, including source reduction, reuse and right to repair".

I would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

We want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and Demolition and the five priority waste streams. As a core focus of working relationships with Mana Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocessors and composters.

See plastics section of this submission for comments on expanding Action 6.4 Priority Waste Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

I support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emissions reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

We fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven results in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for the central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship schemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill, durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

safe for people ecosystems and climate

Viable because they build in ways to cover the real costs

Accessible to everyone

Regenerative because they leave things better than they were before.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter

and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will

struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: They need to be inline with the mainland but in consultation with the local entities that are directly affected particularly wildlife flora and fauna conservation

4. Any other comments

#2312

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already compost and use food scraps bin, but fortnightly collects are too infrequent. Please keep weekly collection

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Council does not have the resources to make this plan work

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This does not apply or assist local homeowners

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Again this is not related for local households

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The council are just trying to gather more revenue and will actually do nothing

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: No resources to do this

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Too much product that can be repurposed is put into landfill. In order to make this change the council will need to invest heavily in infrastructure to collect and repurpose this stuff

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Modern housing with small or no sections cannot be expected to keep rubbish on their property for this long. Council has created the problem by permitting mixed housing estates without considering how homes could manage every day living waste. Government has also contributed by insisting on packaging standards for food products that already have their own natural packaging

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is dream world. Reality is that it is too expensive for construction companies to breakdown existing structures to recycle the material. They are under immense pressure to build homes for the thousands that are reportedly homeless. Conflicting pressures need to be worked through before this plan could even be considered. Also where would all this recycled product be stored?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These are certainly top priorities but until council has a way of replacing these products with more ecofriendly ones it is pie in the sky thinking and I'd rather council focused it's money and attention on the basics

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Surely if council were so keen on this they would set up recycling drop points and get it going without the need for government intervention. Seems like council trying to push their responsibility onto government

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support it but councils have not been successful in managing this in the past so difficult to see how they will make any substantial improvement going forward withou adding extensive headcount

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Develop and deploy a slogan to show the new commitment and progress towards it. "Reduce-reuse-recycle" was helpful.

e.g. "Come on Auckland. We all have a way to go - recycle" Something aspirational, but encouraging, not admonishing preferably with a cool graphic.

If there are 12 areas a tree with 12 branches and each amount of target is shown each year full or empty to help visualise and confirm that the progress is being tracked.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food is an easy area to achieve the most and teach people how to behave about their own use and disposal. The pink bags break down very quickly so 7 days is max. Show people how to transfer multiple bags per week before they break open. Full bags break if they are wet from food scraps, so changing to a second bag mid week may be a better technique than having a very full bag break open when transferring, or tip the tied bag into the streetside bin rather than lifting it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction is an easy area to legislate and confirm behaviour of the practitioners. Incentives for good behaviour should be prioritised over just increased inspections.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Microplastics and forever chemicals should be prioritised as significant long term issues. Not addressable at the end of focus.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS and education help the public in visible ways and in terms of bonding concepts of personal responsibility to the environment. Awareness of personal impact may reduce environmentally harmful behaviours better than short term shaming of behaviours.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Enforcement of littering laws should come through public confidence not to tolerate bad behaviour. e.g. not picking up after dogs at beach should not be acceptable, but showing the offensive behaviour in advertising so individuals can comment and have society support will shift the offending to be socially unacceptable to all residents of New Zealand. An environmental cross New Zealand all cultures minimum standard for the environment, should be achievable and understood. This needs to transcend any local culture in favour of Earth-centric environmental value needs.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: Relate all the relevant areas of island specifics to the general "big island" goals of the country. Show how each person is an island and the whole nation is an island like earth is an island. Nowhere is beyond the whole or outside of the environment.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

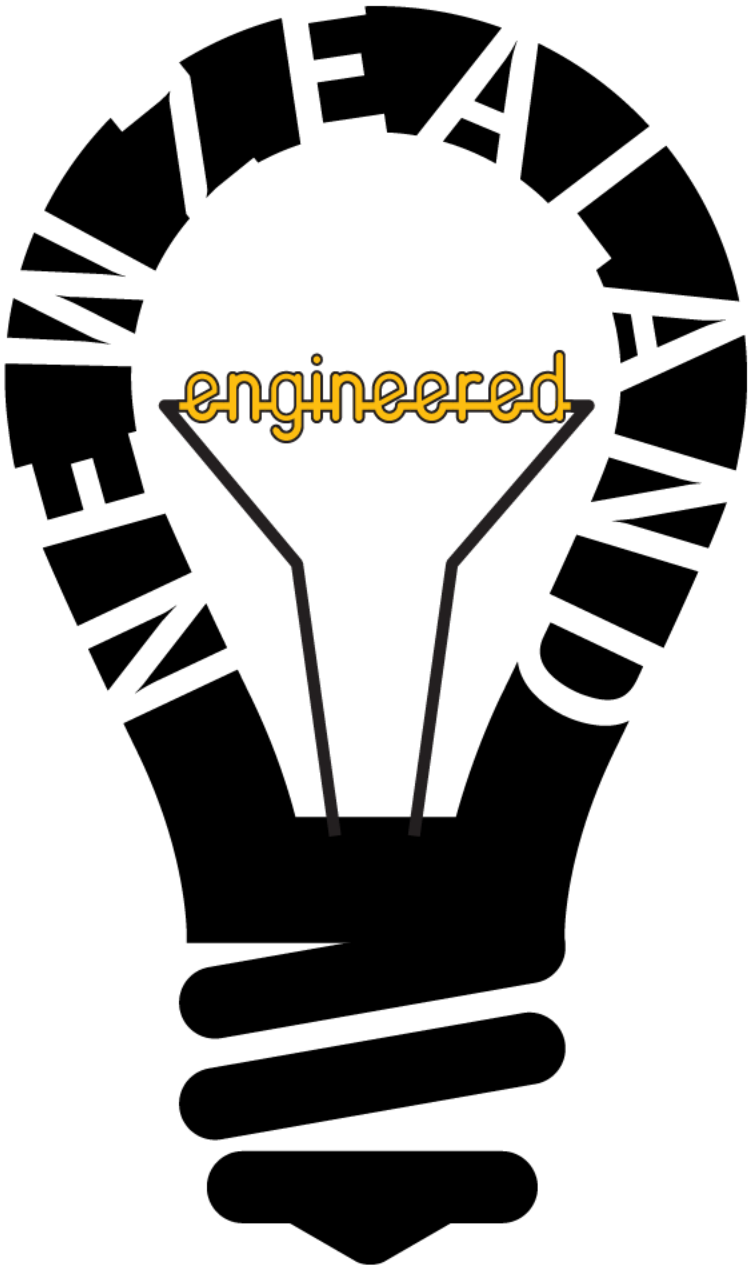
Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:



4. Any other comments

Relate as much experience as possible to daily thought and behaviour regarding waste. Find and share new ways to get each person in the country to understand that their personal behaviour is important NOW. Today. And going forward into the future. There is no separation of anyone from the environment.

Incentivise all New Zealand businesses to focus on their development and design practices. If they document waste reduction techniques, reduce fees or taxes directly for doing so in a realistic and measurable way.

Teach all society members that waste reduction is not glamorous or easy. It involves more effort and often more cost than being wasteful. This is not intuitive, but is mature and responsible. Teach society how to accept a different kind of fun. Thinking about 30 years from now will mean accepting that tommorow morning needs to be different than this morning or yesterday's morning. Make that interesting. Challenging, Aspirational and new fun.

The attached logo is a visualisation concept that I developed to celebrate NZ engineering thinking. The goal has been to promote well engineered ideas when the thinking is representative of NZ ingenuity and value. If criteria were established to embody this set of values, the logo would represent this adoption of concept. The New Zealand name is embedded in the actual item because New Zealand should be embedded in all the ideas generated in this area. Bright engineering can affect the whole space of any nation. It already does. Good or bad.

