Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: David Li

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Because its betterment for Auckland

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Because its betterment for Auckland

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Because the future is now.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

AKL Public transport anywhere but the CBD is not fit for purpose - and walking in AKL these days is not a good options for single women, elderly or anyone who is not looking for trouble.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

800m is a long way for people with disabilities, single females or children - and Auckland is not getting any safer for walkers given the increase in scooters on the footpaths, assaults, beggers etc

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

800m is a long way for people with disabilities, single females or children - and Auckland is not getting any safer for walkers given the increase in scooters on the footpaths, assaults, beggers etc

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

to be truthful I don't rate anywhere in Auckland other than the CBD as having high accessibility.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

keep business and residential separate - nothing worse than being woken up at 5am by businesses opening, having residential streets clogged during the day by business vehicles. These 2 areas should be separate to ensure people have a quality life at home

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The majority of Auckland has Infrastructure constraints - be it wastewater, stormwater, electricity, gas, public transport access and parking.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Allow 5km for scooters and bikes.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Allow 5km for scooters and bikes.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Allow 5km for scooters and bikes.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Allow 5km for scooters and bikes.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

But I only support this under the condition that it is well designed. What is being proposed here is ill designed shortsighted housing which will turn into slums. If the government was serious about fixing the housing problem me they wouldn't take away design protections, rather they'd put more money into well designed developments that didn't spring up in isolation. This is political point scoring and Aucklanders will suffer from the consequences of terribly designed housing for years. Housing is not just something that can be slapped up and changed at will. It needs to be considered well designed solutions with proper amenities and green spaces. I see the maps so called 'community green spaces' and know in practice they are anything but.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

There is not the infrastructure required, especially in the outer metropolitan centres. Yes people should live walking distance to their communities, but as I said above, taking away design protection and shoving housing together with no regard for light, high to boundary ratio and outdoor area is shockingly bad planning for a long term future.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Let's look at millwater and silverdale, housing sprung up along the motorway. There is no community. It all relies on cars. These are monoclad housing mistakes of the future. And taking away protection just makes it worse.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

There is no design behind this that shows anyone that this will work. It's all slap dash housing designed to make developers money to that doesn't improve communities.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

See above. Just chucking up housing in heritage communities for example with no design requirements does not make to happy communities. It is beyond belief why the government thinks this is the way to go. Is there anywhere overseas this has been successfully done? Why are we not proud of our city and care enough to put design guidelines in place to strengthen the housing stock? Why it is focused so throughly on banging up housing at any cost: because the cost will be significant. And it will be to Aucklanders.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Please protect them: once they are gone they are gone. We have cared so hard and so fully about dedicating our planning laws to protect our natural views to volcanos for example. Is that all going to be thrown out? This is surely against mana whenuas values.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There are not enough neighbourhoods identified in this map.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Wastewater issues is a huge issue. If this is not included we'll have contaminated water and won't be able to swim in our ocean. Beaches will be ruined and life in Auckland will yet again get worse for Aucklanders. And for what? Slum housing where no one will want to live.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Yes please include the above. How can the government just casually get rid of something so fundamental to our identity as Aucklanders.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

The proposal is too broad and simplistic. It wouldn't take much effort to assess those areas and apply a more accurate and appropriate distance based on context - it could be nearer or farther.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

The proposal is too broad and simplistic. It wouldn't take much effort to assess those areas and apply a more accurate and appropriate distance based on context - it could be nearer or farther. Overlays and strategic planning frameworks could be adopted that plan and programme density in a more sustainable manner.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

The proposal is too broad and simplistic. It wouldn't take much effort to assess those areas and apply a more accurate and appropriate distance based on context - it could be nearer or farther. Overlays and strategic planning frameworks could be adopted that plan and programme density in a more sustainable manner.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

The proposal is too broad and simplistic. It wouldn't take much effort to assess those areas and apply a more accurate and appropriate distance based on context - it could be nearer or farther. Overlays and strategic planning frameworks could be adopted that plan and programme density in a more sustainable manner.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

The proposal is too broad and simplistic. It wouldn't take much effort to assess those areas and apply a more accurate and appropriate distance based on context - it could be nearer or farther. Overlays and strategic planning frameworks could be adopted that plan and programme density in a more sustainable manner.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more)

within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Auckland many not have the oldest suburbs in the world, but many Aucklanders know them intimately and their rich urban fabric represents significant personal and civic investment over generations. Tangata Whenua place high status on land where certain events or cultural traditions took place.. but what can Pakeha do? These suburbs are part of our legacy as pioneers, settlers and city-builders. If we lose them, then we lose Auckland's heart. Certain suburbs of highest value should be preserved. Suburbs with moderate heritage values (and high amenity values) should be able to intensify, but only if the new development integrate well with the character of the suburb. At a bare minimum, the application of Design Standards (e.g. form based codes) must require any new development to integrate well with the character of the existing suburb.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Very few areas have any protection for character - this is a mistake. There need to be tiers eg Tier 1 (Devonport) and Tier 2 (Northcote Point) so that standards can be written for each type of location- stricter standards in Tier 1, but looser in Tier 2 (more intensification possible in Tier 2, but with aesthetic standards applied).

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Mainstreet and Centre Strategies should form the basis for upzoning of centres. Far higher densities and taller buildings are desirable within Centres but our current zoning and approach is not working - it currently results in mid-rise and vehicle-dominated development with lowish amenity values. We need to update our Centre Zones and support them with programs of urban regeneration.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I support approach including this until a future time, when infrastructure can be coordinated with intensification. We should not have to plan for 5 million pop. capacity in 2022... Growth could and should be rolled out in a more strategic manner.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

ALL overlays were well considered when they were drafted, and should be included as Qualifying Matters.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

It seems less than ideal to be changing this, many people paid a premium to be in a special character area, they have paid for and maintained resource consents to make alterations in these areas. To change this with a stroke of a pen does not seem well thought out.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Oversimplification. You need to look at this area by area unless you protect heritage areas with special character overlays. In the absence of heritage protections I would not support blanket intensifications.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Oversimplification. You need to look at this area by area unless you protect heritage areas with special character overlays. In the absence of heritage protections I would not support blanket intensifications.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Oversimplification. You need to look at this area by area unless you protect heritage areas with special character overlays. In the absence of heritage protections I would not support blanket intensifications.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Oversimplification. You need to look at this area by area unless you protect heritage areas with special character overlays. In the absence of heritage protections I would not support blanket intensifications.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Oversimplification. You need to look at this area by area unless you protect heritage areas with special character overlays. In the absence of heritage protections I would not support blanket intensifications.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

You spent a lot of time and energy identifying SCAs during the development of the unitary plan. Madness to redo it again! Stick with what you've got.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I live on Birkenhead Point. It's a special part of Auckland's heritage. Your plan will decimate its character, all because it's convenient for the shops and buses! Some common sense is required to distinguish such special character areas from normal suburban / urban fringe areas

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Can't find them on your map legend so no idea what they are.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Sounds like a good idea. Here's an even better one - stick with what you've got.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

sufficient distance to make it work and not intefere too much with city centre itself

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

metropolitan centres are already under strain with insufficent infra structure to maintain an already over burdoned system

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

each case would need specific examination as to feasibilty etc

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

infra structure already under strain without adding more housing....areas like Glenfield already 'BURSTING ST THE SEAMS' public transport also inadequate to service such expansion

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

depends on each individual location

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

if its already exists why change

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

the map is not detailed enough to allow a proper answer

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

again insufficient info..hard to guage from this map etc

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

obviously of vital importance...no infrastructure then problems galore and cost of mplimenattion exorbitant to auckland rate payers

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

what little is left of historic buildings in city centre need to be protected before its all gone west and replaced by ugly modernism

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

With the easy availability of e-scooters, the idea that people will only walk to the city, and will only be prepared to travel 1200m will rapidly become outdated. A wider catchment area that accounts for micro-mobility solutions and encourages walking as an option will provide greater benefit to the city and its residents.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

With the easy availability of e-scooters, the idea that people will only walk to the city, and will only be prepared to travel 800m will rapidly become outdated. A wider catchment area that accounts for micro-mobility solutions and encourages walking as an option will provide greater benefit to the city and its residents.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

With the easy availability of e-scooters, the idea that people will only walk to a station, and will only be prepared to travel 800m will rapidly become outdated. A wider catchment area that accounts for micro-mobility solutions and encourages walking as an option will provide greater benefit to the city and its residents.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

People can easily and quickly travel further than 400m to access nearby services.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

People can easily and quickly travel further than 200m to access nearby services.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Many of Auckland's older suburbs have the best access to alternative transport options and to remove these areas from intensification efforts defeats the purpose of the NPS-UD. There is very little special character about many of the buildings in these areas, and replacing old, leaky and poorly insulated single-dwelling houses with buildings that make the best use of the space will benefit all Aucklanders.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Making the most accessible areas of the city only available to single dwellings defeats the entire purpose of the NPS-UD and does nothing to improve Auckland's transport and housing issues.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

To address Auckland's transport issues businesses where people work and shop need to be located closer to where people live.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Decisions on infrastructure suitability should be addressed on a case-by-case basis, and should not be an overarching prohibition on intensifications.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

These are reasonable Qualifying Matters to ensure that intensification is balanced with livability.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

That seems like a reasonable distance, assuming it's measured in a radius rather than actual distance walked through roads etc

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

I think it should match the catchment for city Centre at 1200m

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

I think it should match the city centre catchment at 1200m

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Areas up to 400m is probably adequate for now but these areas will continue to grow, so why not add the ability for a greater area of density to prepare for growth.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Small Town centres could become larger town centres as Auckland as a city grows, having a larger area under the proposal would allow for a greater number of people to live in growing areas.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

It would be sad to see these areas go, but even sadder to deny higher density housing in areas where it is most needed to defend the "character values of these areas".

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

It would be sad to see these areas go, but even sadder to deny higher density housing in areas where it is most needed to defend the "character values of these areas".

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

If this is an ongoing issue with infrastructure wouldn't the correct answer be to fix it for future generations rather than leaving it alone to become worse and not allowing higher density developments to prolong the failing infrastructures life.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

it's so very important but needs to be safe

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

easier to catch rides

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

whatever we do it's unavoidable as you have to drive from waikatoto work in auckland and from up north none wants to stay away from home

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

convenience. you're not willing to get rid of large busses. and run trains all over it's a needs must

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

look you can only preserve a few. it's ridiculous to expect every old building to be kept. use facades on modern buildings so you're preserving some history

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

look we need volcanic and earthquake proof buildings you've killed the land anyway.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

look when you start this our infrastructure is going to be needing rebuild goodbye old power lines broken sewerage systems to small for what you're wanting to do get rid of the port while you're at it

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

look my whole family are auckland born it's our town as I said why preserve whole old buildings just use facades on modern buildings in relation to past histories.

Tell us why

No one wants intensification

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

No one wants intensification

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

No one wants intensification. Leave things alone and stop loading Auckland with more people.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I have concerns about the chance of heritage status for some housing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

I have concerns about the chance of heritage status for some housing

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

I have concerns about the chance of heritage status for some housing

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I have concerns about the chance of heritage status for some housing

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

heritage and care of buildings of interest is important. Auckland needs to learn from mistakes made in the past where buildings have been destroyed

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

i found it impossible to understand from the map

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

i found it impossible to understand from the map

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

Intensification of housing = more people.

the idea that using public transport to accommodate these people's transport needs is pitiful.

1. 70% of people use cars.

2. the Whole concept only has 30% support of existing public transport.

3. Auckland roading infrastructure is a (you cannot even put it into words its that woefully), yet 70% of the intensification will be loaded into that already overcapacity network.

makes absolutely no sense other than to boos the government statistics for available housing that they cannot achieve themsleves.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

Makes no difference on a minority of the people use PUBLIC TRANSPORT

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Makes no difference on a minority of the people use PUBLIC TRANSPORT

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

As above your forcing more people into a city that cannot even handle the mount it already has. get the infrastructure right first then maybe.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

As above your forcing more people into a city that cannot even handle the mount it already has. get the infrastructure right first then maybe.

Qualifying matters

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

People are very able to walk further. This would reduce the need for more cars.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

People are very able to walk further. This would reduce the need for more cars.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

People are very able to walk further. This would reduce the need for more cars.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

People are very able to walk further. This would reduce the need for more cars.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

People are very able to walk further. This would reduce the need for more cars.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Affordable housing for people is incredibly more important than old looking buildings that make people 'feel' good.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Affordable housing for people is incredibly more important than old looking buildings that make people 'feel' good.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Affordable housing for people is incredibly more important than old looking buildings that make people 'feel' good.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Don't want a concrete jungle in the suburbs

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Too intensified

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Must protect special historical areas. Once they're gone, we can't get the heritage back

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Name: Meeree Berghmans

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I think that's good distance

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

sounds fair

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

good distance

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

with the city growing, it's a reasonable distance

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Yes, especially considering it's main city centre area

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

Tell us why

I think I need to some more research

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

I can't see the map

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Everywhere needs to be comfortable for people to live in thus developments are needed

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

No

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is important to retain special character ares to prevent the city becoming "sterile"

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

It is important to retain special character ares to prevent the city becoming "sterile"

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

The selection seems ok in general

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Council needs to allow for future growth

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Significant Ecological Areas must be retained, otherwise areas of native bush and trees could be removed, which will not help to limit the effects of climate change.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

given density of non residential areas around stations, a 15 minute walk is reasonable, especially as CBD residents tend to be a younger age group

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

in non CBD metro areas the density is lower and the age demographic higher than CBD

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

same as above -in non CBD metro areas the density is lower and the age demographic higher than CBD

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

increasing population of younger demographic in CBD areas so the proposal is reasonable. It could be higher, but not lower to be useful

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

increasing populations in these zones have to go up or out: up means better use of the land

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Keeping older buildings for the sake of age only means you can never build up - only out. Given we are not making more land, up seems a better option. Keeping some bot not all such buildings seems a reasonable compromise

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

ditto -Keeping older buildings for the sake of age only means you can never build up - only out. Given we are not making more land, up seems a better option. Keeping some bot not all such buildings seems a reasonable compromise

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

business 'character' is usually less objectively of intrinsic value to keep

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

lack of existing infrastructure capacity to serve increased population density is a serious existing problem. Where it can be upgraded at reasonable cost it must be, but if a yet to be determined too high a price is required then intensification will make serious future problems that cannot be

reasonably addressed but would then need to be done whatever the cost if we want to stay a clean green place to live

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

As long as these constraints are not too severe this seems reasonable: if too limiting then there will be few areas that can be intensified

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

The Map viewer didn't have any Colours - red or blue

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

You need to "get real" and realize the need to improve and replace/maintain infrastructure. For too long infrastructure has been neglected. More people/housing means more infrastructure is needed; it seems it is often assumed it will be ok, but it isn't. Also remember that much of NZ's infrastructure is due for full replacement as it is past its designed use date. Need to stop having big surprises at infrastructure problems as it is pretty predictable and expected. This needs more attention, and before it becomes an issue. No 8 wire approaches will not do, and even No 8 wire wears out.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I do not support. Each area has its own specific and different aspects to the landscape and it's community. A blanket rule for intensification will destroy coastal areas and outlooks just for the luxury of packing in more people living close to the city and transport. This will put even more pressures on local schools to accommodate a growing school role, which would need to expand and lose valuable outdoor areas. There is no more land in these areas for schools to expand.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Allowing sunlight into peoples personal homes. This hasn't been taken into consideration in this plan, only council spaces. Also extra noise pollution from more people, more cars, more transport. This effects mental health as well as bird life in the area.

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I know your survey is only asking about the zoning and intensification, which I support, but I am concerned about the quality and design of the intensified buildings. There are already some hideous townhouses around Auckland, and some shocking traffic / parking issues as a result. I would support greater intensification if there were a vision to do so in a thoughtful and sustainable way - ie not just three cheap little townhouses on a suburban section but actual intensification with beautiful buildings and streets as a result - think Haussmann!

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Living in an area where 3 storey, 3 properties plus are going up, I fail to see where the parking options and congestion easing will come from. People will build for the sake of profit and manipulate guidelines as soon as they are set. How do you plan to stop congested, fully-packed streets? Coming from the UK, the road are constantly full and no public transports comes through. You need to concentrate on this factor in unison or doubled-up.

Important privacy information

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I don't agree with the mindless population increases. The country needs to decide what is a sensible population and plan for it, not mindless growth, driven by capitalist greed, whcih politicians funded by business go along with. We need to be serious about the environment, and that means the population.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

The new builds are absolutely horrible. It will destroy all the heritage areas and beauty of old buildings with crapy new housing. I have only seen a handful of new builds that look decent. The rest will be an eyesore in the next 10 years.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The new builds are horrendous and will kill the character of the area

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

We have to remember that there's no "average" person. There's elderly or those with accessibility needs issues. There's people carrying extra weight whether themselves or items. There's a TON of hills in auckland. Weather also affects. Where possible, would like to see the decision to walk be made easier than giving up and driving a car.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Same thoughts. Under 1km seems better

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

We have to remember that there's no "average" person. There's elderly or those with accessibility needs issues. There's people carrying extra weight whether themselves or items. There's a TON of hills in auckland. Weather also affects. Where possible, would like to see the decision to walk be made easier than giving up and driving a car.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

200m seems more reasonable for smaller town centres like around Glenfield Mall but any further out is heavy residential that is already overflowing with cars along sides that couldn't handle many more

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I think this only bc I was recently paying attention to older buildings in the city and suburbs and thinking, wow, yes these are old buildings, but they're just standing here in ruin? They look totally abandoned or run down from the broken glass I can see in (where not boarded up). Yes was historic but taking up valuable space that could otherwise be homes for people of all needs if that land was free.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I can't really tell what is in blue or red from this map as there's heaps of colours.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I can't really tell what is in blue or red from this map as there's heaps of colours.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

100% yes. This is specifically what I came to this survey to voice on bc just bc more people can fit in taller buildings in some areas, it does not mean the roads, sidewalks, parking, rubbish, etc are sufficient to hold more density. I think this is the most crucial matter about changes in height and density zoning .

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I am happy to see these qualifying matters for things like sunlight into key areas so doesn't become like dead tree and dark NYC streets in the city centre. Don't want the uniqueness of Auckland's panoramic views to be hurt by thoughtless buildings. Domains and culturally important places like museums and Parks need to be preserved

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

If look take a centre like Takapuna - 1200 metres extends high intensity housing through to Hauraki Corner (an area that has narrow roads and is already under considerable traffic strain)

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

What a nightmare...people who have chosen to buy close to these areas often did so due to age, mobility accessibility issues - a planned decision. Imagine a ruddy large apartment building next to you, perhaps with no parking - for our AK rate payers this means streets clogged with cars,

views blocked, gardens in shadows, lack of privacy, traffic jams. I think this whole thing is bonkers. Politicians making demands without the support of the people.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I have just seen that terraced housing and apartments can be built in Beach Haven Road...the street heading to the water is narrow, currently cars have to pull over so a bus or other vehicles can get by. This area also has a number of supported houses with residents with mental disabilities. Our community supports each other and the mixed needs of residents. Putting potentially another 1000-2000 people in this space would be like living in Mumbai or Beijing...we will lose our community, support for those who need it, roads will be crowded, jammed...we only have 2 roads out and then have to tackle Onewa Road with its 62 cameras...another dumb arsed government idea re traffic control. I wonder can we with hold rates for idiotic thinking and strategies.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is a great historical loss. Even if people don't live in these areas, they still gravitate to them on weekends or for social events. They hold heritage and significance in the areas we live in. Wiping these architectural historical timelines out to put more people in a location is appalling-once the destruction has happened I suspect as a city we will have regrets for years. History would tell us what a completely poor decision was made.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I am astounded that Northcote Point and Birkenhead Point are mostly red. The 100 year old plus architectural houses considered to now be dispensable due to the fact the government has put its foot on the infrastructure accelerator. It is responsible to expect that whole suburbs like Remuera can't be exonerated from intensification but when important development of an area is showcased in its historical architecture it should be preserved. Devonport for example is a tourism hot spot because of the historical housing...changing this in this instance changes the tourism appeal.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I mentioned in my earlier comments that some areas do not have roads wide enough to sustain intensification - in that the narrow roads do not allow for flow of traffic now and so adding in a 1000 more people/cars will cause major issues. This becomes important when needing to get emergency vehicles to a site...but can't due to parking congestion. The end of Beach Haven Road (sea end) is narrow and presently cars need to pull over to allow another to pass as the road only has the equivalent of one lane with cars parked in the road. Buses already find this challenging.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

Auckland transport doesn't work and more government "fixes" are going to simply cost more and get less done. Make it private so people with skills and ambition can save the mess we are in

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

There is no rapid transport, just transport that promises a lot and delivers the amount that makes people drive their own cars.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

apartments block light and views. Auckland is cold and wet in winter so you are simply creating future slums around these areas.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Should be more.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

a lot more

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

CBD needs to go to the moon. Special character buildings are of little consequence, unless it is a green area in a city block. Building is building in a CBD

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

We need to enable high density as much as practically possible. Current restrictive council zoning has artificially restricted consumer choice and inflated housing prices.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

It should be 1.2km like City Centre. Metropolitan centres are equivalent to or arguably better than the city fringe in terms of amenities.

We need to enable high density as much as practically possible. Current restrictive council zoning has artificially restricted consumer choice and inflated housing prices.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

We need to enable high density as much as practically possible. Current restrictive council zoning has artificially restricted consumer choice and inflated housing prices.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

400m is far too restrictive, at least 1.2km but I would prefer if terrace housing would be allowed everywhere in Auckland.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

200m is far too restrictive, at least 1.2km but I would prefer if terrace housing would be allowed everywhere in Auckland.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

A small portion of the city should be preserved for historic value.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

Significantly too many homes have been identified as a qualifying matter. I would suggest a couple of streets or blocks can be reserved as a qualifying matter per suburb at maximum.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Infrastructure challenges will only become harder and more expensive if delayed. We need to address difficult problems ASAP.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

High density housing shoukd be close and easy access to all amenities, especially as you are elimination many new home parking options

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

High density housing shoukd be close and easy access to all amenities, especially as you are elimination many new home parking options

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

High density housing shoukd be close and easy access to all amenities, especially as you are elimination many new home parking options

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

We need more houses... but dont ruin every street with noisy grotty rental properties, ruining it for hard working homeowners

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

High density housing shoukd be close and easy access to all amenities, especially as you are elimination many new home parking options

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Seriously, you need to ask why we should protect heritage areas, small bush areas etc? Seriously????

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There should be lots of areas all ivrr auckland, protected for proper “family beighbourhoods”…. Not every little street wants a load of townhouses with noisy renters

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Use your common sense!!! For heavens sake, don’t rush it

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Use your common sense. Once you develop a street ir neighbourhood, there is no turning back. Dont be rates-hungry assholes.... Slow down and devlop quickly and thoughtfully

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Northcote point has one road out. It is completely congested today. We need less housing not more. This is a heritage suburb with beauty character and a strong community. A unique suburb inside a large area. Intensifying housing will destroy the community. We also don't have a school big enough to cope with enrolments and our ferry is more out of action than working.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

If an area is identified as suitable for urban intensification then I feel it's up to watercare to ensure that new infrastructure is made available.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

If you allow the removal of sunlight into public areas you're removing it from all visitors and rendering the place useless. People cannot thrive without light and space.

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

Planning constraints on housing should be kept to a bare minimum, protecting areas in the small part of the regions that needs protection and allowing unlimited development in the vast bulk of the region

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Planning constraints on housing should be kept to a bare minimum, protecting areas in the small part of the regions that needs protection and allowing unlimited development in the vast bulk of the region

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Planning constraints on housing should be kept to a bare minimum, protecting areas in the small part of the regions that needs protection and allowing unlimited development in the vast bulk of the region

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Planning constraints on housing should be kept to a bare minimum, protecting areas in the small part of the regions that needs protection and allowing unlimited development in the vast bulk of the region

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Planning constraints on housing should be kept to a bare minimum, protecting areas in the small part of the regions that needs protection and allowing unlimited development in the vast bulk of the region

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

We need to protect the best of our heritage, but allow new housing elsewhere

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. - Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I strongly disagree the increase of population density in Auckland when there should be more land to develop and more space for people to live spaciously and comfortably. People don't need to live in small and packed apartments or terraced housings! Not justified!

And also, without the appropriate infrastructure support, such as roads, schools and public transport, the purposed increase of density will just worsen the problems we're now facing.

I don't support the proposals.

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The proposed intensification will introduce attractants to complement the transport hubs such as shops and community facilities which will, in turn, attract more people and so it makes sense to support this by making the area bigger to start with. The larger the area the more likely that we will see attractive mixed usage.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

See prior comment. [The proposed intensification will introduce attractants to complement the transport hubs such as shops and community facilities which will, in turn, attract more people and so it makes sense to support this by making the area bigger to start with. The larger the area the more likely that we will see attractive mixed usage.]

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

See prior comment. [The proposed intensification will introduce attractants to complement the transport hubs such as shops and community facilities which will, in turn, attract more people and so it makes sense to support this by making the area bigger to start with. The larger the area the more likely that we will see attractive mixed usage.]

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Same comment [The proposed intensification will introduce attractants to complement the transport hubs such as shops and community facilities which will, in turn, attract more people and so it makes sense to support this by making the area bigger to start with. The larger the area the more likely that we will see attractive mixed usage.]

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Same comment [The proposed intensification will introduce attractants to complement the transport hubs such as shops and community facilities which will, in turn, attract more people and so it makes sense to support this by making the area bigger to start with. The larger the area the more likely that we will see attractive mixed usage.]

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The existing character areas are too large.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Lets get on with the intensification.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Many areas of special character are within 1200m from the city centre and stand to be desecrated by the new intensification rules, examples are Freemans bay, St Mary's Bay, Parnell.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

The 6 storey intensification should be limited to those areas immediately around the met centre's/transit locations, as this type of development is undesirable in most residential areas, and the proposed 3 dwelling 3 storey intensification for most other areas is already significant in terms of the loss of space and impact on infrastructure that it will have on the city.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

The 6 storey intensification should be limited to those areas immediately around the met centre's/transit locations, as this type of development is undesirable in most residential areas, and the proposed 3 dwelling 3 storey intensification for most other areas is already significant in terms of the loss of space and impact on infrastructure that it will have on the city.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Special character areas are the essence of what makes Auckland a beautiful city to live in, to visit and to enjoy both from an aesthetic and a lifestyle perspective. Over decades, vast amounts of resources, planning and investment has gone into preserving the aesthetic of Auckland's SCA's for the benefit of all future generations of Aucklanders. The vast majority of this preservation and significant investment of time, money and planning stands to be completely wiped out by proposed site intensification. We are suggesting large swathes of historic and heritage designated dwellings and properties will be subject to demolition and replacement with high density, low cost, low aesthetic type structures, aka modern day slums in many cases. Auckland's SCA's must be preserved and maintained at all costs, or at the very least proposed building activity within the SCA's should remain subject to existing planning, resource consent and heritage assessment criteria.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

1.2KM's is quite a walk especially considering if it is uphill or in bad weather or both. If I lived that far away from a train or busway station I would want to take transport to get there.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Still not near enough to a train or busway station.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Still not near enough to a train or busway station.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Do not have a reason why not.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Do not have a reason to oppose, already happening in my area re Northcote.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Some Character must be retained otherwise the area will be same same and bland.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Some Character must be retained otherwise the area will be same same and bland.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Some Character must be retained otherwise the area will be same same and bland.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

ON the existing Unitary plan. My house has to constraints concerning height and building. 1. There is an identified flight path for the RNAF planes over my house that may prohibit the height of buildings. This does not appear on the NPS_UD map. 2. The area next to my house has been identified as a 'Flood Plane'. Restraints such as these 1 and 2 should be identified on the NPS-UD map. The map Identifies my house location by colour code as a 'suburban' however the information block identifies it as Urban. How can it be Urban In Hillcrest?

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

The proposal of high density housing including buildings of up to six stories next to a single story dwelling appears to have been considered regarding flat land only. Auckland is hilly and lots of dwellings are on slopes. I live on such a location. The house next to me is on higher land and has been raised to two levels. This means that in winter we do not see the sun above the house next door until 10.30 am. If a three story building was placed upon the site replacing the existing dwelling we would not see the sun at all in winter. Our quality of life would be seriously reduced by living in a dark cold house. we would have to have heating on all day, increasing our cost of living considerably. The value of the house would be reduced considerably and could be unsellable. The council needs to seriously consider this aspect of the plan as it could impact on many locations and many existing dwellings.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The impact these terrace houses and apartments are having on the established suburbs is not being taken into consideration, such as no off street parking making the roads difficult to navigate for pedestrians and drivers. The lack of up grades in amenities. The lack of making less of an environmental foot print no gardens, no solar, no household useable water tanks and so on. Blocking out sun light of neighbouring homes and unsympathetic design to the neighbourhood.

Cheap and ugly housing of poor quality being signed off, just because it's near transport is only a small consideration. The lack of respect and the removal of protection for historic areas is also a problem.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

If the area cannot cope with intensification. Then amenities should be upgraded first before more pressure is put on the neighbourhood and it's amenities.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Forced and rushed housing intensification is already having a big impact on Auckland. It is not ascetically pleasing or sympathetic to the local areas. There is no off street parking provided for many of these homes or minimal (1x car park) meaning people are parking on footpaths and blocking up roads. The current model of public transport especially in some areas is not viable for many families. Infrastructure needs to be fixed before more cheap ugly houses are crammed into established neighbourhoods.

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Think of the weather

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

It depends on the area, and on what the increased heights will mean to other residents access to light

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

It depends on the area, and on what the increased heights will mean to other residents access to light

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

And they need to be comprehensive. The history of Auckland is in these areas, and only vandals would throw that away.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

It is pretty obvious, if a street is 80% or so character, then the whole street should be protected. The streetscape is more important to 'livability' than the (subjective) value of individual houses.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

we need to have a nice mixture....

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

too much all around

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

lets keep some older things

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

how are these going to get power and traffic and water.. wow...

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

these sorts of building are not nice... we need more trains and better everything before this happens... its heading for a real mess

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I believe high rise buildings should be nearer the city. It reduces private transport being used and therefore helps our carbon emmission.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Still believe high rise should be nearer the metropolitan centre.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Ideal for commuters

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I would support this however, looking at what is happening on the North Shore, the big problem is car parking. Some streets were never meant to have cars parked on both sides of the road which we are seeing now when a section is sold to a developer and 13 houses are built on the site without parking for more than 1 vehicle. Some families have 3!

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Same comment as above - I would support this however, looking at what is happening on the North Shore, the big problem is car parking. Some streets were never meant to have cars parked on both sides of the road which we are seeing now when a section is sold to a developer and 13 houses are built on the site without parking for more than 1 vehicle. Some families have 3!

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

It would be tragic to see those character areas in Auckland not being able to qualify. The city would just become a hotch potch of "anything goes" .

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Despite using the maps I was not sure that Devonport was regarded as a qualifying area.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I am not familiar with all areas highlighted.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

As the city moves into outlying areas we should definitely be looking hard at infrastructure for the years ahead, planning for, water, sewage, transport - therefore it must become a qualifying matter.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The City Centre is full

Of apartments within and aureounding already. Parking huge issue

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

What is the definition exactly of metropolitan centres, and what improvements to public transport are being made so that this is worthwhile

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

There is NO PARKING, no infrastructure and no decent public transport requiring this high density development

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Major issue is oarking and access to small centre and having more cars in oedestrian areas

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

In Northcote Point majority of Historic houses have NOT been marked as protected in the new plan hence will lose the character of the neighbourhood and lose historic architecture. Not to mention- small narrow roads, no parking, and alot of pedestrians at risk. Traffic is Terrible already with poor access to Onewa Rd, NO SENSE to increase the number of houses in this area

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

On the North Shore there are few Historic zones and these will be utterly wiped out under the proposal. No new infrastructure. Traffic already appalling, and Huge loss of any character Auckland is holding onto will change and ruin these areas.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Majority of Auckland have huge infrastructure issues not to

Mention drought, sewage, clean watwrways for public swimming etc already affected

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Notable tree register should be checked and corrected - a kauri (a notable and magnificent specimen) is indeed on the boundary between 15 and 17 Pluto Place, but the map shows it elsewhere

We are hoping that a correction to the Notable Tree Schedule in the unitary plan would consequently support our wish to have our property (15 Pluto Place) reclassified as within the Single Dwelling Residential Area. Any future subdivision with resulting driveways, concreting and intensive multi-unit dwelling could impact the kauri's roots and not be in keeping with the existing amenity of the area.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Small town centres and local centres do not all have the same interface with surrounding residential areas so a "standard" rule of 200m may be inappropriate in some circumstances as the detrimental impact may be greater than others with a more remote interface. The 200m rule needs adjusting dependant on the particular circumstances relating to each small town centres and local centre's degree of residential interface.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

In the North Shore situation which effects me, there is very little built heritage. the existing areas of Devonport, Northcote Point and Birkenhead Point represent on about 1% of the urban North Shore area. Once the heritage character of these areas is compromised by spot intensification

then the heritage character is gone forever - it cannot be reestablished. Preserve these areas before it is too late.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The qualifying matter areas are generally small but surrounded by areas that are not qualifying and can therefore be the location of out of character intensification. When this occurs next door or across the road from a qualifying matter property (presumably designated as such because of a desirability to preserve its character) it essentially undermines the qualifying matter protection.

With our property (which is in a qualifying matter location) there are essentially non-qualifying matter properties across the road and next door which would destroy the character of the location and make the qualifying matter protection a joke.

In reality the the aim in these areas of creating more intensive affordable housing will not occur - in most cases it will just create a loophole to allow large, out of character, high value homes in desirable areas.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. 3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

You seem hell bent on getting people on buses to the CBD yet you fail to see that our public transport system is terrible and people who drive to work daily do so because they don't work in the CBD and spending 2 hours catching 2 or 3 buses to get to where you need to go is unreasonable. Why intensify around bus stops when people won't use them? The public transport system needs to be made better first before you create an even bigger problem for the next generation.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Special character areas in Auckland need to be protected long term.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

My thoughts agains these changes and why the area needs to be increased to cover most of Northcote Point.

No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc)

Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

The loss of trees/canopy with intensification is important.

The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point.

The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland.

With the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

My thoughts anyway.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Some of these are in residential suburbs

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Keep characte

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Keep view shafts its what makes Auckland special seeing volcanoes etc as you drive around

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Needs to be more nuanced to take account of eg. land contours and the position of the sun. A 6+ storey apartment building at the top of a south-facing slope will block all sunlight from nearby properties further down the slope, rendering them dark and cold and making the installation of solar panels futile. This is contrary to government legislation that promotes 'health homes', as well as stated moves to promote sustainable energy and move towards carbon neutrality.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

It should depend on the character of a town centre

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

It should depend on the character of a town centre

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I live in Northcote Point and agree with many other residents in the suburb so have reused these salient points.

1) No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc). It already takes up to 45 minutes just to enter Onewa Rd from Queen Street during rush hour. This would extend further as there are no current plans to improve the traffic flow out of Northcote Point.

2) Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

3) We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

4) The loss of trees/canopy with intensification is important.

5) The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point. The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland. This directly impacts us. We live at 9 Council Terrace and the character overlay is being lifted in our section of the suburb even though our house has been previously noted as having historical significance for the area and required us to meet stringent resource consent considerations when completing our renovation. This change in plan would impact is should the neighbours behind us sell and developers are able to build up to 3 stories high.

7. Christine Fletcher made an excellent point- with the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Not only is walking good for the carbon footprint it is good for the human doing the walking

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

good for city and individual - less cars hopefully

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

My only issue is parking, people like cars and parking on road makes it very difficult to move - unless you have certain areas that are car free

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I think that is a reasonable distance.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

I think this is reasonable but no further than 400 metres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I don't agree with this as once properties are sold, developers come in and all the buildings built tend to be an eyesore therefore unappealing, a tonne of concrete, on top of one another, no privacy and not catering to families for recreational or to be able to have pets or for the mobility impaired. Not to mention destroying the greenery and the native birds that it supports. There needs to be a mix of buildings to cater for the different life styles, not all pigeon hole living.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

Could not locate these areas on the map to provide a comment.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Same as above, could not locate this area on the map.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

All housing areas should be free for intensification. NIMBY attitudes exist in areas such as Northcote Pt and Birkenhead Pt. Just because your house is expensive doesn't mean it should be retained as an exclusive intensification free zone. All land in the inner city and North Shore suburbs should be up for development regardless of location

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The question is confusing - my answer refers to all SPA's should be removed and anywhere free to develop or intensify

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

The term Qualifying matters is confusing and should be simplified

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All areas should be free to develop or intensify

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

15mins feels like the comfortable distance, but I think there are plenty of people (including myself) that would be willing to walk further (how long do we spend in traffic!!). We should err on the side of allowing more development, not less.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Same as my answer above, I think there are plenty of people (including myself) that would be willing to walk further (how long do we spend in traffic!!). We should err on the side of allowing more development, not less.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Same as my answer above, I think there are plenty of people (including myself) that would be willing to walk further (how long do we spend in traffic!!). We should err on the side of allowing more development, not less.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Same as my answer above, I think there are plenty of people (including myself) that would be willing to walk further (how long do we spend in traffic!!). We should err on the side of allowing more development, not less.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Population growth around small centres encourages more businesses, amenities and connectedness to those small centres, which encourages more population growth in a virtuous cycle. We should err on the side of allowing more development, not less, and let the market decide which areas are desirable.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Character areas are some of the most valuable land in the city. Since they were developed early, they have the best access to amenities and the central city. There is already a process for protecting heritage buildings on a case by case basis. Cities are for living, and so I believe blanket character areas are inappropriate for cities.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I could not find the “business special character” areas on the GIS viewer.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Infrastructure should be a continual state of upgrade (it just happens on a longer time scale). If infrastructure is inadequate to support reasonable development, that is just a sign it is nearing its upgrade cycle.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support some of these when they are narrow in scope and very specifically used; e.g. I support view shafts as they allow maintaining specific lines of sight to a single point, however I would generally be against ridge line protection as it protects a large area from many different angles and viewpoints therefore it's impact on limiting development is much greater.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Too many heritage houses threatened

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

This whole appalling plan was hatched in secret and presented as a fait accompli. A blight on all the parties in Parliament except ACT who had the integrity to vote against it. It will be ruination to our suburbs. Keep it to an absolute minimum.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

This whole appalling plan was hatched in secret and presented as a fait accompli. A blight on all the parties in Parliament except ACT who had the integrity to vote against it. It will be ruination to our suburbs. Keep it to an absolute minimum.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

This whole appalling plan was hatched in secret and presented as a fait accompli. A blight on all the parties in Parliament except ACT who had the integrity to vote against it. It will be ruination to our suburbs. Keep it to an absolute minimum.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

200m probably OK

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

To minimise the damage

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Minimise the damage

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Minimise the damage

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It would be mad to build more houses than the infrastructure can cope with.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

The more the better.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The city centre is New Zealand's largest economic centre - it has a huge number of jobs, universities and other amenities. People are able to walk further than 1200m to get to the edge of the city centre.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

800m is a very short distance, and people can walk further than this. The outer extremes of a walkable catchment does not need to cater for everyone - people who want to walk less can be located closer in, and of course development will tend to happen where it is most attractive in any case.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

800m is a very short distance, and people can walk further than this. The outer extremes of a walkable catchment does not need to cater for everyone - people who want to walk less can be located closer in, and of course development will tend to happen where it is most attractive in any case.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

400m is an extremely short distance, and people can walk further than this. The outer extremes of a walkable catchment does not need to cater for everyone - people who want to walk less can be located closer in, and of course development will tend to happen where it is most attractive in any case. The large town centres with good access (eg Birkenhead) can have a larger walkable catchment.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

200m is meaninglessly small really. I dont see how 200m is makes any sense as a walkable catchment.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Houses (or groups of houses) with gen historic heritage value should be protected by the Historic Heritage overlay. The general amenity of "special character" is not worth protecting. Further - even if individual houses are protected because they look nice, there is no need to restrict development of adjacent sites with houses that dont have special character. Development adjacent to existing old houses does not diminish the ability to appreciate the old house if someone wants to. To say otherwise is utterly subjective and should not restrict the construction of housing that we so desperately need.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Houses (or groups of houses) with gen historic heritage value should be protected by the Historic Heritage overlay. The general amenity of "special character" is not worth protecting. Further - even if individual houses are protected because they look nice, there is no need to restrict development of adjacent sites with houses that dont have special character. Development adjacent to existing old houses does not diminish the ability to appreciate the old house if someone wants to. To say otherwise is utterly subjective and should not restrict the construction of housing that we so desperately need.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Houses (or groups of houses) with gen historic heritage value should be protected by the Historic Heritage overlay. The general amenity of "special character" is not worth protecting. Further - even if individual houses are protected because they look nice, there is no need to restrict development of adjacent sites with houses that dont have special character. Development adjacent to existing old houses does not diminish the ability to appreciate the old house if someone wants to. To say otherwise is utterly subjective and should not restrict the construction of housing that we so desperately need.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

This could be used in exceptional circumstances, but I would be very wary of applying it broadly. If, say, apartments were to start getting constructed in an area without much infrastructure capacity, this would be a signal that intensive development in this area is desirable and infrastructure upgrades could be planned. Special rates or similar could be used to then fund new infra.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I dont agree with any of the above qualifying matters. The subjective aesthetic preferences do not override the importance of allowing development.