NEW ZEALAND
engineered

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Only if we get bigger bins - but also in summer the smell!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: They should have to pay more for it too! but only if that money comes back to the city - not the private pocket of a commercial entity!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Focus on quality and longevity in manufacture of products. Restrict imports of cheap, poorly made items which will break and go to landfill. Evcoursge availability of spare parts and support repair businesses.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There is low uptake of the food waste bins in our area so people are still overfilling land fill bins and it spills over onto the street, gutters and into the waterways. It would be good to go to fortnightly collections but more people need to use the food waste bins, and the volume of packaging and broken junk needs to be reduced first.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Houses are demolished with no atepmpt to reuse or recycle material - it goes straight into a skip or truck. This is so wrong on many levels. These companies should be required to make every effort to minimise this appealing waste, and they pay more than the public to take the excess to landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We have a duty to do everything we can to reduce waste, and everyone needs to be committed to this.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: However many cans and bottles I pick up out of the gutter it doesn't stop it happening again tomorrow. The mentality needs to change and maybe an incentive will shift this. It should have been done decades ago

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Transfer station costs are too high so people are dumping larger items to avoid this (and some are just lazy!) It costs a lot to investigate, prosecute and remove dumping so preventing it from happening should be a priority. Education and graphic images of dumping will help shift some attitudes, though those who don't care about our world will be harder nuts to crack

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I fully support every effort the govt and council make to turn around this massive issue. We need to continue to support organisations which connect with the public to demonstrate how every single one of us needs to be accountable for our waste.

#2321

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Circular economy is great. Anything that reduces waste to landfill is great. Reducing emissions and protecting our environment is very important.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Also consider options for green garden waste and environmental weeds.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Love this!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Love this direction. Its so important.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Product stewardship is important!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I see a lot of illegal dumping where I live in Avondale and the back streets off Sandringham Rd where all the restaurants are.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Waiheke is unique and should have their own food scraps service and keep the resource on the island.

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste

disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Moving towards a circular economy and the resulting reduction of waste going to landfill is essential for Auckland to be future fit.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: With the introduction of the food scrap waste collection, there is no need for weekly collections of landfill waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. 2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I believe reducing rubbish collection from weekly to fortnightly is not a viable solution. While it may be presented as a cost-saving measure or an effort to promote recycling, it fails to consider the potential consequences such as increased odors, pest infestations, and overflowing bins, especially for households with limited storage space or larger families. Additionally, it could lead to unsanitary conditions and health hazards, posing risks to both residents and the environment. Instead, I advocate for exploring alternative strategies to encourage recycling and waste reduction while maintaining the current weekly collection schedule to ensure the cleanliness and well-being of our community.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I would like to see a review of the food scraps first.

I know many who do not like using it - and unfortunately in my community (semi rural) many compost so I think people should be incentivised to keep composting by being able to not having to pay for food scraps - or incentivise some other way.

Just taking away bins or reducing size may create more dumping of rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I think fines are a good idea, but wonder if those dumping rubbish are doing so because they can't afford the dump fees? Is there any data on who is dumping?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly collection leave less room for rubish ending up in the environment

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Experience 40 yrs on building sites seeing jumbo bin full of good stuff going to landfill . Typically its council 40 yrs behind what is an obvious need.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ban plastic there are alternatives. Allow alternatives from private contractors were practical. Such as Apartments organising their own systems. 100 buckets on road side very impracical.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good luck, "CRS will ensure ...." this needs more teeth. Singapore £2000 fine strictly enforced might help.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: With strict enforcement. Name and shame , stocks for offenders.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: You won't eliminate waste because society does not allow this to happen (products come with packaging that can be recycled or reused).

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: It would be better to focus on sorting the waste so it can be reused. Also the separate food scraps bin should be scrapped and this waste put in landfill where it breaks down quickly and actually promotes the breakdown of other products also.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: For individual households this is fine. For apartments and multi unit dwellings this is the wrong solution. Apartment and multi unit dwellings normally have a centralised rubbish collection area with large bins which all residents use. The contractor normally wheels out these large bins and empties them in the rubbish truck as otherwise they congest the pavements. For instance our apartment building has 84 residents and we use 4 very large bins for rubbish collection, which are emptied 3 times a week. the contractor cleans these once a month as part of their rubbish collection duties to minimise smell. Under the council proposal we would end up with between 14 - 28 of the small bins the council uses, we simply have no room to put such bins, the council contractor would have to wheel them out to the truck 3 times a week and return them to the place of storage and also arrange for them all to be cleaned once a month to match our current service. What the council offer will be an inferior service with no saving in cost.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The idea is correct but the mythology is wrong. The council is proposing the end user fix the problem, it should be the manufacturer who has to address the problem.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This proposal shifts costs to the user as the producer will simply pass the costs on. It will just end up as another cost the end user will have to bear.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

4. Any other comments

Apartment buildings and multi use dwellings should one free to decide whether they wish to use the council rubbish service or make their own arrangements for waste services and in return not have to pay the associated targeted rate charges. The draft plan for 2022/2023 mentioned standardising the ability for multi unit dwellings to opt out of the targeted refuse rate. When this was implemented what aurally happened was Auckland Council made it more difficult to opt out of the council service, even when it is inferior to the service being provided by private contractors. The proposal was to allow multi unit dwellings to opt out of council service and rates charge if council cannot provide a suitable service.

The problem is that the council alone decide what is a satisfactory service, even when it is apparent the council service is not to the same standard as being provided by a private contractor and would not be deemed as "suitable" by anyone who is impartial. It should be up to the residents of each multi unit dwelling as to whether they consider the council service to be "suitable" and if not they should be able to opt out and not be liable for the council targeted rate charges.

The former Auckland City Council has of many years had an effective opt out process for multi unit dwellings containing 10 or more units, this model should be standardised as it is far more suitable for all affected ratepayers.

The sole motivation behind the change is to increase rateable revenue for council regardless the suitability of the service imposed. This is not in the best interests of the ratepayers affected.

Occupants of multi unit dwellings are best placed to decide what is best for them, not the council, and if they elect to use a private contractor they should be exempt from using the council waste services and from paying the associated targeted rates.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Increased pressure on central government to implement a container return scheme - we were so close!!!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I would go even further and say that perhaps a fortnightly is the standard collection, and that for ultra-low waste households they could opt-out entirely and instead do pay-as-you-go (eg receive a different coloured bin to differentiate them or something similar), or an option to opt out entirely? For example, our household generates one standard council-bag of landfill waste every 6 - 8months, and I would rather just pay $5 to dispose of that at the local CRC rather than a kerbside collection. All our other waste is recyclable, or composted at home.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The amount of recoverable and reusable resources is craaaaazy. Ways to make it easy for builders to not throw away extra timbers and screws, or subsidies for companies who dismantle (rather than demolish), would mean that these methods become monetarily incentivised and more likely to succeed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It is silly to pay to dispose of resources, and to then pay to buy them in again, when keeping them out of the waste cycle entirely solves both those issues.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Manufacturers will only make change when it is a question of money - investing in higher quality, longer life containers means reduced overheads which will instigate change! It will also force them to reconsider what materials are used in their packaging (eg #5 plastics aren't very durable and there is not market in NZ for these, but glass is!), and result in widespread change.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I would guess that illegal dumping occurs because hazardous waste is too difficult and . or expensive to responsibly deal with. Making these services more accessible (in terms of more places accepting them, and the cost being put back onto the manufacturer), means people will be less likely to dump.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We already do this - refuse; repair; recycle

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already do our own composting & so the benefits of compost goes directly back into our own garden. Council collection is not cost effective with an estimate of 1/4 of households using the service in our area & those that started no longer using it as "too smelly & messy". No only do trucks drive around collecting a few bins but then it's transported to Reporoa.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We already try & do this where possible but often it's not cost effective for homeowners & builders

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support apart from food scraps

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This was a previously used system; often not cost effective

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is also a concern on private property.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Closest to Auckland

4. Any other comments

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: There will be areas where fortnightly collections will not work despite changing to larger bins which will cost households more.

Some areas may become dumping grounds for rubbish.

Food scraps bins will not work commercially at our office.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Inorganic collections should be more often re demolition goods

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Companies should send out their products using packaging that can be recycled at all times

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Consumer will only return if you make it easy plus an incentive.

Goes back to the onus should also be on the producer

Plus needs to be incentive for the consumer

Days gone by the "Glass" Bottle drives to return - make it fun if return containers/ bottles eg $ or free product

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fines for dumping rubbish - especially whilst driving. Dob the number plate in.

Does not help local bodies have reduced rubbish bins which will take generations to get consumers to take their rubbish home

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Instead of focusing on reduction of waste why cant we just get better at sorting it so it can be reused.

It seems that the whole focus is to get the problem solved by the end user instead of developing infrastructure that can fix the issue.

For example we are never going to find a solution to plastic used to package chicken, this is contaminated and has to go to landfill, which is increasingly expensive due to the landfill levy. A solution for this example would be some kind of waste 2 energy solution.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: for individual households this is fine. For apartments and multi unit dwellings this wont work as their are other factors at play such as common rubbish areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The idea is right but the methodology is wrong.

Again the proposed solution is for the end user to fix the issue, for example with textiles it appears we want to stop people buying clothes, why cant we let people buy more clothes and engage in "fast fashion" and for the regions infrastructure to develop ways to reuse the discarded clothing.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: it does not shift the cost to the producers

it shifts the cost to the user as the costs will be passed on.

This is another example of not wanting to put the right infrastructure in place and trying to find a way to get the consumer to fix the problem

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate.

When this was implemented what has actually happened is Auckland Council have made it more difficult to opt out of paying for the council service, even when the council service is inferior to the service being provided by private contractors.

The proposal was to allow multi unit dwellings to opt out of the council service and rates charge "if council cannot provide a suitable service"

The issue is that the council alone determine what is a satisfactory service, even when it is very clear that the council service is not of the same standard as being provided by the private contractor and would not be deemed as "suitable" by any impartial person.

The old Auckland Council region has for many years had an effective opt out process for multi unit dwellings with 10 or more units, it would appear that standardizing on this model would have been far more suitable for all ratepayers affected.

It appears that the sole motivation behind the change was to increase rateable revenue for the council regardless of the suitability of the service being imposed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Outside Auckland

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I strongly support the proposed direction (Option 2) which:

* affirms a strong zero waste vision for both people and planet,

* centres the waste hierarchy as a guide for action, and

* sets the intention to prioritise actions at the top of the waste hierarchy.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

I support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I support priority 2 to continue expanding the resource recovery network and its services.

I appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, ‘Right to Repair’ and sharing models.

We support Priority 7

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reparoa, Watercare’s wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I urge Council to specifically rule out Incineration as a disposal option for Auckland’s mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

10.6 Include reference to reusable serviceware, designing out single use packaging.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. I agree that fortnightly collections should reduce both cost and emissions overall.

I support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support the recognition of the value of local scale and 'community-led' solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

I would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

I support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilence and local food production.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate "for actions to move up the waste hierarchy, including source reduciton, reuse and right to repair".

I support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emisisons reduction goals.

I can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

I fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven result in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Obviously needs to be addressed, better accounting of waste from commercial is needed, implementation of embeded monitoring systems to large/ skip bins could be a innovative solution. Could support grant for research, once developed system could be relative inexpensive.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support in general, although I think it misses a key area of waste. Disposing of valuable recyclable material I.e., Electrical waste, the volume of which is increasing yearly should also be a priority. We need to create efficient streams for these valuable resources (containing rare earth minerals) to be reincorporated into the economy.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support, has obviously been shown to be effective overseas (Australia)

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: For individual households this is fine. For apartments and multi-unit dwellings this won't work as there are other factors at play such as common rubbish areas and volume of rubbish needing to be collected on a more regular basis.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate.

When this was implemented what has actually happened is Auckland Council have made it more difficult to opt out of paying for the council service, even when the council service is inferior to the service being provided by private contractors.

The proposal was to allow multi-unit dwellings to opt out of the council service and rates charge "if council cannot provide a suitable service".

The issue is that the council alone determine what is a satisfactory service, even when it is very clear that the council service is not of the same standard as being provided by the private contractor and would not be deemed as "suitable" by any impartial person.

We need to continue to have the ability to opt out for waste collection for multi-dwelling units as the requirements are very different and best served by private contractor collection company.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Aotea/Great Barrier

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: As the largest centre of population and industry in the nation, I believe Auckland has the opportunity to change the direction of NZ and to significantly reduce the loss of resources and impact of waste on natural resources and the environment through targeting the top two tiers of the waste hierarchy

In the waste hierarchy diagram the decision to dispose line is unnecessary. Composting is reusing and part of a circular economy if nutrients, organic matter and minerals are returned to the soil to support healthy growing systems for food, timber and vegetation in general- acting as a carbon sink.

Focusing at the top of the waste hierarchy and preventing waste in the first place will help slow Auckland (and New Zealand's, as Auckland is a significant centre of supply to the rest of the country)'s consumption of raw materials. Keeping products and materials in circulation for as long as possible means we don't have to take as many resources out of our environment and into the

economy. We reduce the emissions, damage to ecosystems, biodiversity loss and pollution of the land, air and waters that occur turning these finite resources into unnecessary products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I understand that food waste is a significant contributor to greenhouse gas emissions from landfill. At least as importantly, it contains valuable nutrients, minerals and organic matter effectively mined from the soil that needs to be returned to the soil to enable ongoing productivity rather than being lost to landfill. Removing food scraps (and other organic/putrescible waste) from rubbish bins reduces volume in the rubbish bin and the rubbish bins will be less smelly making less frequent collection possible.

I support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low waste. It is important to reward residents who support Zero Waste 2040 by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Support the rationale in the plan.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Organic materials

The quantity, the creation of carbon monoxide (organic materials) in an anaerobic landfill, the value that these materials hold eg nutrients, organic matter and minerals for soil

I would like to see an emphasis on ensuring wherever possible organic items are diverted for reuse- eg timber or rendered safe to return to soil. It would be great to localised solutions for organic management supported as these reduce emissions through transportation, are popular with communities, can be used to create public community gardens or to support private gardens and generally builds support within a community to divert as the outcomes from diversion are visible and positive. This is especially so when a robust education programme is also in place- again this needs to be at a local community level to ensure it is relevant to each community and its solution.

As an incentive to compost and reduce carbon emissions, I would like to see an Auckland Council subsidy or reduction to the cost of consent for local compost solutions, especially but not exclusively for not for profit, community enterprises. This would support the goals of this plan, help to reduce emissions, future costs, loss of valuable resources and build resiliancy within Auckland and within communities.

Support the move to reusable packaging options. I would like source reduction as a priority across all target waste materials .

Support the move to reusable packaging options. I would like source reduction as a priority across all target waste materials

Through initiatives like local community composting solutions (and local private composting solutions, where the material created is made available locally either as a garden amendment or as food grown with it), I believe stronger communities and identity are developed, aligned with the goals of this plan and other socially and environmentally responsible plans.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I fully support of the intention to Advocate "for actions to move up the waste hierarchy, including source reduction, reuse and right to repair". Also support any opportunity there is for the Council to do more than advocate, to incentivise reduction in landfill waste, food waste and recycling material or to disincentivise these streams creation.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In addition, I believe the removal of public rubbish bins from Aotea/Great Barrier Island has reduced the amount of litter in the environment and contamination of recyclables. Unlidded yellow recycling crates may allow some recyclables to escape at kerbside but there is not litter or rubbish generally at the beaches, outside the shops, etc. Rubbish bins do not get rid of rubbish, people do, in their actions from purchasing through to disposal options.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: I applaud Auckland Council for recognising that their are different needs on the Hauraki Gulf Islands and developing a individual plans as an appendix.

I believe the goals and actions have been developed after engagement with the local community and reflect the situation on the motu. I support the priorities.

C&D waste- it would be beneficial to be able to communicate local solutions for C&D waste at the consent stage of a building project.

Support the use/disposal of septage on island- potentially providing a resource and reducing transport miles and any risk to the Hauraki Gulf through transportation across it.