Further, I disagree with the inclusion of all volcanic viewshafts as "matters of national importance" qualifying matters. Some may be where of significance to Mana Whenua, but there a great number of these that have a huge impact on development potential. For example viewshaft E10 is from the old toll booths for the Harbour Bridge that no longer exist. I travel through here every day and the value from the view of Maungawhau / Mount Eden is hardly of value. These should be reviewed on a case by case basis.

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

We need access to town centers and rapid transit, not a half-hour walk to the nearest bus due to low density

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

We need access to town centers and rapid transit, not a half-hour walk to the nearest bus due to low density

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

We need access to town centers and rapid transit, not a half-hour walk to the nearest bus due to low density

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

A bigger radius ties in with the walkable development

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

A bigger radius ties in with the walkable development

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

Tell us why

There is no actual heritage in these old buildings, something more useful and meaningful can be built in place of old villas

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There is no actual heritage in these old buildings, something more useful and meaningful can be built in place of old villas

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

We need more mixed use areas i.e. Apartments above shops in town centers such as highbury

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I cant see the red or blue outlines anywhere. the only way to tell that a SCA is qualifying or not is to click on individual sites. I am not doing that all across auckland. I'm pretty sure there are more SCA that should be left alone though,

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I find it hard to make any sense of this. Why isn't it in plain English? Deliberately wording everything so it's difficult to understand in the first question puts people off surveys.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

Six level developments aren't good. Too little light gets through. Our transport system is hopeless

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

I don't think it's fair to build high in suburbia. If there's no parking in streets at present how will building more houses help? Our public transport is crap.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

We need sunshine (and parking) to make us shop in the little local shopping areas. Building too many apartments will kill it.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Where are all these people going to park?

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

If you don't honour the past you fail the people of the future. Intensification requires infrastructure. Many older parts of Auckland were built with narrow streets because people didn't have cars and can't support intensification. Example: Try parking in ponsonby at night when residents are home and restaurants are open.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Northcote Point and Birkenhead Point in particular for me are special areas that should retain their character that are going to lose to this ridiculous infill housing situation. The infrastructure isn't there to support intensification, there are already stormwater/parking/crowding issues prior to any changes as they were built so long ago. It won't improve Auckland it will just make Auckland ugly

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

There are parts of Auckland that should just be left now they are. We are not New York.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

As I already said in other comments, if there are limits on the infrastructure there's no point intensifying the housing/building.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

All current special character areas should remain protected

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

All current special character areas should remain protected

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

Any intensification should include proper infrastructure support and enhancement to cope with extra people living in the area or we are just creating more problems

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

We spent a lot of time and money creating the controls in the unitary plan to keep Auckland as a city with certain characteristics and style of living. We should not just abandon these and should take all learning from the u Jarryd plan process and ensure they are in acted in this new law

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Seems a reasonable distance

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

I think for consistency and less confusion a 1200 metre rule should apply

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

1200 for consistency. Fewer numbers, less confusion.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

If this is not contained you will get 'code creep' to less intensified areas.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

400 metres for consistency.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

We do not need intensification across the entire city and we should retain some character. BUT it should not be limited to old villas. Birkenhead used to be known as the "bush suburb" and this became intrinsic to its character. If we allow continued intensification we will lose that amenity (and the carbon sink that goes with it).

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The current approach gives no regard to the amenity and character provided by the tracts of bush remaining in our rapidly intensifying environment. There green tracts have already shrunk across Birkenhead, Birkdale and Beach Haven at a time when we need to maintain and even expand them.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It's all very well for the government and council to demand intensification, but the infrastructure cannot and does not keep up now. Council cannot keep permitting stormwater to be "attenuated" off big areas into local creeks through holding tanks and pits. It needs to make rainwater harvesting compulsory for new builds, especially intensified ones, so the water is put to productive - not sometimes destructive use. Our infrastructure for sewage is barely coping now, god knows what it will be like if the intensification goals of the government go ahead. Funding is the big issue and needs an entirely different approach.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I do not understand why council did not challenge the uneasy agreement between Labour and the Nats when its own unitary plan was years in the making, the discussion and consultation. This is blatant over-riding of local democracy and for what purpose? It is not solving a housing crisis to ignore good planning principles. It is creating a future crisis.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I support it in principle but this should not come at the expense of losing unique architecture and the special character of areas which is created by the current character housing. I think priority for development should be given to areas that are run down and lacking in character where a full scale redevelopment and enhancement as a result of this can take place. Northcote on the North Shore is a good example of this.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

My comments to the previous question also apply to this one. -I support it in principle but this should not come at the expense of losing unique architecture and the special character of areas which is created by the current character housing. I think priority for development should be given to areas that are run down and lacking in character where a full scale redevelopment and enhancement as a result of this can take place. Northcote on the North Shore is a good example of this.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

See my answers to the previous questions -I support it in principle but this should not come at the expense of losing unique architecture and the special character of areas which is created by the current character housing. I think priority for development should be given to areas that are run down and lacking in character where a full scale redevelopment and enhancement as a result of this can take place. Northcote on the North Shore is a good example of this.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city

blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

My answers to the previous question also apply to this question. Another factor that might need to be considered is issues of access and parking around town and local centres. An example of this is intensification on Onewa Road. This is a very busy road and so access from one side of the road to properties is only possible from a practical point of view in many places and there is no street parking at times during the day. These are specific factors that should be taken into account for development in areas like this. In other areas i see a lot of unsightly berm parking due to a lack of provision for residential parking.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Again I support in principle but my comments to the previous questions also apply. The other issue is the impact on existing neighbours due to loss of light, which is no longer provided for, and the impact this could have on the value or saleability of their property. This is probably outside the scope of this survey but the impact on these people could be significant since the impact on them may force them to sell and no one would be prepared to buy unless they were a developer.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Definitely the architecture and character of these areas needs to be preserved. It is a part of our living history and once it is gone it is essentially gone forever and so we must act now to preserve it.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I think we need to take a cautious approach since once these character areas are gone they are gone for good. There needs to be more consultation in areas where existing character areas are facing the possibility of being reduced in size.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

My main concern is with residential areas so business areas don't have much significance for me.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

This is something I have alluded to in one of my answers.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support all of the above ideas. Allowing light into public areas and viewshafts are really good ideas.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

sensible decision but can the council be trusted to take note of the environment, ensure developers replace, incorporate trees etc into their plans ?

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

Have you asked the right organisations eg Disabled, Age Concern, Plunket etc what is considered OK for them?

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

as above -Have you asked the right organisations eg Disabled, Age Concern, Plunket etc what is considered OK for them?

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Judging by what is already being built in Glenfield...and how much the integrity of the neighbourhood is being impacting on for the worst....leave it alone or at least not so far fetching. Just take a look at what has been designed so far. We do not need taller buildings in smaller cul-de-sacs for example. So many apartment blocks do not even have balconies...room to sit outside...room to grow herbs....they have tiny windows that cannt be fully opened....some have nice views but no picture window...just tiny slots of windows. Imaging being in lockdown and not even being able to get fresh air or sunshine. and recently discovering no room on ground floor for wheelchairs, pushchairs.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Why is there no "I do not support" Judging by what is already being built in Glenfield...and how much the integrity of the neighbourhood is being impacting on for the worst....leave it alone or at least not so far fetching. Just take a look at what has been designed so far. We do not need taller buildings in smaller cul-de-sacs for example. So many apartment blocks do not even have balconies...room to sit outside...room to grow herbs....they have tiny windows that cannt be fully opened....some have nice views but no picture window...just tiny slots of windows. Imaging being in lockdown and not even being able to get fresh air or sunshine. and recently discovering no room on ground floor for wheelchairs, pushchairs.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Again...I Support but... a Special Character area is usually in wealthy areas. Why should areas like Kaipatiki that has many old houses...not 'special'' in leafy green cul de sacs and streets... be able to have 6 storey blocks in them just because there are no 'special characteristics" in them. STOP SACRIFICING THE ENVIROMENT. Phil Goff promised no more ticky tacky houses like those in Cook Street!!!!

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Again Support BUT Not too many on Kaipatiki....funny that!!!!! Where we live is special to us !

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

so are you saying if the infrastructure cannot support the new builds or be improved in the short term, you wont build on those areas? About time!

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

If you wouldnt live in an planned apartment block, dont let it be built!

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

it's a reasonable distance to walk anywhere.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

a 10 min walk is not too far to go.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

as above -a 10 min walk is not too far to go.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

A 5min walk is close enough for daily needs

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

as above -A 5min walk is close enough for daily needs

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Our heritage needs protecting.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

We need to protect heritage areas

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

cant see it on the map

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Could put a time constraint on it. Such as will be ok in the next 10 years.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All of the above need protecting.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

What plans are there to support elderly and disabled?

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

What plans are there to support elderly and disabled?

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

What plans are there to support elderly and disabled who possibly cant walk this far.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

The government has been short sighted and has not invested in adequate reading rail and transport options. Their issue is now becoming our issue, intensification of housing which will

create slums, affect the mental health and well being of people long term. This will do nothing for the clean green image of N Z. Rates will go up putting more money in government coffers and we see no benefits. Pretty sick to the back teeth of this.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

The government has been short sighted and has not invested in adequate reading rail and transport options. Their issue is now becoming our issue, intensification of housing which will create slums, affect the mental health and well being of people long term. This will do nothing for the clean green image of N Z. Rates will go up putting more money in government coffers and we see no benefits. Pretty sick to the back teeth of this.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

There has been little to no thought. Our future matters as well as the past. We have obligations to both. Looking back on what was is important for our children. Take care not to strip away our history.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Not toi much thought or areas have been identified.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Again no real areas have been identified

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Dont you think the government should have identified areas and put in infrastructure ahead of intensive housing. Why put strain on existing areas. Also with COVID more people are moving away from working in cities.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

People are already established in their properties within this distance and by allowing this intensification it will disrupt the lives of these people.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Just make sure that you are not supporting the rich with loud voices.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

Found the map confusing

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I think it is most important the the effect any buildings in the suburbs will have on the sunlight of already established properties. In the past this has been protected but I feel that with the new 3 storey high buildings this could impact very severely on some people's enjoyment by shutting out their sun source.

Important privacy information

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

It should be closer. Developers are unlikely to build high-rise apartments around town centres as they are not viable. Most developments that have occurred around town centres are similar to those that can be achieved in the THAB zone.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

It should be closer. Developers are unlikely to build high-rise apartments around town centres as they are not viable. Most developments that have occurred around town centres are similar to those that can be achieved in the THAB zone.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Character areas should be retained. They are a valuable part of the City's history and heritage.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Council needs to add more areas.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Add more areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

There is no point zoning land for more intensity if it can never be achieved due to infrastructure issues. These areas should be identified so developers can focus on other areas that can be developed. Watercare needs to provide more information to the public on areas with infrastructure limitations. Infrastructure limitations also need to include public services like schools and open space.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I agree that the other overlays and controls already in the Unitary Plan should be kept.

There needs to be more controls to reflect the loss of privacy and amenity that intensification will bring.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I think this is important for the growth of Auckland and also if we want to grow as a more metropolitan city. Overseas, other cities are doing this well e.g. Melbourne - and we should be doing more to make this possible here.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

As above. We also need to ensure that that 'walkable' doesn't exclude those with mobility issues, or perhaps families with prams etc. Needs to be 'accessible' as much as it is 'walkable'.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Many of these areas already have some areas where this is happening. It simply needs to be easier for builders to get these plans underway, and for potential home owners to be able to afford them. More density will hopefully make house prices more affordable for all - not just the wealthy. Saying that, I think there's needs to be some consideration of how these builds are done - not right up to the boundary, and not overtly looking into neighbours' homes.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Because some of the 'special character areas' are no such thing. They're old, damp, draughty homes that are limiting the ability of people to live there and build a community.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Urban areas shouldn't have such high buildings outside the immediate surrounds of transport hubs. Limiting building size around suburban areas to closer to transport hubs etc helps preserve urban environment & prevent it becoming like the city.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Urban areas shouldn't have such high buildings outside the immediate surrounds of transport hubs. Limiting building size around suburban areas to closer to transport hubs etc helps preserve urban environment & prevent it becoming like the city.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. These areas are our history and should be cherished for future generations

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

To support this would be to support the neglect and lack of foresight of previous councils and government on appropriate infrastructure. It would allow the council to ignore problem areas and allow them to continue to be problem areas. Too expensive should never be a reason not to improve infrastructure. This is the reason the infrastructure is poor to begin with. If infrastructure were a building and you wished to build more levels, but the framing was bad and could not support the addition. You would have to fix this to support the addition of more levels. You couldn't simply ignore this due to it being expensive, and build more levels anyway. Population and intensity is increasing. You must improve the framing at whatever cost, to ensure the stability of the future increases.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

About the right amount of walking time in Auckland's changeable climate as some of the city centre area has shopfront all weather canopies. Support intensification near city centre to allow easy access to public transport to reduce reliance on cars.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

About the right amount of walking time in Auckland's changeable weather. Support intensification near metropolitan centres to allow easy access to public transport to reduce reliance on cars.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

About the right amount of walking time in Auckland's changeable weather. Support intensification near rapid transit stops to allow easy access to public transport to reduce reliance on cars.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support higher density intensification near large town centres to allow easy access to public facilities and public transport to reduce reliance on cars.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Support higher density intensification near small town centres to allow easy access to public facilities and public transport to reduce reliance on cars.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Support as the proposal obtains the right balance of intensification near public transport and public amenities and infrastructure. We need to reduce the amount of Auckland urban spread. The amount of old housing stock should be reduced and replaced with modern energy efficient homes with adequate provision for green open areas in neighbourhoods. Reducing energy consumption as part of the climate change response needs to be given more priority than keeping all the heritage areas that currently exist.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Support as the proposal obtains the right balance of intensification near public transport and public amenities and infrastructure. We need to reduce the amount of Auckland urban spread. The amount of old housing stock should be reduced and replaced with modern energy efficient homes with adequate provision for green open areas in neighbourhoods. Reducing energy consumption as part of the climate change response needs to be given more priority than keeping all the heritage areas that currently exist.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Need to retain some special character business areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Council need to negotiate with Government to obtain funding to deliver required infrastructure to allow for intensification.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The incursion of tall buildings into suburban neighbourhoods (and particularly heritage streets), looming over neighbouring properties, is a horrible idea that no-one should support.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

The incursion of tall buildings into suburban neighbourhoods, looming over neighbouring properties, is a horrible idea that no-one should support.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

The incursion of tall buildings into suburban neighbourhoods, looming over neighbouring properties, is a horrible idea that no-one should support.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

This should be kept to the smallest area possible. It will turn those centres into ghettos, so overcrowded that no-one in their right mind would want to go there, let alone live there. The very idea is repulsive.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

This should be kept to the smallest area possible. It will turn those centres into ghettos, so overcrowded that no-one in their right mind would want to go there, let alone live there. The very idea is repulsive.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

I am strongly against the government's proposals. The more the damage and impact of these outrageous government proposals can be reduced, the better.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I am strongly against the government's proposals. The more the damage and impact of these outrageous government proposals can be reduced, the better.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I am strongly against the government's proposals. The more the damage and impact of these outrageous government proposals can be reduced, the better.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Needs to be closer as people will drive to the buses/trains otherwise causing more congestion

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Needs to be closer as people will drive to the buses/trains otherwise causing more congestion

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Needs to be closer as people will drive to the buses/trains otherwise causing more congestion for example Albany park and ride

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Should be building more terrace houses as standard

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Should be building more terrace houses as standard

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

1200m in 15minutes is likely too far/long duration for many, particularly given this is supposed to be considerations around the 'average' walker.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Again, this references a similar average walking speed as 1200m/15min. It is noted that one NZ specific study indicated that whilst this is around the average walk speed, it doesn't address as to whether a person would be inclined to walk that distance. This is of particular consideration during poorer weather, the duration of daylight hours, and perceptions of safety, and as such may result in walking ideology over-ruling reality.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

reasoning as per previous -Again, this references a similar average walking speed as 1200m/15min. It is noted that one NZ specific study indicated that whilst this is around the average walk speed, it doesn't address as to whether a person would be inclined to walk that distance. This is of particular consideration during poorer weather, the duration of daylight hours, and perceptions of safety, and as such may result in walking ideology over-ruling reality.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Typically not in favour of an arbitrary blanket measure. If the area were already zoned as such then that should look to be retained, however if not, then the application of a blanket measure will lead to instances whereby homeowners will have a measurable and likely detrimental impact imposed upon their amenity. Essentially, those homeowners who may have specifically chosen not to live in a high-density environment will have this imposed upon them, and the blanket measure may not take into consideration any special character that may also be applicable.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

As above, that is, I am not in favour of the application of an arbitrary blanket measure. If the area were already zoned as such then that should look to be retained, however if not, then the application of a blanket measure will lead to instances whereby homeowners will have a measurable and likely detrimental impact imposed upon their amenity. Essentially, those homeowners who may have specifically chosen not to live in a high-density environment will have this imposed upon them, and the blanket measure may not take into consideration any special character that may also be applicable.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

All existing special character should be considered a qualifying matter. The significant reduction and exclusion of many existing heritage and special character areas, now subject to intensification is extreme and far surpasses any requirements under the Act. This is not called for by the new law, and it is not a necessary thing for the Planning Committee to impose as such in order to fulfil the new law and NPS requirements.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The proposed intensification, particularly within the bounds of existing special character heritage areas is extreme and unnecessary. It is reported in Auckland Council Planning Committee documents that already, prior to any further amendment, that "the preliminary assessment shows that the plan-enabled development capacity can meet projected growth, over the short, medium and long-term" with this around 3x modelled demand, making further curtailment of special character areas unnecessary. Total special character areas across Auckland account for circa 3% of housing supply area, with the historic character overlay being a subset of that, further diminishing the supposed capacity increases. I would note that the basis of this reassessment of character value would appear to be a poorly-benchmarked, inconsistent and highly subjective 'Google street view' survey, obviously conducted by those with little familiarity with such matters. Additionally, the imposition of intensity zoning on many of these areas would appear to be far outside the councils redefined walkable catchments and at odds with the ability to retrospectively supply infrastructure in support of intensification.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

surely this is obvious - if the infrastructure is unable to support intensification either over the development timeframe or economically in an area, then why propose/zone it.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

More housing close to employment hubs

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

More housing close to employment hubs

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Only natural environment should be protected. Not manmade constructions.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I could not understand the map

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I could not understand the map

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure should be a significant concern that Council should address to achieve the development of more housing. Simply trying to put more pipes under the ground is not by itself the solution. There needs to better long term solutions to managing waste and water.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

In principle I support this to allow sunlight into public places. I see the difficulty being lobbyists and the wealthy using it as an avenue to exploit.

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

I do - but would like a closer attention to specific sites. Not every dwelling in a special character area is worth preserving, and some character buildings in non-character areas are worth preserving - provisions should be made to accommodate these circumstances.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

I think that overall the balance is right (some fine tuning might be required).

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Could not see 'business special character areas' on the Legend.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

I would support if it stopped excessive suburban sprawl.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

I think we need to take a longer term view. By extending the catchment to even 1.5 meters, it increases the potential for more housing, which will mean we can avoid renegotiating this question when the time comes to increase the catchment.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

It's very common for people and families to walk at least 1 - 1.2 kms depending on topography. As above this will help to future proof our city.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

As above, increase to 1 km.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Older people and people with disabilities / chronic health conditions may not be able to walk that far. Whilst they may not choose to buy places in these areas they may still have friends and families that do. It will be very difficult for them to go to these places if the homes do not have off-street parking. I note that these are probably the same areas that AT is going to ban on-street parking. This becomes a double impediment to disabled / people with limited mobility as there is no where to park and they can not walk the distance from public transport. These homes need to be required to have some off-street parking, and some designated as mobility parking.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Older people and people with disabilities / chronic health conditions may not be able to walk that far. Whilst they may not choose to buy places in these areas they may still have friends and families that do. It will be very difficult for them to go to these places if the homes do not have off-street parking. I note that these are probably the same areas that AT is going to ban on-street parking. This becomes a double impediment to disabled / people with limited mobility as there is no where to park and they can not walk the distance from public transport. These homes need to be required to have some off-street parking. and some designated as mobility parking.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Older people and people with disabilities / chronic health conditions may not be able to walk that far. Whilst they may not choose to buy places in these areas they may still have friends and families that do. It will be very difficult for them to go to these places if the homes do not have off-street parking. I note that these are probably the same areas that AT is going to ban on-street parking. This becomes a double impediment to disabled / people with limited mobility as there is no where to park and they can not walk the distance from public transport. Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It's important to retain some history and character of older neighbourhoods.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Adequate infrastructure needs to be in place before population density increases, it's logical.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Retaining of green spaces, we need to retain as much green space as possible for the benefit of flora and fauna, the environment and our health. Where there are large areas of green space e.g. a large section that has bush on it and it is adjacent to a reserve, this land should be added to the reserve or be unable to sub-divided. An example is Le Roys Bush, there is a lot of private land bordering onto the reserve that needs to be protected and retained as green space.

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Intensification should only apply to new areas.

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Being close to rapid transit in its self does not make good urban design living environments. Transport is just one of the many factors that make up quality neighbourhoods.

It would be much better to have the requirement of being 200m of a rapid transit stop and a neighbourhood park or significant open space. If council then want to enable more density they could by simply adding more stops and more neighbourhood parks.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

But note that access to vegetation and open space is being mistakenly left out of this discussion. We need to ensure density is met with higher quality landscaped streets and open spaces.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

1) No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc)

2) Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

3) We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

4) The loss of trees/canopy with intensification is important.

5) The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point. The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland.

7. Christine Fletcher made an excellent point- with the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

1) No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc)

2) Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

3) We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

4) The loss of trees/canopy with intensification is important.

5) The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point. The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland.

7. Christine Fletcher made an excellent point- with the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

1) No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc)

2) Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

3) We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

4) The loss of trees/canopy with intensification is important.

5) The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point. The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland.

7. Christine Fletcher made an excellent point- with the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I do not support removing the heritage housing zoning from Northcote Point:

1) No infrastructure to accomodate increase in population (public transport, parking, access to Onewa Rd/Motorway, creche/schools, wastewater etc)

2) Special character in Birkenhead/Northcote Point was assessed via "google maps", most other places in Auckland were visited in person. The loss of majority of the special character areas is a huge blow to these neighbourhoods.

3) We are not near a public transport hub and so the need to intensify is not as pressing as most other suburbs in Auckland.

4) The loss of trees/canopy with intensification is important.

5) The special character zone in Northcote Point should be increased to cover more of the suburb to prevent special character houses being surrounded by terrace housing, thus affecting the character of the whole neighbourhood. The suburb needs to retain special character as a whole, as individual houses alone do not create the Historic character of Northcote point. The zoning changes in Northcote Point and Birkenhead point is significantly more drastic when compared to the other "special character suburbs" in Auckland.

7. Christine Fletcher made an excellent point- with the Council Unitary plan there have already been made available an excess of buiding sites (900,000), so this whole process seems unnecessary and once these changes go through we can never go back.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I think this catchment will probably involve eradicating parking for the high-rise buildings, which I disagree with. Thought that will suit some tenants and workers if they're expected to ONLY use public transport. But it's not helpful to everyone as some people work further than public transport can take them quickly or precisely. Some people have family to assist which requires driving. I would like some high-rise public parking or underground parks as an option too. Town plans change so often it's hard to keep up.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

I think any catchment will probably involve eradicating parking for the high-rise buildings, which I think should be minimal as some tenants and workers do work further than public transport can take them quickly or precisely. Some people have family to assist which requires driving. I would like some of these areas to offer high-rise public cheap parking or underground parks for the apartments as an option too.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

It sounds like it could be okay. Any catchment will probably involve eradicating parking for high-rise and I think that should be minimal as some tenants and workers do work further than public transport can take them quickly or precisely. Some people have family to assist which requires driving. I would like some of these areas to offer high-rise public cheap parking or underground parks for some of the apartments as an option too.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

It sounds okay. Any catchment will probably involve eradicating parking for high-rise and I think that should be minimal as some tenants and workers do work further than public transport can take them quickly or precisely. Some people have family to assist which requires driving. I would like some of these areas to offer some sort of decent size or high-rise public cheap parking or underground parks for some of the apartments as an option too. It improves resale value as well.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government

is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

DEVONPORT , NORTH SHORE - Obviously places like Devonport (and Mt Eden in parts) cannot have high-rise everywhere, ruining the overall character and historical sense of the area/s. The style there has a certain overall look and character that's unique and must be preserved. Any new houses should ideally incorporate the same character and style. But not every urban centre is going to be a fit for intensification at all.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

BIRKENHEAD/ CHELSEA/ NORTHCOTE/ BEACHHAVEN -

I think many areas of the North Shore in Birkenhead, Northcote, Devonport, Chelsea show qualifiers marked for protection which are fair. But that's EXCEPT the currently unbuilt areas which have edges beside the water or giving water views. Most currently are covered in bush or a park. Preserving the coastal areas not yet developed is important. The seaward edge sections should remain empty.

ie. Ones like those seen at the very ends of Ravenstone Place, Holyoak Place, Onetaunga Road, Chelsea Sugar Works and the Defence area of Birkenhead/ Chelsea. Also the Kauri Road sections marked out, but not yet developed, if planning on building there, these are too close to the sea.

WHY AVOID BUILDING ON SEA-EDGE or SEA-SIDE LAND:

1) It's not fair that a few new large builds will get a sea view where people have wanted to live for years and were not able to. Also that due to their height may obscure other homes which currently have views and were all built in the same style sections and era.

2) For maintaining green space and bush which is good for the local climate, environment and wildlife, as well as enjoyment of this unique feature of the North Shore. A lot of bushland is seen around the edges of many sea-facing sections and undeveloped areas. Those ends of streets should be protected. It prevents water pollution from runoff into the bush and not straight into the sea.

3) Safety also, with no cliff building due to potential erosion and threats to houses. It probably blocks some adverse weather events damaging current homes. Avoid removing current green space or bush walks with public use and paths on the coast.

4) Elitism. The more expensive sea-facing apartments could be snapped up by the wealthy and perhaps disadvantage middle or low earners trying to get into a first property. All for a view. Apartments should be set back from waters edge and not obstruct homes already there. Also avoid creating more homes on the Shore that wealthier buyers get but NO ONE lives in for long periods of time. People who live partly overseas, although they have furniture there they seldom use the properties, as people spend a lot of time overseas.

5) Avoiding being an eyesore. Some places with tall buildings shoved in the middle look ridiculous or out of place. Such as the two towers in Herne Bay as you approach the Harbour Bridge from Jervois Road, they look unsightly. Having too many low rise homes with 6-10 stories nearby could look ridiculous if they're spaced out too far. It ruins the feel and style of the suburb they're in. Especially when juxtaposed with houses of older eras.

DEVONPORT

I notice that Devonport doesn't have a lot of area for QUALIFYING which seems very strange since there are so many older homes which are borderline historic which give a certain character to the whole area. I think a much larger catchment needs to be made there for protection. To remain a tourist destination it needs to protect the character now before older homes are demolished and the whole experience of the area will change.

The limits on Devonport area also would help with roading and transport issues, which are already bad enough at certain times. So loading up too many high-rise blocks, etc will just add to congestion. Though new harbour crossings are being discussed there is no guarantee they will be done soon or perhaps done at the Devonport site at all.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I'm not sure that Birkenhead shopping area is well protected. If it's apartment living right amongst shopping areas then the older style facades of shops should be taken into account. This is an older area of the Shore and many buildings are old. Even if not high use stores and not in the 'historic' category yet, many of them soon will be. They carry a character of the area which shouldn't be blotted out by highrise all around.

If highrise is wanted the should be in one spot. But where will it be? It appears to be where carparking is now near Hammond Place. I think it will ruin the character of Birkenhead totally.

Also it means the historic classification timeframe could be misused to remove shops which will soon be a piece of architecture and town-planning design that is part of a local protected record of history/ culture. So it depends where the builds are going.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It really will depend on future plans and technology that might help the infrastructure happen efficiently and at good cost. But due to costs for trying to create that now that could be better left off the table of these plans. By focusing on the current easier access and well-structured areas that can manage transport, water, etc. But won't impact historic or business and other factors.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

In general I think that makes sense. To not obstruct views or make incongruent skylines etc would be wise.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I deeply care about the special character of my neighborhood Birkenhead. We are the gateway to the North with many late 1800's, early 1900's homes. We need to protect of historic houses. It is criminal that the government is even proposing this. I am very disappointed.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

SUBMISSION TO AUCKLAND COUNCIL
PROPOSED REZONING RULES IN BIRKENHEAD AND NORTHCOTE

28th April 2022

Introduction
The main focus of this submission is the provision of the wastewater infrastructure (sewerage reticulation) required to enable the densification of Auckland and in particular the suburb where I live: Birkenhead.

It needs to be borne in mind that the existing reticulation in Birkenhead is already operating beyond its design capacity in some areas and leaking sewage into the environment, and has been doing so for decades. Manhole lids were clamped down as a temporary measure to reduce spills back in the days of North Shore City and to my knowledge there have been no major works undertaken to remedy the situation since. **So no densification can be undertaken until this situation is remedied.**

A sewerage overlay project in Birkenhead
Such a project would cost vast sums of money, take many years to implement and cause major disruption to traffic. Depending on who pays for it, it would plunge either Auckland Council or central government into *even more* debt.

However there are better options:

Make use of the Central Interceptor
From a city wide perspective, it would make far more sense to plan the first phase of densification along the route of the Central Interceptor project, whose completion date is 2025. Focussing on this area alone could provide sufficient additional housing to cover our needs for maybe decades. It would certainly provide sufficient scope to fully tie up the capacity of the construction industry for many years.

Build highrise near the city and at rail transport hubs
Densifying Birkenhead will just exacerbate the existing transport problem here. Instead we should be focussing on building proper highrise (20-30 storeys) near the CBD. A good example would be Kingsland, which currently is mostly just car yards and single storey workshops. This would be a good fit for highrise development, could be serviced by a single wastewater overlay project and is literally a short walk into town.

Build highrise in the Birkenhead village
Lastly, if we are to have densification in Birkenhead, the logical place to put it is in the commercial area of the Birkenhead village. Include the mall itself in this so that the mall owners can add a residential tower in a similar fashion to Milford mall. This approach has the following advantages:

- It only requires a limited wastewater overlay project

- It’s near the main bus stop and the shops
- It won’t impinge on bush reserves
- It won’t block view or overshadow residential housing
- Being at the top of the hill, it would provide magnificent views of the city
- Most of the shops along Birkenhead Avenue and Mokoia Road are old and dilapidated. Some may not meet current earthquake codes and need replacement anyway.

Do not support, Not enough infrastructure

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Heritage areas will be ruined with unsightly apartment blocks.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Council's proposed new rules for identifying "special character areas" are too narrow. The existing special

character areas should all be retained, including Northcote and Birkenhead Points. They are areas of high

character value with an important historical heritage. They should be protected to ensure the area keeps its

distinctive character and unique history.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Council's scoring system is too restrictive:

The proposal requires 66% of individual properties in an area to score 5/6 or 6/6 on a character assessment,

before the area would qualify to keep its "special character area" status. The 66% threshold should be lower

(eg 50% – still a majority of character houses).

Also, properties scoring 4/6 (which Council accepts are still "character supporting") should be counted

towards the percentage test as well, not just 5/6 or 6/6.

Many other suburbs that are keeping their "special character area" status were surveyed in person by Council

representatives doing site visits. Northcote and Birkenhead Points were just assessed using Google Street View,

which means Council's scoring for those areas does not properly show their true character status.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I support Council's proposal to include areas in Auckland with long-term significant infrastructure constraints

as a qualifying matter, meaning that infrastructure should be taken into account as a limitation on increased

housing density.

Little Shoal Bay and Le Roys Bush are already badly affected by freshwater flooding after heavy rainfall.

Increased densification will only make that worse, because more building site coverage means more stormwater

runoff. The area does not have the stormwater infrastructure to manage that – it is a sensitive ecological area

that would be badly harmed by increased silting and runoff.

Onewa Road is already above capacity for traffic, with severe gridlock every morning. The area is not well

served with public transport capacity (existing or planned). Any increased density would just add more

traffic commuting to the CBD each morning, as most residents do not work locally.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

towards the percentage test as well, not just 5/6 or 6/6.

Many other suburbs that are keeping their "special character area" status were surveyed in person by Council

representatives doing site visits. Northcote and Birkenhead Points were just assessed using Google Street View,

which means Council's scoring for those areas does not properly show their true character status.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I support Council's proposal to include areas in Auckland with long-term significant infrastructure constraints

as a qualifying matter, meaning that infrastructure should be taken into account as a limitation on increased

housing density.

Little Shoal Bay and Le Roys Bush are already badly affected by freshwater flooding after heavy rainfall.

Increased densification will only make that worse, because more building site coverage means more stormwater

runoff. The area does not have the stormwater infrastructure to manage that – it is a sensitive ecological area

that would be badly harmed by increased silting and runoff.

Onewa Road is already above capacity for traffic, with severe gridlock every morning. The area is not well

served with public transport capacity (existing or planned). Any increased density would just add more

traffic commuting to the CBD each morning, as most residents do not work locally.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

This is going to damage our special character areas which are just as historical - if not more - than that which is protected in Devonport

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Again, as mentioned above, this is harmful to our special character areas which deserve just as much protection as the others.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

I do not reject this idea, however I find it still important that areas surrounding are still protected

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I respect intensifying in areas closer to Birkenhead mall etc. however again I stand by my belief that this should not incorporate any heritage areas.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

This is an appropriate radius for terrace housing to be built.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I find it is crucial for all heritage/special character areas to be included as a qualifying matter. Who is to say that one area is more important than another? Economic purposes is not enough to take away New Zealand's young history that we need to preserve.

Take Ponsonby for an example. A great place of special character where the heritage homes are within walking distance to malls and shops. I do not see Ponsonby being even considered for new high rises and terrace housing as it has been identified. Why Has Northcote and Birkenhead not received the same treatment? Northcote in particular is arguably not even walking distance to the closest mall, and it is still unidentified. This is shocking.

There are many homes in Northcote and Birkenhead well over 100 years old today and still standing. They are historic, of special character, and do not deserve to be ignored.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

It is insulting that Northcote and Birkenhead are ignored opposed to other areas. How can you identify Ponsonby as a qualifying matter when Northcote and Birkenhead are just as viable.

The mere fact that Northcote and Birkenhead were evaluated using Google street view opposed to the other areas is firstly unjustified and unfair, but secondly causes a huge inaccuracy in presenting our beautiful heritage and special character.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I find it hard to understand the logic of the areas around Ponsonby Rd designated for protection and those that aren't. If you travel down the other side of the ridge facing towards the West Coast, there are many houses that have not been restored, are rentals and are low enough in a dip that if a building was 4-6 stories high it would not necessarily destroy view shafts. Have your decisions been made according to the size of properties rather than heritage qualities? personally, I feel as much as possible of Freemans Bay and St Mary's Bay should be protected. Developers will have to buy several sections in order to build the blocks you are proposing, but of course once started the environment will become so ugly that eventually people will decide to move. But they will have to be very rich developers who will be able to afford to buy properties in bulk. By contrast, regulations have already destroyed much of the architectural value of Ponsonby Rd. There already exist blocks of apartments, but because they are on top of the ridge, their lack of architectural merit has been partially hidden by the large trees in gardens stretching down to Victoria Park. We are lucky that we can look down, rather than having to look up. The same can be said for the apartment blocks along Great North Rd. While they have no green spaces of their own, at least they are able to look down on gardens that stretch away below them.

What ever the government says, the council has the opportunity to defend the qualities that make Auckland the diverse city it is. No one is saying that there shouldn't be larger apartments where

possible. But if they are allowed to be constructed in what should be considered areas of historical and cultural importance, without any regulation that allows for the protection and maintenance of heritage areas, then Auckland will not be a city worth living in.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It is vital that infrastructure is to be considered.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Special character/ heritage areas are all that gives our city character- hence the name!

To lose these we would be essentially destroying the very fibre that makes up Auckland.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Seems to encompass the historical villas and will keep the character of the community and areas intact

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

this is going to damagae our special character areas which ARE JUST AS, IF NOT MORE historical than the ones located in Devonport.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

This is also detrimental to our special character areas which deserve just as much protection as the others.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

i dont reject this point but it is still important that the areas surrounding are protected

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Intensifying areas closer to Birkenhead mall is considerable however this should not incorporate any heritage areas

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

this is an appropriate radius for terrace housing to be built.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

all heritage/special character areas should be included as a qualifying matter. why should one area be more important than another? economic purposes is not enough to take away New Zealands history that we need to preserve RATHER THAN DESTROY.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

It is disgusting that Northcote and Birkenhead have been ignored opposed to other areas. what justifies this? ABSOLUTLEY NOTHING.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Again though, all special character areas within the light rail corridor have zero information. Please review and at least provide a high level view of the Council's thinking on this area so ratepayers can provide informed feedback

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

vital that infrastructure is to be considered.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

protect northcote and birkenhead.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I think care needs to be taken in the classification of "large town centres" - I understand Highbury in Birkenhead is classified in this way, which does not make sense in my mind as I don't believe it qualifies as having "high accessibility". Could be a "small town centre"

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Auckland council invested a huge amount of time, money and energy to develop the unitary plan and identify heritage areas. There are very few of these remaining in Auckland now. I think the threshold should be reduced from 66% to 50% to ensure the protection of remaining pockets of heritage. So much of these areas have already been butchered by terrible developments or houses of poor design and materials usage, so we need to protect remaining areas.

I further understand that Northcote and Birkenhead Points were just assessed using Google Street View, which in my view is an insult to the history of these neighborhoods.

A final point relates to transport links. Onewa road is already too congested, so additional traffic significantly reduces amenity. Although buses run Onewa reasonably frequently, the wider network is clearly not performing as too many people are still driving (generally single passenger)

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Business special character areas seem much smaller, and I'm more sympathetic to trying to preserve the streetscape of these business areas. I also think that as long as nearby areas are given City Center, Metro Centre, or other mixed use types of zoning and do allow for growth, protecting a few shops is not so problematic.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Maintain the existing village like atmosphere

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

All special character areas should be identified

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

It is unclear where these are.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

All infrastructure including those related to recreation should be taken into account as a control on future development.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Little Shoal Bay is a sensetive ecological matter that cannot sustain any more stormwater runoff that intensified housing will bring.

Greater ousingintensification to Birkenhead and Northcote Pt's will overload the existing stormwater outfalls.

There are insufficient recreational facilities available for Northcote areas.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I don't understand this explanation. It states that the qualifying matter reduces limits on building heights etc to ensure special character is maintained. Surely you mean it increases limits, ie reduces density and height.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Again, this is talking about reducing limits - surely you mean the opposite, ie increase the limits to reduce density and height

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I find the entire idea appalling and ill-thought out. This not only applies to special character areas etc, but the whole idea of how a city should work. No consideration given to pressure on infrastructure, parking (people will not give up their cars), loss of sun and privacy, wind tunnelling, insufficient green space for the population. Where is the foresight to develop city areas where people can work and live and play without having to travel to any congested urban centres? I can only assume that the plan, even with the suggested amendments, is aimed at driving Aucklanders out of the city.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

help to focus intensification on areas where it is appropiate.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

help to focus intensification on areas where it is appropiate.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

help to focus intensification on areas where it is appropiate.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

these centres are already quite small with limited public transport links and parking. We would lose the neighborhood feel if they were surrounded by high rise apartments and high density housing of many stories.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

these centres are already quite small with limited public transport links and parking. We would lose the neighborhood feel if they were surrounded by high rise apartments and high density housing of many stories.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

All existing special character areas should be a qualifying matter. Council's rules for identifying

"special character areas " are too narrow. The existing special character areas should all be retained including Birkenhead and Northcote Points. They have high character and important historical heritage especially connected to The Chelsea Sugar Factory which was the first Auckland industry.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There are more areas that should be identified as a qualifying matter, not just a sub set.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure should be taken into account as a limitation on increased housing density.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Little Shoal Bay and Le Roys Bush are already badly affected by freshwater flooding after heavy rainfall. Increased housing density will makes this worse because there will be more stormwater runoff.these areas are sensitive ecological areas that will be harmed by increased silting and runoff.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Most Auckland town centres are small, 400m seems too far and spreads too far into some special character areas (eg. Birkenhead & Northcote Point) destroying the unique community feel

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Most Auckland town centres are small, 200m still seems too far and spreads too far into some special character areas (eg. Birkenhead & Northcote Point) destroying the unique community feel

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The proposed new rules are too narrow. Birkenhead & Northcote Point are communities of special character and important heritage value. They need to be valued and protected.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure should absolutely be taken into account when densifying any area. We have a huge amount of stormwater run off already in the Birkenhead/Northcote Point area and increased densification will only make this worse (Little Shoal Bay floods every time there is heavy rain). Also it is well known that every morning and evening Onewa Road is at a gridlock despite encouraging people to take public transport. This is the main feeder road into the city for the Northcote, Birkenhead, Birkdale, Beachaven & Glenfield areas. It is already at capacity, and an increase in densification will make this unworkable.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

The desktop review (Google street view) of Birkenhead & Northcote Point heritage areas is unacceptable. Other areas had council representatives visit their areas in person to review their heritage and community values. Also the method in which areas were scored seems lacking. Requiring 66% of individual properties in an areas to score 5/6 or 6/6 in character seems too narrow and dismisses a lot of other properties in the 4/6 scoring. I think 4/6 scoring properties should be considered, and of course a personalised visit needs to be carried out to see these properties as a whole contributing to the community heritage feel of an area is important.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

It is always good to have walkable distance (eg: 10-15mins walk) to main public transport station (eg: bus station or train). This will encourage people to take public transport.