The goals of this plan may be supported by community leaders and Auckland Council working to develop a system that enables savings of transport costs achieved by on-island use of traditionally recycled or landfilled materials, to be diverted to support the on island initiative.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

A system that supports the establishment of low waste, 'green' businesses in Auckland in favour of other businesses would be great, identifying what these businesses must do or not do to meet criteria. Financial cost to those not meeting requirements or benefit for those that do. Focus on big business to achieve big outcomes. Thus helping to create a truly 'green city'.

Support for product stewardship schemes, these could have a huge impact on source waste creation, waste streams, illegal dumping and reuse of precious resources

I would like to see Auckland Council advocate to support single material products and to eliminate mixed material products such as packets with paper outers and plastic inners, mixed material textiles, containers made with different plastic components. Mixed material products are often not recyclable or able to be repurposed and end up in landfill.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Support, however, more importantly, it's the enterprise's responsibility to make/package products with recyclable and reusable materials.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: With only one week, the rubbish bin has already started developing some kinds of worms, especially in summer. How the hell could we wait for another week for rubbish collection? The food scrap bin already introduces smells, and it won't be long before disease starts spreading.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Restrictions on plastic wrapping of products, eg vegetables. A campaign to raise awareness of environmental damage through production, use and disposal of cheap polyester clothing. A tax on retailers of these products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Prefer user pays model as it rewards generating lower rubbish. I also like the idea of community bins for recycling, rubbish etc. I have seen this operate in a village in Portugal with narrow streets. No rubbish collection to individual households, but community bin. Would save in collection costs, fuel and emissions.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Community bin for weeds is a great idea, and sometimes operates in West Auckland. Would cut down green waste in household rubbish bins.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Strongly support this. Local community groups can also use this as a form of fundraising.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Should be instant fine for those who put their unwanted goods on the berm in hope that someone will take them. Definitely a problem in suburban areas with a lot of renters.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: While we support the overall focus of the WMMP to reduce waste being created and sent to landfill, and particularly supportive of the encouragement of a circular economy, we do however object to the kerbside rubbish becoming fortnightly and not weekly. We do not believe that this plan has adequately considered in real terms the effect this would have on commercial areas that already struggle with illegal dumping.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: While we agree and support the weekly food scraps collection service, we do not support the fortnightly rubbish collection for most Auckland households from 2026. As a commercial precinct that is located very closely to suburban homes (which is undergoing more housing development- a lot of which is geared towards families, but not necessarily in singular detached houses), we do not believe that without a strong and clear campaign around larger bin options that this will not lead to more illegal dumping within our business district. For areas in which there are renters with undeclared overcrowding, we see illegal dumping as a serious concern. As ratepayers (which would be homeowners) would likely be the ones picking the bin option for their properties, we are not confident that illegal dumping will not drastically increase. In principal this is a great initiative, but in its delivery and practicality, we are not confident that this would not cause more issues for businesses and create unintended cost blow outs in other parts of the councils services (i.e. illegal dumping/community parks and facilities etc).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We support this, but question how this would affect business districts.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support this, but question how this would affect business districts.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support this in theory, but taken together with the proposed Auckland Council 2024-2034 long term plan budgets, this provides a costly picture for businesses (who are also ratepayers, possibly twice- i.e. as a property owner, and then indirectly as a business owner in a BID area).

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We fully support initiatives that will directly address litter and illegal dumping. However, we argue that with the proposal to decrease kerbside rubbish collection to fortnightly, without a clear plan in place to deal with and enforcement penalties to litter and illegal dumping, we are not confident that this will save costs or help communities in the long run.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

As a business district that has struggled with illegal dumping quite badly in the past, and continue to work closely with council's NO DUMP to resolve issues of illegal dumping within our district, we are very concerned of the practical effects of reducing kerbside collection to fortnightly. We are also very concerned that this WMMP does not directly include or expound on the effects and implications for businesses and business districts.

#2402

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to solves the garden waste problem. Unfortunately one private company (Waste Management) has slowly been eliminating the competition, and now has a monopoly. As a result, people are putting garden waste into ordinary rubbish. The Council has a duty to break this cycle.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The introduction the food scraps bins has remarkably reduced our general rubbish volume. The food scrap[bins should possibly be a little bigger? Also, well done to the comms team for the rollout of the food scraps system - you did a fantastic job!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Not enough enforcement/penalties being done - a lot of small developers are using private rubbish bins, or Council bins to hide their construction waste. Make enforcement a priority,

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The food waste bins have massively reduced our general rubbish. Well done! Keep going.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We also need Tetra Pak recycling allowed. It is ridiculous that Tetra Paks are being unfairly treated, when they are less of an environmental problems than plastic bottles.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A lot of the new residents to Auckland treat our city poorly. And young people need better education. We need more community working bees, cleanup days, preferably led by local body politicians.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why:

Organisation (if applicable): Waiheke Resources Trust

Local Board: Waiheke

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: WRT fully supports the Zero Waste Networks (ZWN) submission on the direction of the WMMP

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We support the Zero Waste Networks (ZWN)submission response to this question

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We fully support the Zero Waste Networks (ZWN) submission on this question

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: WRT does not support Waste to Energy incineration as a solution. This should not be supported within or outside of the region. Tāmaki Makaurau waste should not be transported anywhere for incineration.

Also no further expansion of the anaerobic digestion scheme should be considered. Instead looking at localised solutions that already exist and supporting the scaling of these initiatives to meet their communities needs alongside the goals of the WMMP.

Page 50 Extending our food scraps collections

Change the second sentence to say

This includes exploring options for community-led local scale food scraps solutions with multiple benefits including strengthening community partnerships and regenerating the soil.

12.13 Energy from waste

Include an additional principal - Localised organic materials processing are priortised.

4. Focus on five priority waste streams (Organis, plastics, packaging, textiles, biosoilds).

4.2 B - Inckude Tāmaki Makaurau Composters Network within the list of providers

4.3 Chang last sentence in "Council will" column to This includes looking into barriers linked to regulatory frameworks and identifying expertise and scalability of community initiatives.

8.3 Include in the Urban areas paragraph - Support community gardens, compost hubs, maara kai and urban farms that have been impacted by the food scraps collections.

We Fully support the inclusion of community-led composting or processing solutions within the city centre. Please include in the title City centre, Multi unit dwellings and areas outside of the curbside collection areas including rural and Hauraki Gulf Island areas.

8.6 Include explore options for community-led localised food scraps collections.

Second paragraph change to Continue to work with property owners, body corporates, the waste industry and community and non government organisations.

12 Partner with others to achieve a Zero Waste Auckland built on a circular economy

12.3 Include...waste reduction and processing initiatives including on-site composting and addressing litter.

Other Actions Linked to plan

A3 To be able to quantify the contributions of community composting in the region to the Auckland Council goal Include in list of indicators amount of organic material composted.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We fully support ZWN submission to this question

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We fully support ZWN submission to this question

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Hauraki Gulf Island

We support the direction of the Hauraki Gulf Island Waste plan especially with the importance indicated towards community-led solutions for on island food scraps collection and processing.

We have the following suggestions

Waiheke

7.5 Waste goals and actions

Goal 1

Community will

Charge bullet point one to say

Work together with council and mana whenua on a process to design a community-led, on-island solution for domestic food scraps.

In the key actions sections for Auckland Council, bullet point two change to

Continue to resource and fund local community...

Goal 3

Community Action

Bullet point one change to

...such as ops shops and reusable serveware projects such as Good to Go.

Council actions

Include bullet point

Continue to support the establishment and function of a HGI network at share resources and knowledge and identify opportunities for improvement of waste management processes.

Include a new bullet point with regards to zero waste events

Community will

Continue to work with food vendors and event organisers to delivery zero waste events on Waiheke, and explore solutions to single use serve-ware through a reusables systems and wash station set up.

Council will

Continue to support on island events to be zero waste through providing resources and funding for the development of an events reusable serveware and wash station scheme.

Rakino

8.3 Waste Goals and actions for Rakino

Goal 5

Include in Council actions

Support representatives to attend HGI network hui.