However, with a walkable distance of 1200m, it will require safe pedestrian walking road (eg: street light, pedestrian walkway/crossing, shelter for rainy day, etc).

It is similar to Singapore where public transport is the key means of transportation. Most of the residential areas in Singapore are close to MRT station or bus stop (with frequent bus trips bringing people to MRT station). Typically it's less than 10mins walk, you will reach a bus stop or MRT station.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Less than 1000m is definitely a plus point for everyday walking to main transport station. People will tend to be more receptive to walk less than 1km on a wet day, especially if it is to encourage people to use public transport everyday.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Similar to Singapore. A walk less than 10mins to reach a rapid transit stop will encourage people to use public transport more frequently.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

The main concern will be the infrastructure to cater for this additional people.

Will there be enough public transport (frequent and go to many places), stormwater (it might be ok for now, will it cause flash flood in the future), water supply (Auckland currently already having issue of water restrictions), schools, hospitals, parks (apartment has no garden, where can the people go), flora and fauna (how will it affect native birds and plants),etc?

Will it become a concrete city (no more nature as NZ is famous for) with potentially infrastructure issue in the future (50 years down the road)?

It is not just merely increase more houses in an area.

The area/town has to form a self sustainable township by itself. People can have access to school, shops, hospital/clinic, parks, job opportunity, etc. People can just stay within the town itself instead of travelling far away to get what they need.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Similar to above, mainly about infrastructure to support the higher density of people.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

New Zealand is famous for its nature and space (not too crowded).

There is reason that people from overseas choose NZ as their permanent home.

There are many metropolitan lost their character due to rapid development, instead of having 50-100 years planning.

Those areas turned out to be concrete city with no character. It is also loosing the appetite of outsiders moving in, while the locals are unhappy due to over-development and loosing other important characters (eg: spaces/freedom, reserve parks, not stuck in traffic, etc).

It is very important to keep in mind we (human) are sharing our habitat with native birds and plants.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

Not sure where in the map is the 'blue' and 'red' boundary line.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Looks reasonable

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Yes, definitely need to include stormwater. If we make reference to the recent floods in south east asia (Malaysia, Philippines, etc), it might be due to the over-development for the past 2-3 decades and the stormwater might not keep up with the fast development and climate changes.

Water supply is also a critical issue. Auckland is currently encountering water restriction or barely have enough water supply for everyone.

With the increase of occupants in Auckland, more water is required for existing occupants and upcoming extra density.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

School and hospitals are also another qualifying matters.

With the increase of people, more schools/early child care are required to cater for these extra people.

More people means more hospitals and healthcare workers are required.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

I previously lived in Freemans Bay and walked to work in the city as did most of the people living around me. 15 mins is not a long walk and it would take longer than that if you took the bus. If you added walking corridors with rain shelters scattered along the way then you'd likely get more buy-in

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

It can't be further as you need to consider people carrying shopping, kids, etc.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

800m is really not that far

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I firmly believe that it depends on the design of the housing. A lot of these areas being suggested for terraced housing are also subject to draft rules that will limit or remove parking on the streets. If you are going to add more houses then there needs to be adequate off street parking so each residence has two parking spots, even if it's one internal garage, and one outside the garage. A lot of the new terraced housing have inadequate parking and storage (where exactly do you put your bikes that you are being encouraged to ride when you have no shed or garage space?). Also these town centres have employees that need to park in the surrounding streets as often they'll have after work commitments (school pick-ups, sport, shopping etc) that public transport doesn't cater for. So yes I support intensification, ideally apartments would be added on top of existing shopping malls, but the residences have to be designed to keep cars off the road - ie adequate parking, bike storage, EV charging points, visitor parking etc as I know as a parent that if I had to rely on public transport only then my kids would miss out on nearly every before and after school sport and activity that they currently participate in.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

See above. Shoebox housing with no parking or storage will not cater for active families. There has to be a full plan in place, not just left to individual developers who are driven by profits, so that these new centres are welcoming and cohesive not the next generation of slums.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

There is a certain amount of NIMBY-ism to this as a lot of the character areas conveniently happen to be in areas of high value housing. I do think that we need to retain some of our character housing, but we can't just single out poorer neighborhoods for intensification. Perhaps a compromise could be reached like how old facades are retained in renovated commercial buildings, and have the character houses moved or included as a feature (eg reconstructed as shop fronts on the lower levels) to retain some character.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

It doesn't impact me as long as there are some old areas/houses retained

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We need another water catchment north of the city so Albany to Warkworth can be developed further. No point in growing areas that aren't big enough to support their own communities as this just forces people to commute.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

None. Light and views of landmarks are important. Also important not to create cold wind tunnels.

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Special Character areas as existing have been carefully arrived at over the years after much consideration and consultation. These relatively few areas need to be retained. Most cities strive to maintain historical character. Special Character areas help to protect the urban trees and bush which are part of the special character.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

CORRECTION from submission made earlier this afternoon:...

Devonport maintains most of its Special Character status. Why does Northcote Point and Birkenhead Point NOT maintain most of that status ? Special Character is not just the odd street but is the sum total of an area. Devonport maintains it most of its Special Character status. Why does Northcote Point and Birkenhead Point also maintain most of that status ? Special Character is not just the odd street but is the sum total of an area.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Per above - appears to be a sensible balance of maintaining character and progress. It would be good to understand how we would define when something that was special character eventually becomes too old and difficult to maintain. Invercargill is a great example of areas of the city having some sort of historical protection that meant it was impractical for owners to continue to maintain and parts of the city just looked like a sad ghost town rather than the opportunity for regeneration and gentrification that would improve the liveability and operability of the city.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. Tell us why

Sadly, some of the best architecture, past and present, is industrial.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Please refer to the attachment.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

FEEDBACK ON THE AUCKLAND COUNCIL'S CONSULTATION ON PROPOSED CHANGES TO UNITARY PLAN TO ADDRESS THE NATIONAL POLICY STATEMENT: URBAN DEVELOPMENT AND THE HOUSING ENABLING ACT 2021

To: Auckland Council

Name of submitter: Tara-Lee Carden

This submission provides feedback on the proposed changes to the Unitary Plan to address the National Policy Statement: Urban development and the Housing Enabling Act 2021. In particular, this feedback relates to land located along Island Bay Road in Beach Haven . This property falls within the Kaipātiki Local Board area.

The submission is concerned with the proposed zoning that has been identified along part of Island Bay Road.

The specific provisions addressed by this feedback are as follows:

a) Proposed Zoning - The proposed zoning for Island Bay Road features a combination of both Two-Storey Single Dwelling Residential Area and Residential – Mixed Housing Urban Zone – Modified, as indicated in **Figure 1.**

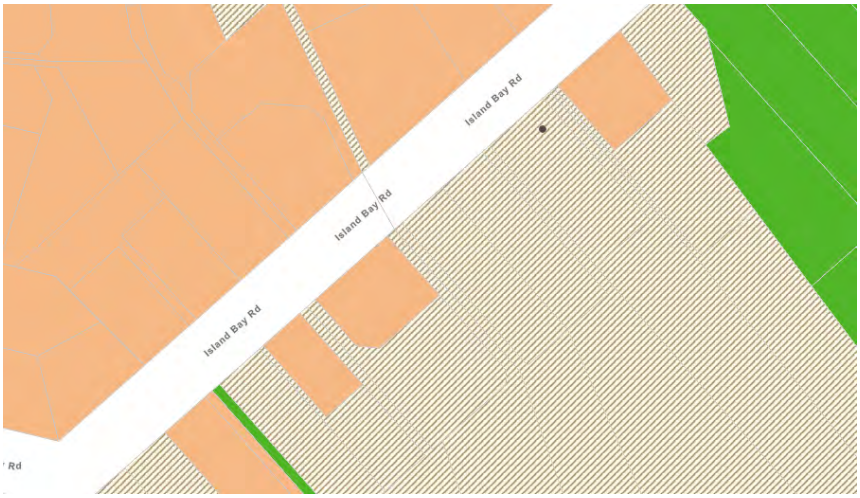

Figure 1 – Proposed Zoning Changes

The submitter has the following feedback in relation to the proposed zoning:

a) The submitter notes that the preliminary response viewer for the NPS-UD and MDRS notes that this area is subject to a Significant Ecological Area (SEA) Overlay as a Qualifying matter. However the SEA is only located on the lower areas of the site. The upper areas of these sites that front Island Bay Road are not covered by the SEA. These areas that front Island Bay Road are generally flat and they would be suitable for further development in line with the outcomes sought by the Housing Enabling Act 2021. The submitter considers that the Residential – Mixed Housing Urban Zone – Modified should be applied to the top portion of the land fronting Island Bay Road. This covers the land from 34-64 Island Bay Road, as indicated in **Figure 1**.

Figure 2 – Proposed Zoning Changes

The submitter's concerns would be addressed if Unitary Plan was amended in the following way:

a) That the land tope areas of land at 34-64 Island Bay Road is rezoned to Residential – Mixed Housing Urban Zone – Modified as set out in **Figure 2** above.
b) Any other changes that would address the concerns raised in this feedback.

The submitter appreciates the opportunity to provide informal feedback on the proposed changes to Unitary Plan and thanks the Council staff and elected members for their time in considering the matters that have been raised in this feedback. The submitter would welcome contact from staff in the Unitary Plan team if any clarification or further information is required.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Walkable catchments are a good idea if the city has a viable, reliable public transport system. What Auckland needs, and I think it is the only solution that will work, is a Circular Tube Underground system (not cut &cover which was given up in UK in 1900) around the whole Harbour with branch lines running off it. Like the Circle Line in London which was built early 20th century. The Chinese are excellent at doing this efficiently and cheaply and quickly. Shenzhen took 6 years. It would cost less than Covid, $52 billion, and would bring Auckland into life. London, New York, Paris could not live without Tubes systems. Auckland is no different. High density and not sufficient public transport will not work. A tube system would be the making of Auckland!

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Highbury and Northcote are not big cities. They have limited public transport links and parking. They do not need a wide catchment area.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

I don't think this applies in my area.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Highbury and Northcote are not big cities. They have limited public transport links and parking. High density terraced housing is inappropriate in this area as with the new developments it will hit capacity unless a tube is added then this might be needed.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Highbury and Northcote are not big cities. They have limited public transport links and parking. High density terraced housing is inappropriate in this area.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Cities need character and style. Ruining special heritage areas with buildings of conflicting style is ridiculous suggestion and it makes me wonder if any of the planners visited the area. NZ has so few heritage areas. Northcote Point and Birkenhead at the moment are very attractive areas to visit and historically rich and so different from Auckland is this difference that makes these areas unique. They have a special character of their own. In my area Clarence Rd Northcote Point the planner has demonstrated a complete the lack of regard for style or common-sense. It is a travesty! My own beautiful Kauri Villa is vintage1905 perhaps earlier, 6 Clarence Rd Northcote Point used to be a B Listed property. This is because it was the dower house of the now protected home 4a Clarence Road which faces the Harbour, a part of which was the first building on the North Shore. My house was later added on the orchard, as a Dower House for the widow. The old fruit trees are still here. It was in my house that that Mayor of Auckland, Dame Kath Tizard played as a child. I was also voted Women of the Year 1983 by the women of Auckland for services to The Arts so it has a history of its own. I saved it from demolition in1975 and once again it is under threat. As the planners only protect one side of the road the far side of Clarence Road my beautiful old villa is now unprotected. If my house is redeveloped as as three storey building nobody is going to see the protected house behind which will lose all its sun. The result will be three story modern houses sandwiched between two lines of protected houses. Surely it is common-sense to see that both sides of the road have the same style. The result will be hideous. It is out of KafKa! Only a developer who wants to make money could have come up with such a scheme. As it happens most of the houses on my side deserve protection. It looks as though the planners have not seen or visited the area and have worked off Google Maps. This is plainly unfair to Northcote as it is a far more interesting area than say the lines of villas in Ponsonby which are protected.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

This utter raping of Northcote and Birkenhead by planners is hard to take when one looks at those protected areas in inner Auckland. From the water it is beautiful to look at and that is what the tourists come for and want to see. It is as though our suburbs do not matter but if this area is ruined by unsightly houses the whole of Auckland will pay. Turning Northcote Point and Birkenhead into a slum for no good reason is hard to take, We have not been treated fairly by the planers at all. To achieve this high density must of the trees will have to go. Our area is rich in historical heritage. These homes are where the North Shore began and there is much evidence of the Maori lived there. All sorts of objects turn up in our gardens. We have a $24 million white

elephant of a cycle path to nowhere that is never going to be used. We have the first concrete Road in Auckland which is still lovelingly preserved, We deserve the same care that is given to the inner city streets,

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

This would help our area. Little Shoal Bay already suffers from Fresh water flooding badly now. Adding more density to this area means a lot more money has to be spent for little gain.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

This plan especially Special Character Areas seems to have been done in haste and with little public consultation. My area Northcote Point, 6 Clarence Rd is such a case. The planners could only choose one side of the road to protect and chose the far side from the sea which has coastal buildings I suppose to pander to the developers as Harbour Views are very lucrative. This means a row of modern three story buildings sandwiched between two rows of heritage buildings! That the two major political parties have joined together without asking their supporters if they approve of the plan is a fait accompli. It is undemocratic. How can opposers of the plan of which both political parties approved without their supporters knowledge make their position heard? It is obvious to all that this scheme is already in place and the results are unpleasant. One only has to drive around Auckland to see the mess that is to come. The grid lock on the Onewa Road every morning is proof Auckland needs a proper Tube system not crowding people into tiny flats with no transport and nowhere to go! Ancient Rome did this but Rome had vast forums and open spaces. Ordinary Romans lived on the Street and only went home to sleep. Auckland is not Ancient Rome. An Underground Tube system based on London would be the cheapest answer in the long run. It will eventually have to be done. I shall not be here to see it but the future of Auckland looks very bleak at the moment. It does not have to be like this. Never is a Proper Tube system mentioned. It ought to be. Wedging buildings in unsuitable sites and clearing beautiful heritage villas is not going to work for anyone. Auckland Council is for every one and every suburb should be treated equally. Birkenhead and Northcote have been overlooked and it is up to the City Council to stop the rape of our beautiful heritage suburbs and waterfront.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The city centre is a hugely significant area that is a significant draw for people. As it further develops it will become much friendlier for pedestrians, cyclists and other active modes. Since people will be able to walk or cycle directly into the city centre from adjacent suburbs the walkable catchment should be much larger, since people will be willing to travel further since they do not have to catch PT as part of their journey. I think a catchment of more like 2000 m (25 minutes) would be appropriate.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

For similar reasons to above, I believe the catchments around metropolitan centres should be larger. People are willing to travel further to centres where they can get many things done in a single journey.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

800 m catchments are too small for rapid transit stops. PT users already travel from much further to stations and if they are able to cycle they can travel much more than 800 m in a reasonable amount of time. Increasing the catchments around rapid transit stations will make it possible to concentrate more housing near to good PT, rather than having development more spread out across the suburbs.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I wholeheartedly oppose the inclusion of special character areas as a qualifying matter. The special character areas are far too broad. The city is not a museum and while some protection is appropriate, the special character areas are too extensive. They preclude development in a huge proportion of the inner suburbs, for some of them such as parts Ponsonby (which is almost an extension of the city centre) the proportion of houses with special character protection is over 90%. This is completely unacceptable. By preventing development in the inner suburbs this has (under the Unitary Plan) and will force more development further out in the city. This puts a greater strain on transport infrastructure and goes directly against the aims of creating a compact city. The inner suburbs have the best access to the city centre, the best transport transport connections, and with their older street grids, are more walkable than newer suburbs with mid-20th century car-centric streets. The inner suburbs are where development should be concentrated.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I only know that 40 Anzac St car park was bought by way of extra high levies to Council over 30-35 years by the then businesses, with the Town Clerk's promise that it would never be allowed to be anything but a car park. To propose to make a misshaped 'square' of it is ludicrous and on many counts, does not comply with Council's own requirements. A Town Square should be a sizeable open square or round sunny space, not a dog-legged narrow one that would struggle to accommodate 5000 people for ANZAC. The proposed buildings around it are far too tall so that in winter, shading would be most unencouraging for anyone to use it for recreation. The newly bought site next to Potters Park will shade the popular small children's play area and much of the grass area. An alternate compliant and available plan much better than Panunku's Isthmus would bring in no less income from land sale and cost no more to develop. Sunnier and larger too. It's not too late to make adjustments.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I don't support this formula at all. Auckland is not build like European Cities where public transport works. No matter how many houses you cramm into this city, public transport and infrastructure will fail. The only solution to this problem is to build satellite Cities with frequent trains into the city center. Heritage areas should remain as they are and not destroyed by intensification

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

I don't support this formula at all. Auckland is not build like European Cities where public transport works. No matter how many houses you cramm into this city, public transport and infrastructure will fail. The only solution to this problem is to build satellite Cities with frequent trains into the city center. Heritage areas should remain as they are and not destroyed by intensification

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

I don't support this formula at all. Auckland is not build like European Cities where public transport works. No matter how many houses you cramm into this city, public transport and infrastructure will fail. The only solution to this problem is to build satellite Cities with frequent trains into the city center. Heritage areas should remain as they are and not destroyed by intensification

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

It depends. If these areas have heritage houses, they should remain as they are.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

It depends. If these areas have heritage houses, they should remain as they are.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Heritage areas need to be preserved. The map showing Birkenhead Point and Northcote Point have significant proposed increased Mixed Urban Zones. Devonport has hardly any, which makes no sense as they have a lot more frequent ferry services into the city than Northcote/ Birkenhead Points.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

See my previous comment re. residential. -Heritage areas need to be preserved. The map showing Birkenhead Point and Northcote Point have significant proposed increased Mixed Urban Zones. Devonport has hardly any, which makes no sense as they have a lot more frequent ferry services into the city than Northcote/ Birkenhead Points.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I think that speaks for itself. How can you keep building high density when infrastructure won't cope?

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I think all of the above should be qualifying matter. Auckland doesn't have much history, so it's very important to preserve what we have.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

Agree in principle, however, obviously this general rule will require qualifiers and caveats ('qualifying matters'). Blanket rules are not appropriate in all cases, for example a general rule will requrie exemptions for (for example) areas with heritage value or environmental sensitivity etc.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

As above. I agree in principle, however, obviously this general rule will require qualifiers and caveats ('qualifying matters'). Blanket rules are not appropriate in all cases, for example a general rule will requrie exemptions for (for example) areas with heritage value or environmental sensitivity etc.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

(as above) Agree in principle, however, obviously this general rule will require qualifiers and caveats.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Agree in principle, however, obviously this general rule will require qualifiers and caveats ('qualifying matters'). Blanket rules are not appropriate. For Birkenhead in particular, specific roads need to be further investigated such as Hinemoa and Rawene - the existing heritage overlays in these areas should in principle be retained and more detailed investigation undertaken. This change may have a significant impact on the overall heritage feel of the area so the local community needs to be reassured that each area has had sufficient attention and investment from experienced planning and heritage consultants (eg. not just a look on Google Maps/Street view), and that any exemptions and the decisions around these are transparent and able to be questions (appropriately).

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

As per previous comments about the importance of qualifying matters, particularly in areas with heritage value where significant heritage elements are scattered and not conveniently located within a certain radius of town centre areas. Some of the town centre itself may contain signficant heritage building elements providing an overall look and feel to the area so blanket rules are not appropriate. For Birkenhead and Highbury in particular, specific roads need further investigation such as Hinemoa and Rawene - the existing heritage overlays in these areas should in principle be retained and more detailed investigation undertaken. This change may have a significant impact on the overall heritage feel of the area so the local community needs to be reassured that each area has had sufficient attention and investment from experienced planning and heritage consultants (eg. not just a look on Google Maps/Street view), and that any exemptions and departures are transparent and the wider community is made aware of these and the process that has been followed.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Absolutely support, as per my comments above. Special character elements are what make each community unique, they encourage community involvement, a sense of pride and belonging/connection to the land - these are all things improve quality of life and general wellbeing withinin the community with downstream positive impacts on things like the levels of crime and vandalism.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Note: the map provided does not distinguish between residential and business special character areas so my comments below apply to the general blue versus red layer (ie. qualifying versus not a qualifying matter). When compared with areas like Devonport, this initial proposal for the Birkenhead and Northcote Point area - with many heritage elements similar to Devonport - does not seem to be consistent and appears rather abitrary. There are areas around the Higbury town centre that need to be further investigated and protected - from the blue versus red allocations on the GIS map provided, it appears that these assessments have been made by those who have not actually spent time walking around these areas - the community needs to be reassured that any changes have had detailed consideration from specialist consultants in heritage and planning (not just a Google Map analysis) .

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

For example, Little Shoal Bay.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I don't trust the council to play fair. The only way to enforce this is to have everyone adhere to the same rules.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Development should be focused on the key area of near Highbury corner. not Hinemoa Street or Rawene Road

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

These are small centres with minimal public transport and parking.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As above .These are small centres with minimal public transport and parking.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

All existing character areas should remain. There are even more areas that should be included in this category. Nortcote Point and Birkenhead Point have important historical heritage value.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The councils scoring system for special character areas is too restrictive and all areas should have been surveyed in person rather than on Google maps. A fresh look at this would be appreciated The councils scoring system of 66 % needs to be lowered to 50 % for a fairer assessment.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The heritage of Northcote and Birkenhead Points should be included as qualifying matter. one Road is above capacity now and increased density would exacerbate the problem. Little Shoal Bay and Le Roys Bush could not cope with intensified housing. they already have stormwater problems.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

I think this should be greater, more like 2km

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

I think the new zoning should have a greater radius, match the 1.2km

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

This should really be more like 1.2km which is about a 15 minute walk

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

400 metres isn’t very far. It should be at least 800 metres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

This should be at least 400 metres 200 metres is nothing

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The city is currently zoned as a donut, single house zone around the city centre with intensification only allowed further away from the city centre. The current single house zonings do not make sense. I fully support rezoning much of the single house zones and removing the character protection. In the scheme of things the house's proposed for protection are not old.

Save a few streets. But re zone the rest and actually allow a walkable liveable city to be built that can be serviced by good public transport. I recommend removing more protection than is currently proposed.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

Refer comments above -The city is currently zoned as a donut, single house zone around the city centre with intensification only allowed further away from the city centre. The current single house zonings do not make sense. I fully support rezoning much of the single house zones and removing the character protection. In the scheme of things the house's proposed for protection are not old. Save a few streets. But re zone the rest and actually allow a walkable liveable city to be built that can be serviced by good public transport. I recommend removing more protection than is currently proposed.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

In some areas these need to be temporary such as catchments which will eventually be serviced by the Central Interceptor which will remove the wastewater servicing constraints.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Current special character areas are already a very small proportion of land and housing in Auckland. Reducing that further erodes the heritage value of Auckland, while likely to not make any difference to housing availability and affordability in Auckland. No first home buyers will be able to afford a townhouse built on Queen Street in Northcote Point, for example. This proposal is the proverbial 'sledgehammer to crack a nut'.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Current special character areas are already a very small proportion of land and housing in Auckland. Reducing that further erodes the heritage value of Auckland, while likely to not make any difference to housing availability and affordability in Auckland. No first home buyers will be able to afford a townhouse built on Queen Street in Northcote Point, for example. This proposal is the proverbial 'sledgehammer to crack a nut'. The proposal for Northcote and Birkenhead Points, in particular, would severely reduce the amount of special character in those suburbs. Preserving the existing special character status will be far better for Auckland culture and heritage value in the long run. It would be a great shame to lose or significantly reduce the character of these historic suburbs. The proposal goes too far and would not make any positive impact to the underlying issue that this is all about - housing affordability. What has Auckland got to gain from knocking down beautiful old villas and bungalows, only to replace them with luxury (and therefore expensive!!) townhouses that only existing rich homeowners would be able to afford.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Realistically most people would think a 15 minute walk to get to a town centre on foot is too far. More realistic is <10minutes.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Most people would walk 800m.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Most people would already be used to walking this distance to get to public transport.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

There are buildings (both residential and other) that have historical significance to early Auckland life. We have very little history in Auckland, so why not preserve the small amount that we have left. These buildings have stood for over/around 100 years and should be protected to stand another 100 years.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

1. The method (Google maps) used to identify special character areas in Northcote and Birkenhead Point is incorrect and not in line with other areas such as Devonport. This is not acceptable.

2. The threshold of 65% of a street/areas housing having special character is set too high. What is the rationale for setting the bar this high? It should be more like 50%

3. The result of using a high threshold and incorrect identification methods has resulted in predominantly character areas such as Northcote Point being carved up such that very limited (and not necessarily the right) areas would be deemed "character".

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Northcote and Birkenhead Point are already struggling with stormwater overflow issues at Little Shoal Bay with the current single house scenario. This is a sensitive ecological area of historical significance and should be protected from anything that threatens to increase the current problems.

Northcote Point and Birkenhead Point are not well served by public transport - we can't even get a ferry to consistently stop at Northcote Point, let alone get a bus frequency less than 1 an hour.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Walking is good for the environment and health (mental and physical). Giving more people the opportunity to walk into the city centre is important. Not having to rely on public transport means control over how long the 'commute' takes which is a benefit.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Walking is good for the environment and health (mental and physical). Giving more people the opportunity to walk into the city centre is important. Not having to rely on public transport means control over how long the 'commute' takes which is a benefit.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Allows more people to walk to public transport rather then relying on a feeder bus (or similar). More exercise and more control over what time you arrive to catch the public transport.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

The way to get vibrant town centres is to have easy access to them. This means more density to create a buzzing centre. Town centres should be pedestrian/bikes/scooters only too.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

The way to get vibrant town centres is to have easy access to them. This means more density to create a buzzing centre. Town centres should be pedestrian/bikes/scooters only too.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

New developments can become part ofa special character area. It is up to the owner if they choose to sell their property to a developer. Every suburb needs to embrace the intensification neer to town centres and public transport. Otherwise, we increase the difference between rich and poor suburbs.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

This seems reasonable. Would be interested in knowing the areas this relates to.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Encourage more people to live there to catch public transport than car in walking distance

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Convenient

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Good idea

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

More house for first home buyers

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

More house for first home buyers

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

People would not walk more than that to get to work.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

People wouldn't walk any further to go to shops.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

People wouldn't walk any further to catch a bus or train.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Could be 800 m as above.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

I live in Northcote Point and I don’t want any 6 stores buildings nor 3 stores apartment blocks built next my house

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

It’s too close

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

It’s too close

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

I don’t want to lose heritage houses or buildings in Northcote Point or Birkenhead

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

I think it is ridiculous

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

It would completely spoil the ambience and architectural feel of Northcote Point. Some people will sell out to money hungry developers. It could also be dangerous, there is an apartment block

being built on Oneway Road, how on earth can they turn right to get access to the Motorway, it's a mess in rush hour at the moment

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

We need to keep our special character areas as they are, we cannot afford to lose any of them

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Heritage buildings should be protected, but not whole areas. The proposal creates future a "donut" city, where intensification around the city centre is limited. This means the city is less efficient, fewer people can live close to centres of employment, and the carbon profile of the city is worse. Special character areas should not be a qualifying matter. We need more apartments close to the city centre, in Freemans Bay, Mt Eden, Ponsonby etc. Special character areas should not apply within 30 minutes walk of the central city.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Wendy Haresnape

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

We should leave all our Heritage area intact. They represent our history

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Northcote Point is a unique historical area and should be included

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I believe that Northcote Point should be included due to its unique and historical features

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

1. Northcote Birkenhead points need to remain untouched 2. The assessment was done using google maps and not even visiting the areas 3. These areas should have the same protection if not more than the likes of Devonport or Ponsonby. 4. Northcote already has a huge amount of high

intensity housing being built (it just increased from 1400 houses to 1700) Northcote point has already had the harbour bridge and motor placed through it, Northcote residents have taken way more than their fair share on behalf of Auckland and New Zealand 5. The current unitary plan is catering well for intensive housing, why destroy the little heritage we have ? 6. With the pandemic the need for people to live close to the city Centre has well and truly gone. 7. The Auckland city Centre is now a crime ridden disaster, why would people want to work or live close to this area? 8. The water , power and roading infrastructure can barely support the unitary plan intensification .. let alone what is proposed

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The water , power and roading infrastructure can barely support the unitary plan intensification .. let alone what is proposed. This must be a very high consideration especially in heritage areas where there would be a massive need (and cost) to support the intensification

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

1500m-2000m is a reasonable catchment subject to topography. For flatter areas up to 2km is not unreasonable to walk or scooter or cycle to connect to public transport or travel to work, social and recreational opportunities.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

1500m-2000m is a reasonable catchment subject to topography. For flatter areas up to 2km is not unreasonable to walk or scooter or cycle to connect to public transport or travel to work, social and recreational opportunities.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

1500m-2000m is a reasonable catchment subject to topography. For flatter areas up to 2km is not unreasonable to walk or scooter or cycle to connect to public transport or travel to work, social and recreational opportunities. Park and ride opportunities for cycles and scooters can be provided around public transport to increase the convenience and accessibility of it use and thereby enhance the increased use of land resources within the RUB.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

400m around large town centers is a small catchment. Given that a 800m distance to rapid transport has been suggested by the council and because most large town center have reasonable to good public transport options and connections then the same distance should apply centres as it does to walkable catchments.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

400m around large town centers is a small catchment. Given that a 800m distance to rapid transport has been suggested by the council and because most large town center have reasonable to good public transport options and connections then the same distance should apply centres as it does to walkable catchments.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more)

within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Some of the more high quality special character areas should be given appropriate heritage status to therefore meet the matters of national importance threshold and provide genuine protection of these areas. If they cannot meet this threshold of protection then they are simply a nice to have rather than necessity. There is no opposition to the protection of certain areas to reflect Auckland's and New Zealand's heritage, however protection for protection sake, especially considering the location of many special character areas in centralised and sustainable locations is considered to be unnecessary. There are many sites that are recommended to be included as qualifying matters that have little special character purpose other than to those who may specialise in heritage and built form industries.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

See above. Some of the more high quality special character areas should be given appropriate heritage status to therefore meet the matters of national importance threshold and provide genuine protection of these areas. If they cannot meet this threshold of protection then they are simply a nice to have rather than necessity. There is no opposition to the protection of certain areas to reflect Auckland's and New Zealand's heritage, however protection for protection sake, especially considering the location of many special character areas in centralised and sustainable locations is considered to be unnecessary. There are many sites that are recommended to be included as qualifying matters that have little special character purpose other than to those who may specialise in heritage and built form industries.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

We have no opposition or support the business special character areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

It is the responsibility of a local authority to ensure infrastructure is provided and if there are areas of the region that do not have sufficient infrastructure this is penalizing those areas and landholders for under investment from legacy councils. The inclusion for areas that do not have sufficient infrastructure the willingness of a developer to provide this infrastructure may well result in greater regeneration outcomes than simply not including them and therefore watching these areas fall further behind as other more desirable areas with infrastructure capacity are developed first.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Do not support the following overlays as qualifying matters:

- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

- Local Public Views Overlay

- Stockade Hill Viewshaft

These impose an unnecessary restriction on development for little gain and certainly do not qualify as matter of national importance.

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I would love to see natural features such as large trees and SEAs be included as qualifying matters that are protected due to their role in shaping the special character of an area.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Heritage housing and buildings are integral to our neighbourhoods and communities unique characteristics and must be protected. These homes and communities need to be protected not only because of the visual amenity but because once my is lost that history is gone forever. If they are allowed to be removed they will be lost forever across the Auckland region and other cities across NZ. There appears to be a culture within government that development can occur with complete disregard for the people who live in areas of significance. Many part of the world have fought to retain their heritage and rebuild if it it gets destroyed. We want cities full of diversity and if every building becomes the same, we will be removing homes that have lasted years and replacing them with something that looking at many new builds will not last the test of time.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

While 1200 meters may be a good rule of thumb, you need to carefully analyse the particular street and section of a street before deciding where the zone should stop/start. It is not as easy as as having a hard rule of 1200 meters.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

While 800 meters may be a good rule of thumb, you need to carefully analyse the particular street and section of a street before deciding where the zone should stop/start. It is not as easy as as having a hard rule of 800 meters.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

While 800 meters may be a good rule of thumb, you ned to carefully analyse the particular street and section of a street before deciding where the zone should stop/start. It is not as easy as as having a hard rule of 800 meters.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I think it depends on the large town center. Some are on the rail system with many newer buildings and it would make sense in those areas. it does not make sense in the North Shore we there is no rail system or say an area like Birkenhead where there are many historic homes close by and reliant on traffic flows along Onewa Road which is already congested.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

I think it depends on the particular small town center. Some are on the rail system with many newer buildings and it would make sense in those areas. It does not make sense in say the North Shore we there is no rail system, in particular say an area like Northcote Point where there are many historic homes close by and reliant on traffic flows along Onewa Road which is already congested. Northcote Point is a dead end peninsular, with poor public transport accessibility, gridlock on Queen Street and Onewa Road every morning, very little jobs close by for residents, high special character homes that give the neighbourhood a unique feel. Much of the land in Northcote Point is not the most suitable for development due to being sloped, on the coastline (visible from the coastline) and many of the streets are too narrow for construction vehicles. Whereas somewhere like Penrose /Ellerslie would be good for development - that area has larger roads, much old damp/drafty state housing that could be redeveloped, jobs close by for residents in the industrial parks, better transport accessibility links and land more suitable for development etc (no coastline, flat and no flooding). The area could benefit through improved security through having more people on the streets and more affordable housing.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is very important to recognise that preserve the special character features of Auckland, such as architectural value. Villas and bungalows are part of the unique feature of Auckland and streets with those (and their surrounds) should be preserved.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I think the areas that are part protected should be fully protected. For example, Devonport appears to be fully protected but Northcote Point does not. There should be full protection (2 level single house dwelling) throughout Northcote Point eg Queen Street, Clarence Road, Church Street, Richmond Ave, Princes Street, Wilding Ave etc to protect the special character of the "area"

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

For areas such as Birkenhead Point and Northcote Point, there are are severe issues with transport congestion, parking, wastewater networks etc. Much of Northcote Point was in flood recently due to poor storm water infrastructure. These should be qualifying matters to be taken into account.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Auckland should unlock development potential of land best supported by infrastructure. Council should consider focusing on areas with high sales demand and sale prices, this supports developers to find feasible development sites in an economic climate that is difficult to make a site stack up.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Auckland should unlock development potential of land best supported by infrastructure. Council should consider focusing on areas with high sales demand and sale prices, this supports developers to find feasible development sites in an economic climate that is difficult to make a site stack up.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Auckland should unlock development potential of land best supported by infrastructure. Council should consider focusing on areas with high sales demand and sale prices, this supports developers to find feasible development sites in an economic climate that is difficult to make a site stack up.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

I support this. There are some unusual zonings illustrated on the proposed maps. The two-level single house zone next to Orewa town centre should be all changed to Mixed Housing Urban (minimum). Many of the properties within the proposed 2-level single house zone are 800SQM plus with little infill due to previous single housing zone limitations. Auckland Council should consider enabling the development of infill houses on larger sections such as Florence Ave in Orewa.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Auckland should unlock development potential of land best supported by infrastructure. Auckland Council should consider rezoning land surrounding Transpower Assets (110KV lines) to THAB if in defined walkable catchments. Transpower overlays define setbacks so I see no reason the adjacent land cannot be upzoned too.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Almost all of Auckland's brownfield suburban areas developed in the 50s/60s have significant infrastructure constraints. Auckland Council should not restrict development potential based on infrastructure constraints but instead provide an opportunity for Council and private entities to enable development through cost share arrangements offsetting any capacity constraints. CCOs need to tackle reasonable infrastructure projects all over Auckland. Introducing development restrictions will take the heat off CCOs and not fix the underlining issue.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Our special character houses do just that - bring character. And once they are gone, they are gone forever. I support retaining special character houses being a qualifying matter because they are part of what makes Auckland special. They represent a time of form over function, and if Auckland wants to be a world leading city it has to celebrate its diversity in housing typology as much as its drive for a low emission future. Both can co-exist. Both are required

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

pretty hard to understand and use the map, but in general i support areas like devonport, ponsonby, northcote and a cluster approach - ie not just a single road, but something closer to a suburb, or mini suburb approach, so that if you walk the area the character is consistent, as well as allowing local businesses to work with this theme to create eateries and retail that conenct witht he local character

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I support this

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I do support it from a main city area as long as thought has gone in to the design of the buildings and that there are open areas for people to use such as parks or green spaces and that large trees (even if they are not native) are left in place and also new planting of native trees and landscaping is part of the plan.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I do not agree with this on suburban routes and transport stops as in these builds often there is not much thought into the design of the build or parking spaces for people who live in them. This often results in limited street parking. Again I think there still needs to be much more protection of large trees on land set for development and more landscaping of developments and areas for people to use or meet.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

As above. [I do not agree with this on suburban routes and transport stops as in these builds often there is not much thought into the design of the build or parking spaces for people who live in them. This often results in limited street parking. Again I think there still needs to be much more protection of large trees on land set for development and more landscaping of developments and areas for people to use or meet.]

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I think again a lot of this is due to planning and design of developments. At the moment, particularly in Glenfield I have seen many houses removed from a piece of land and completely cleared of any vegetation, including mature, native trees and ugly box like apartments squeezed onto the site to fit in as many as possible with no trees. They also often dwarf any other houses in the street leaving them no sun or being very overlooked with no privacy and often a lack of views.

After a few years these apartments begin to look very shabby. I think much more thought and conditions need to be put into the design of the buildings and the number of houses. Most of these builds have about 5 bedrooms and one very small living area, not much outdoor area and are not well planned for New Zealand way of living. Most have many stairs which are not easily accessible for older people so do not encourage a variety of age groups to live within a community.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

This is closer to a main town area which is more suitable to this type of housing as long as there is still green spaces and native tree planting left for people to use within this and they fit the character of the town centre, however not in special character areas.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These areas/homes are of cultural and heritage significance and also include many mature trees and environments for our native birds. I feel it is up to us to protect these homes and not have any high density housing in them which would spoil the unique character of these areas.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

See above comments. Also most of these are around our coastal areas which we should be trying to protect. These will also have many mature native and exotic trees on them which are not protected from developers. Views are often blocked by these developments as well.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I agree with improvements to business areas as long as they keep the character of the local area which often has a village like atmosphere to it particularly after covid where people are not so keen to go to big shopping malls anymore and would prefer the outdoor areas that these areas often provide.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I think this is something that has not been identified in the past with the addition of many high density housing, particularly around smaller suburban streets. With no little or no parking on these new builds many of the new occupants/owners park additional cars on the streets which then creates traffic issues and busy streets which used to be quiet. Also mature native trees are not protected and developers remove these which impacts upon the look of a street and lack of natural environment for native birds in the area.

Where stormwater infrastructure is not adequate impacts on our streams, streamlife, and native bush areas. These streams eventually lead to the sea so also has an impact on the quality of the water at our beaches.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I would support all of these proposals to protect the views and character buildings. Allowing sunlight into areas is also really important. I would like to see more protection placed on any existing mature trees (this was something that the council used to have in place) and the inclusion of more green spaces or parks included in developments with additional native tree planting as a requirement to provide shading and protection for native birds.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Stop being lazy and work with central government to address the infrastructure shortfall. Building new houses far away from current centres is just kicking the infrastructure cost down the road

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

This is just not the right tool for the job. If you want to retain the look and feel of something, that does not have to clash with the height and the density. There are plenty of talented architects, who can retain the character of a building without being limited in their ability to right-size it for the area. The above list is vague, and feels intentionally unhelpful to let the public have an informed discussion on the matter.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

This needs to be better explained for all rate payers to understand the impact on existing sites

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

This needs to be explained better for rate payers to understand impact on existing sites

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

People wont walk almost 1 kilometre to get to rapid transit

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Not in zones currently protected from high density housing design

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Not in zones currently protected from high density housing design

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Heritage only exists if protected This is a reversal of everything achieved Historically to protect heritage

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Past Protected areas must remain protected otherwise this reverses good decisions made in the past

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Keep protections in place as they exist today

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

This needs to be explained in terms that rate payers understand

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Water infrastructure availability MUST be a qualifying matter. Also MUST stop building in flood plains to minimise the future problems, or come up with innovative buildings to address climate change and future flooding risks.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

There is limited infrastructure to support this at present

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Not needed

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The heritage areas around Birkenhead and northcote has high historical value and shld left as is.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The heritage areas around Birkenhead and northcote has high historical value and shld left as is.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The heritage areas around Birkenhead and northcote has high historical value and shld left as is.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

The heritage areas around Birkenhead and northcote has high historical value and shld left as is.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

What is a rapid transit stop for buses? Not too sure on this one. I would support it for trains, but not so much for buses.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Birkenhead and Northcote Point should be included.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Birkenhead and Northcote Point should be included.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Birkenhead and Northcote Point should be included.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Not upgrading certain infrastructure because it's too costly just punishes ourselves in the future. Our city is past its use-by date already (i.e. the Harbour Bridge).