Kawau

9.3 Waste goals and actions for Kawau

Goal 3 include in council actions

Support representatives to attend HGI network hui.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It would be great to see the encouragement of a circular economy that not only keep resources in circulation, but that creates an ecosystem that is sustainable and economically viable.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I support the food scraps bins (even if the bins are flimsy in wild weather), but I do not support the reduction of kerbside rubbish collection being fortnightly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Instead of focusing on reduction of waste why cant we just get better at sorting it so it can be reused.

It seems that the whole focus is to get the problem solved by the end user instead of developing infrastructure that can fix the issue.

For example we are never going to find a solution to plastic used to package chicken, this is contaminated and has to go to landfill, which is increasingly expensive due to the landfill levy. A solution for this example would be some kind of waste 2 energy solution.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: for individual households this is fine. For apartments and multi unit dwellings this wont work as their are other factors at play such as common rubbish areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why: The idea is right but the methodology is wrong.

Again the proposed solution is for the end user to fix the issue, for example with textiles it appears we want to stop people buying clothes, why cant we let people buy more clothes and engage in "fast fashion" and for the regions infrastructure to develop ways to reuse the discarded clothing.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: it does not shift the cost to the producers

it shifts the cost to the user as the costs will be passed on.

This is another example of not wanting to put the right infrastructure in place and trying to find a way to get the consumer to fix the problem

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft plan for 2022 / 2023 talked about standardizing the ability for multi unit dwellings to opt out of the refuse targeted rate.

When this was implemented what has actually happened is Auckland Council have made it more difficult to opt out of paying for the council service, even when the council service is inferior to the service being provided by private contractors.

The proposal was to allow multi unit dwellings to opt out of the council service and rates charge "if council cannot provide a suitable service"

The issue is that the council alone determine what is a satisfactory service, even when it is very clear that the council service is not of the same standard as being provided by the private contractor and would not be deemed as "suitable" by any impartial person.

The old Auckland Council region has for many years had an effective opt out process for multi unit dwellings with 10 or more units, it would appear that standardizing on this model would have been far more suitable for all ratepayers affected.

It appears that the sole motivation behind the change was to increase rateable revenue for the council regardless of the suitability of the service being imposed.

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: More could be done for the compulsory re-cycling of timber from demolition sites. Quality timber framing and flooring materials from houses built 100 years ago are being crushed and sent to landfill. Firms should be required to de-construct and make timber available for re-use.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Urgent priority. Action needed now.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The old curb-side inorganic rubbish collection was a better idea. Lots of recycling occurred through people picking up items from the curb. The small problem causes by mess, and bad behaviour from minority of collectors was not sufficient to change the system.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Households being more efficient at recycling but businesses being far more accountable as they are the largest contributors and we never hear about that

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: since the foodscraps were introduced i only put my bin out once a fortnight. As long as families can opt for a larger size bin i like the idea

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Essential businesses need to be responsible for their waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I don't believe the council still has (or perhaps ever had) the consent of the governed regarding its "Zero Waste" utopian vision from 2014, as outlined in the draft WMMP document. Families and households are currently struggling to make ends meet, and the council seems to be suggesting they should be making the time to learn skills such as repairing appliances and mending clothing, jarring and bottling food etc. It come across as completely out-of-touch with reality. It's another example of the council trying to change how people live rather than serving how they actually live, much like Auckland Transport is infamous for, as rightly pointed out by our Mayor.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No reduction in core services should be happening while we still have wasteful, unnecessary spending of ratepayers money on vanity projects, pointless marketing, bike lanes which are only used by a wealthy and vocal minority, and "traffic calming" measures designed (apparently) to irritate and slow Aucklanders down. I voted for the Mayor to cut down wasteful spending NOT core services that are actually useful. I expect him and the council to stick to their word.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Green waste drop-off at local dumps is no longer subsidised when apparently it was in the past. This should be reimplemented to incentivise proper disposal of green waste at a place it can be properly composted. Instead people are being charged about $70 to take and manually unload a trailer of green waste at the local dump. This simply encourages people to dump it illegally.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Forcing companies and businesses to implement schemes as this will merely increase end costs to customers, i.e. the ratepayers, which are already struggling with a cost of living crisis. Perhaps such schemes can be revisited when NZ is out of recession and Auckland council has paid off it's enormous debt? Until then I cannot support passing on even more costs to households.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The first step to not promote increased illegal dumping is to not remove bins from public places, and not reduce landfill collection. Doing these things and then spending ratepayers money on increased enforcement when the litter will inevitably increase seems inefficient and ineffective.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: While it is supported in general the influence that Council has on the goods that end up as waste is limited. This needs to come from government who will need to regulate to obtain permanent action.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: This will require a lot of education and marketing to limit waste that could otherwise be diverted accumulating on residential properties.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Support but the actions that support this are weak and appear to be lacking funding. This has to be a building industry requirement to minimise waste and also incorporated into design.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Treating biosolids will be problematic and require a lot of investment plus difficult consenting pathways. It may require special government attention on the consenting front.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The return facilities would have to be accessible and easy to maintain and allow for collection vehicles to pick up the materials recovered.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: While instant fines will help there has to be enforcement resources and you have to catch people littering. Might not be that effective unless the culprits can be tracked. Better to educate certain sectors of the population that they are paying for their lack of responsibility.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Pass the change to the Unitary Plan to provide space for waste separation in new buildings. Also update the building code to have separation designed into internal spaces in new residential dwellings.

Require construction sites to have waste minimisation plans as part of building consent checks.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Need to ensure that residential developers are monitored - too many are dumping paint and concrete down storm water drains

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Aotearoa Plastic Pollution Alliance

Local Board: Outside Auckland

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The Aotearoa Plastic Pollution Alliance (APPA) strongly supports the direction to focus on the top of the waste hierarchy. However, we were expecting to see more direction on the very top of the hierarchy, ie Reduce, Rethink and Redesign (Option 1). The draft waste strategy has a lot of direction for Reuse, Repair and Repurpose (Option 2), but defers to Central Government for the Option 1 approach. By addressing Option 1, the solutions then flow downward to the rest of the waste hierarchy. Options 2 to 5 are important for keeping materials circulating, but of course this is kicking the can down the road. If the kitchen sink is overflowing, what use is it getting the mop when we should be turning off the tap?

Concerningly, prioritising Options 3-5 (recycling, downcycling and recovering value) is a risky direction for certain materials, such as plastics, and plastic-associated chemicals. The number of plastic-associated chemicals classified as hazardous continues to rise as scientists assess the complexity of plastics and APPA strongly urges Council to base the WMMP on preventative actions and use precautionary principles. Furthermore, Options 3-5 divert attention away from the

invisible costs of waste (illustrated on page 5 of the snapshot) when closed loop circularity is unattainable, the extra costs of recycling, downcycling and recovering value processes and that poor recovery and recycling rates persist in Tāmaki Makaurau, and across the motu.

To focus on Options 1 and 2, we expect to see a dramatic reduction in single use packaging and service ware, short life products, and in products and materials (including additives or components) that cause pollution and harm during their full lifecycle (from resource extraction, production, transportation, use, through to end-of-life).

Hospitality and grocery retailers (particularly supermarkets) are low hanging fruit sectors where such actions could be accelerated. Since people interact with these spaces every day, reducing single use products in these spaces will help normalise reusable and safe alternatives, and shift consumption attitudes and behaviour away from disposability and single use. For example, the Council should mandate or heavily incentivise hospitality venues to cease providing single use coffee cups which are not only an end-of-life waste problem, but a drain on the Earth's resources and produce pollution and harm during their use (recent studies have found single-use cups can release as much as millions of microplastics(1) or trillions of nanoplastic particles per litre into hot liquid(2), along with hazardous substances such as heavy metals(3), with bioplastic liners found to be worse than fossil-based plastic liners(4)).

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We support the shift to fortnightly rubbish collections. We believe that less frequent or smaller rubbish collections will incentivise waste reduction. The communications campaign for the food waste collection has been good. However, these actions need to be balanced with advocacy and incentives that stop waste getting to households in the first place - source reduction, redesign, re-use and right to repair are key to achieving the 2040 goal. We also support Council's continued work to grow the community-led resource recovery network and would encourage these to be spaces and initiatives that support actions higher up the waste hierarchy.

We support Auckland Council offering flexible bin sizes for larger households. We also support cost benefits to be passed on to ratepayers, but it is unclear whether the households that get bigger bins receive the same benefits for their rates. We would support a system whereby households that produce low waste, or no waste at all, are rewarded.

We are concerned that many apartment dwellers, if not all, use private companies to collect their waste. This means the Council and the public do not know what happens to their waste. Lack of transparency and monitoring of private waste companies is a problem that needs to be addressed because we want everyone to get on board and focus on the top of the waste hierarchy. We strongly recommend that Council ensures its waste operator licensing system is robust; it should require reliable and honest reporting from waste companies regarding the volumes and types of waste they collect, how much and what types are recycled and downcycled domestically, how much and what types are exported and whether they are exported to responsible operators overseas.

We share the concern about nappies and medical waste being a large portion of landfill items. Medical waste is an especially challenging problem because medical supplies are so essential. Our concern about nappies is that it disproportionately affects women – it is often women who have to deal with this waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We support mandatory site waste management plans that contain effective targets and are audited. But we think that Council needs to go further and prevent waste at the sourcing stage. The Council should consider sustainable design of materials during the consenting stage and whether consent applicants have designed waste out of the construction process.

Council mandating or, at least, incentivising the use of green building rating tools, such as Green Star and Homestar, is a way to reduce, measure and monitor C&D waste throughout the design, procurement, and construction stages of building projects. We would also like to see an increase

in locations where C&D material can be dropped off/stored and or found for reuse (e.g. integrating with the continued growth of the Resource Recovery Network mentioned elsewhere).

We also support calls to ban the use of expanded polystyrene (EPS) in the construction sector, as this is a pervasive and toxic source of plastic pollution.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: APPA strongly supports the prioritisation of the reduction of plastics (and packaging and textiles containing plastics) waste. Given there is significant overlap in plastics and packaging, we would like to see more clarity around particularly problematic packaging types such as composite packaging that contains plastic components as well as other materials.

However, we urge Council to expand how it addresses and understands the pollution impacts of plastics (and packaging and textiles containing plastics). The polymers that make up plastics, as well as the chemicals (greater than 16,000) used in their production, are continuously accumulating in our environment, and pose risks to human and environmental health. The harms caused by plastics-associated chemicals and microplastics occur from cradle to grave; during the production and transportation of plastics, the use of these products (such as in food packaging), and even as a result of recycling plastics. These harms are not just an end-of-life problem.

Council's WMMP should support the commitments made by New Zealand to end plastic pollution, for example, as a signatory of the ANZPAC Plastics Pact and member of the High Ambition Coalition to End Plastic Pollution. We urge Auckland Council to advocate to Central Government for the implementation of strong measures that address the full life cycle of plastics including plastic production reduction. We also urge Council to incentivise businesses, such as supermarkets, to implement strategies that reduce the single-use plastics they trade, while avoiding their replacement with regrettable or false solutions such as bioplastics.

We understand that it is important to focus on certain types of waste so that Council resources can be apportioned effectively to obtain quicker results. However, we also acknowledge that other types of waste are extremely problematic in that they are key sources microplastic pollution and

plastics-associated chemicals – these include electronics, tyres, products containing synthetic textiles (e.g. furniture and carpets), and a range of other short-lived and single-use products. Therefore we would like to see Auckland Council widen its scope for priority items within a specified timeframe to target these key problematic sources of waste that cause disproportionately high rates of pollution.

As mentioned before, we do not see enough focus on the Reduce, Rethink and Redesign (Option 1) of the waste hierarchy. The language in the Draft Waste Management Strategy heavily focuses on diversion from landfill – this is problematic because diversion includes down-cycling and waste exports to developing countries which we want to avoid.

Instead, we believe that manufacturers and businesses should be heavily involved in shifting their behaviours and business models, as part of this waste management programme. The language of the Draft Waste Management Strategy needs to reflect this by advocating 'source reduction'. This means shifting to:

- plastic-free packaging (including minimising plastic cellotape) and deliveries
- providing product maintenance, servicing and repair
- sharing and product rental business models – e.g. car sharing, libraries of tools/kitchen appliances, sewing machines etc.
- reusable packaging and service ware (e.g. reuse/refill grocery retailers, cup/container loan schemes, mug libraries)
- rewarding bottle and container returns (regardless of whether a CRS is implemented nationally)
- disincentivising procurement of problematic products (e.g. synthetic carpets, single-use packaging)

We believe that business-led shifts to waste reduction will be highly effective in shifting consumer behaviour. At the moment, businesses are not incentivised to opt into these source reduction practices.

With regards to the recent simplifying of kerbside collections (to plastics 1, 2 and 5), the Draft Waste Management Strategy states at page 45 that "These present an opportunity to encourage manufacturers to switch to a type of packaging that can be collected at kerbside…". However, we fail to see how the recent standardisation of kerbside collections actually incentivises businesses to redesign and reduce their packaging. Right now, the only lever available to incentivise businesses seems to be public pressure which takes a lot of effort to foster. Additionally, there are not many, if any, processors taking plastics 5 (PP) in the North Island, which generates the risk of low-quality waste exports to low- and middle- income/developing countries which we do not support (see our response to Qs 2d & 4).

We also want to see Council undertake thorough due diligence on microplastics and chemical contaminants (such as PFAS) in biosolids. Emerging scientific research, including by APPA

members, has found alarming quantities of these contaminants in biosolids which can result in irreversible contamination of the whenua if applied to land.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support the CRS and mandatory product stewardship schemes from a climate justice point of view, because these schemes make the producers pay for pollution, and not consumers and ratepayers. However, we want to see more direct actions such as monitoring producers and having specific, measurable targets for source reduction. This work goes hand in hand with incentivising businesses to adopt the source reduction methods we list in our answer to Question 2C.

There is a risk, however, that product stewardship schemes rely too much on recycling rather than re-use or refill. If return rates of single-use plastic bottles, for example, increase significantly, do we have the infrastructure capacity to process them all? Or does it continue to be shipped offshore to low- and middle-income countries that may have inadequate waste management and recycling infrastructure? If the returned material is plastic, which is chemically complex so tends to be downcycled into a lesser quality (low value) and potentially hazardous material, CRS may lock-in the ongoing (and increasing) production and use of virgin plastics. This would not address the key drivers of plastic pollution.

Nevertheless, with this proviso, we fully support Auckland Council advocating to Central Government to implement the CRS and other product stewardship schemes and are glad to see that Council sees a need for “urgent” implementation. Indeed we would encourage Auckland Council to consider implementing a region-wide CRS regardless of whether or not a scheme is implemented at the national level.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

- Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.
- It works – high return rates, high quality recycling, low litter, proven result in many countries over decades.

- It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

- It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

In addition to its advocacy on CRS and product stewardship, we would like to see Auckland Council advocate that Central Government takes a strong and ambitious position on the Global Plastics Treaty negotiations. A strong Agreement to End Plastic Pollution by all Member States of the United Nations will be critical to begin addressing the root causes of plastic pollution described in other parts of our submission. We would also encourage Auckland Council to advocate for Tāngata Whenua and Indigenous Peoples globally, including our neighbours in Pacific Island States, who have critical expertise and experience (bearing the brunt) on plastic pollution, to play a meaningful role in these negotiations. This includes advocating for the inclusion and protection of Indigenous perspectives and knowledge systems that address plastic pollution and environmental degradation. This is aligned with Council's approach to partnering with Mana Whenua and prioritising te ao Māori in this plan.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support tackling this matter through prevention, education and clean-up campaigns, especially in areas where littering and dumping are recurring problems. This is where the CRS would help greatly, as it helps people see litter as valuable items that can be recovered for monetary value.

We also see value in putting in place convenient and cost-effective methods of collection for problematic items like mattresses, couches, bedframes, tyres and e-waste.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Tell us why:

4. Any other comments

We fully support the Zero Waste Network's submission on this plan. We would like to add the following comments:

Waste exports:

The Draft Waste Management Plan has a serious blind spot in that it does not assume that waste exports, particularly to developing countries, should be avoided. Exporting our waste to developing countries harms the environment and people overseas, because the environmental and resource consent laws in those countries are lax and company practices are not environmentally safe.

Such a blind spot flows on to some problematic assumptions within the Draft Waste Management Plan. First, as mentioned under our answer to Question 2C, diversion from landfill is generally considered a good thing. However, diversion includes waste exports and downcycling which we must avoid. We want the Council to consider the full lifespan of every single waste item, and not just on our shores. Council must make explicit plans to avoid exports of Auckland waste to low- and middle-income countries at all costs.

Second, we note that Action 6.5 proposes Council advocates for a continued increase in the Waste Disposal Levy. While we support this as a tool to disincentivise waste disposal and incentivise resource recovery, it can create perverse incentives for waste companies to export more waste

because it is cheaper than to dispose of waste in NZ landfills. The irony is that hard-to-recycle plastics would be safer kept in a well-managed, sealed NZ landfill, than exported to a poorly managed facility in developing countries where it will leach to the environment. We therefore also urge Council to advocate to Central Government to disincentivise, or better, ban waste exports alongside its advocacy on the Waste Disposal Levy.

Supermarkets:

Supermarkets have a role to play in the implementation of Council's WMMP – much of Auckland's household waste and recycling is purchased at the supermarket, particularly single-use plastic packaging. They have influence in supply chains and must be part of the shift to 'top of the waste hierarchy' solutions that go further than recycling. Instead of 'encouraging' or asking them to 'consider' refill or reuse systems, we would like to see this plan develop proposals to incentivise more ambitious actions to be taken by these powerful players.

Waste-to-Energy Incineration/ Disposal:

We strongly urge Auckland Council to explicitly rule out Waste-to-Energy Incineration as an option for managing Auckland's waste. Recent media around a proposal for a very large incinerator, led by Kaipara District Council, has indicated it would rely on Auckland's waste as a key input.

In APPA's view, incineration is a completely unacceptable option for waste management and disposal. It not only encourages the continual generation of waste and problematic products and materials (which in the case of plastics will continue to cause harm and pollution across their lifecycle), it is also a highly polluting activity in and of itself. A recent report by Eunomia Research and Consulting commissioned by Waikato Regional Council has modelled the likely greenhouse gas emissions from incineration, demonstrating they would far exceed landfill emissions (primarily due to combustion of plastics and other fossil-based materials). Furthermore, the complexity of plastic products (polymers and plastics-associated chemicals) would very likely result in emissions of a wide array of toxic substances into the ash, wastewater and waste gases produced by incinerators, even with the most advanced pollution control techniques. The ash and wastewater byproducts would need to be disposed of in specialised hazardous waste facilities/landfills, meaning that incinerators are not really alternatives to landfills at all but simply shift and amplify the harms of our take, make, dispose linear economy.

For similar reasons, we strongly encourage Council to exclude the support of investment into additional landfilling capacity in the WMMP that would extend beyond the 2040 zero waste goal. Waste disposal capacity must be restricted in order to create proper incentives to treat landfilling, incineration or disposal of any kind as a last resort, in order to achieve zero waste by 2040.

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The WMMP focuses the attention right the way through the lifecycle process, with more thinking around why are we creating, buying or using products that end up in landfill. I think the WMMP will force households, commercial enterprises and 'wasteful industries' such as product manufacturers and construction, to manufacture, use and pack products that don't have a high landfill waste output. That is better for the environment.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I am a big supporter of this and I have been an early adopter of minimising household waste for decades now. I only have a small household though, but often have people to stay. With a small household it is not uncommon for me to only put the bin out every 6 or 8 weeks. But we are very conscious, whenever we buy anything, to consciously look at its packaging and if there's am option with lesser to no landfill output, we'll buy that, even if more expensive. The foodscraps bin has been a game changer. If anything, that bin gets too full and would need weekly pick up (or a bigger bin). But with the foodscraps and recycling bins, the landfill bin collection can easily be extended. I'm looking forward to the day where it is not needed at all, or maybe only quarterly year collections. Council's cost savings should go to stormwater improvements.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The WMMP focuses the attention right the way through the lifecycle process, with more thinking around why are we creating, buying or using products that end up in landfill. I think the WMMP will force product manufacturers and construction companies, to manufacture, use and pack products that don't have a high landfill waste output. The companies will be forced to only use contractors who are implementing the WMMP, so their subcontractors and suppliers will need to innovate their products for compliance to win business. The end effect is better for the environment and supports greenhouse gas reduction in emissions.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Wholeheartedly support the shift in solutions and cost moving to product manufacturers, producers and consumers to be responsible (more responsible) for the waste they create and use, as opposed to shifting that onus onto council and ratepayers to 'find a waste solution'. We need to stop the ambulance at the bottom of the cliff approach.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I suggest that the Auckland Council introduce the concept of "a life cycle approach" to waste management which becomes a guide towards a circular economy. The life cycle approach looks at impacts environmentally from the producer to consumer to whether a product is reused or recycled or disposed of to the landfill. So it covers the upstream and downstream of a product however it also shows where responsibilities lie and so who should take the responsibility for the waste along the life cycle.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Suggest edit out the statement "so you will have more space in your rubbish bin" This could imply more space for other types of waste? See above under Question 2A heading

The options to divert waste are very important. This is an infrastructure issue and so should this be investigated Nationwide - probably through the MfE to provide more options.

Currently the Auckland Council website does not provide many options of to divert other waste. I also think the website is clunky and still the same as years ago. Because there are not many diversion options provided, maybe the website could become more educational in terms or repair and reuse ideas. Options also need to be provided at a local and community level which is currently increasing however to we also need some other options? For example options to recycle lids nationwide.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It is important to use a life cycle approach and for the council to promote:

- organisations and businesses to work together to find upstream solutions which design out C&D waste.
- It important to design infrastructure so that waste at a building and construction site can be sorted without contamination and sent to a site for reuse or recycling

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It is important to use a life cycle approach and for the council to promote:

- businesses to find upstream solutions which design out plastics that cannot be recycled
- council to provide infrastructure for recyclable plastics such as compostable packaging to be recycled
- businesses to find upstream solutions which design out packaging which cannot be recycled and design in packaging which can be reused or recycled
- businesses to find upstream solutions which design out textiles which cannot be recycled and reduce the production of garments. This is a global issue. At a consumer level repair and upcycling, and reduction in purchasing garments.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It is important to increase the volume of recycling of plastics and glass. It can reduce litter. It can help raise money for community projects. The council could promote the

reuse of containers such as glass by collecting them at the resource recovery centres, especially if they become the collection points for the container deposit scheme. The council can educate consumers and producers about the waste hierarchy which can help behaviour change. Along the life cycle of products, producers can design out waste and consumers can reduce, reuse and recycle resulting in great diversion of waste from the landfill.

I support the introduction of the priority products selected for the Product Stewardship schemes and I also agree to advocate for a wider range of products to be declared as priority products, such as textiles and mattresses for all the reasons discussed above in the life cycle approach.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The litter on large building sites in residential areas has increased. There is high risk of pollution of stormwater. There has been an increase in development in Auckland and I think this is a large issue. There appears to be a lack of compliance.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Yes I support this in principle. But I still think that it is a bit of a tall order. You are going have to work hard to get people and companies onside.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There many families in this city that need a weekly collection to dispose of the rubbish that builds up in their homes. We have a choice to use it weekly, fortnightly, monthly, at present. Your agenda to go to a fortnightly collection come 2026, takes away that choice. What you really need to do, is to offer more education and offer more options such as the food scrape bins etc.

Where people going to dispose of their rubbish if you head to reduced collection cycle. There will be more illegal dumping which you won't be able to police, (you can't even stop it at present). Please get real. Zero waste by 2040?? That's like zero deaths on our roads!!

We have been told by the Mayor, for people who next to a water course/stream that runs next to their property, that UT is their responsibility to clear and clean up these areas. This used to be Councils tasks that were handled be a crew who were briefed in the safest way to do this. Where are public now landed with this chore, meant to dispose of this trash? Come on, we need real solutions here. Rubbish isn't going to magically disappear because you want zero waste in 16yrs.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: With a family of two small children, we cannot survive with a fort nightly rubbish collection. Also, it states that the cost saving would be seen in our rates. I find that very hardly believe - when has the Auckland council EVER given back or helped the rate payers. This is just another stunt to make them look “relevant”

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland’s total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don’t know

Tell us why: Seems like it would be more costly & have very little impact

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: With the cost of living already so high, implanting something that would pass the cost onto the produce would mean raising the cost for the consumer.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: How would this be implemented? Who would be checking for spot fines? Who would be dealing with the paperwork?

This seems that it would just end up costing more to an already high rates bill!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support in full the submission by Aotearoa Plastic Pollution Alliance (APPA). I am surprised and concerned that the draft strategy places a lot more focus on Option 2 of the waste hierarchy and not Option 1. Option 1 (Reduce, Rethink and Redesign) should have more action plans attached to it, and not limited to just advocacy to Central Govt. By addressing Option 1, the solutions then flow downward to the rest of the waste hierarchy. Options 2 to 5 are important for keeping materials circulating, but of course this is kicking the can down the road. If the kitchen sink is overflowing, what use is it getting the mop when we should be turning off the tap?

I also believe that prioritising Options 3-5 risks ignoring preventative actions and focus away from Option 1. Options 3-5 involve a lot of carbon emissions, too. I would like to reiterate that we need to focus dramatically reducing single use products.

I support APPA's submission that hospitality and grocery retailers (particularly supermarkets) are low hanging fruit sectors where reducing single-use products could be accelerated. Since people interact with these spaces every day, reducing single use products in these spaces will help

normalise reusable and safe alternatives, and shift consumption attitudes and behaviour away from disposability and single use.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support shifting to fortnightly rubbish collection. My own household produces less than 10L of landfill material every fortnight. This is possible because I recycle everything else and compost. I'd also like to take this opportunity to applaud Council's communications on food waste collections and the new kerbside collection rules. I have seen these comms everywhere, from street posters to social media posts. Well done!

I support Auckland Council offering flexible bin sizes for larger households. I also support cost benefits to be passed on to ratepayers, but it is unclear whether the households that get bigger bins receive the same benefits for their rates. I would support a system whereby households that produce low waste, or no waste at all, are rewarded.

I want to record my strong concern about the lack of transparency with private waste companies in Auckland. Many apartment dwellers, if not all, use private companies to collect their waste. I live in an apartment block and our waste is collected by a private company, and I do not know where the waste goes or whether their processes are environmentally safe. Lack of transparency and monitoring of private waste companies is a big problem that Council needs to address, because everyone needs to get involved - not just people who use Council collections. Therefore I strongly recommend that Council requires reliable and honest reporting from waste companies regarding the volumes and types of waste they collect, how much and what types are recycled and downcycled domestically, how much and what types are exported and whether they are exported to responsible operators overseas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The Council needs to go further and prevent waste at the sourcing stage. The Council should consider sustainable design of materials during the consenting stage and whether consent applicants have designed waste out of the construction process. (Whatever the media calls "red tape" or "green tape" is sometimes necessary, as it comprises the very checks and balances that our democracy depends on!)

I support APPA's submission that Council should mandate or incentivise the use of green building rating tools, such as Green Star and Homestar as a way to reduce, measure and monitor C&D waste throughout the design, procurement, and construction stages of building projects. I also support the call to ban expanded polystyrene (EPS).

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support in full the submission by Aotearoa Plastic Pollution Alliance (APPA).

I urge Council to advocate to Central Government for the implementation of strong measures that address the full life cycle of plastics including plastic production reduction. I also urge Council to incentivise businesses, such as supermarkets, to implement strategies that reduce the single-use plastics they trade, while avoiding their replacement with regrettable or false solutions such as bioplastics.

There is not enough focus on the Reduce, Rethink and Redesign (Option 1) of the waste hierarchy. The language in the Draft Waste Management Strategy heavily focuses on diversion from landfill – this is problematic because diversion includes down-cycling and waste exports to developing countries which we want to avoid. Manufacturers and businesses should be heavily involved in shifting their behaviours and business models, as part of this waste management programme. The language of the Draft Waste Management Strategy needs to reflect this by advocating 'source reduction'.

I believe that business-led shifts to waste reduction will be highly effective in shifting consumer behaviour. At the moment, businesses are not incentivised to opt into these source reduction practices.

With regards to the recent simplifying of kerbside collections (to plastics 1, 2 and 5), the Draft Waste Management Strategy states at page 45 that "These present an opportunity to encourage manufacturers to switch to a type of packaging that can be collected at kerbside…". However, I fail to see how the recent standardisation of kerbside collections actually incentivises businesses to redesign and reduce their packaging. Right now, the only lever available to incentivise businesses seems to be public pressure which takes a lot of effort to foster.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support in full the submission by Aotearoa Plastic Pollution Alliance (APPA).

I support the CRS and mandatory product stewardship schemes from a climate justice point of view, because these schemes make the producers pay for pollution, and not consumers and ratepayers. There is a risk, however, that product stewardship schemes rely too much on recycling rather than re-use or refill. If return rates of single-use plastic bottles, for example, increase significantly, do we have the infrastructure capacity to process them all? Or does it continue to be shipped offshore to low- and middle-income countries that may have inadequate waste management and recycling infrastructure?

I support Auckland Council's view that this matter is "urgent". It is low hanging fruit that could be implemented immediately. We are one of the last OECD countries to adopt a CRS. It is a shame that relentless lobbying is to blame for the CRS not taking off: see https://businessdesk.co.nz/article/environment/relentless-lobbying-delayed-recycling-policy

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support tackling this matter through education and clean-up campaigns, especially in areas where littering and dumping are recurring problems. APPA makes a good suggestion that there is "value in putting in place convenient and cost-effective methods of collection for problematic items like mattresses, couches, bedframes, tyres and e-waste."

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I support in full the submission by Aotearoa Plastic Pollution Alliance (APPA).

The Draft Waste Management Plan has a serious blind spot in that it does not assume that waste exports, particularly to developing countries, should be avoided. Exporting our waste to developing countries harms the environment and people overseas, because the environmental and resource consent laws in those countries are lax and company practices are not environmentally safe.

Such a blind spot flows on to some problematic assumptions within the Draft Waste Management Plan. For eg, the assumption that any diversion from landfill is a good thing, when diversion includes waste exports and downcycling - which are not meaningful solutions.

Second example. Action 6.5 proposes Council advocates for a continued increase in the Waste Disposal Levy. While this may disincentivise waste disposal and incentivise resource recovery, it can create perverse incentives for waste companies to export more waste because it is cheaper than to dispose of waste in NZ landfills. The irony is that hard-to-recycle plastics would be safer kept in a well-managed, sealed NZ landfill, than exported to a poorly managed facility in developing countries where it will leach to the environment.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Amazing proposal that takes place and kaupapa to the heart of its project. Good to see land and sea considered in the plan as well as out first nation people and their practices being respected.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Targeting food waste is a great idea to reduce landfill and its associated emissions. Large percentages of domestic waste is organic matter. Creating an accessible composting network within our centres will greatly reduce the necessity for weekly collections of landfill

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Such an interesting area full of resources that get wasted every day. Not only are we talking about a sector that is high in waste consumption but there is very good evidence to support the separation of this waste and create resources as well as recycling. Lets re use this material and make it accessible for the companies to do this separation on site!!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These areas make up huge percentages of the national waste in landfill and there is better pathways than ever to pursue to reduce and separate them from the landfill stream.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We must make product stewardship programs a priority in this country if we want to see bigger differences to the commercial sectors waste sum.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Local solutions such as supporting communities with good waste infrastructure such as Community Recycling Centres, perhaps even supporting members of the public to donate to the CRC's around the region.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments