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Please endeavor to include all heritage buildings and areas, as this is something that we cannot get back (regarding the proposal to include identified special character areas as a qualifying matter).

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

15 minutes is a good amount of time to spend walking. Since most commutes are done twice per day, that would equate to 30 minutes total.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

As much needs to be walkable or at least bikeable as possible. If not possible, good, high quality rapid transit solutions (not just buses or LRT) should be provided.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

1200m please. Again, please focus on both walkability and bikeability as bikes have an excellent ability to extend the range of transit to places where transit may not be able to reach.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

It is good to have significant density near town centres however it should not be overbearing and should try to fit in to the character of the neighbourhood (unless the neighbourhood has absolutely no character at all). Even still, it is possible to design good-looking apartments that aren't an eyesore. Terraced houses are a great addition as they provide increased density without looking out-of-place. And ensure that there are plenty of dairies so that people don't have to drive to the supermarket every time they want something!

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

200 metres is equivalent to a 3 to 4 minute walk which is too little.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

The height of a building is not a single factor that will immediately spoil a neighbourhood, though it should be taken into consideration. I think a blanked height limit is too restrictive and could result in NIMBY outcry which could result in the limits being tightened further.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I can't find any such areas on the map.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I cannot find these areas on the map.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

Infrastructure constraints should matter as building extra housing where the infrastructure (NOT just roads) is unable to support could result in failures. Though efforts should be made to upgrade

infrastructure where possible, though road widenings should be kept to a minimum as they likely will end up clogged up anyway because of the extra housing units and will cause more problems for the neighbourhood.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Local Public Views- Be very careful to not turn this into a weapon for NIMBYs to use. Rather, it should be used as a factor to consider and not an immediate disqualification.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Some intensification around city centres makes sense and will help ensure future development is in the right areas rather than spreading over the entire district.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Some intensification around city centres makes sense and will help ensure future development is in the right areas rather than spreading over the entire district.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Some intensification around city centres makes sense and will help ensure future development is in the right areas rather than spreading over the entire district.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

400 metres is a very big radius to apply around a small town centre like Highbury. It will make parking difficult, and add numerous traffic movements to a thriving main street. It will no longer have the charm and convenience of a local shopping precinct. Once this has been destroyed it will never be recreated.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

400 metres is a very big radius to apply around a small town centre like Highbury. It will make parking difficult, and add numerous traffic movements to a thriving main street. It will no longer have the charm and convenience of a local shopping precinct. Once this has been destroyed it will never be recreated.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I strongly believe ALL existing special character areas should be retained. They have been identified in the past because they have special character which should be retained and celebrated moving forward. To suddenly decide an area previously identified no longer has special character is illogical and unreasonable.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The very restrictive scoring system used by Council is far too narrow. Areas of significant historical value in our city speak of our heritage, the way our city grew, and the changes over time. The pockets of history tell us of the people who lived here before us and the work they did. There are ample opportunities for other types of development in newer suburbs, but once our history has been erased it has gone forever. Auckland does not have a large number of character buildings left given the size of the city, and they are precious.

The very narrow proposed rules for special character deem it impossible for owners and residents to have maintained and improved their properties over many decades - sometimes well over 100 years. This is completely unrealistic - the most pleasing outcome is to see special character properties cherished, maintained and used - allowing our history to live on and be part of our current lives.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Current businesses can operate highly successfully from sympathetically upgraded special character premises. This in turn creates desirable precincts with character and charm which attract patronage. Destroying that character and replacing with homogenous buildings takes away the individual charm of an area and removes the choices - both from the people who operate businesses there and the people who bring their business to a precinct.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure should be taken into account as a LIMITATION on increased housing density.

Greater housing density puts heavy pressure on more established infrastructure - overloading storm-water and road transport links and threatening our beautiful harbour and shore. The few remaining areas of open space and natural bush are valued by everyone for recreation and mental well-being.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support some built form controls in the City Centre to allow sunlight into public space. Reference New York City where staggered building heights on Manhattan allowing sight and light lines to inner city streets, buildings and parks.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Special character of suburbs such as Ponsonby, Parnel, Herne Bay etc will be destroyed as they can be accessed within a 15 min walk from city centre.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Suburbs such as Northcote Point, Birkenhead Point, Chelteham and Devonport will lose their special character as they are all within 10 minute walking distance from metropolitan centres.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

I'm not clear what else could be included under the label Rapid Transit Stop in the future (other than train stations)

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Other than Parnell none of the suburbs listed have enough existing housing currently protected under the Special Character protection to be effected by the change and road infrastructure seems to sufficient to allow for the extra parking and road traffic high density housing would introduce.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Small townships such as Highbury Birkenhead and Northcote Point do NOT have the road infrastructure to support extra traffic and parking spaces increased intensified housing would introduce. The special character the existing number of heritage houses (including new builds built in heritage style) gives to these surrounding suburbs would be destroyed by the introduction of modern townhouse and multi-story apartment buildings.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Many areas in Birkenhead Point (as an example) that are not identified as a qualifying matter (for special character protection) are FULL of bungalow and villas that give this area it's SPECIAL CHARACTER. Without protection, there will be nothing to stop developers from purchasing these types of properties and replacing them with high-density housing.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

In responding specifically in relation to Birkenhead. There are many groups of houses in the area that provide a collective sense of character. As an example numbers 75,77,79 and 81 Hinemoa Street. All villas, and they collectively provide an important sense of the history of the area but are zoned: Residential – Mixed Housing Urban Zone – Modified. Given the sheer volume of other opportunities to build denser housing, it seems unnecessary to enable the demolition of houses like this.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

As discussed in response to the previous question. The criteria used is too narrow and doesn't appear to identify individual, or groups of houses that provide obvious historic references to the area (Birkenhead). For example, 74 Hinemoa Street, which is the old Birkenhead Post Office is not protected.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

The protection of ecological areas around Birkenhead appears patchy and inadequate. Reasonably significant protections appear to have been given to the coast through the coastal erosion overlay. However, Le Roys Bush is a very significant ecological area in Birkenhead that has been developed and maintained through many thousands of volunteer hours. The north end of Le Roys (towards Highbury) appears to have been given minimal protection through the Significant Ecological Areas overlay, this should be extended at this end to provide more coverage and protect both a significant ecological and community asset.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

there is plenty of land, make it smaller ..can always make it larger next election

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

there is plenty of land, make it smaller ..can always make it larger next election

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

there is plenty of land, make it smaller ..can always make it larger next election

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

there is plenty of land, make it smaller ..can always make it larger next election

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

there is plenty of land, make it smaller ..can always make it larger next election

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

1. Northcote Birkenhead points need to remain untouched

2. The assessment was done using google maps and not even visiting the areas

3. These areas should have the same protection if not more than the likes of Devonport or Ponsonby.

4. Northcote already has a huge amount of high intensity housing being built (it just increased from 1400 houses to 1700) Northcote point has already had the harbour bridge and motor placed through it, Northcote residents have taken way more than their fair share on behalf of Auckland and New Zealand

5. The current unitary plan is catering well for intensive housing, why destroy the little heritage we have ?

6. With the pandemic the need for people to live close to the city Centre has well and truly gone.

7. The Auckland city Centre is now a crime ridden disaster, why would people want to work or live close to this area?

8. The water , power and roading infrastructure can barely support the unitary plan intensification .. let alone what is proposed. This must be a very high consideration especially in heritage areas where there would be a massive need (and cost) to support the intensification

9. Replacing a villa with a 3 houses in a heritage area will not make it any cheaper for new home buyers.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

1. Northcote Birkenhead points need to remain untouched

2. The assessment was done using google maps and not even visiting the areas

3. These areas should have the same protection if not more than the likes of Devonport or Ponsonby.

4. 9. Replacing a villa with a 3 houses in a heritage area will not make it any cheaper for new home buyers.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The water , power and roading infrastructure can barely support the unitary plan intensification .. let alone what is proposed. This must be a VERY HIGH consideration in heritage areas where there would be a massive need (and cost) to support the intensification

A good example would be Onewa road..how on earth is this expected to support the increase in housing / car / bus / bike intensification

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I live on Rawene Rd in Birkenhead, a street impacted by these proposed changes. While I am supportive of my house being removed from the special character area, I have concerns about the amount of lost heritage in other parts of Birkenhead and Northcote as a result of these proposals.

I recommend reviewing the proposed changes and including more homes that are clearly of special character quality for the area. Google Maps alone is insufficient a tool.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Broadly I support the changes to the special character for business. However, once again some of our most precious special character buildings are not protected as part of these changes. For example, the Hellaby's Building at 98 Hinemoa St is protected but the Dils Building at 92 Hinemoa Street is not, despite being of similar character. I would recommend doing the assessment properly and revising the qualifying matter to include more buildings that add to the character of our community.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure must be a qualifying matter as this is a key constraint for intensification in our local community. Some streets, like Rawene Rd in Birkenhead, have narrow roads and already have issues with stormwater management, and this is only going to get worse with more apartments coming online under current Unitary Plan rules. These changes add further pressure to this.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Streets and areas with a high proportion of current special character houses should also be a qualifying matter. For example, there are wholes streets in Northcote Pt (in fact the whole suburb is a historic neighbourhood) that should be included as a qualifying matter so that the character of the neighbourhood can be protected for generations to come.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

The THAB and in many instances mixed urban zones are not have adequate regard for proximity to green spaces .

Intensification is great open use green space is critical - not just sports fields but green spaces all public can use.

Without it intensified neighbourhoods will be terrible places to live and from what I can there is very little regard to green spaces in the assessment process.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I do not support intensification as this type of living has a detrimental effect on people's mental health, mood and general health due to lack of sunlight, inability to have choices, for example to have a garden.

1) Children will not get opportunities to run around in their own back yards, instead they will be stuck inside, probably on devices. When parents get home from work their commitments to dinner, homework supervision, laundry etc will prevent them from taking kids to the local park to play. If they had space at home where parents can supervise them out the window they will get much needed exercise and fresh air both of which are beneficial for their physical and mental health.

2) The infrastructure is not in place (& in some cases not even planned) to support the proposed increase in housing volume. You only have to look out the window when it rains to see the volume of storm water running down the road largely in part due to the disproportion of land area being built on compared to lawn and garden area leaving no natural absorption.

3) Schools in the area are already at maximum capacity and the playgrounds are being swallowed up with classrooms leaving little outdoor play area for the kids. Where is the plan for more schools/teachers?

4) Whether Auckland Transport likes it or not we are as a nation importing more cars (whether they be electric or petrol driven vehicles) and if you build a 3+ story apartment building in place of a single dwelling you are increasing the volume of cars to be housed per site.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Special character areas are "special character" areas for a reason and a quick drive around both Northcote and Birkenhead Points will demonstrate how people are keen to enhance the area by renovating existing dwellings. In fact one property in Queen St, Northcote Point has trucked in an old villa, keeping within the existing vibe of the area. All heritage areas including Northcote & Birkenhead Points should remain as "special character" areas. Council's scoring of these areas was done by Google Street View rather than having the same courtesy applied as for example Devonport/Stanley Point areas.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

I believe I've covered my reasons above. Special character areas are "special character" areas for a reason and a quick drive around both Northcote and Birkenhead Points will demonstrate how people are keen to enhance the area by renovating existing dwellings. In fact one property in Queen St, Northcote Point has trucked in an old villa, keeping within the existing vibe of the area. All heritage areas including Northcote & Birkenhead Points should remain as "special character" areas. Council's scoring of these areas was done by Google Street View rather than having the same courtesy applied as for example Devonport/Stanley Point areas.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

I believe I've covered my reasons above. Special character areas are "special character" areas for a reason and a quick drive around both Northcote and Birkenhead Points will demonstrate how people are keen to enhance the area by renovating existing dwellings. In fact one property in Queen St, Northcote Point has trucked in an old villa, keeping within the existing vibe of the area. All heritage areas including Northcote & Birkenhead Points should remain as "special character" areas. Council's scoring of these areas was done by Google Street View rather than having the same courtesy applied as for example Devonport/Stanley Point areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

I believe I've already outlined at the beginning my concerns regarding lack of infrastructure and lack of planning for infrastructure.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I do not support intensification as has been suggested. This type of living has a detrimental effect on people's mental health, mood and general health due to lack of sunlight, inability to have choices, for example to have a garden.

1) Children will not get opportunities to run around in their own back yards, instead they will be stuck inside, probably on devices. When parents get home from work their commitments to household chores will prevent them from taking kids to the local park to play. If they had space at home where parents can supervise them out the window they will get much needed exercise and fresh air both of which are beneficial for their physical and mental health.

2) The infrastructure is not in place or planned for to support the proposed increase in housing volume. You only need to look out the window when it rains to see the volume of storm water running down the road largely in part due to the disproportion of land area being built on compared to lawn and garden area leaving no natural absorption. With climate change changing rain patterns there are heavier more infrequent rain falls and the current infrastructure cannot cope.

3) Schools in the area are already at maximum capacity and the playgrounds are being swallowed up with classrooms leaving little outdoor play area for the kids. Where is the plan for more schools/teachers?

4) As a nation we are importing more cars, whether Auckland Transport likes it or not! If you are going to intensify housing there will be more cars to be housed per site.

John Watson stated earlier this week that there is sufficient land to build on without the need to intensify so lets see some investigation into alternatives rather than bulldozing ahead.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I do not support intensification as has been suggested. This type of living has a detrimental effect on people's mental health, mood and general health due to lack of sunlight, inability to have choices, for example to have a garden.

1) Children will not get opportunities to run around in their own back yards, instead they will be stuck inside, probably on devices. Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Special character areas should be preserved at all costs. A drive around Northcote & Birkenhead Points will demonstrate how people are keen to enhance the area by renovating existing dwellings. I can think of 6 renovations underway currently in the space of 1km radius of where we live at Northcote Point. Had council representatives actually visited the area as they did in other special character areas rather than using Google Street Viewer this would have been immediately evident.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Special character areas should be preserved at all costs. A drive around Northcote & Birkenhead Points will demonstrate how people are keen to enhance the area by renovating existing dwellings. I can think of 6 renovations underway currently in the space of 1km radius of where we live at Northcote Point. Had council representatives actually visited the area as they did in other special character areas rather than using Google Street Viewer this would have been immediately evident.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

All existing heritage areas should be protected. The special character of these areas has developed over more than 100 years and eliminating them at a stroke of a pen is very poor governance. Once gone they can never be recovered.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I refer in particular to the North Shore. All of Northcote and Birkenhead Points should be protected as is Devonport. Allowing intensive development in these areas will decimate the character of the area not to mention values. Many of these properties have had extensive renovations done to them on the understanding that the heritage character will be protected.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

There are already a significant number of apartment blocks within the city centre so increasing the height on the outskirts of the city centre would make sense as the heights gradually reduce the further away from the centre you get

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

I think some consideration is needed to the areas where this would be applied rather than a blanket application. For example, in Birkenhead, some of the roads around the town centre are

major thoroughfares so applying the THAB zone to those street would be justified. However, applying that zone to streets that are quiet and mainly have local traffic would be out of keeping - particularly when that area is currently a special character area.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

I think some consideration is needed to the areas where this would be applied rather than a blanket application - this needs to be fit for purpose.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

We risk losing even more of our heritage and character if we introduce these new zones. I think more should be done to help improve the standard of homes within special characters so that people better understand the planning rules and are enabled to meet them. Some of the poorer quality new builds are signed off by the council without them meeting the rules - better enforcement would have prevented some of the areas not meeting the 75% threshold.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

For Birkenhead, I believe that the streets to the south and east of the town centre should all remain special character areas. Streets like Rawene Road and Mariposa Crescent contain a large number of what seem to be high quality villas but the THAB zone risks them being destroyed and replaced with apartments. Looking down Hinemoa Street, there are quite a number of heritage properties - some of which could end up being dwarfed or damaged through the construction of apartment blocks on either side if the rule changes go through.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The wastewater system in Birkenhead already seems to be struggling. Our house is near the bottom of the line and we have already had overflows underneath our pole house that go down into Le Roys Bush. Watercare don't seem to have any solutions for this. Adding apartment blocks further up the line without expanding the existing network would cause more and more problems.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

The other aspect I think should be considered as part of this is the impact on trees and the environment in general. With the lack of tree protection over the last few years and the inability to notify trees, there's a real risk we will lose even more of our greenery.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?**

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I totally oppose the Auckland Council plans to remove the majority of the Auckland Unitary Plan's Special Character Overlay in both Northcote and Birkenhead, as part of the directive from Central Government to intensify building height and density. Much work was done under the Unitary Plan to accommodate both protection of heritage houses and buildings and allow for more density. For Central Government to create this directive is arrogant and ignorant of the facts. We saw the same with the Special Housing Accord developments. The infrastructure has to be built first before this type of intensification can occur. The Government and Auckland Council cannot be

allowed to destroy the local and wider Auckland history forever. As a country we have already seen so much of our history destroyed.

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Yes I believe its a great idea as this basically follows international trends of a 20 minute City, where everything is available to a dweller of a city within 20 mins walk and on the elderly's walking speed on average at 0.97 m per second

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

It should be a min of 1200 m to follows international trends of a 20 minute City, where everything is available to a dweller of a city within 20 mins walk and on the elderly's walking speed on average at 0.97 m per second.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

It should be a min of 1200 m to follows international trends of a 20 minute City, where everything is available to a dweller of a city within 20 mins walk.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

It should be a min of 1200 m to follows international trends of a 20 minute City, where everything is available to a dweller of a city within 20 mins walk.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

It should be a min of 1200 m to follows international trends of a 20 minute City, where everything is available to a dweller of a city within 20 mins walk.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Special character is important but this can still support larger building through intellegent architecture.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Special character is important, however good architecture can overcome the issues of scale and all possibilities should be explored.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

It shouldn't be a blanket approach, Special character areas can still support larger buildings. Good architecture can overcome issues of scale.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

This is not an excuse to allowing reduced intensification, its something a city should always be assessing and its Councils job t to provide for in the city plan, so it should not be a qualifying matter.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Views should only be prioritiesed when they benefit the public rather than private land.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Commuters need quick and easy access to bus and train stations.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Commuters should be spared unreasonable time getting to their bus or train stations

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

I doubt that infrastructure will be able to cope with ever increasing traffic.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

I doubt that infrastructure will be able to cope with ever increasing traffic.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Special character areas, developed over a significant period of time may form the "DNA" of an area, with which residents identify.

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

In principal I agree with this. I also think that within certain areas particular streets, that are well serviced by transport and, importantly, are on ridge lines should be included (examples Onewa Road, New North Road). The road height is important as the larger buildings do no block or shadow smaller ones beneath and around then and the denser housing is limited to the main road.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

As above this should be looked at on a street by street basis and not as a blanket rule. There are streets in many areas that fall within these brackets that are not suited to intense housing, yet parts of long well serviced roads roads might fall out of the housing changes. Again there are some roads that need to excluded due to their size, ability to support extra parking/ households etc.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per the above a blanket rule on distance does not provide suitable and sensible protections for streets that can simply not sustain this kind of intensification. A great example of this is Mariposa Avenue in Birkenhead - new zoning Residential Apartment and Terrace housing. In its current form this street is nearly impossible to navigate, esp during pick up and drop off of daycare, church or due to daily parking for commuters and Highbury shopping users. Adding to this congestion would bring the area to a standstill - where as Hinemoa (at the shopping end) does lend itself to higher rise buildings/ mixed housing as it has wide access, parking and can be walked to other amenities. Additionally, this area is well serviced by buses, however the ferry service is terrible and under-utilised driving people to cars which uses one road (Onewa) to feed to the motorway half a dozen huge suburbs along the coast, creating traffic chaos in its current state with no other possible alternatives due to the peninsular nature of the Kaipatiki coastline. *A good example of where this can be extended to a larger area is Takapuna, where the city centre is surrounded by good, wide, feeder roads, many on ridges, where there is room for transport, parking and multiple motorway access points.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per the above a blanket rule on distance does not provide suitable and sensible protections for streets that can simply not sustain this kind of intensification. A great example of this is Mariposa Avenue in Birkenhead - new zoning Residential Apartment and Terrace housing. In its current form this street is nearly impossible to navigate, esp during pick up and drop off of daycare, church or due to daily parking for commuters and Highbury shopping users. Adding to this congestion would bring the area to a standstill - where as Hinemoa (at the shopping end) does lend itself to higher rise buildings/ mixed housing as it has wide access, parking and can be walked to other amenities. Additionally, this area is well serviced by buses, however the ferry service is terrible and under-utilised driving people to cars which uses one road (Onewa) to feed to the motorway half a dozen huge suburbs along the coast, creating traffic chaos in its current state with no other possible alternatives due to the peninsular nature of the Kaipatiki coastline. *A good example of where this can be extended to a larger area is Takapuna, where the city centre is surrounded by good, wide, feeder roads, many on ridges, where there is room for transport, parking and multiple motorway access points.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Living in a vibrant, busy and interesting city is what attracts many of us to Auckland. Part of what makes this true is the particular characteristics of its many suburbs from the stately homes of Remuera and Parnell to the urban planning of Hobsonville, the Maunga in many suburbs like Mangere, the glimpses of city from Ramarama to Albany and the harbours that we are surrounded by. Our character areas are part of this vibrancy and are enjoyed by many whether you live or visit. Often these older areas are close to amenities (Kingland/ Mt Eden), parks (Epsom, Birkenhead) that were gifted or protected by our forebears and are part of the enjoyment that people get when they visit these areas for walks, coffees, or events. They are part of "Brand Auckland" - immortalised in art work, marketing and promotional material that bring people to this city to visit (and spend money), live and work. Heritage areas cover a tiny proportion of Aucklands built area - removing their protection will give such a tiny incremental ability to increase building space, at huge cost to our heritage and our brand - one that becomes irrevocable very quickly.

Additionally many of these heritage areas are in very expensive land catchments. The cost of the land to begin with means that the base costs before buildings are prohibitively high, meaning the build cost for a quality build will be many millions or worse yet, developers will look to save on the building costs driving poor quality, cheap housing further damaging these beautiful areas. For example a land / house in Birkenhead Point might cost $5m to purchase today. 3 quality homes would need to have build costs of ~$2m each. This means the 3 townhouses would need to be selling for around $4m each before the developer saw a profit. This example would be repeated across many of these areas (assuming quality builds that matched the areas level of quality living are built). Finally, if all existing historic areas are removed as they currently stand and there is no options around this then the areas that currently hold historic zoning should have strong historic building rules limiting the look and feel of any future housing to the look and style of the area. Great examples of this kind of building can be found already for example in Christchurch https://www.odt.co.nz/lifestyle/home-garden/new-twist-english-style-period-homes-proving-popular-christchurch and Parnell.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The historic area is more than just the sum of the properties - it is often about the other planning, gifting and history woven into these areas. For example : There is a large amount of area around Birkenhead and Northcote point that should be protected as a whole, rather than individual properties having protection. The area is dominated by villas and bungalows that are around 100 years, and more, old from when the area, which has a strong historic legacy, was first built on en masse. From the iconic sugar factory to the Hinemoa shops, and the many houses on the surrounding streets that have been fiercely protected and maintained to a high standard by generations of owners who see themselves as custodians of these properties for the future. Houses have been struck off the specific housing register over the years (for example 18 Bridge View Road), despite opposition, but in good faith that they would retain their protections under the blanket protection of the area. There has been no work undertaken to go back and reassign these homes to the register now that the blanket protection is removed - with which they would never have been removed. The North Shore, and Birkenhead/ Northcote, in particular is being hard hit with the removal of historic provisions - removing character that might forever lessen the value and desirability of the area as a whole. The Birkenhead/ Northcote area in particular is linked with large bush walks that provide an amenity for all in Auckland. These walks wind in and out of the historic residential housing. One example is the park from Colonial road, through Chelsea bay up Telephone along Palmerston down Bridge View to Hinemoa park and back up the hill to walk through Le Roys and Little Shoal Bay. Much of these parks and walkways were gifted and continue to be maintained by the council and many volunteers. On this walkway dozens of people a day sit on the donated seat at the corner of Waganella and the cul-de-sac end of Bridge View road (whose name was changed from Harbour View on 1 Feb, 1967 owing to its harbour then bridge views) rest on their walk and look across the harbour to the city, Devonport and Takapuna. This view, and the public amenity it provides will disappear under the proposed plan as houses over whose roofs you can see (12,18, 21, 23 Bridge View could be built out and the street will no longer have a name that holds any meaning. Hundreds gather in this spot to watch New Years eve

fireworks off the sky tower and bridge, and light shows on the Bridge. *see images of this area attached. Walking through the historic houses absolutely form part of the walk - many of which are noted. Le Roys is one of the biggest inner city Rainforests in the world - walked first by Maori to gather food and now by us - having been extensively protected (Kauri/ Nikau and more) and around which intensification will have devastating effects - many of the back of properties that currently feed into this area will be able to be developed and as it currently stands they appear to form part of the park and the amenity the park provides to the wider Kaipatiki and Auckland area.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

There are areas of shops dotted all around Auckland that should maintain their protection, again as they add to the character of the city as a whole. Examples of this that come to mind are Kingsland and Hinemoa street

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Again using the example I am most familiar with there are many areas with infrastructure issues, especially those in historic areas. *See images of Bridge View Road. The cul-de-sac end of Bridge View road has had pipes break/ flood under the road and park on more than one occasion in the past few years requiring immediate remedial work from Watercare et al. This water then runs to the park/ walkway that leads down to Hinemoa park which has culverts and drainage that immediately over flow in any weather event undermining the land. The neighbourhood ensures

public drains are kept clear to avoid this but this would only be exacerbated with more housing in the area and very little permeable land as described by the new plans. Furthermore this particular cul-de-sac which already supports 8 properties with a narrow one way in and out entrance (no parking) has only 3 actual off street parks leading cars to park dangerously and on public land while works are being done or anyone has guests to their property.

As is well known many of these historic areas also have issues with waste running into the ocean (only a few 100 m away from us), over head powerlines etc.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Local Public Views Overlay * see attachment. There are many spots in Auckland that add to the variety of areas characters whether they be city, sea, mountain or built. I would be vary surprised if all of these are protected or consultant on, as up until now, many would have been seemingly protected by other provisions under the old unitary plan and its predecessors. Two in particular deserve mention in Kaipatiki - 1. The rest stop park at the corner of Waganella and Bridge View roads that provides view across the park and Aucklands harbour, inner city and north shore and is a favourite stop for many walkers all day long and a great view point for events. 2. The view from Le Roys Bush and Little Shoal Bay, across the harbour and to the bridge - an iconic view of Auckland and a key view point for events.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Views from and of the park, Corner of Bridge View and Waganella highlighting small cul-de-sac of historic homes and public amenity of park/ rest stop (very important if you've ever walked the hills around here!). Please see the videos for better resolution of views etc.

Some very short (6-12 sec Videos, only available via the link):

Video filmed during the day (5 May) to show park rest stop view, enjoyed by many. THis also demonstrates the housing stock (old) and the views across the roof line that are open to all, and could be lost.

Also, from an infrastructure POV the car parking issues currently existing.

Youtube link only available with the link:
https://youtube.com/shorts/eRiBH8uhI6U?feature=share

Here is a similar view (evening, 1 May) highlighting what would be lost above the roof lines and across the park and mature trees. Note Number 18, which had protection until recently and was taken off as it had blanket protection.

https://youtube.com/shorts/YEk664lw0C4?feature=share

And from the narrow part of the street level where crowds gather to watch the bridge:

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I believe that the current catchment in Birkenhead is far too wide given the fact that it encompasses many old well maintained villas in Mariposa Crescent and Hinemoa Street.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I believe that the current catchment in Birkenhead is far too wide given the fact that it encompasses many old well maintained villas in Mariposa Crescent and Hinemoa Street.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Birkenhead and Northcote don't have rapid transit stops. So there is no need for such a catchment in these areas.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

As these special character areas only account for 3.6% of total housing stock they should definitely be included.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Many houses in Northcote and Birkenhead Points have been identified as not having special character due to the desktop survey undertaken. A full in-person survey needs to be undertaken to correctly identify these additional special character areas.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Hinemoa Street and Queen Street have business buildings which have not been identified, namely both the Northcote Point and Birkenhead Point old Post Office Buildings and the Bridgeway Theater.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Intensification of housing without consideration of the long term effect on water, sewerage etc is a recipe for disaster. The current infrastructure cannot cope with the number of houses currently in place.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I don’t want our beautiful heritage vibe of my area ruined by mass modern development. I love Birkenhead point and how it is now. I’ve been a resident for 20 years .

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Crammed next to your neighbors is not what my neighbourhood is all about . I like light , space and green spaces a

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I do not support but don't agree with the options presented. I think that this should be area specific. The historic character of so many houses, and the look and feel of the older suburbs including the village shops must be maintained. This is part of the amazing character that these building impart reflecting our history. These suburbs generally have old trees on site and in the roads and parks. Modern buildings construction techniques most often remove these. Once gone it's gone forever. Preserve these areas.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I do not support but don't agree with the options presented. I think that this should be area specific. The historic character of so many houses, and the look and feel of the older suburbs including the village shops must be maintained. This is part of the amazing character that these building impart reflecting our history. These suburbs generally have old trees on site and in the roads and parks. Modern buildings construction techniques most often remove these. Once gone it's gone forever. Preserve these areas.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Area specific. As above. Modern suburbs can definitely have these zones.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Again. Be suburb specific - protect our historic buildings.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Protect the historic buildings and areas. Modern suburbs that don't have character can be intensified in these zones.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

As above. [Protect the historic buildings and areas. Modern suburbs that don't have character can be intensified in these zones.]

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

As above. [Protect the historic buildings and areas. Modern suburbs that don't have character can be intensified in these zones.]

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Many inner city heritage areas will be ruined

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Ditto [Many inner city heritage areas will be ruined]

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Ditto [Many inner city heritage areas will be ruined]

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Ditto. The land area of these high intensity zones is massive and will provide for sufficient intensification

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Ditto. The land area of these high intensity zones is massive and will provide for sufficient intensification

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Character is part of what makes a city area desirable and liveable.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

You have basically made a few character 'ghettos'. Larger parts of the city need to retain character

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

This would encompass areas such as Ponsonby, parts of Grey Lynn and Parnell. These areas have houses which are a crucial part of the heritage of our city. This cannot be underestimated in terms of the preservation of character and how Auckland residents relate to the city in the future. Once lost, the history represented in these houses is gone for good. Auckland, as a city, should be allowed to retain features which have meaning and special aesthetic value, such as villas and some bungalows.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

This question calls for a blanket response which covers many quite different areas. Some centres will be relatively modern and already have high density housing, for example New Lynn, Takapuna, Albany etc. Other areas will have established, heritage villas which contribute to the history and character of Auckland as a complete city. For example, Devonport, Birkenhead Point and Northcote Point. Once again, Auckland should have the right to preserve our history inherent in some of our housing and buildings.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

See answer to previous question. Character and heritage should absolutely be retained for future residents. Auckland should allowed to retain structures which have meaning and history - things which make our city distinct.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Each of these proposals mean that almost all residential areas in greater Auckland, will be subject to high density housing.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As answered in previous question. [Each of these proposals mean that almost all residential areas in greater Auckland, will be subject to high density housing.]

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more)

within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

These areas are vital to the preservation of the history of our city. Removing villas and old bungalows and replacing them with higher density buildings will, in many cases, mean expensive apartments that the 'average' person is still unable to afford. How does replacing character with very expensive apartments and town houses, help to solve the housing crisis for most of the people and families currently unable to afford housing in Auckland? Auckland City Council should be fighting very hard to retain special character areas which are intrinsic to our heritage and to preserve this for future generations. Other world cities are famous for buildings which add special character and Auckland should absolutely be allowed to retain our own particular character

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I have viewed the map on the council website and there seem to be very, very few area that qualify currently.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The High density housing that we already have in Auckland (under the current Unitary Plan) already covers a walkable area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

With the existing Unitary Plan, there is already a walkable catchment area in Auckland areas

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

We already have walkable areas around transit stops around High density places

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

With the existing Unitary Plan, there is already a walkable catchment area in Aucklands high density areas

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The capacity for more housing in aucklands walkable catchment areas already exists

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

In our street we have houses that date back to the early 1900's. We, and our neighbours take great pride in our properties, our area and our community. We live here because of the history and the character homes. The renovations we have all done on our properties have been done so as to be done in keeping with the historical nature of the area. The new apartments built on the corner of Hinemoa and Maritime we built with historical characteristics and look about them.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

We moved to this area 30 years ago. We love that the properties have stood the teat of time, have character and also have history. Our house was built in 1920. Our neighbour's house before then. We can not understand how the Council is prepared to remove the special character of this area, how they are prepared to allow the removal and destruction of houses that have been here for nearly a century. We have all maintained our properties so as to continue to protect the houses

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I do not think enough has been done to look at properties in the area; up driveways, behind fences, behind hedges. There are many houses in the area which were built before WW1 and even just after WW1. This needs to be taken into account and these properties need to be protected

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The existing bush and beach areas already suffer from stormwater issues, parking is a constant problem, traffic congestion at peak hours through Birkenhead etc. We have flooding across our property each time we have a heavy downfall of rain due to the lack of storm water our neighbour's have

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Our home was built in 1920. In our house, we have approximately 8 leadlight windows, 2 bay windows, weatherboard nearly 100 years old, wooden nox corners, tongue and groove soffits, boundary fences built with bricks made in the 1900's from the local brickworks. Every renovation and extension we have done to our house has been done with quality materials so as to maintain the historical characteristics of our property and the area we live in. We can not understand why the council would want to remove the historical status of this area and, in doing so, allow the potential destruction of the history of everything in the area

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Realistically, people are not going to be able to, or want to, walk that far in inclement weather. This zoning puts pressure on existing properties that currently have sizable permeable areas and vegetation, which also need to be prioritized in view of climate change.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

For the same reasons as above. Ten minutes is a long time to have to walk in pouring rain with shopping.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

These areas are likely already quite built up, so it would not be such a bad idea, but I don't want to go as far as say I support it.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I am generally in support of this, but worry that it would be at the expense of any heritage buildings that currently exist. I think we are on the brink of losing a lot of what adds character and diversity to some areas, and this needs to be taken into consideration.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Same as for the previous question. -I am generally in support of this, but worry that it would be at the expense of any heritage buildings that currently exist. I think we are on the brink of losing a lot of what adds character and diversity to some areas, and this needs to be taken into consideration.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

I think it's imperative that we ensure we don't lose these heritage areas and replace them with what might essentially become like the housing estates in the UK, where crime runs rampant and there is little social cohesion. Many of their high rise apartment buildings are now being demolished as it was nothing short of a failed social experiment.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I can't see any blue or red, only pink and other colours!! This is quite a worry, where are the protected areas?? For example I do not see any Historic Heritage Overlay Extent of Place.jpg Historic Heritage Overlay Extent of Place

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

I find the map confusing difficult to identify the different areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

Sorry, I put other again, because I think I support, but am confused when you say: "it would reduce the limit on building heights and density that would otherwise be enabled". I'm assuming you want the heights and density limited to reduce the overload on infrastructure, which is obviously important. For too long development has gone ahead without adequate infrastructure being put in place, and we are constantly playing catch up.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

We must act now to preserve Character buildings, green space and trees before it's too late. Vast areas of productive food growing land in Auckland has been covered with sprawling Shopping Malls that have killed businesses in smaller towns and contribute to traffic congestion and pollution. If we are to have high rise accommodation, it should be above these malls. Climate change is the result of human activity, and the only way to reduce it is to reduce the number of humans on the planet. I don't accept that Auckland should increase it's population by another million people. The "economy" that depends on a large population is causing pollution and climate change.

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

I do not support this in any shape or form. You are destroying the little history this country has. Can't believe you differentiate Devonport but equally old areas such as Northcote point and Birkenhead point are not!

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Great that the wording in these options is so complicated. As above the old character areas should not be included within the proposed changes.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Support this move as more people could live closer to the centre CBD

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Support this move as more people could live closer to the centre CBD

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Support this move as more people could utilise the public transport

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support this move as more people could live nearby town centre to reduce future carbon footprint

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Support this move as more people could live nearby town centre to reduce future carbon footprint

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Old and heritage buildings should be protected

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

The special character zone should be covered in the nearby small town centre of the residential area. About the property at 12 Alfred Street, Northcote Point. I believe that this house should be classified as a Residential - Mixed Housing Urban Zone. Due to the fact that the two neighbouring sites are Urban Zone. Therefore, there is no point in keeping this site as a two-storey single dwelling residential area. The house also does not have any heritage value. You have classified 10A Alfred Street, Northcote Point as an Urban zone which has a 1920s house on the site. Therefore, I believe that 12 Alfred Street, Northcote point should be classified as a Residential - Mixed Housing Urban Zone.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Busines areas of special character should be protected. If buildings are too old, they should be able to be replaced, however, the building will require to build in a similar nature to blend into the street view.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

About the property at 12 Alfred Street, Northcote Point. I believe that this house should be classified as a Residential - Mixed Housing Urban Zone. Due to the fact that the two neighbouring sites are Urban Zone. Therefore, there is no point in keeping this site as a two-storey single dwelling residential area. The house also does not have any heritage value. You have classified 10A Alfred Street, Northcote Point as an Urban zone which has a 1920s house on the site. Therefore, I believe that 12 Alfred Street, Northcote point should be classified as a Residential - Mixed Housing Urban Zone.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

I am making a submission about the new housing rules in order to protect our urban ngahere. These changes to the planning rules will threaten native trees on private land because there will be no space to accommodate trees on these new developments. I believe we need to protect these important natural assets for our city, by requiring consents to remove or significantly prune currently protected trees. It is therefore extremely important that the plan change ensures that trees currently legally protected by being included in Schedule 10 (Notable Trees) and Significant Ecological Areas (SEAs) as well as other provisions are included as "qualifying matters".

I propose that the new rules:

1. Qualifying matters must include all current legal tree protection elements in the Unitary Plan so that these trees continue to require consent for removal / pruning under the new rules.

2. This includes Schedule 10 (Notable Trees), Significant Ecological Areas rules, Riparian Margin rules and rules that protect coastal Pohutukawa.

3. The scope of the Plan Change to enable these changes to the Unitary Plan must also include correction to any identified errors in Schedule 10.

4. The scope of the Plan Change to enable these changes to the Unitary Plan must also include the addition to Schedule 10 of any new nominations for scheduling that have been received by Auckland Council.

5. The new MDRS housing rules will enable permitted development of all Single House Zone properties with up to 3 new dwellings. This intensification will inevitably encourage the removal of any trees that remain legally unprotected. This will be a disaster for the urban forest and for climate change amelioration, resulting in the permitted removal of many thousands of trees. It is therefore essential that the current and extremely meagre legal protections in the Unitary Plan for urban trees on private land are retained and that the opportunity is taken to identify and schedule new qualifying trees that have been nominated. New nominations should be encouraged as part of the plan change process.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Intensification in the Auckland CBD is appropriate as it reduces urban sprawl and reduces transport infrastructure needs

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Identified 10 metropolitan areas make sense for intensification

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

This is to generous distance for commuters and should be reduced considerably. Intensification within a reduced zone would be more applicable say 300m

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Some areas which have significant historical considerations have not been adequately catered for and a blanket approach has been adopted which has major implications

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Some areas which have significant historical considerations have not been adequately catered for and a blanket approach has been adopted which has major implications

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is vitally important that the city retains its heritage and special character buildings and areas as they are unique non-replaceable and provide character and a point of difference within a metropolitan city

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I think the methodology that has been used to identify areas and houses is simplistic and misleading. It does not look at the variances within the suburb. In some circumstances there is an absence of integration between Heritage and THAB e.g. Birkenhead Point and Northcote Point have been disadvantaged by the methodology.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Hinemoa street should be extended as it was the first business suburb on the North Shore and is widely used by the public throughout the week and heavy usage on the weekend due to character appeal

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

There is a lack of buffer zone transition between the most generous and sensitive housing stock zones. (THAB and Special Character Single House 2 Storey). This has partly been created by the over generous walkable demarcation zones proposed specifically in town and large town centres. E.g. Hinemoa Street/Birkenhead.

This has the potential to create significant conflicts that cannot be adequately addressed via the implementation of standards, rules, or assessment criteria even if a resource consent was to be required. The reliance on terms for design purposes such as "encourage" could affectively become meaningless, "floor plans" can creatively be relabelled by developers, while window treatments must still exist in some form for the proposed high apartment blocks.

When a too generous THAB zone walkable area within the town centres allows for such progressive enabling development but does not adequately incorporate satisfactory amenity retention for the more sensitive qualifying heritage housing stock that it adjoins, then it will inevitably cause serious issues. This predicament goes directly against the view to manage, protect and not compromise heritage features. To suggest that identified heritage, cultural, historic character as a qualifying matter will not be impacted adversely via a six-storey apartment immediately adjoining a property is misguided.

Implications:

1) The heritage street profile the character dwellings that are to be retained will be compromised and their overall value will be reduced when providing for such generous walkable THAB zone apartment blocks being located directly beside or behind these heritage properties. No heritage comment would suggest that the addition of a significant six story development immediately adjoining an 1890's dwelling would maintain, manage and not compromise the heritage character.

   This situation is specifically illustrated on my property at Hinemoa Street, Birkenhead. One side of the street has dwellings located below the road, while qualifying special character residential and business heritage are located on the opposing side. This means the eye of pedestrians is naturally drawn to those Dwellings and Business Special Character zoned properties located directly behind where the THAB zone is currently proposed.

   THAB zone will then act as a backdrop to this vista under the generous notion of being a "walkable" zone. Despite also the acknowledgement of the regional importance of Hinemoa Street in the Councils own heritage assessment report, dwellings located behind on Palmerston Rd or surrounding Mariposa that have scored a heritage ranking criteria of 6.

2) The over generous THAB zone clash will also provide no privacy and a sense of total dominance to the rear of the character properties that they will tower over. In essence, the heritage character homes are expected to provide street frontage for the wider public domain to view and enjoy and then equally expected to offset vista space and outlook for the THAB development immediately to the rear or side of these subject sites. Due to the very public street frontage, heritage dwellings often have their internal living arrangements orientated to the rear or their property along with more generous outdoor living spaces. This means that those houses identified as heritage will invariably have their living spaces facing the THAB building creating a fish-bowl environment. The heritage benefit is for everyone apart from the actual owners of the qualifying buildings. As it stands the proposed THAB designation has become is to generous and should be reduced.

The proposed clash of zones (Special Character verse THAB) is concerning as the criteria applied to maintain and protect heritage as a qualifying matter has been set at 75% heritage housing stock in the current proposed walkable areas. In contrast there is a lower 66% heritage retention criteria for identified in non- walkable areas.

In essence the Council has outlined that more value or merit must be placed on these areas to achieve suitable protection in the first place to obtain a "qualifying matter status." The proposal as it stands has taken this approach to the detriment of those building identified as being of heritage status. No consideration has been given as to how to integrate THAB and heritage buildings to minimise the effects. The council would be better placed to use a buffer zone whereby they utilise surburban mixed zone housing between THAB and heritage qualifying properties.

The method by which the calculation has been derived is misleading as the calculation includes areas within Birkenhead which are some distance from higher quality heritage areas. In effect this reduces the score disproportionately across Birkenhead Point.

It is even questionable that should this approach be so loosely applied by the Council regionally without a suitable zone buffer (rules will not satisfactorily address these issues), then in some cases cynically it might even be better to have special heritage character homes also zoned THAB and not retain any heritage. Given the living environment and the heritage special character is so negatively compromised and impacted by two opposing residential zones located together side by side. **At best the heritage zoned areas should adjoin the three dwelling direction that has been envisioned, not THAB.**

The specific 10 metropolitan modern areas or the CBD should be the strong provision for the generous THAB zone. The plan anticipate for apartments to be there, and even more generous height limits could be applied which would be less intrusive to other town centres which have heritage character qualifying matter issues. In adopting this approach it can reduce urban sprawl reduce traffic congestion.

<u>Limitations of google street view and heritage percentage scoring – Specifically for Birkenhead.</u>

The use of google to undertake assessment of the properties does not do justice to the wider area. It neglects to consider the surroundings, elevations of properties and other the positions of other historical buildings relative to the area.

The elementary heritage score card dynamic that does not provide for smaller blocks or acknowledging specific area characteristics. Currently they are merely grouped by whole suburb areas instead.

An example of this is the relationship and merit of Chelsea Sugar works as a national heritage treasure located on a peninsula. Arguably some of the best views too experience this heritage icon (as opposed to far away water views from Birkenhead Ferry Wharf/Harbour Bridge), can be viewed close by from Mariposa St, Palmerston Road, Rugby Rd, Telephone Road, Birkenhead.

When viewing Chelsea Sugar works the impression and vista is enhanced when surrounded amongst building of the era. Removing these heritage cottages would take away the current historic heritage character. This will result in blocking the Chelsea Sugar works icon for the wider pedestrian public domain and equally provide for development that does not naturally link to this important heritage asset, losing and devaluing the heritage appeal vista experience it provides when viewed currently.

However, a number of these residential properties are not provided special character qualifying status being simply identified on the current very wide broad-brush approach.

Several of these cottages are classified in the own right as meeting the criteria of achieving a grade of six but potentially are not heritage acknowledged allowing for extensive Mixed Urban/THAB development.

The council should strongly consider pushing back THAB zone as realistically it appears to be the only avenue the Council might hope to maintain and not compromise heritage, cultural historic values in its town and larger town centres.

Inconsistent application of distance criteria analysis - THAB:

The approach that is proposed in the plan is inconsistent with respect to THAB. There appears to be an overreach in the attempt to provide more dwellings within the THAB walkable zone. Disproportionate circles of growth through the application of THAB would encourage sprawl with little point of difference being retained.

Albany and Takapuna modern and already identified centres for growth on the legacy North Shore are not so disadvantaged by an increased THAB walkable distance. Hence the suitability of the plan in respect to this area.

Northcote and Glenfield appear to have only very "marginal" increases proposed to its current THAB zone stock. Both of these centres are conveniently located to several motorway junctions and have several arterial roads feeding those centres.

Birkenhead has had considerable proposed increases applied that seems disproportionate to the current or feasible transit links, terrain or heritage characteristics. At present THAB has been applied equally from the town centre which is simplistic in its approach and doesn't consider other factors

Onewa Rd, Birkenhead Ave and Mokoia Rd (which are main arterial routes) have growth proposed at the same rates as Hinemoa Street which is a street of heritage significance and does not experience the same public bus transit options. There are limitations through Little Shoal Bay with speed bumps and contour differences experienced in this vicinity are larger and is not an easily walkable area e.g. GIS reflect 5m terrain difference from Birkenhead to Pupuke, Mokoia to Chelsea a 15m difference, while Mokoia to Palmerston Rd demonstrates a 30 m terrain drop.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

This seems to support appropriate intensification.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Seems appropriate to give intensification within reasonable distance.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Seems a good and appropriate distance to focus intensification.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

400m can get you very much into the heart of residential living. The centres themselves already tend to be quite small. I think a lot of the neighbourhood feel would be lost unless this distance is

within or very close to town centres. People and families in residential areas do not want to feel like they are living in inner cities.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Small town centres often are right in the heart of residential and have limited parking and infrastructure. This proposal would change the shape of a small town centre into something quite different. Neighbourhoods are not big cities and people and families in neighbourhoods do not want to feel like they are living in inner cities.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I think the proposed rules identifying special character are too narrow. Once a special character is lost, it is eroded for good. Existing special character areas should ALL be retained. In particular the special character areas of Birkenhead Point and Northcote Point that contain so much important history and heritage in them. I was shocked when I saw areas with old sugar work houses, beautiful 120 year old villas and other historical streets might lose special character status. These areas have such unique heritage and character and Auckland does not have many areas such as these. All existing special character areas should be retained. I understand the need for intensification but there is plenty of scope for this this without eroding history and heritage in a rushed and roughshod manner.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

All special character areas should be retained. Not just a portion. Do not destroy our history and heritage! - there is plenty of scope for intensification without eroding our special character areas. The scoring system is too restrictive. The thresholds should be lower. They exclude character supporting buildings - why? These should be included. As an example Birkenhead Point is a beautiful mixture of old and new - so it is at risk. Save Birkenhead Point and Northcote Point. Has Council even visited these areas? Have you seen the history, the streets the early workers walked up and back. The walking history tour you can do. The original worker houses and old heritage buildings. Do not destroy our heritage and special character areas. There will be plenty of opportunity for housing intensification without needing to do this.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

No real knowledge in this area.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater

infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Clearly infrastructure limitations must be considered when looking at housing density. It would be absurd not to consider this. Relevant to Birkenhead Point and Northcote Point are significant ecological areas and numerous instances of slips that could potentially be exposed or worsened with increased runoff. Little Shoal Bay is already at significant risk. We also have beautiful native bush areas that will be affected - for example Le Roy's bush and the steam gully below Inkster Street. The stormwater system in the Birkenhead Point and Northcote Point areas already floods and overflows in heavy rain events. We have seen pipes burst and water gushing up high out of drains. From a logistics perspective the Onewa Road traffic issue is already horrendous. Major intensification around those areas will make it even worse. The public transport system is inadequate for the existing residences in the area already.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I would like the proposals to be as conservative as possible. The intention to me seems to be to open the floodgates so to speak. So we need to protect as many qualifying matters as possible to retain special character, views, and ridge line protections. There should be plenty of opportunity for Auckland to intensify without needing to throw away our heritage, what makes Auckland special and what makes Auckland a great city to live in.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

We need more intensive housing close to rapid transit stops and local shopping centres.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

We need more intensive housing close to rapid transit stops and local shopping centres.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

We need more intensive housing close to rapid transit stops and local shopping centres.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

We need more intensive housing close to rapid transit stops and local shopping centres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

We need more intensive housing close to rapid transit stops and local shopping centres.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Old houses are damp and run down , It is better that they are replaced with more intensive housing. Young people need houses!!!! that they can afford.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

Old houses are damp and run down , It is better that they are replaced with more intensive housing. Young people need houses!!!! that they can afford.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Old houses are damp and run down , It is better that they are replaced with more intensive housing. Young people need houses!!!! that they can afford.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Its up to the council to support that infrastructure.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Young people need homes, like their parents were able to buy and live in back in the 1970s.

Important privacy information

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Please do not remove the Special Ecological Area overlays from private land titles - this will result in the sad loss of our native trees and the habitat they provide for birds and wildlife, for example the SEA overlay that projects the native forested parts of Lee Roys bush in Northcote of which a large portion in on private land and could be lost if the SEA overlay in that area is removed.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

enough already for a walkable catchment

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Already has enough

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

already has enough

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Auckland has the capacity for more housing

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Will ruin the suburbs - infrastructure does not support it.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Would take away the character of the Birkenhead suburb such as Hinemoa Street, with its historical character buildings.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Government's new housing rules: What it means for Auckland

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

We do not support the blanket application of Apartment Building zones that are based solely on a distance measurement in Auckland.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

We do not support a blanket application of Apartment Building zones based solely on a distance measurement

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Auckland's history is preserved in the architecture of its existing heritage suburbs which have been retained for decades & these should continue to be protected.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

We want our history preserved in the architecture of the existing heritage suburbs

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

As more business becomes home based, business will not be centralised in 'character' areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All of these are relevant but in Auckland that leaves most areas of heritage housing unprotected from being destroyed, for example, my great grandmother's gracious villa in Mt Eden, which was later owned by the poet Albert Wendt, would be likely destroyed. For those who take inspiration & have an appreciation of history & heritage, this Terraced Housing and Apartment Building Zoning is legislation giving official approval/encouragement of wanton vandalism.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Need to start by intensifying much closer to focus the density, it can spread later over time

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Need to start by intensifying much closer to focus the density, it can spread later over time

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Need to start by intensifying much closer to focus the density, it can spread later over time;

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Need to start by intensifying much closer to focus the density, it can spread later over time. The Unitary plan already allows for Birkenhead to intensify - without extending it.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Need to start by intensifying much closer to focus the density, it can spread later over time.

Assuming this is the definition of Birkenhead - it already has the zoning under the Unitary Plan to allow sufficient intensification without extending it.

There are significant issues around Infrastructure - roading and water, not to mention parking - which make intensifying the streets (eg Zion Rd) around Birkenhead completely impractical.

Intensification should be achieved through more highrise development within the Village - this is more practical as it genuinely IS close to public transport, supports retailers and will be more cost-effective to upgrade the necessary infrastructure as its a more condensed space.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Auckland only has a very small % of houses that are special character - these built structures tell the stories of our place. They help create and support a sense of identity. If we destroy this character now it will be an appalling waste.

The 'score' rating bar set by the Council is too high and consideration should be given to including properties that rated 4/6. Also perhaps the scoring system is a bit punitive in rating neutral and negative both as 0 on most factors? Would like that to be reconsidered - which could be done without having to fully reassess everything, just change negative to -1 as has been done for the IPA score

When you look at places like Birkenhead Point there are a lot of unique and special homes - many of which will lose their special character protections under the proposals.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Birkenhead Point has a rich history (as does Northcote Point and other special character areas, hence the zoning!), it tells the story of pre-bridge Auckland when people would travel across from the city on the car ferry, land at the Wharf and drive up Hinemoa to go north (through the strawberry fields and orchards). People would stop at the top of Hinemoa near Maritime Tce to shop at the dairy and bakery (I think the former is corner Bridgeview and Hinemoa and the latter corner HInemoa and Maritime), get petrol, go to the post office, butchers etc.

There are a lot of houses in Hinemoa St, Maritime Terrace and the surrounding areas (Bridgeview, Wakanui) that are worthy of protection and still retain their unique and distinctive architecture.

Examples: Wakanui St (west side) there are historic homes whose character has been retained. In addition, on the opposite side of the road on the corners of Maritime and Hinemoa there are Historic Heritage homes, so it would make sense to retain a small area or cluster of homes which are protected. Likewise, in the same triangle 'block' (Wakanui, Maritime, Hinemoa) the house at the corner of Maritime and Hinemoa (81 Hinemoa St), referenced above.

There are other houses in both Hinemoa St and Maritime Terrace that have special and unique character that should be protected, eg 30 Martime (the maps are not clear if it is the one with Historic Heritage protection), 42 & 46 Maritime, as well as the villas across the road from them at #29 and 35.

In Hinemoa St, the houses which I think should be considered further are # 9 -1 3 and 19 (one of which I think is Historic Heritage but not clear which).

I support the retention of Special Character protections on the properties identify further along Hinemoa St opposite Glade Place and le Roy Terrace, thank you.

I also support the retention of the Special Character overlay in Awanui St.

As an added point - most of the special character homes on the Point are NOT close to any form of rapid transport, and the transport options are limited in frequency. There is the ferry - but its a steep hill to walk down/up for many people.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I support the Business Special Character zoning of the shops on HInemoa St, Birkenhead Point. I think there are a few distinctive buildings in Birkenhead Village that are worthy of protection, especially around Highbury corner/ roundabout, such as the Oborns Building.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure is a fundamental requirement to support any intensification. It is simply negligent to not include it as a qualifying matter.

Much of the water, stormwater and wastewater infrastructure in Birkenhead is already under stress and there are significant issues, eg with stormwater overflow and wastewater leaking in the bush.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I support all of these.

Also strongly request the retention of Special Character as a qualifying matter for all properties within the Coastal Erosion, Inundation, and current Special Ecological Area zones. There are cases of these in Birkenhead - eg Tizard Rd, Maunganui Rd, Lower Maritime, Lower Hinemoa, and in regard to SEAs the streets such as Hinemoa, Onewa, Fairfax, Valley, Seaview etc bordering on Le Roys Bush.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?**

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Historic areas on the outskirts of the Central City Area.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Again lots of areas have wonderful villas and bungalows that give our city character. By making it this wide it has the potential of destroying a lot of our heritage.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Again this is too drastic. Rules out fine housing that should be kept.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Needs to be looked out very closely to determine what housing stock would be lost.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

I think special character areas should be able to subdivide for two houses if the land area is over 1000 meters rather than 1200m at present without resource consent. This would still allow for the heritage to be retained but will free up more spaces for houses.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Areas such as Northcote Point should be designated as a Special Character Area.

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

The city centre has a high concentration of jobs and key infrastructure which makes it the most accessible area for intensification. With further development of localized shuttle transport within the catchment, could support a larger catchment area.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Support some of the proposed exemptions to limit building heights and density in some areas. Strongly support Off street car parking and should be included in every development.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Rapid transit stops are designed to move large volumes of commuters. Increased passenger volumes would warrant high infrastructure costs.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support some of the proposed exemptions to limit building heights and density in some areas. Strongly support Off street car parking and should be included in every development.

152 Hinemoa Street, is within 5 minutes walk to the Birkenhead Town centre serviced by good access to public transport with both bus and ferry modes of public transport.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Support some exemptions to limit building heights and density in some areas. Would support further modifications in the Auckland Unitary plan heritage areas to further limit building heights and density to help retain the heritage value the area reflects. Off street car parking is a must and should be included in every development.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Do not support Residential -Special Character Areas (SCA) as a qualifying matter

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Do not support the introduction to the rule plan for identifying Residential -Special Character Area (SCA) -sub areas. A Residential -SCA heritage area is an area or suburb that has significant special character homes, heritage value and historical importance that contribute to the collective visual coherence and history of that area or suburb. A small cluster as proposed surrounded by large and medium density high residential buildings would have minimal character value or historical importance for that area.

I do not support the introduction of the rule plan for identifying sub-areas of high quality special character values and / or historic heritage areas. Objection relates to 152 Hinemoa Street Birkenhead been included in a 'sub area' identified as a sub-area of high quality special character.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Buildings in the older areas of the proposed business special character areas, have buildings that are earthquake prone with low IEP and NBS ratings less than 34%. Many of the commercial buildings have small floor areas, limited commercial use with strengthening costly and/or difficult to achieve . History shows preserving similar heritage buildings around Auckland has been limited to saving building front facades resulting in minimal historical value to retain the values they reflect.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

There are areas in Auckland with long term significant infrastructure constraints and hence why these areas have not been developed. Many factors such as topography, ground stability, isolation and distance form existing infrastructure services and the like make the cost to service these areas prohibitive. There should not be a hard and fast rule to force or prevent development of these areas. These areas should continue to be reviewed as technology and construction methods evolve making it more economic to develop.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Submission: Do not support proposed Residential Special Character Area (SCA) -sub area- Hinemoa Street Birkenhead-western side Hinemoa Street between Rugby Road and Mariposa Crescent

10a. Other comments

Rezone 152 Hinemoa Street, Birkenhead as Terrace Housing and Apartment Building Areas Zone

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

SUBMISSION: Auckland Council's preliminary response to National Policy Statement-Urban Development (NPS-UD) and Medium Density Residential Standards (MDRS)

DO NOT SUPPORT RESIDENTIAL SPECIAL CHARACTER AREA (SCA)-SUB AREA AND ZONINGS ON WESTERN SIDE OF HINEMOA STREET BIRKENHEAD.

EFFECTED PROPERTY 152 HINEMOA STREET

Date: 4 May 2022

My objection relates to property at 152 Hinemoa Street Birkenhead, Auckland 0626 been included in a 'sub- area' identified as a sub-area of high quality special character. (Preliminary NPS-UD and MDRS plan attached P1)

The property is in the Kaipatiki ward and lies at the northern end of Hinemoa Street, four properties south of Mariposa Crescent in the sub- area of high quality special character identified between the northern side of Rugby road, on the western side of Hinemoa Street, between Rugby road and Mariposa Crescent.

REASONS:

The Government's approach to more housing is by taking a much stronger role in planning for the growth of New Zealand and as a result introduced two new initiatives namely:

> The National Policy Statement on Urban Development (NPS-UD) which came into force in August 2020. The NPS-UD policy directs Auckland Council to enable more building height and housing density around Auckland's City Centre, metropolitan centre's and rapid transit stops.
>
> Amendments to the Resource Management Act December 2021, which requires Council's of New Zealand's largest cities to apply new Medium Density Residential Standards (MDRS).

Auckland is well aware that Tamaki Makaurau's population is growing, with its population fast approaching two million people with population growth to 3 million over the next 30 years. Auckland's population in large accept that the rule-book needs to be revised to enable people who really need to build to undertake projects with certainty. However, many Aucklander's will not agree with the planning methodology and introduction of these new rules, but given these rules have been supported by both major political parties, it is reasonable to assume that these planning changes will most likely be implemented based on the Central Government's direction with limited changes based on Aucklander's feedback.

The proposed NPS-UD and MDRS plan changes will have a significant impact on the special character of the area, whereas my submission has ONLY a minor effect to the proposed changes. Neighbouring properties near the site, 152 Hinemoa St, on the western side of Hinemoa St between the two road entrances into Mariposa Crescent along with homes in Mariposa Crescent , with more notable period homes are already proposed to be included in the Residential- Terrace Housing and Apartment zone. (Refer Photos P2&P3 attached)

The Government has not included Special Character Areas (SCA's) as a qualifying matter. To be included as a qualifying matter there must be robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

The site, 152 Hinemoa Street, under the current Unitary Plan is included in a heritage overlay area along with the majority of sites in Birkenhead and Northcote Point areas. Under the current preliminary response Auckland Council plans to remove the majority of the current Unitary Plan's Special Character Area overlay in both areas respectively.

In the 'Summary of Area finding, SCA's –Residential', the report found that Birkenhead Point special character area is NOT of high quality special character value. An area of high quality is determined to be one that has 75% or more individual properties scoring 5 or 6. This area has 43% of individual properties scoring 5 or 6.

Furthermore, the Birkenhead Point survey data does not show that there are sub-areas of high quality special character and/or potential areas of historic heritage value. In its recommendations, it found no further special character work is recommended in this area. The report did not formally identify or recommend any high quality special character sub-areas in Birkenhead Point.

The report did note there are a small cluster of high quality special character dwellings that have a collective visual and historical coherence with the lower Hinemoa Street commercial centre, some distance away from the property at 152 Hinemoa Street.

I do not support the introduction of the rule plan for identifying sub-areas of high quality special character values and/or historic heritage areas. A SCA- Heritage Residential, is an area or suburb that has significant special character dwellings, heritage value and historical importance that contribute to the collective visual coherence and history of an area or suburb. Heritage areas meet the threshold of a district or suburb of a distinct grouping of properties that contain high quality special character values and the area should be obvious and easily identified. A small cluster surrounded by large and medium density high residential buildings would have the effect on the area having minimal character value or historical importance. Any appeal to residue in a heritage area dwarfed by high density housing, while having to maintain an historical building at significant cost for the wider benefit of the general community, would be lost. The new rules won't result in the loss of character homes overnight, but in 10 years you will see change.

The site, 152 Hinemoa Street, is included in an area identified as Policy-3d up-zoning around Town and Local Centre zones.

My submission refers to the proposed rule guide-line enabling more high buildings within walking distances to metropolitan centres and existing and planned transit stops. The criteria identified here apply to this site:

> 'A 5 minute or less walk (400m) around large town centres with high accessibility'.

The site, 152 Hinemoa St, is within 5 minutes walk to the Birkenhead Town centre serviced by good access to public transport with both bus and ferry modes of public transport.

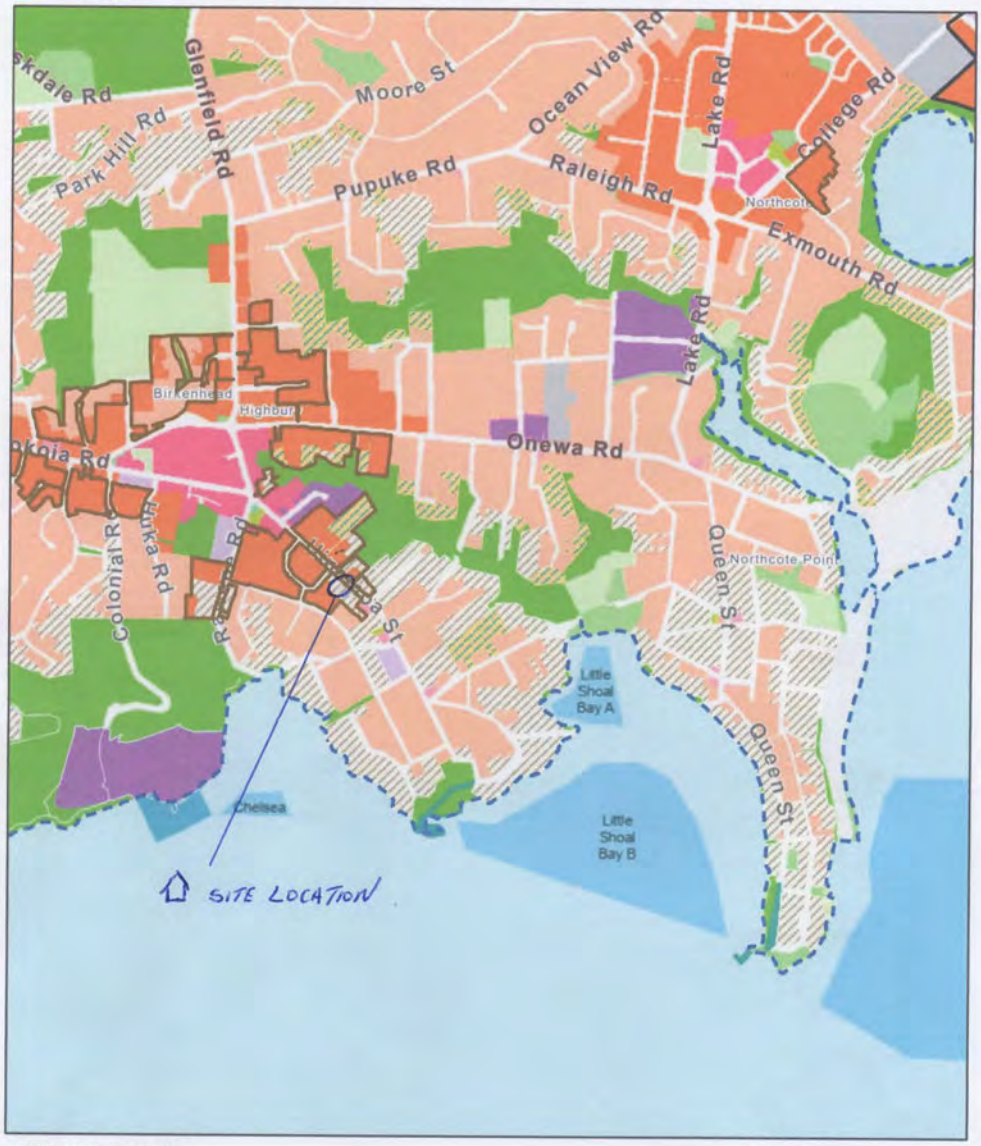

The site, 152 Hinemoa St, is preliminary zoned as Two Storey Single Dwelling Residential and I seek should the preliminary rules be adopted and largely unchanged to have the zoning amended to the zoning allocation of adjacent sites, including sites directly across the road, to the proposed plan zone change of Residential-Terrace Housing and Apartment Building Zone-modified. (Photo of Palmerston Road properties to rear of boundary P4)

For the zoning changes to be considered on a fair and reasonable basis the planning methodology needs to be consistent with the planning rules and directives taken into account at time of drafting. Large areas of Birkenhead Town Centre and Birkenhead Point are preliminary zoned Residential- Terrace Housing OR Residential- Mixed Housing Urban and it would appear odd and inconsistent for the said site, 152 Hinemoa Street, given its geographical location, not to be considered in one of these two zones.

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: John Pezaro

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Walking for short trips out is essential to help solve climate issues.

We must reduce the pressure on our agricultural land neat the city.....higher densities is the only answer

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Walking for short trips out is essential to help solve climate issues.

We must reduce the pressure on our agricultural land neat the city.....higher densities is the only answer

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

800m is just too short. 1km min.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

same

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

same

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

We cannot restrict all intensification just because of some 'heritage' buildings. This needs to be very carefully and intensively investigated.....most heritage are areas are houses on single sections.....not sustainable in the long term.....let alone sea level rise.....

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

A longer term view would reduce these exceptions

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

There are enough areas already included.....we don't need additional commercial areas

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We can only build so much.....inferstructure is an important aspect of a 'good' city.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All these are needed also

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Areas that are now pleasant for families to live in could become crowded and homes deprived of sunlight by large buildings

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Again, many streets that are now pleasant places to live could lose their character and suitability for families and heritage buildings could be lost.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

As it becomes more difficult to travel by car, it will become more convenient to live near access to public transport and this will cater for people who have to travel daily to work.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

These centres often have areas of characterful housing around them and it would be a shame to have these dwarfed and overshadowed by large and ugly apartment buildings, not to mention the social problems that such intensive development can introduce.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

This would destroy the character of many of our smaller neighbourhood centres which are mercifully still low-rise, such as Highbury, where one can still walk in sunshine and have views to the harbour.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

It is these areas of special character that give our city its own unique character, and we should value and protect them

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Large areas around the old town centre of Birkenhead, where there are many lovely and interesting old buildings going back well into the early days of Auckland settlement are not designated as a qualifying matter and so our much-valued historic local community would be vulnerable to destruction.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

We need to do all we can to save what we have left of our heritage buildings that give our suburbs their special character

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It is obvious that we should not be planning intensive development without the infrastructure to support it. There are already problems with pollution in our waterways and this and other problems would be exacerbated.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

this will encourage less car trips to transport hubs thus reducing emissions.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

this will encourage less car trips to transport hubs thus reducing emissions.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

this will encourage less car trips to transport hubs thus reducing emissions.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Existing special character areas are designated that to preserve our colonial history. All character areas should be saved for future generations. Allowing high rise cheek by jowl with victorian villas will ruin precious streetscapes that will never be able to be replaced.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There numerous Victorian and Edwardian villas on Birkenhead Point that are under threat from this new plan. This is a unique area of historical significance. Allowing high rise apartments in this zone will destroy the streetscape. It will never recover. We need to preserve these pockets of old Auckland for future generations. Let's not be short sighted!

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

The sweep of Hinemoa St in Birkenhead contains many old stores that date back to Victorian times, they need to be saved to preserve the historic nature of the point.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Name: Rebecca Davies

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

It's not only walking distance that should be considered, but also cycling. 30-45 minutes walking should be used as a benchmark.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

It's not only walking distance that should be considered, but also cycling. 30-45 minutes walking should be used as a benchmark.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

It's not only walking distance that should be considered, but also cycling. 30-45 minutes walking should be used as a benchmark.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support but the infrastructure in residential areas may not support a 400m THAB catchment. Such areas need to be serviced by safe cycling infrastructure to enable and encourage active modes of transport to avoid exacerbating traffic problems.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The infrastructure in smaller residential areas may not support a 200m THAB radius. Such areas need to be serviced by safe cycling infrastructure to enable and encourage active modes of transport to avoid exacerbating traffic problems.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

Tell us why

Special character seems to be a way to preserve property values of the wealthy because they are the demographic who typically live in such areas. This results in inequalities and unequal distribution of the negative effects of increased development which gets pushed out to other areas while property values in special character areas only increase up and up as they become even more desirable places to live. However, the character of these areas is also something that should be preserved for future generations to some extent.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

It doesn't seem consistent or fair to apply the qualifying matter to the whole of Devonport, Stanley Bay and Cheltenham and most of Ponsonby/St Mary's Bay and to only apply a tiny part to Birkenhead. It should be more important to retain character aspects of places like Birkenhead because they don't have as many individual heritage features such as Devonport has, so it is even more important to retain what is there. In Birkenhead's case, while there may not be as many heritage properties as in other areas, it is the overall feel of the area that is its character and that should be retained. What is the justification for preserving all of Devonport/Stanley Bay/Cheltenham over other areas? This is a really unequal protection. Areas such as Ponsonby and St Marys Bay should not be subject to qualifying matters and should instead be prioritised for development because they are within walking distance of the CBD.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Transport in particular is a key concern. Growth without adequate infrastructure will create all sorts of problems.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Support these overlays. Once views are gone, they are gone forever.

FEEDBACK ON AUCKLAND COUNCIL'S

PRELIMINARY RESPONSE TO GOVERNMENT'S NEW HOUSING PROVISIONS

I acknowledge the Government's proposals arising out of the National Policy Statement on Urban Development 2020 (NPS-UD) and the Resource Management (Enabling Housing Supply and Other Matters) Amendment Act 2021. The manner in which these are sought to be applied to Auckland is opposed, as per the below.

I do not agree with the proposals. Such planning considerations are most effectively left to the Auckland Council and indeed, to properly follow on from the earlier Auckland Unitary Plan process.

More particularly, this response relates to the need to retain recognition of the special qualities applying to the Chatswood area of Birkenhead. These considerations could be considered under the header in Council's Feedback of "Other qualifying matters".

Chatswood can be described as the area generally bounded by Colonial Road - Mokoia Road - Balmain Road - Onetaunga Road. It has a special character that, since it's subdivision and development in the 1970's, has been recognised with special planning provisions that distinguish it from the standard range of zonings that apply to other areas. This is especially so in the Unitary Plan where its special qualities are recognised despite the desire to see additional intensification of residential areas in that Plan. Accordingly, it was zoned Residential - Single House zone when other residential areas were rezoned for greater intensification.

Chatswood is a specially designed subdivision and area and has long been recognised as such in planning documents, particularly the relatively recent (2016) Unitary Plan, that following a process of close scrutiny of areas and appropriate zonings.

The special qualities or special character is contributed to by:

- The spacious sites, resulting from limiting development to one house per site and the coastal setting, with views to the city, the harbour and to the islands, particularly Rangitoto. For example, the controls that have applied in Onetaunga Road have required building on the coastal side of the road to be set back with a 10m front yard to provide for views from the street and from houses opposite towards the city and the harbour. The area is popular for recreational walking along the footpaths and grass berms where public views to the city and harbour can be enjoyed. The limitation on development is essential to maintain that public amenity.
- The retention of vegetation through the lower - lying parts of the area providing a link for birdlife from the vegetated grounds of the Chelsea Sugar Refinery, westward through Chatswood to the coast and further west across the harbour.
- The area not being a through route meaning less traffic and accordingly, a better residential amenity.
- It providing access to the coastal reserve areas between the Sugar Refinery and the Defence Force base which are enjoyed by many, both local residents and the public from further afield. Onetaunga Road for example, frequently sees car parking along the roadside by folk accessing the reserve areas to use the walkways and the beach at Kendalls Bay. We would not want to see any relaxations in required car parking given the need to provide public parking for visitors.
- All these features provide a unique neighbourhood character that should be retained.

These qualities or characteristics are not recognised in the current proposals that Feedback is sought on. These are qualities or characteristics that are relevant and important to Aucklanders. These could be recognised as another "qualifying matter", for example as part of "The Local Public Views Overlay" or similar, that including views for the public that contribute to neighbourhood character. The qualities and characteristics certainly warrant limiting building heights and residential densities to those which apply now.

The Feedback documents show Chatswood largely included in the Residential – Mixed Housing Urban zone. Some parts that are close to the coast are zoned Two – Storey Single Dwelling Residential Area.

I do not agree with that as proposed and, staying within the reasonable bounds of what is sought by Government, seek that the zoning in the Unitary Plan be retained or that all, or a larger part, of Chatswood be included in the Two – Storey Single Dwelling Residential Area.

More particularly, I say that all the area of Chatswood be retained in the Residential – Single House zone of the Unitary Plan

or

all the area of Chatswood be included in the Two – Storey Single Dwelling Residential Area

or

The Two – Storey Single Dwelling Residential Area as proposed be extended to include particularly the sites at 8 to 142 Onetaunga Road and 225 Chelsea View Drive and 71 to 139 Onetaunga Road and 2 to 12 Bragato Place and 1 to 9 Bragato Place

or

The Two – Storey Single Dwelling Residential Area as proposed be extended to include particularly the sites at 52 to 112 Onetaunga Road and 225 Chelsea View Drive and 71 to 117 Onetaunga Road and 2 to 12 Bragato Place and 1 to 9 Bragato Place.

It will be recognised that the above alternatives progressively refine or reduce the area sought to be included in the Two – Storey Single Dwelling Residential Area to those parts that exhibit all the qualities or characteristics referred to above. Any of the alternatives are within the reasonable bounds of the proposed zonings and would not conflict with the reasons for seeking such rezonings as part of the Government's current proposals.

I am happy to be contacted to discuss any of the above.

Regards, Alan Watson

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Under the unitary plan, Auckland has plenty of capacity for intensification of housing within a walkable catchment

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

The 10 regions already highlighted already have enough capacity for intensified housing. it does not need to include heritage areas like Birkenhead village or Northcote Point

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Again there is enough capacity already provisioned for in the rapid transit areas

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Again there is enough capacity already provisioned for within the walkable catchment area

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

There is enough capacity already provisioned for within the walkable catchment area

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I think that there are pockets of Auckland that should keep as heritage because it enriches the look of the city and increases its liveability. Many heritage streets are our taonga and should be treasured. There is still enough opportunity to build intensively in other areas already flagged. Northcote Point and Birkenhead Point hold special places in the story of Auckland.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I think that there are pockets of Auckland that should keep as heritage because it enriches the look of the city and increases its liveability. Many heritage streets are our taonga and should be treasured. There is still enough opportunity to build intensively in other areas already flagged. Northcote Point and Birkenhead Point hold special places in the story of Auckland.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Birkenhead village and Queen Street have beautiful historic character buildings which speak to the history of Auckland

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Many of these heritage areas have limited infrastructure- limited parks with narrow roads and stormwater and wastewater issues

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

We do not support intensification and the loss of any heritage buildings.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

We do not support intensification and the loss of any heritage buildings.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

We do not support intensification and the loss of any heritage buildings.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

We do not support intensification and the loss of any heritage buildings.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

We do not support intensification and the loss of any heritage buildings.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

We support as we do not want the loss of any heritage buildings.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The Historic Heritage overlay areas need to be extended significantly.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Residential Heritage areas should not be disrupted by extensions to business areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure constraints must be considered.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Heritage residential buildings must be protected.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

For Birkenhead that will take out our heritage house and will not be good for the area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Our transport routes are too poor now - onewa road is horrendous- more houses will mean more cars

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Not good for Birkenhead and northcote points - transport is not effective now

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Again will not suit many communities as the area does not provide adequate parking or efficient transport

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

We cannot lose heritage shops and most small communities have these

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

We must not lose any more heritage buildings

The Birkenhead point post office is one of only 2 left

These must be kept and surrounding houses be in keeping with the area

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

As per previous comments more of the houses with heritage features need to be kept

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Need to have everything kept

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

What is proposed is reasonable (on the outside of that 10 minute or 15 minute walk some discretion hill slopes etc

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Yes reasonable should be adequate green space between the high rises ,Spacing important On the outskirts of the 800meters it is important not to damage close houses during constructions eg earthquake vibrations from digging etc earthquakes potentially damaging neighbors to a high rise

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Yes as long some spacing green space gardens trees etc between the high rises

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

If near work and services that would be good

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

100 meters should be enough Say 20 shops with big Tall building around it Would change the area and their may not be services to support

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Support except those houses close to a urban shopping centre say

10 minute walk should be able to be developed keeping those in the suburb more in tact

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Need to appreciate and preserve some history and different time periods

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

No comment but support

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Without good infrastructure services the quality of life would deteriorate for those living their and could have adverse effect on the environment

pollution into waterways oceans

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Yes if the damage caused by the development would have a huge adverse effect on neighbors then the scale and heights and size of the developments heavy vibrations causing damage to hear by building broken windows foundation damage of building next door.

Developments should not ruin and damage neighboring properties

if it was to go ahead and developers and council may need to

damage home owners if harmful developments were to occur.

Another qualifying matter would be Soil and flood risk of large development Eg some soil types are not good for high rises and also

flood risk the development likely to cause flooding and major infrastructure issues. These factors should also be taken into consideration or qualifying matter

Consultation of big development's should be notified to those directly affected (not a restriction but allows peoples input rather than people ringing up council and find out whats happening next door

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Auckland issue is limited infrastructure including public hospitals and good public schools. Many areas are jam-packed every peak hours. More cars on the street, dense population, higher crime, people are forced living in a very expensive small space with no room to breath, lack of green area and safe parks. By including the long-term significant infrastructure constraints as a qualifying matter, you are protecting us from developers who intention they have are profit (selling unaffordable houses) and walk away from their responsibilities after they ruin this city.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Building higher buildings makes sense however please leave the parks, boat clubs, golf clubs and rugby clubs as they are.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Building higher buildings makes sense however please leave the parks, boat clubs, golf clubs and rugby clubs as they are.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Building higher buildings makes sense however please leave the boat clubs and boat yards such as little shoal bay boat owners association and The Landing - Okahu Bay Hardstand as they are. Maintenance facilities for boats are very important

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

We need more homes so intensified living makes sense, however Northcote rugby club is a very important sports facility and part of New Zealand/Aoteroa culture and heritage and this facility needs to remain as it is please

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Please leave Waitemata golf club as it is. This is an important part of the local community and is a beautiful landmark in the North Shore

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

There is already enough space to further develop for higher density within a walkable distance under the current unitary plan, so there is no need for this at all.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

There is already enough space to further develop for higher density within a walkable distance under the current unitary plan, so there is no need for this at all.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

There is already enough space to further develop for higher density within a walkable distance under the current unitary plan, so there is no need for this at all.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Only targeted areas already within 200 200m from the centre of large town centres should be targeted for high intensity. There is enough capacity in the current unitary plan to meet future requirements.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

yes but only 200m from suburbian town centres.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

There are a large number streets with villa's and bungalows close to Birkenhead town that have significant special character significance and collective hestitage value, linked to Chelsea sugar works and Birkenhead shops, that will be lost forever. The proposal doesn't make sense that we wouldn't want to retain and maintain these old buildings otherwise why would people want to live there. We should be doing more to limit intensification and retain these special places to live and work.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Specifically, the whole of Birkenhead and Northcote point must retain their special character overlay, the same as Devenport. Otherwise, the North Shore community would lose a significant part of its heritage.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Aging the significance of business buildings are very important for maintaining the history and significance of the Birkenhead/Chelsea/Nortcote history. We should be doing more to limit intensification and retain these special places to live and work.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

there are already issues with demands on infrastructure, parking congestions, roading congestion, waste water, and stormwater issues (council does even know where the pipes go now). The current unitary plan can't even cope with the current infrastructure demands.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

There are a significantly large number of objections to this proposal and council and I hope the council takes the time to carefully complete a full impact assessment and consider what makes these areas so special and why people want to live there today. Just look at the disastrous impacts the current unitary plan has had on Auckland as a whole. We can do better for our future generations by retaining what is special that makes Auckland stand out while at the same time grow.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

They will help to focus intensification on areas WHERE APPROPRIATE

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

As above will assist in intensification on areas where appropriate

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

As above will assist in intensification on areas where appropriate

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

These centres are already quite small with limited transport links and parking - they would lose their neighbourhood feel if surrounds by high-density housing

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per above re 400 metres - These centres are already quite small with limited transport links and parking - they would lose their neighbourhood feel if surrounds by high-density housing

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The new rules for identifying “special character’ areas are too narrow - existing special character areas should all be retained. As an example Birkenhead & Northcote Points are areas of high character value with important historical heritage. They should be protected.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Council’s scoring system is too narrow - all properties that score 4/6 and above should be included -and these areas should be viewed in person - google street view should not be used as a means to assess the character of an area

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

As per above .Council’s scoring system is too narrow - all properties that score 4/6 and above should be included -and these areas should be viewed in person - google street view should not be used as a means to assess the character of an area

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Agree that infrastructure should be taken into account as a limitation on increased housing density.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Little Shoal Bay & Le Roys Bush are already badly affected by freshwater flooding after heavy rainfall. Increased densification will only make that worse - higher density means more site coverage, more stormwater runoff. It is a sensitive ecological area that would be badly harmed by increased silting and runoff

Onewa Road is already above capacity for traffic with severe gridlock every morning. The area is not well served with public transport capacity - existing or planned. Any increased density would just add more traffic commuting to the CBD each morning - where the majority of people work.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I think all special character area protections should remain. I own a property in Birkenhead Point and am utterly opposed to the idea that high density housing could replace unique historic buildings in this area and others heritage areas like it. That's what makes this area so wonderful.

Also, concerned that we did a major renovation following the strict heritage planning guidance from the Council and this could now could not count for anything.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

My understanding is that the existing Unitary Plan already allows for significant intensification and hence enough housing around 10 identified town centres/metropolitan with excellent public transport like train stations and bus stations - these general sweeping new additions to the new plan seem unnecessary. Also, most people won't walk 1200 metres - I know because we walk a lot and very few people do.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

As per above. [My understanding is that the existing Unitary Plan already allows for significant intensification and hence enough housing around 10 identified town centres/metropolitan with excellent public transport like train stations and bus stations - these general sweeping new additions to the new plan seem unnecessary. Also, most people won't walk 1200 metres - I know because we walk a lot and very few people do.]

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

As per above. Also not sure what your exact definition of rapid transit stops is - I think only the train stations and bus stations should really count. Intersecting main roads not so much but certainly the identified catchment areas around these should be closer.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Apartment heights of 6 storey are super high and these will be built in areas with single house/single level houses - these houses will be dwarfed. 400 metres takes in too many single level houses and destroys neighbourhood character.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per above although 200 metres is a little better than 400 metres. Again, I already understood we had planned appropriate capacity for more housing within a walkable catchment of these areas without having to add more.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government

is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Utterly ridiculous that you are considering removing the special character overlay - special character isn't just about individual houses it's about the feel of an area and it's about HISTORY. We do a significant amount of work to preserve Maori history which is fantastic - for Pakeha, buildings are largely our history and it's IMPORTANT. I just cannot fathom how you blanketly want to take away the protection of our history and heritage and beautiful old houses. Also, this in no way will create affordable housing. In these special character areas, a section costs $2.5-3million, then you need another $4million at least to build 3 houses and then each house will be worth between $2.5 and $3 million. This is not affordable. Why have these calculations of costs not been made? Put alongside the fact this is destroying HISTORY, the whole idea is crazy.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Your planned special character overlays take away most of the heritage protection in Northcote and Birkenhead Points. These are significant historical areas in the early growth and development of Tamaki Makarau and your plans give no regard to the value and importance of these. While not all houses will disappear, the historic character of the area will with intensive housing sitting between the old villas and bungalows, reducing light and privacy and character. As per above, the costs just don't make sense either.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

As per above. [Your planned special character overlays take away most of the heritage protection in Northcote and Birkenhead Points. These are significant historical areas in the early growth and development of Tamaki Makarau and your plans give no regard to the value and importance of these. While not all houses will disappear, the historic character of the area will with intensive housing sitting between the old villas and bungalows, reducing light and privacy and character. As per above, the costs just don't make sense either.]

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure is a huge consideration for building and the fact it currently isn't a consideration doesn't make sense. Water, sewerage, parking, access etc etc, all of these things are important to the running of a safe and vibrant community and will need additions/upgrades with more housing and more people. They should absolutely be included.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I support the addition of these and any other qualifying matters that ensure our communities are preserved and enhanced, along with appropriate intensification in the areas that can support it and build a greater Auckland community.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I ride a bike as well as drive a EV.

I believe for mental and spatial wellbeing the number and quality of life is vital to healthy residents - more air, open space, and sunlight. A design, keeping the number of people per acre contained as with all the three catchments - 1200, 800, and 800 seems about right. I favour the closer in (ie 800) metre numbers would best suit 6 stories - then graduated less stories further out to the 1200 limit, when 1 or 2 stories would prevail.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

See my general comment for the 1200 metre ? above, which apply also for the 800 metre questions [I ride a bike as well as drive a EV.

I believe for mental and spatial wellbeing the number and quality of life is vital to healthy residents - more air, open space, and sunlight. A design, keeping the number of people per acre contained as with all the three catchments - 1200, 800, and 800 seems about right. I favour the closer in (ie 800) metre numbers would best suit 6 stories - then graduated less stories further out to the 1200 limit, when 1 or 2 stories would prevail.]

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

I've expressed my views in the 1200 metre above.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Where I live near Highbury town centre the topography is quite restricted. I rather fancy skyride transportation to the ferries below this centre. As it is the transport becomes bottlenecked and their isn't much scope around the centre for expansion - especially to the south, west and east - the natural lay of the land and geography would not suit much more than exists - a selective case by case recommendation.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

This may be a good for centres where the topography and character of the land is more useable. But in the case of Highbury a good deal of caution is needed not to destroy the natural bush character and history.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The Birkenhead, Northcote, Highbury, and coastline requires close attention. There are options in these locations that have barely been explored. I strongly expect the decision makers would find it profitable to meet with local bodies for a closer look.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

This whole area to the south, east, and west of Highbury centre is an absolute must to be reviewed. It is coastal as well as interior. Both the topography and the geography is broken up. Much of the early history and heritage is located here dating to the mid 1800's. It is unique - I'm not kidding!

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Much of Birkenhead has long established and large heritage buildings and sites. Something I believe has greater potential even than Sydney harbour's Birkenhead Point development. Take a look!!

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

As I've indicated in my other responses, this Birkenhead, Northcote, Chelsea, Highbury area, the topographic and geographic lay of the land is not easybuild topography on which to build infrastructure. It's tough, broken, and constrained. I am 83 years old, retired builder and developer and I can tell you this is tough terrain.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I wish to make an overall point. I think the surveys focus mostly south of the bridge. Perhaps a judgment by me, but I do have an uncomfortable feeling there is more to do before this Unitary

Plan is settled. I feel there is too much head and too little heart surrounding this drive to manage bigger and more in term of numbers and city growth.

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I am a Northcote Point resident. Traffic congestion on Queen Street, Northcote Point, especially during rush hours, is already intolerable.

Northcote Point is an isthmus. In the event of the need to evacuate residents in an emergency there would be major problems even with the existing level of housing density. This point was raised in relation to the Skypath approval process.

High density housing is already being provided in Northcote and it is yet to be seen how this will affect the area.

Any new housing constructed on Northcote or Birkenhead points will be too expensive for first (and many second-) time buyers. Any suggestion that the area will support housing within the fiscal reach of first home buyers is risible.

The devastation that high density housing will have on our charming marine suburbs cannot be overstated.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

It seems a very backwatd move to ignore the city's heritage and allow 6 storey apartment buildings that will loom over beautiful historic villas on either side of the new apartments

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

see above comments -It seems a very backwatd move to ignore the city's heritage and allow 6 storey apartment buildings that will loom over beautiful historic villas on either side of the new apartments

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Northcote Point should be a special character area

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

how are the roads going to cope with the new devopments

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Further development of the CBD is in keeping with the. The historical principals and ideas of town planning that have been in force in Auckland for decades. People understand and expect this sort of development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

This is far too generic and is being applied without consideration of the heritage or other intrinsic value of certain areas such as Birkenhead etc. There is no reason why the measurement needs to be equal in all directions from the metropolitan center. Indeed the proposed amended areas do not extend equally down Hinemoa Ave. More consideration needs to be given to the areas that have intrinsic heritage value, such as all of Mariposa Cresent and the western end of Palmerston Ave there are significant numbers of Villas and Bungalows in this area and the area is frequented by many people who simply enjoy walking in these historical areas. In the case of the western end of Palmerston Rd - having one side of the street in the new intensification area and the other side of the street left as a heritage zoning is ridiculous - The heritage values will be completely compromised and lost in this end of the street and through all of Mariposa. There are significant numbers of historical houses in this area that have been mark to be included in the intensified development areas. This is not appropriate. The residents in these areas value the historical aspects of their neighborhoods. I understand Council assessment of the area was based on the area needing 75% of the properties to have high historical value. his threshold seems far to high. I believe a level of 50 to 60 percent would be appropriate. based on this I believe you would find that all of Marisa and he Western end of Palmerston Rd would be deemed of heritage importance and should be preserved in its entirety. as well as the section of Rawene Rd that is scheduled for change. I also understand that council completed its assessment of Birkenhead using "Google - Street View" and have not done a street walk over as per the other suburb assessments of Auckland. Further consideration that appear to have been discarded are: By allowing the much taller and more intensive development zone to occur on the north side of Palmerston Rd (which is already elevated above the street) you will effectively build a wall of houses that will block sunlight from the remaining heritage housing, thereby removing the ambiance and street appeal and devaluing the remaining property values Similarly to the Palmerston Rd the steep terrain along the eastern side of Rawene Rd also means that the effects of a large building such as visual dominance and loss of sun light on neighboring properties will be greatly exaggerated in these areas. The current plan complete disregards the heritage values that have been protected here for decades. Furthermore the services and infrastructure is insufficient to sustain this level of intensification. Council would subsequently need to fund significant upgrades to the roading network as well as the drainage and sewerage systems. All of which would result in large rate rises. The current limits on intensification and scale for development in the following areas should remain as it currently is and not be changed. The special character overlay areas should

remain in their entirety, including the areas council is currently proposing to sacrifice namely: Palmerston Rd Mariposa Cres Hinemoa St Rawene Rd There is not one great city on the planet that does not acknowledge and value its own heritage.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

see all points above - You are applying this too generically without thinking about the values of the values of the people that already live in the area. The ares that have had heritage overlay protection for decades should continue to enjoy this protection for the wider good of the city

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

The few remaining heritage ares of Auckland offer value to the wider community and should be protected as they are in all great cities.

However the the councils current response is not looking to sufficiently protect all of the current heritage areas in the Birkenhead areas and needs to be extended to include all of the following, just as the current heritage overlay does:

a. Mariposa Cres,

b. Western end of Palmerston Rd

c. Eastern side of Rawene Rd,

d. any other heritage areas currently protected in the suburb.

It appears Council is proposing to sacrifice the areas noted above. There would be approximately 40 historical houses in the areas noted above that will be demolished. This is not acceptable or appropriate for the following reasons:

1. Having one side of a street in a heritage zone and the other side of the street rezoned into a

Terrace Housing and Apartment Zone does not result in a preservation of the heritage area as implied by the survey question above.

2. The effects of the steep topography in this area will greatly exacerbate the effects of any taller buildings on the neighboring area, taking sunlight and forming dominant "wall type' housing blocks. This will reduce property values, and quality of life for the remaining residents.

3. The residents of the area and the far wider community value the few remaining heritage areas of Auckland - these should be protected in full.

4. The exponential increase in demand of the roading network plus storm water run off and sewerage etc etc etc will require the council to make significant investment in an area with some very old infrastructure - this will result in significant rate rises.

5. For those in the area and particularly those currently living in an area covered by the heritage overlay these proposed changes to the areas noted above will not be minor in nature or insignificant - they will be dominant life changing events.

In summary the special character areas should be used as a qualifying matter for the entire area currently covered by the heritage overlays not just in part as the current proposal does.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

The council proposal is taking significant chunks out if the heritage area in Birkenhead, specifically it is proposing to sacrifice the following areas where approximately 40 -60 historical buildings are to be re-zoned. These areas are:

a. Mariposa Cres,

b. Western end of Palmerston Rd

c. Eastern side of Rawene Rd,

d. any other heritage areas currently protected in the suburb.

Council has used a threshold of 75% of the houses in an area needing a high heritage area and have assessed Birkenhead via he use of Google street view only. This threshold is too high - a level of 50-60% is more appropriate - furthermore a specific site walk over should be undertaken by council to complete there assessment.

I believe all of Mariposa and the Western end of Palmerston Rd would be re-classified as needing special character overlay of a more accurate assessment was made as outlined above.

The above noted areas should be protected in full as being part of the special character area. Overall the current residential special character areas should be used in full - not in part as Council is currently proposing.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Areas where it would be difficult, costly or almost impossible to upgrade ALL services to accommodate the increased number of dwellings should NOT be included in these new zone. Any zoning changes of areas to allow greater housing intensification should also consider the steep topography of an area and the strain on any existing services.

As an example the narrow streets at the western Palmerston Rd, Mariposa Cres and Rawene Rd cannot easily accommodate any increase in traffic that will be inevitable with this proposal. Also upgrading the aging in-ground and above-ground infrastructure in these historical areas with steep terrain would be almost impossible.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Protect all of our, few-remaining heritage areas - we will never get them back once they are gone.

There is not one great city on the planet that does not acknowledge and value its own heritage.

Auckland will be diminished without its heritage.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Just over one kilometre is a viable distance to walk into the city centre

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

800 metres is probably practical for more local walking

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

As above -800 metres is probably practical for more local walking

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Shopping and transport needs to be closer fir a greater number of people

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

As above -Shopping and transport needs to be closer fir a greater number of people

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

So few character areas in Auckland. We need to treasure them and enhance them not demolish them .

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

As above -So few character areas in Auckland. We need to treasure them and enhance them not demolish them .

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

As per the housing heritage areas. These are unique and once gone will never return . We will have a homogenised city with no charm whatsoever.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Maybe this shouldn’t occur just yet

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I support the concept of 1200m walkable catchment from city centres. Local shops are not city centres though.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I think this works well if it is well thought through and utilising ridge lines as opposed to blanket areas. We are in culdesac in Birkenhead Point and that is much different to Onewa Rd. Street by street approaches need to be looked at.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

As above this should be looked at on a street by street basis and not as a blanket rule. There are streets in many areas that fall within these brackets that are not suited to intense housing, yet parts of long well serviced roads roads might fall out of the housing changes. Again there are some roads that need to excluded due to their size, ability to support extra parking/ households etc., like small culdesac's where parking is already at a premium

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per the above a blanket rule on distance does not provide suitable and sensible protections for streets that can simply not sustain this kind of intensification. A great example of this is Mariposa Avenue in Birkenhead - new zoning Residential Apartment and Terrace housing. In its current form this street is nearly impossible to navigate, esp during pick up and drop off of daycare, church or due to daily parking for commuters and Highbury shopping users. Adding to this congestion would bring the area to a standstill - where as Hinemoa (at the shopping end) does lend itself to higher rise buildings/ mixed housing as it has wide access, parking and can be walked to other amenities. Additionally, this area is well serviced by buses, however the ferry service is terrible and under-utilised driving people to cars which uses one road (Onewa) to feed to the motorway half a dozen huge suburbs along the coast, creating traffic chaos in its current state with no other possible alternatives due to the peninsular nature of the Kaipatiki coastline. *A good example of where this can be extended to a larger area is Takapuna, where the city centre is surrounded by good, wide, feeder roads, many on ridges, where there is room for transport, parking and multiple motorway access points.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As per the above a blanket rule on distance does not provide suitable and sensible protections for streets that can simply not sustain this kind of intensification. A great example of this is Mariposa Avenue in Birkenhead - new zoning Residential Apartment and Terrace housing. In its current form this street is nearly impossible to navigate, esp during pick up and drop off of daycare, church or due to daily parking for commuters and Highbury shopping users. Adding to this congestion would bring the area to a standstill - where as Hinemoa (at the shopping end) does lend itself to higher rise buildings/ mixed housing as it has wide access, parking and can be walked to other amenities. Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Living in a vibrant, busy and interesting city is what attracts many of us to Auckland. Part of what makes this true is the particular characteristics of its many suburbs from the stately homes of Remuera and Parnell to the urban planning of Hobsonville, the Maunga in many suburbs like Mangere, the glimpses of city from Ramarama to Albany and the harbours that we are surrounded by. Our character areas are part of this vibrancy and are enjoyed by many whether you live or visit. Often these older areas are close to amenities (Kingland/ Mt Eden), parks (Epsom, Birkenhead) that were gifted or protected by our forebears and are part of the enjoyment that people get when they visit these areas for walks, coffees, or events. They are part of "Brand Auckland" - immortalised in art work, marketing and promotional material that bring people to this city to visit (and spend money), live and work. Heritage areas cover a tiny proportion of Aucklands built area - removing their protection will give such a tiny incremental ability to increase building space, at huge cost to our heritage and our brand - one that becomes irrevocable very quickly.

Additionally many of these heritage areas are in very expensive land catchments. The cost of the land to begin with means that the base costs before buildings are prohibitively high, meaning the build cost for a quality build will be many millions or worse yet, developers will look to save on the building costs driving poor quality, cheap housing further damaging these beautiful areas. For example a land / house in Birkenhead Point might cost $5m to purchase today. 3 quality homes would need to have build costs of ~$2m each. This means the 3 townhouses would need to be selling for around $4m each before the developer saw a profit. This example would be repeated across many of these areas (assuming quality builds that matched the areas level of quality living are built). If all existing historic areas are removed as they currently stand and there is no options around this then the areas that currently hold historic zoning should have strong historic building rules limiting the look and feel of any future housing to the look and style of the area. Great examples of this kind of building can be found already for example in Christchurch https://www.odt.co.nz/lifestyle/home-garden/new-twist-english-style-period-homes-proving-popular-christchurch and Parnell. Surely there is enough land being freed up through this process, that we don't have to risk the Heritage of our beautiful city. Capacity to build 900,000 new homes is an abundance of land. The Heritage properties are such a tiny proportion of this number - it makes no sense to risk it now.

I totally support the proposed climate change coastal erosion overlay around the cliffs, but it should be extended to all properties (like 21 and 23 Bridge View Road which does not have it) - there appears to be no logic to why those 2 houses do not have that classification.

Most concerning has been hearing that this process was done using Google Street View. I find it very difficult to understand how one gets a feel for the Heritage feel of an area by looking at low resolution computer images. I would love to have seen the street assessments done in person, instead of a screen. Is it possible to get hold of the assessments and and check what the process and criteria was? What is the assessment criteria for rating heritage houses? It feels immensely unfair that wholesale Birkenhead and Northcote Points have lost out where others have mostly remained in tact (like Devonport which remains largely untouched, Ponsonby, Kingsland, Mt Eden etc)

We should be protecting Heritage Corridors, like protecting Bridge View Road, Waganella and Palmerston Road.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The historic area is more than just the sum of the properties - it is often about the other planning, gifting and history woven into these areas. For example : There is a large amount of area around Birkenhead and Northcote point that should be protected as a whole, rather than individual properties having protection. The area is dominated by villas and bungalows that are around 100 years, and more, old from when the area, which has a strong historic legacy, was first built on en masse. From the iconic sugar factory to the Hinemoa shops, and the many houses on the surrounding streets that have been fiercely protected and maintained to a high standard by generations of owners who see themselves as custodians of these properties for the future.

Houses have been struck off the specific housing register over the years (for example 18 Bridge View Road), despite opposition, but in good faith that they would retain their protections under the blanket protection of the area. There has been no work undertaken to go back and reassign these homes to the register now that the blanket protection is removed - with which they would never have been removed. The North Shore, and Birkenhead/ Northcote, in particular is being hard hit with the removal of historic provisions - removing character that might forever lessen the value and desirability of the area as a whole. The Birkenhead/ Northcote area in particular is linked with large bush walks that provide an amenity for all in Auckland. These walks wind in and out of the historic residential housing. One example is the park from Colonial road, through Chelsea bay up Telephone along Palmerston down Bridge View to Hinemoa park and back up the hill to walk through Le Roys and Little Shoal Bay. Much of these parks and walkways were gifted and continue to be maintained by the council and many volunteers. On this walkway dozens of people a day sit on the donated seat at the corner of Waganella and the cul-de-sac end of Bridge View road (whose name was changed from Harbour View on 1 Feb, 1967 owing to its harbour then bridge views) rest on their walk and look across the harbour to the city, Devonport and Takapuna. This view, and the public amenity it provides will disappear under the proposed plan as houses over whose roofs you can see (18, 20, 22, 21, 23 Bridge View) could be built out and the street will no longer have a name that holds any meaning. Hundreds gather in this spot to watch New Years eve fireworks off the sky tower and bridge, and light shows on the Bridge. *see video below. This seat, and land was gifted to the Council to provide a place to view our beautiful city. Single dwelling protection needs to be put on number 18 Bridge View Road at a minimum, so this gift that the Council are custodians protects its view. I am sure the family that gifted this land would want that.

https://www.youtube.com/shorts/YEk664lw0C4 (view from the seat on gifted land with number 18 Bridge View consuming the view)

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

There are areas of shops dotted all around Auckland that should maintain their protection, again as they add to the character of the city as a whole. Examples of this that come to mind are Kingsland and Hinemoa street

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Again using the example I am most familiar with there are many areas with infrastructure issues, especially those in historic areas. *See images of Bridge View Road. The cul-de-sac end of Bridge View road has had pipes break/ flood under the road and park on more than one occasion in the past few years requiring immediate remedial work from Watercare et al. This water then runs to the park/ walkway that leads down to Hinemoa park which has culverts and drainage that immediately over flow in any weather event undermining the land. The neighbourhood ensures public drains are kept clear to avoid this but this would only be exacerbated with more housing in the area and very little permeable land as described by the new plans. Furthermore this particular cul-de-sac which already supports 8 properties with a narrow one way in and out entrance (no parking) has only 3 actual off street parks leading cars to park dangerously and on public land while works are being done or anyone has guests to their property. As is well known many of these historic areas also have issues with waste running into the ocean (only a few 100 m away from us), over head powerlines etc.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Local Public Views Overlay. There are many spots in Auckland that add to the variety of areas characters whether they be city, sea, mountain or built. I would be very surprised if all of these are protected or consultant on, as up until now, many would have been seemingly protected by other provisions under the old unitary plan and its predecessors. Two in particular deserve mention in Kaipatiki - 1. The rest stop park at the corner of Waganella and Bridge View roads that provides view across the park and Aucklands harbour, inner city and north shore and is a favourite stop for many walkers all day long and a great view point for events. 2. The view from Le Roys Bush and Little Shoal Bay, across the harbour and to the bridge - an iconic view of Auckland and a key view point for events.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The infrastructure is not in place and traffic would be chaos

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

This is going to be awful in a few years if the project is completed

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These areas are stunning and have been well preserved over 100 years. You will destroy this and we will never look back in another 100 years and idolise terrace housing

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

You will destroy character homes in NZ

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The walkable catchment area should be 30 mins or about 2.5km. I and almost everyone I have spoken to currently spend more than 30 minutes commuting to work by car or public transport. Trading this for a 30 minute walking commute would be a dream for us. If a significant number of Aucklanders were able to walk or cycle to work it would have a number of huge benefits including:

- improved mental and physical health; and

- reduced spending on health services; and

- reduced traffic and congestion; and

- reduced spending on traffic infrastructure; and

- reductions in the amount of pollution; and

- reductions in the amount and speed of climate change.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

I think it should be 30mins or about 2.5km for the same reasons as my previous answer.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

I think it should be 15mins or about 1.5km, so that people can combine a 15min walk with a 15min trip on public transport for a total commute of 30mins.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city

blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

I think the walkable catchment should be 30 mins or about 5km, for the same reasons as I listed in my initial answer.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

I think it should be 30 mins or about 5km, for the same reasons as I listed in my first answer.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government

is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Auckland is in the middle of a housing crisis. The city is one of the most unaffordable places to live in the world and this is only getting worse now that inflation is skyrocketing. This has a huge number of negative impacts on the people of Auckland, including:

- child poverty; and

- homelessness; and

- long-term health issues for both children and adults who are forced to live in cold, damp homes; and

- businesses closing as they are unable to afford the level of wages that staff require to pay their rent.

However, Auckland Council has the opportunity to solve a lot of these problems by allowing high density development within the walking catchment areas. They also have the support of central government and the majority of New Zealanders who voted for parties that worked on the updated NPS-UD and MDRS. The council did make some progress towards addressing the housing crisis through the first Auckland Unitary Plan, but the council's own "Housing Assessment for the Auckland Region" has shown that this did not go far enough and will not improve access to good quality housing for most households.

There are obviously trade-offs in allowing for the Special Character Areas to be developed. Some residents of those areas may have worse views from their back-gardens and they may find less free on-street parking available to them, but I don't believe those impacts should outweigh the huge negative impacts that the council's proposed policy of blocking the building of healthy homes near to the CBD will have on the majority of people who live or work in Greater Auckland.

I also find the council's justifications for creating Special Character Areas confusing. There are already other specific criteria for protecting buildings with genuine heritage value. Many of the buildings in the proposed Special Character Areas are not old or of special architectural value. Many of the buildings, including my own rented accommodation, are cold, damp and mouldy, which is certainly a sort of "character", but not one that the council should be promoting.

The council's own studies show that SCAs will block the development of healthy, affordable homes within over 30% of the walkable catchment of the CBD. This will condemn thousands of children to grow up in poverty; living in mouldy homes at the edges of the city with parents who

must make long commutes to their jobs in the CBD. The council has simply not produced the evidence to show that preserving SCAs is important enough to justify this decision.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I don't think that SCAs should be a qualifying matter. They should certainly not be used to block development of healthy affordable homes within walking distance of the CBD.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I don't think that SCAs should be a qualifying matter. They should certainly not be used to block development of healthy affordable homes within walking distance of the CBD.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I support these qualifying matters providing they are based on genuine, evidence based long-term constraints that can't be reasonably solved by more investment or smarter thinking.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

My understanding is that all qualifying matters require site-by-site analysis to support their imposition. I don't see any evidence that the council has performed this analysis.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

We believe the city centre is the place for intensive housing development, thus suiting the student population and apartment dwellers who want the amenities offered by the central city. Many young people wish to buy a first home and are currently finding this difficult to afford. A city apartment is a good and affordable start on the property ladder.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

The AUP already allows sufficient capacity.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

An extension from the existing AUP is not necessary.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

We think the existing AUP allows sufficient building of this nature within large town centres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Small shopping centres should not be dwarfed by multi-storey buildings of this size and such buildings will encroach on nearby housing in a visually detrimental way. The permitted building around small shopping centres should be no more than 3 storeys.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The proposed plan would be an open invitation to developers to demolish existing character houses to the detriment of a suburb as a whole. Small pockets of protected houses in among buildings of up to 12 metres will be ugly and detract from the heritage value of the area. It will require removal of large established trees in older areas which will further degrade the environment. We already have problems at times of heavy rainfall and the reduction in soakage areas is a real concern.

The areas in question are already expensive. Allowing intensification will not result in affordable housing for those on low incomes.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Blocks of land in Northcote Point are proposed to not be included as a qualifying matter, including our own house at 56 Princes Street. Our house, a kauri structure with beautiful leadlight windows, is 100 years old and has been added to with sensitivity to its age and style. To the west, there is the building that was Clow's Bakery (55 Queen St, built around the turn of the twentieth century) and to the north, a beautifully restored villa. Our area is a favourite walking area, with many old shops (including Clow's) converted to dwellings. The front of our house featured in an Auckland Council leaflet on walking the area of Northcote Point. However, perhaps its merits were not appreciated by looking at Google Earth, since we have a high wall and hedge on the street frontage.

The qualities of these properties, taken collectively, give the area special character which should be protected. Once demolished for short-term financial gain, the quality of housing that makes Auckland special will be lost forever.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater

infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

There seems to be an assumption that massive growth in Auckland is a good thing. It places undue pressure on infrastructure and also is at the expense of development in other New Zealand centres.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

We feel strongly about the retention of character buildings in the city centre. Too much demolition occurred in the 1970s and 1980s. The preservation and restoration of buildings in Customs Street East is an example of good practice.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The existing special character areas are only a small proportion of the available housing stock as identified by the Unitary Plan. The assessment done so far by the Council is excluding large areas on Birkenhead Point and Northcote point which contain some very valuable heritage homes which for one reason or another have not been listed as historic. I did a walk around Birkenhead Point today and noted dozens of such houses. The reason for saying that all existing special character areas in Northcote and Birkenhead Points should be retained for the foreseeable future include:

1. The lack of time given by the government to properly analyse matters

2. The lack of natural justice in removing an overlay that may have encouraged people to buy in an area and spend a lot of time supporting

3. The lack of infrastructure in these areas to support intensification meaning that flooding and sewage overflows will increase

4. The fact that if ugly concrete blocks are imposed between old villas, bungalows, art deco buildings, significant architect designed homes etc it will detract from the overall look, feel and character of the area

5. The fact that many houses analysed already by Auckland Council are disqualified by arbitrary and irrelevant criteria - eg minor alterations, a hedge or fence, a garage. If theses houses adjacent to more authentic homes are not protected from the intensive rules, this excludes the opportunity for someone to restore them to their former historical status

6. The government legislation is applying a brutish one size fits all approach - that would remove the possibility of choice for people who prefer to live in a traditional home with a garden

7. There is a serious risk that developers will spoil an area with pepperpotted ugly boxes destroying the continuity and ambience of what were previously character areas

8. There is no process or rules in place to protect the design quality of buildings - once this is in place, then government could look again at increased intensification on Birkenhead and Northcote points

9. Intensification will result in even more destruction of trees, bushes and gardens - no more intensification should be permitted until rules are in place requiring climate change mitigation and adaptation - eg green rooves, green walls, detention and retention tanks, etc

10. The Unitary Plan has already identified sufficient housing stock for Auckland - overriding the UP with an undemocratic and rushed process is BAD government and anti-democratic

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The existing special character areas are only a small proportion of the available housing stock as identified by the Unitary Plan. The assessment done so far by the Council is excluding large areas on Birkenhead Point and Northcote point which contain some very valuable heritage homes which for one reason or another have not been listed as historic. I did a walk around Birkenhead Point today and noted dozens of such houses. The reason for saying that all existing special character areas in Northcote and Birkenhead Points should be retained for the foreseeable future include:

1. The lack of time given by the government to properly analyse matters

2. The lack of natural justice in removing an overlay that may have encouraged people to buy in an area and spend a lot of time supporting

3. The lack of infrastructure in these areas to support intensification meaning that flooding and sewage overflows will increase

4. The fact that if ugly concrete blocks are imposed between old villas, bungalows, art deco buildings, significant architect designed homes etc it will detract from the overall look, feel and character of the area

5. The fact that many houses analysed already by Auckland Council are disqualified by arbitrary and irrelevant criteria - eg minor alterations, a hedge or fence, a garage. If theses houses adjacent to more authentic homes are not protected from the intensive rules, this excludes the opportunity for someone to restore them to their former historical status

6. The government legislation is applying a brutish one size fits all approach - that would remove the possibility of choice for people who prefer to live in a traditional home with a garden

7. There is a serious risk that developers will spoil an area with pepperpotted ugly boxes destroying the continuity and ambience of what were previously character areas

8. There is no process or rules in place to protect the design quality of buildings - once this is in place, then government could look again at increased intensification on Birkenhead and Northcote points

9. Intensification will result in even more destruction of trees, bushes and gardens - no more intensification should be permitted until rules are in place requiring climate change mitigation and adaptation - eg green rooves, green walls, detention and retention tanks, etc

10. The Unitary Plan has already identified sufficient housing stock for Auckland - overriding the UP with an undemocratic and rushed process is BAD government and anti-democratic

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

All historic business buildings should remain protected at this stage because there is not urgent need to do otherwise.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The lack of infrastructure will mean that flooding and sewage overflows will increase resulting in scouring, erosion, pollution and other ill effects.

Intensification should be undertaken only in areas where sufficient infrastructure will be in place to cope with the additional load.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Other qualifying matters should include:

1. all the existing significant ecological areas

2. a buffer area around all bush reserves, ecological areas and recreational reserves so that people can enjoy a natural experience without the sight and sounds of factories, houses and other structures and without feeling as though they are exposed to undue scrutiny

3. all coastal cliffs

4. all areas with stands of significant trees - these should be protected until there has been an opportunity to list them in the Unitary Plan or a plan put in place to transfer them to another area or compensate for their removal by planting an equivalent volume of suitable trees.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. 7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Auckland's history should be part of the future, once it's gone it's gone forever and we're left with a bland city with no character

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

Northcote - Birkenhead point is an historic area of the settlers on the northshore which should be kept in memorium, Villas, The Masonic Lodge

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

We need to keep some of our history, not high rises, it become a concrete jungle, parking is bad enough, and transport continuity is non existant

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

The traffic is diabolical at present, the infrastructure will not handle it, parking is diabolical, the sewer and waters systems will not cope,

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

The infrastucture and density will not handle it, the water front will suffer and it will be come a concrete jungle save our Settlers history in memorium.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

People spend a lot of money to preserve out history we do not want a concrete jungle, the infrastructure and environment wont handle it.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Leave All historic areas alone, it is our history, not just your blue area, Northcote Point - Birkenhead Point should be an historic area

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Areas with Historic Building should be untouched, they are our history in Memorium,

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Keep the areas as they are if they are historic.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Aucklands infrastructure can not handle any more water and drainage by puting more in the land will have to be comprimised, leave it alone.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Enables large amounts of people to easily get into city centre without using a car. Also provides a good public transport system for people for people living in high density areas who often don't have cars

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Same as above Enables large amounts of people to easily get into city centre without using a car. Also provides a good public transport system for people for people living in high density areas who often don't have cars

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Same as above Enables large amounts of people to easily get into city centre without using a car. Also provides a good public transport system for people for people living in high density areas who often don't have cars

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Helps workers live closer to their area of work thus reducing car loads on the roads. It's a good way to decentralise Auckland central.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Same as above Helps workers live closer to their area of work thus reducing car loads on the roads. It's a good way to decentralise Auckland central.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Once special character are gone they are gone. I've read only 3% of Aucklands housing is special character. I feel this is a last resort to free up areas for densification. I also feel these areas give Auckland some of its unique character and enhance peoples experience of Auckland

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

I will only comment on Northcote Point. I do not think the currrent infrastructure can support these denisifications. Already on a week day it can take half an hour just to get to Onewa Road as the only exit from Northcote Point is Queen St. Northcote Point is small in area and I don't the gain in numbers of dwellings is worth the cost of lost losing character housing. Devonport would also be similar. Maybe there are some special characters areas that could be densities if they have good infrastructure and room for growth. I still feel this is a last resort.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I touched on this in the above question regarding Northcote Point. So areas where infrastructure has long term contrainsts it doesn't make sense to density the area before upgrading infrastructure.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

A one size fits all approach is inappropriate. For example, in Birkenhead Point and Northcote Point, public transport down Onewa Road is already constrained. Adding significantly more people will make Onewa Road almost gridlocked during rush hours. The criteria for decision needs to include the full journey not just the proximity to a transport hub. So, for example, on the North Shore, proximity and ease of access to the Northern Busway should be an important factor

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

A one size fits all approach is inappropriate. For example, there is a huge difference between somewhere like Birkenhead Point or Northcote Point, and Albany on the infrastructure front. The former areas were simply not designed for massively increased numbers. Both have had significant sums spent recently on beautification (Footpaths, gardens etc) which would be wasted as roads, footpaths, bus-stops etc would all need to expand. Albany on the other hand has had more modern design principles applied and could easily cater for a larger population

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is easy to destroy historical buildings but by doing so we lose our connection to our heritage. The destruction of historic commercial buildings in the 1980s in the Auckland CBD is an example of this

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Birkenhead Point and Northcote point should have a more granular approach. There are certainly houses which do not have any special historical merit, but there are many in these areas which are historic and should be protected

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Adding potentially huge numbers of people to already inadequate infrastructure will be a disaster. Electricity is another factor. If people are expected to have electric vehicles, given that the

current supply network is already struggling to cope, it will need significant capacity improvement in any intensification area. Such capacity improvement takes many years

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

One of the features of Auckland is that much of the Waitemata is viewable from the roads and parks within 2km of the shoreline. This is because there is little intensification along shorelines. Houses around the shoreline are generally older one or two storey dwellings. By allowing multi storey buildings, within 2km of shorelines, this will dramatically degrade views of the Waitemata that are enjoyed by everyone and not just those who live in that 2km strip. In areas such as St Mary's Bay, Birkenhead Point and Nortcote Point, allowing multi-storey buildings will remove views of the sea for much of those suburbs, making them very different suburbs. The sea is part of Auckland - removing people's connection to it by significantly degrading views from the suburbs in question, changes Auckland itself, for the worse

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Jon Barton

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The current unitary plan provides enough land supply

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

We don't need any more than 3 stories high to meet current needs

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Current plans meet needs required

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Would be good as long as the new buildings are in keeping with the retained historic shop frints

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

This makes no sense and will not help housing . No one is going to purchase historic houses at huge costs and build affordable home they will just build 6 4 million dollar homes on the site. Not helpful at all

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Absolutely need more infrastructure completed before any building work goes ahead

Some of these historic houses still have clay pipes

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Current changes to the unitary plan fulfil the need for increased housing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Smaller narrow roads in heritage areas will not benefit from density housing and no where for cars to park

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

There is no need to go further out especially in Birkenhead point

Current unitary plan allow for enough supply

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

3 stories high is adequate to meet supply

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Destroying one heritage house to put on 4-6 apartments will not help with affordable housing as these apartments will be millions just benefiting the developers

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

People have spent thousands retaining their properties to keep the heritage of the area and we have such few areas left we must protect them

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Need to keep the green areas and all heritage houses

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Massive repair and building needs to be done to the infrastructure

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There are far more special character houses than you have identified in your maps

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

All existing infrastructure had never been enough so adding more properties will only make things worse.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

It seems like you are just trying to find a quick fix for housing without considering the long term effect on the heritage and historic look of Auckland. What was the point of having a Heritage Policy for Auckland if you now just ignore it and let anything be built. The inner city areas have already been destroyed by very bad designs that the council have let go through and now you want to destroy our Heritage residential areas as well. I am very disappointed in what you are proposing.

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?**

Tell us why

Support the proposed walkable distances of 15 mins (1200m) to the city centre and 10 mins (800m) to metropolitan centres and train / busway stations within which development of up to 6 stories may be enabled, providing that an expanded list of qualifying matters protections are included.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

Tell us why

Support the proposed walkable distances of 15 mins (1200m) to the city centre and 10 mins (800m) to metropolitan centres and train / busway stations within which development of up to 6 stories may be enabled, providing that an expanded list of qualifying matters protections are included.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Support the proposed walkable distances of 15 mins (1200m) to the city centre and 10 mins (800m) to metropolitan centres and train / busway stations within which development of up to 6 stories may be enabled, providing that an expanded list of qualifying matters protections are included.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I have great concern that Auckland's already limited heritage buildings and green spaces are going to be lost through this process; you have made a climate emergency resolution but have failed to include green space in anything that you are doing or proposing to do.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

As stated earlier we can't be losing our heritage areas to bland high rise; peoples mental health are affected by the aesthetics of an area. Leave it be

Qualifying matters must include all current Historic Character areas in the AUP-OP.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Your map is extremely hard to follow; I couldn't see any red areas so it leaves me in doubt as to what you are proposing to allow to be lost

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Your map is extremely hard to follow; I couldn't see any red areas so it leaves me in doubt as to what you are proposing to allow to be lost

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

How will you ensure sun and sight lines in places where you are proposing putting in multi storey buildings. There are already places that have become wind tunnels because of poor planning

10a. Other comments

Plan Change to ensure trees currently legally protected by Schedule 10 and Significant Ecological Areas are qualifying matters. Current legal protections in the Unitary Plan for urban trees on private land to be retained and that the opportunity is taken

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Akiko Burke

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I do not want the high-rise building spreading into our heritage residential suburbs

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Auckland city has never kept up with infrastructure requirements and adding all these apartments will only make matters worse

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Again, Auckland city has never kept up with infrastructure requirements and adding all these apartments will only make matters worse. Our coastline is very fragile and we should take care of it and not just keep building more large apartment building on the edges.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Depends on the character & historical value of housing in the area, for areas such as Birkenhead with many historical homes & other dwellings within 400 meters the distance should be closer.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Areas with huge historical significance such as Northcote & Birkenhead should remain as special character areas & not be chopped up with some parts retaining the status & other parts losing it. This makes no sense as the whole area contains significant amounts of historical dwellings &

other buildings. With a great part of the area losing its special character status then the whole area is eroded of its historical value. The council has a duty to insure the protection of our local heritage.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Areas with huge historical significance such as Northcote & Birkenhead should remain as special character areas & not be chopped up with some parts retaining the status & other parts losing it. We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Further housing intensification will be detrimental to areas such as Little Shoal Bay where increased runoff from increased housing will impact on the sensitive ecological balance of the area.

Onewa Road & Queen Street are already grid locked, further housing intensification will only add to this problem. Significant issues also around the reliability of the Northcote ferry due to regular service cancellations based on weather conditions.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I feel there is currently plenty of capacity for higher density housing - much of which is untenanted.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I feel there is currently plenty of capacity for higher density housing - much of which is untenanted.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Currently there is enough capacity for higher density living that is close enough to transit stations.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

There is enough space for higher density housing in walkable distance from the town centres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As before - there is currently plenty of available capacity for more housing within walking distance of the town centres.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The birkenhead point area we live in has a special significance to Auckland's history and those that live in it do so because they value our combined history. The level of craft and care that most residents value in this hosing has meant they are an example of resilience that sets an example to so called more modern ways of building that quite frankly have cost the country millions with the leaky building disaster.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

We have been in our house for 45 years and even when we moved into it this area of Birkenhead point was special with a wide range of ages and socio economic residents. The people who manage to move into this area generally stay because they see the value, history and other folks who understand our heritage was a nation. This neighbourhood is valued as a whole and if developers are allowed to implant out of character high density housing - then our history will be gone forever. I see development in this way as being done by people whose goal it is to make money and leave.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

The businesses in this area are an integral part of the overall feeling in Birkenhead and need to be protected so that we don't suffer and become the mess that much of Highbury shooting centre has become - eg a badly defined mall from a few years ago that has no empathy with its surroundings and therefore has degraded the entire Highbury shopping area.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

As with a lot of heritage areas continued continuing investment in the birkenhead area is important

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Basically heritage is about the streetscape as much as the individual houses. The protection that has been in place has been extremely important to retaining the individual character of Auckland. To turn our backs on that after well over 150 years of care and love is something I cannot believe we are even considering. We love this city and don't want it to become just a giant housing block where people just survive. They need a life quality as well.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Please modify & cutomise to take into acount heritage housing areas prior to 1940. Both zones will involve encroachment on some of the aforementioned plus areas of significant ecological significance.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Same as above - it needs to be closer

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

400 metres is more viable

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Yes - it could work as it appears in Takapuna and will work in other areas

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

If 400 metres is too far, 200 could be more equitable

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Absolutely essential it is included. One size does not fit all for heritage and ecoloal reasons. The unitary plan was a very well constructed piece that went to a great deal of effort to include the aforementioned.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There is too much encroachment on ecological areas around Little Shoal Bay plus LeRoys bush area more 'set back' area, preservation of th quality of increasingly in demand green space areas is required. With intensification, the demand, essential requirement for green areas will increase - they must be preserved as should pockets of heritage housing. This also applies to other other ecological reas within Kaipatiki

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

More info would be useful please but yes, in support in principal

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

If there is insufficinet infrasture it affects quality of life for residents - trying to fix retrospectively is extremely costly and fraught

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I support intensification through THAB in appropriate locations - such as around significant centres such as (on the North Shore) Takapuna and Albany. However, I don't support this around smaller town centres such as Highbury in Birkenhead. Highbury is much smaller in size than these other centres (really just a countdown and some pharmacies) and is not as well served by public

transport as e.g. Albany or Takapuna. Buses pass through Highbury, but it is no better served by public transport than elsewhere on Onewa Road

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I support intensification through THAB in appropriate locations - such as around significant centres such as (on the North Shore) Takapuna and Albany. However, I don't support this around smaller town centres such as Highbury in Birkenhead. Highbury is much smaller in size than these other centres (really just a countdown and some pharmacies) and is not as well served by public transport as e.g. Albany or Takapuna. Buses pass through Highbury, but it is no better served by public transport than elsewhere on Onewa Road

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I strongly support the retention of the existing special character areas in Auckland. The proposed modificiation of these will result in a negligible increase in housing supply, and result in special character areas i.e. our history being lost forever. T

The vast majority of Auckland suburbs are unremarkable from a heritage/character perspective and can be appropriately intensified with out Auckland's special character/history being lost.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

My comments particularly relate to the special character areas in Birkenhead and Northcote Point:

1. The Birkenhead and Nortchote Points Special Character Areas are a special and unique part of Auckland and worthy of protection. Along with Deveonport, they are the oldest parts of the Northshore, and Birkenhead and Northcote Point have a unique and special heritage dating from the establishment of the sugar works in 1884.

2. At the moment these areas read as one legible special character area from the sugar works down to the Nothcote Tavern and base of the Harbour Bridge. Protection should be retained for all areas currently protected under the Auckland Unitary Plan.

3. As a resident of this area visitors from other parts of Auckland, New Zealand and overseas all comment on the special character of the area and the beautiful old homes that have been carefully nutured and protected for approaching 150 years.

4. The Council's proposal will see the protected areas reduced to a series of small and fragmented "islands", with the overall sense of these being an overall special character area being lost.

5. This will make a negligible difference to housing supply in Auckland (a few extra town houses) which will in no way be affordable, while destroying a unique and cherished special character area that has, until now, been carefully protected for many years.

5. Birkenhead and Northcote Point need to be resurveyed - with the Council applying a more generaous approach to heritage protection - ie. protecting areas where the majority of the buildings have special character, and even where buildings may have been added to or extended.

6. While I consider all of the existing heritage areas in Birkenhead and Northcote Point should be retained, as a minimum protection should be extended the length of Hinemoa Street, Maritime Terrace, and Queen Street in Northcote Point from the Bridgeway Cinema down to the base of the Harbour Bridge. These areas are predominantly special character homes of exceptional value and allowing these to be destroyed for the sake of a few additional town houses is an inexcusable traversty.

7. Protectiing (as a minimum) Hinemoa Street, Maritime Terrace, and Queen Street (by exanding the special character area to extend from the Bridgeway to the base of the Harbour Bridge) would make minimal difference to housing supply and ensure that Birkenhead Point and Northcote Point continue to be legilbe special character areas in a meaningful sense.

8. I understand that the current proposal was not based on an actual survey of the areas but using street view - these areas that have lasted for nearly 150 years deserve more respect and a physical surey should be undertaken.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The walkable catchment should be 2400 metres (30 minutes) for the City Centre. A Business - Mixed Use Zone should be used instead of a Terrace Housing and Apartment Buildings zone.

In Auckland, many people are willing to walk further than 15 minutes to access jobs, services, opportunities and rapid transit.

Walking is an attractive travel mode within a 30-minute catchment of the city centre, since 30 minutes is a typical commute time for Aucklanders and it avoids the need to pay for parking or pay/wait for public transport.

We can already see this in 2018 census 'travel to work' data which shows walking mode share above 10% (and often much higher) for these central suburbs.

This larger walkable catchment also better reflects the accessibility of the city centre by cycling/micro-mobility and the bus network, giving a wide range of options for low-emissions travel.

Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the City Centre - this is crucial to enabling More Homes in the Right Places and climate-responsive development.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Walkable catchments should be 1600 metres (20 minutes) for Metropolitan Centres in the isthmus (Newmarket, Sylvia Park), and 800 metres (10 minutes) for other Metropolitan Centres.

In Auckland, many people are willing to walk further than 10 minutes to access jobs, services and opportunities that the metropolitan centres provide. I myself am an e-scooter rider and can easily travel long distances quickly with a very lightweight device.

Household Travel Survey data shows that the median walking commute in Auckland takes around 22 minutes, compared with the median driving commute of 23 minutes. This data covers 2011-2014 and it is likely that driving commutes have lengthened since then, due to development in remote suburbs and greater congestion.

Greater walkable catchments for Newmarket and Sylvia Park better reflect the accessibility of these centres by cycling/micro-mobility and the bus network, giving a wide range of options for low-emissions travel.

Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the Metropolitan centres - this is crucial to enabling More Homes in the Right Places and climate-responsive development.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

'Walkable catchments should be 1600 metres (20 minutes) for Rapid Transit Stops in the isthmus, and 800 metres (10 minutes) elsewhere.

The definition of Rapid Transit in implementing the NPS-UD should include high bus priority areas.

In Auckland, people are often willing to walk further than 10 minutes for rapid transit. Auckland Council research (Wilson, 2013) shows that many rapid transit stops have a walkable catchment larger than 800 metres, and that walking is often the dominant mode up to around 2000 metres. There have been many network improvements since 2013 which will only incentivise walking more. As an e-scooter user, it is easy for me to get to a bus stop on my scooter. I often travel from Hillcrest to Smales Farm station on my e-scooter in order to catch the high-frequency busses there.

Furthermore, increased walkable catchments better reflects the cycling and feeder bus catchments of isthmus stations.

Special Character Area overlays should not compromise the development potential of the Walkable Catchments of the rapid transit stops - this is crucial to enabling More Homes in the Right Places and climate-responsive development.

The Business - Mixed Use Zone should be used instead of a Terrace Housing and Apartment Buildings zone, in the first 200 metres of the Walkable Catchment of Rapid Transit stops.

This will support:

-The creation of new centres, at stops which aren’t already in Town Centres, and in highly accessible locations on our public transport network;

-The development of 15-minute neighbourhoods centred around the rapid transit stop, enabling residents to access daily needs by walking, cycling and micro-mobility and to live lower carbon lifestyles.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city

blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

I support upzoning adjacent to town centres.

Upzoning to a distance of 800m - further than currently proposed by Council - should take place around all Town Centres defined by Council as ‘large + high accessibility’, as well as all other town centres on the isthmus.

This will support the development of 15-minute neighbourhoods centred around town and local centres, enabling residents to access everyday services and amenities, by walking, cycling and micro-mobility, living lower carbon lifestyles.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

I support upzoning adjacent to town and local centres.

Upzoning to a distance of 400m - further than currently proposed by Council - should take place around all other Town Centres (not on the isthmus) which are small but have high accessibility.

Upzoning to a distance of 400m should take place around all Local Centres defined by Council as ‘large + high accessibility’, as well as all other local centres on the isthmus.

This will support the development of 15-minute neighbourhoods centred around town and local centres, enabling residents to access everyday services and amenities, by walking, cycling and micro-mobility, living lower carbon lifestyles.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Special Character Area overlay should not compromise or limit development in Walkable Catchments

I support protection of listed Heritage, and high quality, continuous SCA outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The Special Character Area overlay should not compromise or limit development in Walkable Catchments

I support protection of listed Heritage, and high quality, continuous special character outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

Old homes were not built to modern standards of warmth and dryness, nor weather tightness. Replacing older homes and villas with modern apartments will radically improve quality of life for residents, offering warmer, drier and healthier living environments.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The Special Character Area overlay should not compromise or limit development in Walkable Catchments

I support protection of listed Heritage, and high, quality continuous special character outside of Walkable catchments

With the climate emergency, Auckland Council needs to enable More Homes in the Right Places. Special Character overlays in central suburbs - the areas with the greatest access to transport and existing amenities - are significantly limiting sustainable housing development and low emission neighbourhoods.

Business zones need flexibility to adapt in order to provide for the needs of a growing local population. This includes providing for local shops and services, as well as apartment-style housing above.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

It is the responsibility of the NZ Government, Auckland Council and its CCOs to deliver infrastructure in anticipation of future housing growth. It may be reasonable to have extremely limited areas qualified where it is impossible or extremely difficult to address long-term infrastructure constraints.

Wherever there is strong demand to live, and high accessibility, central and local Government agencies should endeavour to address infrastructure constraints to support development.

Intensification in existing urban areas is a more efficient use of infrastructure, compared to greenfield development. Prioritisation of infrastructure funding between greenfield growth and brownfield intensification needs to be considered.

With the climate emergency, investing in infrastructure upgrades to support development in existing urban areas - close to existing amenities and transport - is crucial to reduce transport and housing-related emissions. Auckland Council should minimise and avoid extensive greenfield development requiring new infrastructure in peripheral urban areas, locking-in higher emissions for households.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Further analysis of these other qualifying matters is required by Auckland Council to provide evidence that these Matters meet the legislative threshold to be applied.

The NPS-UD sets out that Qualifying Matters need to have identified Specific Characteristics that makes the level of intensification required by the NPS-UD and MDRS inappropriate in light of the national significance of urban development.

Heights and density more restrictive than the NPS-UD catchment or MDRS can only be imposed to the extent that it affects the characteristic in question. Site by site evidence is required for qualifying matters, which includes justifying the extent of the area that it's applied to, as well as the sites that it applies to.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I would like Auckland Council to re-look at the Birkenhead Point and Northcote Point areas specifically.

Whilst I live in Glenfield and broadly agree with the move towards more intensification in our city, I strongly feel that the few remaining areas of Auckland that have retained their historic feel into the present day should be preserved. Auckland has very few historic areas left - most were demolished or altered in the past. Historic areas make up a very small proportion of the total area of Auckland.

Not only are many parts of Birkenhead Point and Northcote Point important from the perspective of their links to the history of Auckland's development, their feel and character provide an amenity value that local residents - and residents of nearby suburbs including the ones that will see more intensification - benefit from greatly. It would be a great shame for the people of Auckland to lose this amenity - it cannot be replaced once it is gone.

I would also like to register my view that the treatment of Birkenhead Point and Northcote Point in the proposal is inconsistent with the treatment of other areas of the Auckland, such as Devonport and Grey Lynn , which have had virtually all of their existing special character areas included as a qualifying matter. For that reason, I would like Auckland Council to carefully re-look at the Birkenhead Point and Northcote Point areas - via in-person visits rather than simply looking at Google Street View. Birkenhead Point and Northcote Points do not consist entirely of unmodified Victorian and Edwardian museum-piece houses - but neither do the other special character areas that the proposal retains.

I also suggest that the recent "character assessment" has been used in too restrictive a way in the proposal. For example, not including properties which score 4/6 - even though these are still "character supporting" does not appear to support the idea that value comes from character and amenity in the perception of Aucklanders, rather than simply via a set of academic classifications.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Because of the threat to heritage housing areas

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

It needs to be much closer - as above - because of the threat to heritage housing and buildings

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Or not at all

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

400m simply too close especially if people are going to knock down current housing to do this in heritage areas

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As above 400m simply too close especially if people are going to knock down current housing to do this in heritage areas

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

It would spoil the look of some areas and I believe it important to retain the way they are

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Heritage/special character areas/green spaces and bush reserves need to be kept as they are. Don't lose our history in particular Little Shoal Bay and all the Northcote Point, Northcote and Birkenhead areas.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

As above Heritage/special character areas/green spaces and bush reserves need to be kept as they are. Don't lose our history in particular Little Shoal Bay and all the Northcote Point, Northcote and Birkenhead areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Huge costly problems if it's not

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

1200 meters is to wide an area for intensification.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

This is too wide a sweep, and risks compromising the character of inner city areas which have historic value.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I do not support the blanket coverage of intensification within a certain boundary. While it may be appropriate for most suburbs, it will result in the loss of heritage and character homes such as in

Mariposa Ave, Birkenhead. Once these homes are gone, they are gone for good, and these homes represent the history of the area, the history of Auckland and NZ. We should be preserving the essence of Auckland, not removing it.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I do not support the blanket coverage of intensification within a certain boundary. While it may be appropriate for most suburbs, it will result in the loss of heritage and character homes such as in Mariposa Ave, Birkenhead. Once these homes are gone, they are gone for good, and these homes represent the history of the area, the history of Auckland and NZ. We should be preserving the essence of Auckland, not removing it.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

There are areas of the the city, including Birkenhead Point and Northcote Point which represent the history of Auckland. These areas as a whole should be preserved.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

1. The assessment focuses on individual properties and fails to consider the area as a whole and however various elements interact. Nor does it reflect past trends of rejuvenation/renovation/improvement and

continued future potential.

2. The assessment fails to consider the specific qualities of Northcote Point as outlined in Special Character Area statement in Schedule 15 of the Auckland Unitary Plan.

3. There is no evidence or explanation as to how Auckland Council determined the requirement of 66% needing to achieve a “5 or 6” in order for an area to qualify as Special Character.

A more flexible approach is warranted which would allow multiple pathways to protection, e.g.;

•60% of dwellings score “5” or above, or

•70% of dwellings score “4” or above, or

•80% of dwellings score “3” or above.

4. Arbitrary assessment ‘boundaries’ producing illogical and/or irrational outcomes.

▪ It fails to consider the character of the area as a whole, and

▪ It has caused distortions in areas which are otherwise able to achieve 66%.

▪ Should Auckland Council proceed in the manner currently proposed, the loss of cohesiveness across the area will remove one of the key factors defining the area, meaning retention of the remaining areas would become harder to justify into the future.

5. There are significant concerns over the use of ‘Google Street View’ in order to conduct the survey of Northcote Point, particularly in light of the consequences of these decisions.

▪ Discrepancies, inconsistencies and limitations have been noted.

▪ Assessment via Google Street view is unacceptable. An in-person

assessment (by suitably qualified heritage staff) must be conducted.

6. Alternative Options

▪ In essence Auckland Council has proposed an ‘all or nothing’ solution, the compromises and constraints of which, risk undermining the very qualities they seek to preserve. The solution needs to be more nuanced, particularly in managing the ‘buffer zone’ around key areas of Built Heritage.

7. Cost vs Benefit. Is it appropriate?

▪ The relatively small size of Northcote Point means the incremental benefit to be gained from full intensification is marginal. However, the costs of doing so are significant. The well documented integrity, character and heritage of a maritime suburb which played a key part in the history of Auckland will be destroyed.

▪ Auckland Council have already confirmed that more than sufficient housing supply exists, we feel the costs far outweigh the benefits and therefore it would be inappropriate to intensify the Northcote Point Special Character Area as currently proposed by Auckland Council.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

1. Coastal Erosion.

Extends around the coast line and predicts future coastal erosion. Development within this overlay is limited to Single House.

2. Notable Tree Overlay.

This identifies and protects scheduled notable trees across Northcote Point.

3. Significant Ecological Areas Overlay.

This provides protection of the bush and wetland areas associated with Le Roy's Bush.

4. Historic Heritage Overlay Place.

Identifies specific properties of key heritage value

(e.g. Masonic Hall, Northcote Tavern, key residential homes etc)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Auckland Council Draft Planning Maps

Overview

Auckland Council have determined that for an area to qualify as a 'Special Character Area' (and therefore exempt from intensification) it must be of 'high quality'. Auckland Council has also determined the 'high quality' threshold to be;

- **66%** of properties scoring a "5" or "6" in areas outside the 'walkable catchment' (e.g. Northcote Point).
- **75%** of properties scoring a "5" or "6" in areas inside the 'walkable catchment' (e.g. 400m of Highbury).

We hold significant concerns over both the assessment methodology and conduct.

We also believe Auckland Council has not provided a sufficient range of options to capture the nuances between 'Heritage' and 'Character'. Rather, an 'all or nothing' approach is presented.

We do not believe that sufficient justification exists for Auckland Council to reduce the size of the Northcote Point Special Character Area to the extent proposed, the compromises and constraints of which, risk undermining the very qualities they seek to preserve.

The assessment focuses on individual properties and fails to consider the area as a whole and however various elements interact. Nor does it reflect future potential.

- Specifically, it fails consider the full range of Special Character attributes as outlined in Schedule 15 of the Auckland Unitary Plan. These include, but are not limited to;

    - Historical Context
    - Physical and visual qualities
    - Built Form
    - Architectural values
    - Urban structure
        - *Subdivision*
        - *Road pattern*
        - *Streetscape*
        - *Vegetation and landscape characteristics*

- The assessment criteria (as outlined in the SCA Residential Survey Guide 2021 focuses solely on the 'Built Form' and 'Architectural Values' components, completely disregarding the remaining elements.
    - The assessment criteria required by Council are;
        - Scale
        - Relationship to street (including boundary treatment and setback)
        - Period of development
        - Typology
        - Architectural Style
        - Physical integrity
    - We are concerned over the relevance of;
        - Relationship to street. For example, a property might be scored down because it has a tall hedgerow along the front boundary. There are no protections around the hedge and it could be removed by the owner in due course.
        - Physical integrity.
            - *For example, if a property is in need of maintenance or even a coat of paint etc. it would lose marks.*
            - *This makes no allowance for the potential for the property to be renovated/rejuvenated and make a greater contribution to the Area.*
            - *Particularly over the past two decades, Northcote Point has experienced somewhat of a revival, with the character of the area being restored and enhanced through the gradual renovations of properties in the area. In many cases this has involved the removal of previous unsympathetic features, significantly restoring the property to its original status.*
            - *Marking in this way shows no regard for these trends (or remaining potential) in the neighbourhood, preferring instead to actually prevent any further rejuvenation.*

- The assessment method misinterprets the requirements of s.77I of the Resource Management (Enabling Housing Supply and Other Matters) Amendment Act in the survey it conducted is a site-by-site survey which focuses on properties as individual entities rather than a 'site-specific' survey as required by the Act. The latter of which focuses on the area of Special Character as a whole, in order to determine the geographic area where intensification needs to be compatible.

- Unlike many other Special Character Areas across Auckland, Northcote Point's peninsula form means it is a spatially well-defined and coherent area.

- This means that whilst the Special Character Area does not cover all of Northcote Point, it does cover a significant portion of it.

The assessment fails to consider the specific qualities of Northcote Point as outlined in Special Character Area statement in Schedule 15 of the Auckland Unitary Plan.

- Excerpts from Schedule 15 include;

  - *The overlay area is of significance because it is one of the earliest substantial areas of European settlement and development that occurred on the North Shore in the late 19th and early 20th centuries.*
  - *The built fabric includes the houses and clusters of early commercial buildings, street layouts and urban form.*
  - *The overlay area also incorporates some commercial buildings located on Queen Street in Northcote Point, which are located in close proximity to the surrounding housing and are considered to be an integral part of the collective special character of the area.*
  - *Throughout the area there is a high degree of visual coherence due to the general consistency of subdivision pattern and lot sizes, density and rhythm in the positioning of houses, age and style of housing, as well as the scale, materials and forms generally evident. The combination of these attributes contributes to the visual coherence of the area.*
  - *It is one of the three marine suburbs established close to Auckland City.*
  - *A wharf at Northcote Point was established in the 1850s, along with the first Northcote Hotel. Early houses, shops and a post office were established close to the wharf, and the earliest church, St John the Baptist, was consecrated in 1860 by Bishop Selwyn.*
  - *The area collectively reflects important or representative buildings, types, designs, styles, methods of construction, materials and craftsmanship, urban patterns, landscape, and streetscape qualities.*

- The assessment appears to have been done on generic Auckland-wide scoring approach which is inconsistent with the objectives of Schedule 15 to recognise the distinctiveness of different character areas.

- Northcote Point's Special Character Area statement within the Auckland Unity Plan discusses issues of streetscape, density, and subdivision patterns however the assessment recently conducted by Auckland Council fails to address the impact intensification will have on these qualities.

  - *Historically when considering Special Character Auckland Council has focused more on architectural and building details this is because planning rules allowing limitations of subdivision and lot size were able to effectively keep those matters stable, and with building additions and alterations, or new buildings, being the main focus of change (noting that in Northcote Point, subdivision for new allotments has effectively finished).*
  - *The new proposal however will allow a significant change in densities, subdivision patterns, and streetscape (potentially many more vehicle crossings and less space for grass berms or street trees).*
  - *In this context, the non-architectural aspects of Special Character should come into greater focus as it is this that is likely to create at least as much disruption to Northcote Point's cohesive built form character as potential demolition of existing buildings.*

- *Whilst it is not clear whether Auckland Councils' approach has focused overly, and inappropriately, on architectural purity because of its past technical focus on that. It does appear that it may have when those properties that have been identified for retention are compared against those that are not.*

There is no evidence or explanation as to how Auckland Council determined the requirement of 66% needing to achieve a "5 or 6" in order for an area to qualify as Special Character.

- This process excludes properties rated a "3" (neutral) and a "4" (character contributing);
  - *83% of Northcote Point properties scored a "3" or greater reinforcing the strong qualities of variety and visual cohesion outlined in Schedule 15.*
- A more flexible approach is warranted which would allow multiple pathways to protection;
  - *60% of dwellings score "5" or above, or*
  - *70% of dwellings score "4" or above, or*
  - *80% of dwellings score "3" or above.*
- The assessment criteria works on the allocation of a single score per property and does not allow any ability to weight scores in the case of a significant place/object. This has the potential to create unreasonable outcomes.
  - For example, buildings of key significance (e.g. Northcote Tavern, Masonic Hall, Church of St. John the Baptist) are allocated the same 'weighting' as much smaller residential property.
  - A weighting system should be introduced to ensure the significant Character/Heritage values these properties bring to the Special Character Area are appropriately represented and accounted for.
- The six assessment criteria do not adequately allow for the future potential for the area to be restored/rejuvenated.

Arbitrary assessment 'boundaries' producing illogical and/or irrational outcomes.

In order to group properties to make the 66% threshold decision, the current Northcote Point Special Character Area was broken down into a number of smaller areas. Whilst no specific rationale has been provided, these are have generally been drawn to align with street 'blocks' as shown to the right;

- We have observed that manner in which these blocks is drawn has a number of significant deficiencies;

    - It fails to consider the character of the area as a whole, and
    - Whole blocks may loose heritage/special character protection status due to a single property (which may have been scored down due to a hedge, or lack of paint etc).
    - It has caused distortions in areas which are otherwise able to achieve 66%. Examples include;

        - Queen Street (section of villas just past the Engine Room and on the left, in the direction of travel to the wharf).
            - *These villas lose their Special Character Area protection as they are assessed in the same block as properties on Alfred St and Milton Rd.*
            - *This assessment ignores both the fact that Alfred St/Milton Rd have no visual connection with Queen St, fails to consider the corresponding impact on Queen St as a whole.*
            - *A number of the properties on Alfred St are then afforded 'single house zone' protection as they fall into the coastal inundation overlay. This means Auckland Council have essential 'protected' some of the very houses they used to justify removing the heritage protections for the villas on Queen St (and allowing them to be rezoned 3 stories/3 house per site) – this is a nonsensical outcome driven purely by the arbitrary manner in which the assessment areas were drawn up/defined.*

        - Church St (between Faulkner and Rodney)
            - *The properties along this stretch of road meet the 66% threshold.*
            - *However, since the street has been 'broken up' for assessment purposes, and therefore the assessment becoming dependent on properties in Wilding, Faulkner, Queen and Rodney, the report deems that section of Church Street it to have "failed" the test and therefore recommends it loses it's Special Character Area overlay.*
            - *Had this section of Church Street been assessed as its own entity, it would have "passed". This is an illogical outcome.*

        - Clarence Road
            - *Is split down the middle, with one side having the Special Character Area removed and the other retaining it.*
            - *The assessment has given no consideration whatsoever to the overall integrity and cohesiveness of the Street, thereby compromising the streetscape that the retained Special Character Area on the other side is supposed to have.*

        - Rodney Road
            - *The area to the north of Rodney Road (bounded by Queen, Faulkner and Church) has been divided without any justifications provided.*
            - *The results in one side of Rodney Road (southern side) retaining the Special Character Area overlay, but the other (northern side) only retaining it for approximately two-thirds of the Road.*
            - *No regard appears to have been given for the cohesiveness of the streetscape, particularly noting the area to be rezoned commences directly opposite from the Masonic Hall (a Category "A" listed building).*

- As previously outlined, Schedule 15 of the Auckland Unitary Plan lists the cohesiveness of the Northcote Point Special Character Area as a notable factor.

    - In light of the above the assessment should be done on the Special Character Area as a whole, not by fragmenting it.

    - Should Auckland Council proceed in the manner currently proposed, the loss of cohesiveness across the area will remove one of the key factors defining the area, meaning retention of the remaining areas would become harder to justify into the future.

There are significant concerns over the use of 'Google Street View' in order to conduct the survey of Northcote Point, particularly in light of the consequences of these decisions.

- Assessment via Google Street view is unacceptable. An in-person assessment (by suitably qualified heritage staff) must be conducted.
- Limitations include;
    - Inability to assess properties not able to be viewed from the street.
        - No consideration for properties able to be viewed from alternative public vantages, despite this being a requirement of the SCA Residential Survey Guide 2021. For Examples include;
            - Parks/green space (e.g. Hall's Beach)
            - Coastline/harbour
            - Other streets
        - Northcote Point contains many 'hidden gem' heritage properties that retain their original site orientations and can not be easily seen from the street.
            - The lack of ability to view from the street should not be considered just cause to disregard the Heritage/Character values of these properties and the impact they have on the area as a whole.

    - Incorrect scoring due to limited/reduced ability to gain necessary view perspectives.
        - Some properties assessed as "unable to be viewed from street" when the reality is the Google Street view angle caused this, and in reality the property is able to be viewed from the street.
        - No ability to judge the interconnectedness of individual elements across the Special Character Area.

    - Exclusion of reserves and green spaces
        - E.g. Hall's Beach
            - No cognisance given to these elements of the Special Character Area.
            - All reserves and green spaces are excluded from the proposed Special Character Area overlays.

Alternative Options

We feel Auckland Council remains too firmly wedded to the concept that Heritage = Special Character = Single House Zone.

In essence Auckland Council has proposed an 'all or nothing' solution, the compromises and constraints of which, risk undermining the very qualities they seek to preserve. The solution needs to be more nuanced, particularly in managing the 'buffer zone' around key areas of Built Heritage.

We do not feel Auckland Council has evaluated a wide enough range of options for providing 'middle ground' solutions to address the needs of both Heritage/Special Character and intensification. Nor has Auckland Council provided any guidance on how it intends to manage the immediate juxtaposition between a modern 12 metre high townhouse bordering a valuable Heritage/Character property/street/area—particularly given no design criteria would be applied to the new buildings.

For example, Auckland Council could investigate the use of an additional qualifying matter, Built Heritage Area overlay, along with a Special Character Area overlays to better represent and manage the complex (yet interdependent) relationship between the two, whilst still maintaining

In the Northcote Point example, a Heritage Area overlay could be used to cover the core areas where there are strong examples of Built Heritage. Given the criteria which Auckland Council have conducted their recent assessment, this would be well placed (once issues such as assessment areas etc are resolved) for a Built Heritage Area overlay.

Then, a Special Character Area overlay could be placed over this and extending out further (to say the extent of the current Special Character Area), in which intensification is permitted, however it is somewhat constrained (two stories, larger lot sizes etc.) and importantly, subject to an appropriate set of design criteria to ensure that it is sympathetic with the unique values and characteristics of that particular Heritage Area.

An example of this is the approach being taken by Christchurch City Council, who is proposing to introduce Residential Heritage Areas alongside Residential Character Areas as qualifying matters. This allows Heritage and Character Areas to be used either simultaneously and or separately in order to best target the values being sought to protect. Critically, this nuanced approach provides the Christchurch City Council with much more flexibility in being able to provide intensification, but do so in a manner which serves to compliment, not detract from, the heritage and character values they are seeking to protect.

Cost vs Benefit. Is it appropriate?

Section 77I of the Resource Management (Enabling Housing Supply and Other Matters) Amendment Act requires Auckland Council to demonstrate why it is inappropriate to intensify to the full extent.

Given the relatively small size of Northcote Point, the incremental benefit to be gained from full intensification is marginal.

However, the costs of doing so are significant. The well documented integrity, character and heritage of a maritime suburb which played a key part in the history of Auckland will be destroyed.

Given Auckland Council have already confirmed that more than sufficient housing supply exists, we feel the costs far outweigh the benefits and therefore it would be inappropriate to intensify the Northcote Point Special Character Area as is currently proposed by Auckland Council.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Where intensification is required, it is desirable for the intensification to take the form of intensification more or less uniformly across an intensified zone, rather than being comprised of new large and high buildings, being scattered randomly throughout areas largely comprised of single-family dwellings.

That is so, because the new large and high developments impact unfavourably upon single family dwellings and most particularly where new building is permitted up tp 1 metre of its side boundary.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Refer explanation above Where intensification is required, it is desirable for the intensification to take the form of intensification more or less uniformly across an intensified zone, rather than being comprised of new large and high buildings, being scattered randomly throughout areas largely comprised of single-family dwellings.

That is so, because the new large and high developments impact unfavourably upon single family dwellings and most particularly where new building is permitted up tp 1 metre of its side boundary.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Refer explanation above Where intensification is required, it is desirable for the intensification to take the form of intensification more or less uniformly across an intensified zone, rather than being comprised of new large and high buildings, being scattered randomly throughout areas largely comprised of single-family dwellings.

That is so, because the new large and high developments impact unfavourably upon single family dwellings and most particularly where new building is permitted up tp 1 metre of its side boundary.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town

centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Refer explanation above Where intensification is required, it is desirable for the intensification to take the form of intensification more or less uniformly across an intensified zone, rather than being comprised of new large and high buildings, being scattered randomly throughout areas largely comprised of single-family dwellings.

That is so, because the new large and high developments impact unfavourably upon single family dwellings and most particularly where new building is permitted up tp 1 metre of its side boundary.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Refer explanation above Where intensification is required, it is desirable for the intensification to take the form of intensification more or less uniformly across an intensified zone, rather than being comprised of new large and high buildings, being scattered randomly throughout areas largely comprised of single-family dwellings.

That is so, because the new large and high developments impact unfavourably upon single family dwellings and most particularly where new building is permitted up tp 1 metre of its side boundary.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Existing special character areas have been identified as a consequence of development decisions and actions that have taken place over a lengthy period that long precedes the current Government requirement to increase housing intensity everywhere.

Accordingly, people have purchased into areas that are best suited to them, in the rightful expectation that planning provisions will not destroy the quality of environment into which such people have invested. However, Government's intensification policy dramatically changes the character of all areas to which its intensification proposals apply.

That Government policy treats people's investment and location decisions with arrogance and disdain, while also degrading the amenity of the areas into which people deliberately invested. The attached graphic showing new three storied residential construction next to an existing

single-storied and historic / character dwelling; adequately explains the amenity degradation referred to here.

Additionally, where the existing amenity of any particular single-family dwelling is degraded by having up to three, three storied buildings being built on the adjacent site up to 1m from the side boundary,existing owners of single-family dwellings and / or historical and character buildings, will suffer permanently loss of amenity and value.

It is further noted that the above-referred degradation also represents a direct and unavoidable financial loss that is not subject to recompense - but ought to be.

For the areas I am most focussed upon namely Northcote Point and Birkenhead Point, Government's intensification provisions could easily permit new, three-storied buildings to simply block existing multi-million dollar views from existing dwellings - with no compensation available or required, as a consequence of Government's proposed intensification regulations.

Additionally, I wish to specifically advocate for the retention of Northcote Point and Birkenhead Point as special characters areas and also advocate that their planning framework be left untouched by the Government initiative for intensification.

The planning thinking that supports the proposed policy set out immediately above, is that the current Unitary Plan provides for 900,000 new dwellings in Auckland already. That of course anticipates a population increase for Auckland of somewhere between 3 million and 4 million.

It follows therefore, that the Unitary plan already permits more than enough intensification, to allow Northcote Point and Birkenhead Point to be left untouched and unscathed by intensification that Government's new intensification planning policies prescribe.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Unless intensification can apply uniformly across any given area, the amenity of single family dwellings will be seriously compromised wherever those dwellings are imposed upon by Government's higher density developments. The attached graphic adequately illustrates this issue.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Refer explanation above. Unless intensification can apply uniformly across any given area, the amenity of single family dwellings will be seriously compromised wherever those dwellings are imposed upon by Government's higher density developments. The attached graphic adequately illustrates this issue.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It is quite simply practicable common development policy and common sense to accept that where infrastructure is both inadequate and very expensive to upgrade, then such areas should not be intensified in a manner that overloads existing infrastructure.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Glenys Christian

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

Development should occur in areas where there is rapid population growth such as west and south Auckland, Albany and Northcote town centre.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

See above. Development should occur in areas where there is rapid population growth such as west and south Auckland, Albany and Northcote town centre.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

There are good and reliable bus, train and ferry services in Auckland but AT says there will be cuts.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Low cost housing which no one wants to live in will be the result.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

See above. You will drive people away from these areas, not to them. Low cost housing which no one wants to live in will be the result.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

I own a villa which was one of the caretakers' houses for the Chelsea Sugar Refinery. There is a mirror image building next door at 14 Maunganui Road, Birkenhead Point. I have owned mine for coming up 34 years and no one from the council has ever been inside to look at its patterned ceilings which are pretty much still original. My house was given a derisory valuation of $275,000 in the recent revaluations which to me is a beacon for developers! Once this heritage is gone it's gone. Also I have a large rimu tree in my grounds which would be the first thing to go if developers moved in with the resulting loss of birdlife and amenity values.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The maps seem to be very random with a house up the road from me on the corner of Rugby and Palmerston Roads qualifying as special character although it has aluminium windows!! I think a much more thorough assessment is needed on an individual house basis.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Hinemoa Street should be preserved as a whole.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

There are more important infrastructure needs such as a second harbour crossing. Stopping rapid expansion in older heritage suburbs will delay the need for upgrading infrastructure for a while.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I agree in principle and think there are a number of buildings in central Auckland which need to be preserved at all cost such as the Ferry Building, much of Vulcan Lane, The Shakspeare and Albion pubs and Wah Lees in Hobson Street.But the city centre seems dead t present with all the construction, effects of Covid etc. Maybe it will never recover. So what is the point of zoning suburbs in order that the same low cost apartment blocks can be built there which is part of the problem?

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

This is a general comment, as there is no other opportunity to make this point.

I support an increase in density, subject to comments below on protecting ecologically valuable areas (e.g. Kaipatiki area) through the qualifying matters provisions. However, this density increase must be associated with measures which radically reduce private car ownership and use. Otherwise we will just make our congestion and carbon emissions problems even more serious. My experience with the higher density developments to date, in Auckland, is that more car ownership rates remain the same, leading to

more cars being parked on roads, causing road safety issues (especially for pedestrians and cyclists).

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I'm concerned about the effect of this change on private land within land currently classified as Significant Ecological Area (SEA), typically bordering reserves. The existing protection of SEAs should be maintained. This is essential for a number of reasons, including the role that trees on private land within SEAs play for mental and physical health, climate change mitigation and adaptation, and protection of native biodiversity. The NPS-UD legislation is a very blunt tool and it is essential that wise use is made of the 'qualifying matters' provisions.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Repeating my comments above, I'm concerned about the effect of this change on private land within land currently classified as Significant Ecological Area (SEA), typically bordering reserves. The existing protection of SEAs should be maintained. This is essential for a number of reasons, including the role that trees on private land within SEAs play for mental and physical health, climate change mitigation and adaptation, and protection of native biodiversity. The NPS-UD legislation is a very blunt tool and it is essential that wise use is made of the 'qualifying matters' provisions.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

I support limited use of the 'qualifying matters' provision to protect areas of the built environment that have especial architectural and heritage value.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

I support the 'qualifying matters' provision being used so that the bush protected under the current Significant Ecological Area (SEA) rules are reinstated and strengthened in the revised Unitary Plan. This is essential for a number of reasons, including the role that trees/bush on private land within SEAs play for mental and physical health (especially where reserve tracks are close to reserve boundaries), climate change mitigation (trees absorb carbon), climate change adaptation (e.g. storm water attenuation), and protection of native biodiversity. The NPS-UD legislation is a very blunt tool and it is essential that wise use is made of the 'qualifying matters' provisions.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support all the additional qualifying matters mentioned above.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I don't believe people will walk 1500m or even 800 m. as suggested. It is more reasonable to expect anything up to 500m.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Half the distance is what most folk would be prepared to walk.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

It's too far and this will mean people will more likely use vehicles, which means more vehicles on the road for parking and for travelling in already overloaded roads. The unitary plan already have enough catchment area for higher density housing.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

There are already enough high density key areas in the unitary plan eg Takapuna that don't effect character areas.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Once again the unitary plan already has enough intensification areas that are close enough.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Once again, too little infrastructure to support this at this stage and already enough provisions for this in the current unitary plan.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

there is already enough of a catchment are to still increase housing which obviously is needed but it will have a lesser impact on infrastructure that is already overloaded. Plus if people are living this close to small towncenters it is more likely they will use public transport.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

This is what makes some of these areas so special and historical. You will loose the community feel and character. A lot of people have bought character homes for this exact purpose. I believe all current character areas should be a qualifying matter.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

These areas are not large enough and do not take into the character nature of the homes that are there. For example Mariposa Crescent has so many homes over a century old and these will eventually all get ripped out for developers profits. This area will loose its special character and community feel. For years any development on these homes had to maintain the character of these homes and now your saying it is not important. Well people do feel it is important. We love the Special feel of these historic homes and their yard spaces that will disappear due to lack of privacy and lack of character building being built beside them. The special feel of our neighbour hood will change drastically.

Plus a complete lack of planning for example If you don't need to provide parking on site more cars will be parked on the roads, which will decrease road area. Mariposa Crescent already has very tricky traffic flow issues when cars are parked there, this will only become more of a problem. Increased septic and stormwater requirements and no infrastructure to accomodate this. Increased traffic on main transit roads and no infrastructure to accomodate this. There is such a complete lack of planning that has occurred for this to occur.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Once again you are going to loose the special character feel of the area. The beautiful old buildings and shops down Hinemoa can just be demolished.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater

infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We are already struggling with traffic issues which narrows our streets and makes them unsafe. We are already struggling with traffic congestion to get anywhere, this will only increase the issues.

These older areas already have issues with storm water which will only get worse.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Auckland is in danger of becoming a bland ghetto

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

I think suburbs with character housing should be left alone - again with the bad design of current terraced apartments Auckland will not be an interesting city to visit or live in

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

All older areas should stay as they are

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

limiting

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

The concept of special character has been abused to protect privilege.

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Many of the dwellings marked are of little meaningful character and restrict the growth of the city.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?**

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Once we lose our heritage, it can't ever come back...

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Large areas of Northcote Point have not been included as a qualifying matter and therefore have not retained their protection. I am concerned that the area will lose its heritage.

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Infrastructure in Northcote Point would not be able to cope with increased density eg weather impacting the ferry, high traffic congestion on Queen Street exists already and Onewa Bus routes are oversubscribed as it is.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

With regard to Birkenhead Point I point out the steep topography down the ridge that is Hinemoa Street and also Palmerston Road. Prone to slips.

I do think that current infrastructure does not support further housing - such as traffic congestion, stormwater management and provision of utilities: water, electricity and gas.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I am aware of higher density housing already around the major train corridors and bus terminals.

With regard to Birkenhead Point I point out the steep topography down the ridge that is Hinemoa Street and also Palmerston Road. Prone to slips.

I do think that current infrastructure does not support further housing - such as traffic congestion and provision of utilities: water, electricity and gas.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

It is not appropriate to add more housing to such cul de sacs as Zion Road and Ian Marwick Place etc affecting traffic congestion and lack of suitable infrastructure.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city

blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I highly recommend that the relevant town planners personally visit the Birkenhead Point and Northcote Point neighbourhoods to walk around the community, to see the topography, the amenity value, the traffic flow and the ambiance of community life here.

With climate change upon us I highly urge council to protect all coastal areas

by not intensifying housing thus mitigating silt and waste run off into our beautiful harbour.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I have lived on Birkenhead Point for 42 years during which I have been active in the local community.

The magnificent bush areas here are visited by people from all over Auckland.

I would like to see all existing native bush in reserves and on private land retained as is. This is such an asset for Metropolitan Auckland!!

The buildings on Hinemoa Street tell a history that is fascinating - one definitely worth keeping and enhancing.

I would like to see a more detailed history of the area available. Several signs are already on buildings and small walking tours highlight the heritage value of these buildings.

Together with Chelsea Sugar there is a fabulous destination here for tourists travelling by ferry from the city for relaxation, bush walks, great food and a glimpse into the history of a part of our city. This is a priceless treasure!

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I would like to see all the Hinemoa Street shops plus the Northcote Point Queen Street shops retain protection as special character. Older character buildings on Mokoia Road and Birkenhead Avenue also to retain protection.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

How important to consider existing infrastructure which in heritage areas is largely inadequate for expansion. I think there should be no intensification of housing on Birkenhead Points and Northcote Points both of which have coastal and native bush borders. Stormwater must be well managed in order to protect Waitemata Harbour.

Traffic congestion is another huge issue here - Onewa Road and Queen Street

completely congested.

The wetland in Little Shoal Bay is a natural treasure so vital to the health of many native species. The bush serves as a natural filter for stormwater from uphill.

This area could not sustain intensification.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I support all of your listed Qualifying Matters.

I especially urge the protection of Birkenhead and Northcote Points, for the benefit of local native forests, the amazing history of the area, the character buildings which are imbued with story:

One story relates to the grand old building at 146 Hinemoa Street - my husband rebuilt the lovely verandah on the street front when he saw an old photograph with the verandah intact. Apparently a large truck had crashed into the verandah many years ago destroying it. The owners together with the help of the Heritage Society funded the rebuild. And what an asset it is now to the streetscape.

I urge you to personally spend time here to see and feel the importance and value of this beautiful part of our great city.

There are many locals here with a great passion to protect the character buildings, the stories, the history, the forests, the walkways, the Chelsea Sugar factory.

I'm one of them and I am grateful for this opportunity to share my love for this place.

May visitors relish the opportunity to travel by ferry and share in the magic.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** I don't know

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

We cannot have intensification at the cost of other core values that go directly to the enjoyment and mental health of people inhabiting those neighbours, to allow for appropriate open spaces and parks, retention of character homes for enjoyment of all and also sea and skyline views.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

We cannot have intensification at the cost of other core values that go directly to the enjoyment and mental health of people inhabiting those neighbours, to allow for appropriate open spaces and parks, retention of character homes for enjoyment of all and also sea and skyline views.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Special character areas are part of the fabric of residential areas and reason why people live there and why people chose to visit those areas. They are a vital part of Auckland. Removing or reducing

them turns Auckland into just another dense city and so we might as well go and live offshore if one of the reasons for living in Auckland disappears

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The assessment seems to have been randomly settled without regard to both individual properties and the area as a whole. Both houses and the areas they are in should be considered together and given the same special character status.

The assessment fails to consider the special qualities of Northcote Point as outlined in the SCA statement in Sch 15 of the Unitary Plan

I cannot understand what evidence Council has relied on to determine the requirement of 66% being based on getting a 5 or a 6 for an area to qualify as special character. There needs to be greater flexibility in how the assessment is undertaken.

The boundaries appear to have been assessed randomly. How one side of a street but not the other is included is beyond me. Also even on some sides of the street with similar character homes, a different outcome has been reached.

This is real think edge of the wedge stuff. One you start allowing developers to get in and remove what anyone would call a character home, then neighbours and the neighbourhood will feel less inclined to remain and the special character areas currently protected will also be lost.

I understand the assessment has been undertaken using Google street view. This is not going to give an accurate assessment and an in person assessment is required.

There are various areas, including Northcote Point, that have long been regarded by all commentators and observers as character areas. These proposed changes will mean the end of those areas as comparatively few houses are protected and as others “fall”, neighbours will be tempted to sell or forced to sell in that the reason why they bought in the area will be gone.

There is no rational economic basis for attacking Northcote Point by the apparent random application of special character status. The costs will outweigh the benefits. The benefits of retention of protection for the whole of Northcote Point is not a NIMBY point. These areas attract local businesses and out of suburb people drawn to the character status. Personally when I am in our front garden I see people strolling past on a walk or on their way to the movies, the cafe or restaurant, commenting on the special character of the areas. The benefit therefore spreads far more widely than just the residents and those occupying the special character homes.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

We should apply the same rules to commercial pre isles that we apply to residential. The special character areas currently designated in Northcote Pt and Birkenhead should all be retained.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

There are many other proposed qualifying matters directly fretting northcote Point including coastal erosion, notable tree overlay, significant ecological areas overlay and historic heritage overlay place.

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Andrew Maude

Name of organisation/business:

Your local board: Kaipātiki

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

This is a dreadful proposal by the council and i wonder if they are really in touch with the city

A number of reasons

Preserving the unique heritiage areas and the history they have --ie Northcote ,birkenhead point is -paramount to the character of the area not only for the residents but for everyonw

Replacing them with 6 storey eyesores

Strain on local infra structure such as parking and traffic flow (already at breaking point)

This will lead to increase in traffic flow and congestion plus emissions

Effect on native fauna that will be cut down to build these 6 -storey buildings and the loss of use for wildlife --eg native birds --where do they go ?

Why are these areas being identified when there is no shortage of land avail for building houses ?

Expensive houses replaced by equally as expensive townhouses is so short sighted with the only objective being achieved is making developers profit

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

This is a dreadful proposal by the council and i wonder if they are really in touch with the city

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

I do not think that a blanket application to all town centres makes sense. This should be looked at as default but only if there are not other other overriding reasons for it not happening

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

I do not think that a blanket application to all town centres makes sense. This should be looked at as default but only if there are not other other overriding reasons for it not happening

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Planning must retain the ability to exempt certain areas from a one size fits all approach where it makes sense such as in heritage areas

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The assessment for what areas should be a qualifying matter is flawed for the following reasons

The focus on individual properties does not take into account how the properties fit together in order enhance the visual amenity of the whole area

There is no explanation as to how the assessment is arrived at.

The assessment has not taken into account the specific qualities of Northcote Point as a whole either as set out in schedule 15 of the current Auckland Unitary Plan or indeed as described on its own website where it said "With its many old villas and other historic features, a beautiful coastline and spectacular views, it's one of the North Shore's most interesting heritage areas"

It has created arbitrary boundaries. For example in Clarence Road between Rodney Road and Vincent Road where one side of the street will be a qualifying matter. We have a photograph taken in 1924 which shows that of the 5 houses that stood on the street at that time 2 were on the side that will not be a qualifying matter and 3 will be a qualifying matter. Areas therefore need to be considered together.

My understanding is that the assessment has been done by Google Street View. The Council owes it to the property owners of areas that will lose special character protection to at least do in an in-person assessment with a heritage specialist given the financial implications of these changes.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Although intensification is necessary it cannot be looked at in isolation to the infrastructure constraints in some area. Failure to do so will make Auckland a less liveable city for those that live in infrastructure constrained areas.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

These qualifying matters make sense to include

Important privacy information

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

In particular Northcote Point deserves NOT to be spoilt by having 3 story dwellings in amongst the older, original dwellings, overshadowing them.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Please do not destroy our special areas like Birkenhead and Northcote Point. It will be regretted in the future. I will not be here to see the destruction if it happens, but am hoping that my Grandchildren will benefit from my submission.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

within a walkable catchment area, auckland has enough room for higher density housing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Under the Unitary Plan, Auckland has plenty room for higher density housing within the walkable catchment of the 10 metropolitan centres

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Within a walkable catchment of the rapid transit stops there is plenty of capacity in Auckland under the Unitary Plan - Auckland already has enough capacity

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Under the current plan as mentioned before Auckland has plenty of capacity for higher density housing within walking distance of these areas

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

As above [Under the current plan as mentioned before Auckland has plenty of capacity for higher density housing within walking distance of these areas]

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There is very little special character left in Auckland this would be a tragedy to take this away. Special Character areas create a feeling of belonging and has a great village feeling. The areas are well maintained and people enjoy the area and housing that has been around for a long time - it gives history and sense of belonging - everyone looks out for each other - kids are safe and they are great family areas. Most of these houses in Birkenhead are amazing and have real history and are beautiful - why would you go and ruin this !!

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

We moved into Birkenhead Point years ago with our young family mainly for the reason that it is a special character area and that we were not living next to high rises, apartments, shoddy building and intrusion of privacy from apartments. You need to keep these areas as they are, its such a shame when this happens and no consideration has been given to the people who live here

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

I love the Birkenhead Hinemoa street and Queen St Northcote businesses, they are amazing buildings and are within keeping with the area. They have been cared for and renovated with care and their special character in mind. I would like for them to keep their protection from awful square buildings that have no character whats so ever !!

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We are already struggling with poor infrastructure in the Birkenhead Pt/Northcote PT areas - congestion on Onewa Road and Queen Street, parking is a nightmare on the narrow streets and terrible issues with stormwater and wastewater issues through our bush areas and busy streets - we do not need to add to this. Ferries and Buses are terrible - they are not regular enough and are cancelled - it would be crazy to add to this !!

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support all of the additional qualifying matters as above.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

It should depend upon the character of the buildings and neighbourhood itself, not just be based upon a 1200 metre distance which doesn't consider the character.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

There is already enough scope for development within the 10 metropolitan centres.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

There is already enough scope for development within the rapid transit centres. It should be based upon the character of the neighbourhood, and allow opposition from neighbours directly affected. It should not only be based upon distance from a hub .

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

It should be based upon the character of the neighbourhood, and allow opposition from neighbours directly affected. It should not only be based upon distance from a hub. Keeping character historical listed buildings is important.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

200m from small town centers is acceptable but It should NOT be based solely upon distance. It should depend upon the character of the neighbourhood, and allow opposition from neighbours directly affected if the building is going affect their outlook and sun in any negative ways. It should not only be based upon distance from a hub. Keeping character historical listed buildings is important.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

We are surrounded by character housing currently. Getting rid of the character housing in our street and neighbourhood would alter the neighbourhood completely and remove the reason for living in this neighbourhood. The special character homes in #s 11, 16, 24 and 30 Maritime Terrace should be retained and same for 95, 93, 81,79,77 and 75 Hinemoa st. I would like any Maritime terrace and Hinemoa St special character houses kept, and Bridge View, Palmerston Rd, Wanganella, Tizard , Brassey, Rugby, Telephone Rds. Glade Place, Glade Lane, Learmonth ave and Wakanui, Pullum and Inkster Sts.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I would like any Maritime terrace and Hinemoa St special character houses kept, and Bridge View, Palmerston Rd, Wanganella, Tizard , Brassey, Rugby, Telephone Rds. Glade Place, Glade Lane, Learmonth ave and Wakanui, Pullum and Inkster Sts. I also think #s 8,12 and 20 Maritime should have character status applied.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

The Birkenhead shops in Hinemoa St such as Ravenhill at 98 and 96 in the Marinovic Building, are very characterful and historic and should retain protection as they have been lovingly restored by the current owner. Same for 100 Hinemoa and the Fishers Building at 102.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Existing infrastructure is having a hard time, you should not be intensifying areas where the existing infrastructure is already at breaking point. Le Roys bush already struggles at times with run off .

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Why do you consider that allowing sunlight and enforcing height controls in public spaces any more important than protecting individual properties from development of those factors? Changing zoning restrictions to allow multi storey development on zones that have not been previously without consultation could result in the wholesale devastation of neighbourhoods and remove character homes for good.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

People are happy to walk 10 minutes, which for most is more like 1km.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

This is less than a 5 minute walk. The opportunity for people who love to use active transport extends to a10 minute walk. The distance should be closer to 1km. More available land for higher density building will help keep the cost a bit lower, enabling cheaper housing cost to the town centres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

I feel this should be at least a 10 minute walk, closer to 1km, to maximise available land and keep costs lower.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Houses within character areas can be protected individually by affording them heritage protection. Other homes around them have higher values by association, which makes replacement with higher density housing less economically feasible. This combination protects high character housing areas sufficiently and in line with our society's needs. Developers should be allowed the opportunity to replace individual houses with medium density options that celebrate the existing character where those homes are not meeting their potential.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

By enabling the changes in density, you provide developers the opportunity to contribute to more innovative solutions to funding and development of infrastructure in those areas.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Auckland is a big city it has enough areas that can be used for higher density without at 1200m catchment which might take Heritage areas

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

This should not be used where it will effect the current Heritage areas in Auckland.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

All existing special character areas must be retained, in the scheme of things they are a very small part of Auckland land area but a very important part which shows the history of European settlement. These areas are important to show all New Zealanders and indeed overseas tourists, our first settlements and the buildings and all the native timber that fashioned the houses of that time. I do not live in the Birkenhead heritage area but I often go walking there, it is such a special

place to walk and I enjoy soaking up the atmostphere. The sense of travelling back in time, surrounded by the character houses will be lost if the whole area is not protected. My walk includes Hinemoa St, Rugby Rd, Palmerston Rd and Bridge View Rd to name a few and that walk would be DECIMATED. I would not be able to see the sea and would I still be able to view the Bridge from Bridge View Rd?

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The current heritage area of Birkenhead and the Point need to be retained as they are now. European heritage in NZ is just as important as other heritage areas. By allowing high rise you immediately block everyone's enjoyment of the views of the harbour, city, bridge and sugar works. I may not live there but I can go and enjoy being able to see the views of the city and bridge with the current height of the houses. Wind and lack of sun problems will also occur. The residents of Palmerston Rd show that they really care for their historical houses and they have all been restored beautifully. I do not think that the Birkenhead and Northcote Point areas were given a timely and accurate assessment of their character status.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

There does not seem to be any protection for the old post office on Hinemoa Street between Brassey Rd and Wanganella.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Being a heritage area means the infrastructure is old and it will not cope with increased housing in the area. There are stormwater and wastewater pipes that will not cope with an increase in housing. Often there are narrow roads in these old areas and again they will not cope with increased numbers. The dangers of sewage runoff will be increase for Le Roy's Bush and the harbour.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Yes to support all of the additional qualifying matters. Views for the public is very important.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

You are just going to make a corridor of 6 story housing near railway stations blocking light etc from surrounding houses. It's going to be revolting.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

As above reason [You are just going to make a corridor of 6 story housing near railway stations blocking light etc from surrounding houses. It's going to be revolting.]

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

What are you doing to Auckland ? It already is becoming an unliveable city. No green spaces and endless ghastly terraced housing with no parks and reduced tree canopy. Just to squeeze more people in.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

All the above reasons. This city is becoming a miss match and a testimony to greed!!!! You have to make a city liveable not just to meet govt directives to cram more in. Look at some of the ghastly apartments in upper Queen Street, that you can barely move in.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

As a born and bred Aucklander I have watched this city slowly be destroyed.. Most politicians live in Wellington. Auckland although it is the power house for NZ has virtually been allowed to sprawl. There has been no concerted planning. The buildings in Auckland city are a disgrace. There are areas where the three story apartments blocks are evident and they are just awful. No gardens or trees. There are no easily assessable parks on the shore like Cornwall Park. The whole of the shore is a testament to greed. Now you want to take any of the lovely remaining areas of any character, St Mary's Bay Ponsonby, Northcote Point and Birkenhead Point and turn them into the same ghastly housing. Loosing valuable gardens for wild life and the tree canopy. Oh yes but we are in God's own … Auckland where nature takes a back seat for greed. The infrastructure can't even cope with a down pour now let alone all this intensification that has not the infrastructure to back it up. You are making a city that is unliveable. People need green spaces a sense of community. Congratulations on ruining the last vestiges of something lovely that was Auckland. You need to look to Sydney that still has kept its character areas. What a boring city this is going to become. On the shore you can't just say well you have the beaches as half the time they are unable to be swam in. The Haruraki Gulf is slowly but surely being destroyed through sewerage overflows, over fishing etc. What's going to happen to the biodiversity in Auckland ? Chop all the trees down where are the wildlife going to live. Does anyone really want to live in a city with no nature. There was a time when the council wanted us all to plant trees for this very reason. It's such a shame greed is getting in the way. There are enough areas in Auckland already ruined with intensification God knows why you want to ruin the whole lot of it.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater

infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

How is the infrastructure going to cope with all of this intensification? This city is going to become even more unappealing to live in. There are no easily assessable parks on the north shore. The tree canopy will go. The wildlife will be drastically reduced. The Hauraki Gulf is already dying. Every time there is a downpour the beaches are unable to be swam in. The carbon footprint will increase. Also the pollution, it's going to be an unhealthy city to live in. Look to the great cities of the world like London. It has parks as it's lungs and has kept its heritage has a sense of community. This city is going to be awful. The only nice places left are Herne Bay, Ponsonby , St Mary's Bay, Birkenhead Point, Northcote Point Devonport and Cheltenham. They are going to be ruined as well. I'm not a NIMBY either. I can't afford to live in Herne Bay but don't resent those who do. It's an illusion to think that intensification of these areas will allow poorer people to access them. It's not going to happen as the units will just be even more expensive than the original house on the section. This is a very short term plan not thought out well by the government most of whom have no attachment to Auckland. Maybe all us Aucklanders should move down to Wellington that still has a city centre and it's character buildings. I support the reintroduction of these as qualifying matters -. The special character overlay and don't want it removed . Support the reintroduction of the Significant Ecological area overlay

. Support the Infrastructure constraints as qualifying matters

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The infrastructure to support such intensity is significant. The city is struggling with current loads.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Will there be more Rapid Transit Stops commissioned in future and so does this mean existing Rapid Transit Stops only or could be applied to any new Rapid Transit stops?

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** I don't know

Tell us why

Will there be green spaces and community based environments for families living in these areas?

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I support the large areas where there is more shops and business that would be supported by higher density

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

This is supporting the Heritage of Auckland and indeed NZ and with heritage areas such as Northcote Point have a strong focus on restoring and retaining character to preserve for future generations

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There are many areas as a whole that have little or no historic cultural value and do not reflect the trend to retain, rejuvenate and improve as many have done and are continuing to do in areas such as Northcote Point. I do not see good supporting evidence relating to the assessment metrics or appropriate data used for decisioning.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

There are few areas remaining that can retain our historical significance

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Makes absolute sense - infrastructure needs to be able to be able to support the communities living in them

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Historic HeritageOverlay Place. In Northcote Point Many old villas with historic features as well as historic significance dating to the late 1800's, many of which have been proudly and respectfully rejuvenated to retain the character and associated history will be compromised by the proposed intensification. Northcote Point is noted as one of the best Heritage Walks and areas in Auckland.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

This has been been addressed under the Auckland Unitary Plan that has identified that there is currently enough capacity for higher density housing

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

As per previous comment above there is already a number of metropolitan areas identified where sufficient allowances have been made or are planned for higher density housing eg Albany, Takapuna on the North Shore which have the infrastructure that can cope with this

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

The Unity Plan for Auckland already addresses this

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

This should be closer to Town centres as local areas do not have the infrastructure to cope due to deadend and narrow streets.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

When relocating back to Auckland to live from overseas, the appeal for us was to buy into an area that still had its history intact and well built housing. We found our forever house in the area of Birkenhead Point 12 years ago. As our family grew we decided to renovate and modernise our house. One of the

There are not many areas on the North Shore that maintain the history of where the area came from. Birkenhead Point is one of those areas, while small it maintains its history and connection to the community due to special character area and protected buildings.

We have recently renovated our 1918 Bungalow where we were required to obtain resource consent due to the Special Character Overlay. This was a plus for us as we wanted renovate in keeping with the area. It was our mission to maintain the integrity of our bungalow while modernising it for our expanding family but with a focus on maintaining the character of the bungalows on either side of the property and the history of the street. This cumulated in the house receiving an award in the NZ House of the Year Awards in 2021.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

'Glade Place needs to have its special character area reviewed and put back to how it is classified under the Auckland Unity Plan, due to a number of factors:

- Number of Bungalows in their original condition

- Number of villas in the street

- Two of the villas in the street currently and will maintain their historical protection (Historic Heritage Extent Of Place)

- Notable Grove of Trees. Which covers a number of properties in Glade Place and thereby restricts any development in the first place

- Glade Place has the same if not more special character considerations than other streets that have maintain their special character.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

It is good to see that a number of Local Business buildings in Hinemoa St have maintained their special character area however this should be extended to include additional buildings eg the building occupied by the Ravenhill cafe. Why is one on one corner maintaining its protection when a building with the same historical significance does not. Without protection the area will lose it special character.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

There are a number of significant issues regarding the infrastructure in the Birkenhead Point area along with some significant sensitive areas of habitat.

Parking is currently congested in the area at the best of times. Narrow roads do not help this situation. Glade Place for example is regularly congested due to business customers parking in the area to assess local businesses. With more houses, business customers will have even less locations to park due to residents cars.

There are already Stormwater issues due to poor infrastructure in Birkenhead Point. The East side of Hinemoa street catchment directly flows into Le Roys bush. This is a world class area of native bush and a lot of money has been invested to maintain tracks and the bush it self. However money has not been spent of infrastructure. Changing the special character areas will increase run off and problems for this ecologically sensitive area. The current Significant Ecological Areas - Terrestrial needs to be expanded to include the east side of Hinemoa Street.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I believe the assessment process for what is special character qualifying factor was flawed. I understand the assessment was not carried out in person but rather by viewing Google Maps (which is out of date) due to covid. This has resulted in an incorrect assessment of the special character nature of Glade Place for example. There are 6 Bungalows in a row that are no where to be seen in other parts of Birkenhead Point. Not to mention the two protected villas, historical Warehouse, other villas and protected tree line. There is a group of more than 10 houses that are of significance in the Street which currently has been assessed no significant special character, which is clearly incorrect.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Our character architecture and neighborhoods are part of our collective identity.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The city center has tall building and around areas where tall building already exist this change would be fine, 1.2 km distance would incorporate some inner city character areas and Auckland would no doubt lose a number of character buildings that set off other buildings. square box buildings such as the many apartment buildings we already have around the city, do nothing to enhance the character of Auckland. It could be anywhere. We would lose a significant comparative advantage we have over other cities for quality of living and tourism.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Again as the previous question before you run the risk of affecting character areas by allowing taller square boxes to replace character villas and bungalow's. You are disregarding the importance of character. Remember your square boxes will not be designed by Lloyd Wright or the Bauhaus or have any similar significance. You will be creating the slums of the future because successive governments have lacked the political will to tackle the housing issue with the unpopular capital gains tax, limiting absentee landlords or freeing up new land and build infrastructure to support this. Your proposal would penalise the people who have made considered decisions to live in neighborhoods who maintain attractive gardens and houses that inspire others. During the covid lockdown people did not walk around the concrete boxes for the relief of being in lockdown. They took to the streets en masse to walk around leafy neighborhoods with attractive houses and gardens.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Well lets use the Northern expressway as an example. Within 800 meters you have a mass of shops and commercial property. The transport is not an eyesore because at Smales farm it is a commercial area. So apartment blocks instead of commercial buildings would be ok there. At the Albany site where there is not enough parking, there could be taller buildings among the commercial sites with retail below. Again at Helensville. Everywhere else on that route the impact of taller buildings would be significant.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

One of the examples you give is Glenfield. Successive councils have botched this area. It is dominated by the expanded Glenfield mall. And the magnet of Mac Donalds which creates a constant traffic issue of the right turn into Kaipatiki Rd for all directions of traffic. The school roll has dropped from 1500 to 500 approx. It brings to mind " Come friendly bombs and fall on Slough, It isn't fit for humans now". So in my mind you really can't make this area much worse. So go for it. I listened to the idea at a public meeting of a Link type bus service for the North shore so that people in Takapuna could get to Glenfield. I can see this working the other way, but only the visually impaired of Takapuna would be likely to make such a trip. I cant see someone in a $5 million house coming to Glenfield to buy a $49 dress of hang out at the Postman's Leg at all let alone on a bus.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

I do not support any intensification in these areas. I live in Birkenhead and apartment blocks erected thus far have only detracted from the character of the area. Contributed to the traffic issues particularly on the weekends and Saturday most of all. The buses are empty, the ferry is not busy right now due to the city being empty of people because of covid and businesses adopting a work from home strategy.

There have been very few buildings of high quality build that are apartment blocks. The council planners are unable to police this properly due to a lack of staff. To replace character houses with apartment blocks will not improve areas of Auckland on the whole and not improve Birkenhead at

all. People love sunshine. A busy cafe is usually the one with sunshine. The ones in the the shade are never busy. Taller building reduce quality of life for the residents of an area. Intensify the city for those who wish to live in tower blocks and apartments. Leave the character suburbs to be just that.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

This question is worded poorly and confused 2 people who read this. Character areas should not be subjected to intensification. Of course housing was built around transport.....Most families could not buy a car! You could not buy a new car unless you had foreign currency up until the late 1960's and this was the case way after some of these houses were built! The fact that public transport or walk was the only option for most families was a given and to word this question and the supporting information to the question in this way shows a lack of understanding of the history of Auckland and makes me question the stewardship you have of it in your hands. I did not

go to university as I was not smart enough at the time and I hope the person(s) who worded the supporting information didn't either lest they have quite possibly wasted these important years and managed to add a bias to this question.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

Kauri die back risk from clear felling of sites next to virgin kauri forest.

Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

Classifying all existing areas of ecological significance as a qualifying matter.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

Areas that have significant gaps in infrastructure should not be promoted for development, but should a developer wish to pursue a project, finance should be available to upgrade infrastructure in that area.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The city Infrastructure can not support what is in place today

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

I think this is reasonable to support the business and communities in the Metro areas

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Will there be additional RTS in areas of significance in future?

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Great to be able to sustain communities including the business communities and would be great if these included green space development to support communities - so would support if the whole picture is being considered to ensure wellbeing for families living in high density communities

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Great to be able to sustain communities including the business communities and would be great if these included green space development to support communities - so would support if the whole picture is being considered to ensure wellbeing for families living in high density communities

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

It is important to preserve historical and cultural aspects of both Auckland and NZ

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

There are areas that do not have the historic or cultural significance. The assessment appears to fail to consider special character areas in Northcote Point as outlined in the Special Character Area statement in Schedule 15 of the Auckland Unitary Plan.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Retaining again historic and cultural significance to the business that have been foundational to the Auckland area

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We need to be able to sustainably grow and with commercially viable options or areas more suited for infrastructure expansion

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Historic Heritage Overlay Place - Northcote Points historical and cultural heritage will be compromised along with infrastructure overload if high intensity developments proceed.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Where is the edge of the city centre ? More definition is required .

The terrain of the city is generally hilly to steep for easy walking for senior citizens .

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

The unitary plan has a significant capacity for higher density housing within walkable distance of these centres .

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Even this distance senior members of our society struggle due to hazards surface of our pedestrian paths .

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Your example of town centres i.e . Glenfield and you description of local centres would appear to be the same . Most confusing .

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

being even closer would reduce the requirement for parking at these centers .

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Why destroy the special character and ambiance of these areas with spot or strip development of parts within these areas .They would stand out like boils on a face .

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

Both Northcote and Birkenhead Points were very shabbily treated by a indifferent survey method compared to other heratige areas .

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Again a indifferent survey method used in the Birkenhead and Northcote Point areas failed to do justice existihg structures in these areas .

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Without infrastructure constraints , the building of three home , three stories on individual sites without resource consent will obstruct planned and efficient infrastructure upgrading.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The present capacity for HD housing in a walkable catchment is enough.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

To retain local character.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

The topography in hilly suburbs penalizes them.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Dead end streets in theses areas would suffer.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

To keep this housing around the small town centres..

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Special character areas are important to break up housing sprawl.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

One example would be to avoid losing areas of bush for birds to live and for our health.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Some assessment should be made in all areas of local character change.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All planning surveys should be done by suitably qualified persons visiting site. Records, maps , aerial photography and google earth must be backed up by site visits.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I do not support the proposed changes at all.

The council and government seems to have forgotten what us Kiwis actually want.

We do not want high density housing, we want to have space and a section. It is really insulting to us Kiwis that you seem to be forcing overseas type living options on us. There is a reason we live in NZ and not overseas!

There is a huge amount of land available in Auckland to make this work. One simple solution to free up land is to say no to any farms in Auckland.

Aucklanders have to be able to travel from point A to B to C to D in an efficient manner. Since Auckland is so spread out, public transport and bikes do not work. So instead of focusing on the idea of intensifying areas with infrastructure that cannot support it, why not look to keep NZ how us Kiwis want it...our own homes on our own section.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

I do not support the proposed changes at all.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Auckland already has enough close proximity high density housing. At 1.2km from a town centre this will increase car usage for a lot of people. This is a 20 minute walk which most people would choose to drive. More people in an area means more air pollution from motor vehicles.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

There is already enough high density housing within Auckland. High density housing does not have sufficient parking which impacts street parking.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

The bus system is designed for the passenger to jump onto a connecting bus - this is not a reason for the council to use in an effort to support housing density increase.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The only winners in this suggestion is the developers. There is plenty of land in Auckland. Why would you destroy the heritage of areas such as Birkenhead Point. This council making decisions like this will ensure that the city has no history left except what you read in a book. Birkenhead Point / Hinemoa St is a weekend destination for people coming to enjoy the cafes, art gallery and local walks.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

I would ask you why do we want this? The city centre does not represent what it used to. High density housing in Birkenhead Point will be at a price point that the average NZer cannot afford - again the developer is the winner - they destroy the heritage and then put up multiple dwellings where there had been one. What about the trees here that are home to the Wood Pigeons - or maybe your developers are building a spot on their high density roofs?

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I live on Mariposa Crescent, previous owner included Sir Keith Sinclair (a notable NZ historian) who penned work in this house, and a manager of the Chelsea Sugar Refinery. Many houses here has links to the days when the Clydesdale horses pulled up the Kauri from the wharf. Is nothing worth protecting?

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

There have already been significant parking issues in Mariposa Crescent with the surrounding business employees parking here. There is an early childhood centre that creates traffic movement and cars parking cause visibility issues. There is now yellow lines on one side of the road. These narrow roads are not designed for high density housing.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Please protect our area. As a home owner on a large site I could make money from high density housing but I care about our city and our heritage. Birkenhead Point deserves to be saved. Le Roys bush is a forest within an inner city suburb - home to glow worms, native birds and species, flora and fauna, little shoal bay is really well patroned with the beach, playground, basketball and tennis courts. Please don't ruin this area.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

This will affect adversely the character areas and houses in Ponsonby St Marys Bay and Parnell. Character areas should retain full protection.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

This could affect Character houses in character areas and diminish the collective historic value of Auckland

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The character of each area should be taken into strong consideration

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The character of each suburb should be considered.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

If I have understood the question correctly character of an area should be very high as a consideration as to building height. I live in Birkenhead and apartment building have only diminished the areas character

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

The map supplied was fairly useless. Blue was purple? No ledger that I could find

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

The map was not that easy to understand. You could have made this much easier to understand. No ledger that I could see. If your purpose was to confuse you have achieved this. Hence the answer of I don't know.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Birkenhead where I live cannot support more vehicles on the road and our public transport is woefully short of my needs to maintain my business and keep employing 15 plus people as I have done for many years. Infrastructural restraints should be a strong consideration

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Onewa Road is a major infrastructure problem given its current congestion. It's not too hard to find parking issues in the Birkenhead/Northcote area given the number of cars already parked on the roads.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

'People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

'People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

'This should not result in removal of natural bush and parkland or golf course areas. People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

'People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

'People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more)

within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Need to appreciate and retain the special character of the historical foundation of the city that makes it unique

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

'This comment applies to all proposals that will impact on SEAs and natural bush, parkland, reserves and golf courses. People need more open space to enjoy, and;

- that naturally functioning habitats and ecotones are critical to the ecological significance of these areas including private land adjoining.

- Edge effects of bush removal around significant ecology and kauri forest. Weed and bush damage from edge effects exposures.

- Kauri die back risk from clear felling of sites next to virgin kauri forest.

- Council being required under the New Zealand Freshwater Policy Statement to protect and enhance full catchment management areas including habitats of endangered/threatened native freshwater fish and the receiving environments of these habitats.

- Classifying all existing areas of ecological significance as a qualifying matter.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?**

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?**

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Under the existing Auckland Unitary Plan (AUP), the zoning for properties on Marywil Crescent, Terrylyn Drive, Kerrymaria Place and Jessmae Place (and other nearby areas) in Hillcrest was 'Residential - Single House Zone'. This reflects the 'Restrictive Covenant Contained in A283532 A.L.R' established in April 1968 which is noted on the Certificates of Title for these properties, which restrict them so a single dwelling on each property.

The proposed zoning change to 'Residential - Mixed Housing Zone - Modified' under the MDRS does not reflect the situation described above. As neither the MDRS nor the NPS-UD can override legal covenants on property titles this is disingenuous. The existence of restrictive legal covenants should be incuded as a qualifying matter and also be clearly shown on Auckland Council GIS map information.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

Too much intensification in certain areas without appropriate infrastructure being there to support such housing is a terrible idea and will lead to pockets of urban slums much like it has in many areas of Europe.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

Same reasons as above - without appropriate infrastructure these people will just continue driving to their work places and nothing will change simply by trying to intensify housing availability around these areas. There needs to be consideration given to schooling infrastructure and transport capacity - why don't you put money into developing good public transport first before intensifying housing?

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Same reasons as above - without appropriate infrastructure these people will just continue driving to their work places and nothing will change simply by trying to intensify housing availability around these areas. There needs to be consideration given to schooling infrastructure and transport capacity - why don't you put money into developing good public transport first before intensifying housing?

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Same as above. Many of these areas do not have appropriate infrastructure to deal with such increases of people living in the area. We have experienced this in beach haven where you have built terraced units on a residential street without consideration for issues like car parking or playgrounds or safe spaces for children. It is resulting in an increase of rubbish and cars - most of these people aren't changing their work locations just to live in an area so they continue driving to south Auckland and clogging up the roads so in my opinion it isn't worth it!

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Too much and too much rapid intensification without you putting the time to plan or fund appropriate infrastructure is going to result in poorly designed housing which reduces the beauty and natural landscape of these areas. We would support terraced units but not apartment style housing in these areas.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Some of these areas hold such special significance to New Zealand - geographically and historically for us as a united people. I think putting apartment and 6 storey buildings in these areas ruins that significance and alters the landscape significantly for future generations who we also have a duty to protect.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Important consideration !!

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

The unitary plan already provides for enough high-density housing within the 'walkable catchment' areas. Too much high-density development leads to infrastructural problems – the provision of adequate wastewate and sewage capacity immediately springs to mind.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Once again, the unitary plan provides more than enough opportunity for intensification in and around the metropolitan centres. A great deal of effort went into establishing the unitary plan for Auckland, and the housing densification which resulted from it – and the further densification for which it makes provision – are sufficient for Auckland's housing needs.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification creates its own problems – provision of infrastructure; reduction in greeen spaces; the loss of valuable trees. There is enough opportunity for high-density housing development in the unitary plan already. Further densification in Auckland is not necessary.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The unitary plan already makes provision for enough high-density housing close to large town centres. More high-density development is not necessary.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The unitary plan already makes provision for enough high-density housing close to small town centres and large local centres. More high-density development is not necessary.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

The Victorian, Edwardian, pre-World War II and 1950s/1960s wooden houses are an essential part of Auckland's heritage and an architectural taonga. Our city is beautiful because of its natural settings and because of its architectural heritage, and we should treasure both of these elements. We are fortunate to have the treasure – this vital taonga – of lovely old houses in our city. The special character areas of Auckland, with their beautiful homes and their established, mature trees, help make it a "livable" city. Cultural impoverishment will result from their destruction.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The special character areas in Auckland should be seen as a whole; intensification intespersed among older wooden homes will ruin the character of the areas. The main point is that destruction of special character areas to provide greater housing density is irreversible and is not necessary.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

It makes perfect sense to take infrastructure constraints into consideration when maing decisions about town planning and intensification.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I strongly support the inclusion of all six of the following overlays and cotrols as qualifying matters to limit the height and density of development in Auckland:

Ridgeline Protection Overlay

Local Public Views Overlay

Auckland War Memorial Museum Viewshaft

Stockade Hill Viewshaft

Character buildings in City Centre zone and Queen Street Valley Precinct

Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

It should consider other features and not just be a strict 400m interpretation.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

It should consider other features and not just be a strict 200m interpretation.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

The cost:benefit of another 4% of land area for housing versus the other measures taken doesn't warrant elimination of heritage areas. The analysis of what is heritage was not done properly and requires proper heritage expertise.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

The areas close to the city centre, including Ponsonby, Eden Terrace and Parnell should be used for apartment buildings, and not protected where there

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

DO NOT SUPPORT AT ALL. Areas that are further from the city centre are not suitable locations and the socio-economic characteristics of the area should also be considered to prevent the building of apartments that are going to be come undesirable places to live e.g. “slum” style.

The amenities of the area are often not suitable for the proposed population increases, and would require significant master planning and co-ordination to make sure town centres are created and supported to cater to the increased demand.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

DO NO SUPPORT. The current and proposed so called “rapid” transport networks are not well defined or suited, there should be also a time of travel considered as well, e.g. rapid transport that takes 40+ minutes is not an area to build apartments. The transport network is also not designed to move the volume of people.

The roading network around these areas are also not designed to cater to this population change. The idea that cars will not be used does not match any current situation with streets have far more cars than in prior decades. While council is encouraging people to use public transport, behaviours are not changing - more people in more apartments (often with no car parking included) will mean more cars parked on streets.

The amenities of the areas withing 800m of rapid transit stops are often not suitable for the proposed population, and would require significant master planning and co-ordination to make sure town centres are created and supported to cater to the increased.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre

(such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

They should be small and concentrated areas, with high levels of amenities very close to the town centre (including public transport options, recreation and green space). The existing feel and surrounding houses in these suburbs should also not be affected. Access to light and view tunnels of existing properties should also not be impacted.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

DO NOT SUPPORT AT ALL. Small town centres are designed to cater to the wider community, not a few apartments in close proximity. The overall feel of nearly every suburb in Auckland will be significantly negatively impacted by this proposal. The exiting zoning should remain.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The 'Special character' designation is often applied to the lowest quality build our city has, with houses that have no modern features to improve their quality of living and that would fail many modern tests of suitable/safe/healthy or sustainable living.

These areas of 'special character' are also where Intensification is most suited as they are often very close to the city centre, close to high levels of ameinity (shops, restaurants, pharmacies, businesses, transport, green spaces and parks).

In the next 10-20+ years, if intensification were to happen solely in the proposed 'Special character' areas, this would be the most beneficial and have lowest impact to the wider Auckland area (limit urban sprawl, limit commutes, limit vehicle movements).

The 'character values' of all of the existing suburban areas should be retained and not destroyed to benefit a few developers who will build low quality housing for the highest bidder.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These are the key areas for intensification - close to amenities (shops, restaurants, businesses, parks, attractions etc), close to the CBD, close to transport (public and roading).

The 'character values' of all of the existing suburban areas should be retained and not destroyed to benefit a few developers who will build low quality housing to the highest bidder.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These are the key areas for intensification. In the next 10-20+ years, the proposed 'Special character' areas if they were the SOLE area of focus for Intensification would be the most beneficial and have lowest impact to the wider Auckland area (limited urban sprawl, or increased commute and vehicle movements.

The 'character values' of all of the existing suburban areas should be retained and not destroyed to benefit a few developers who will build low quality housing to the highest bidder.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

This is the most critical area to support. The vast majority of the Auckland region must fall into this category and as such should retain the zoning of 2016 unitary plan.

The "isthmus" i.e. the very centre of Auckland should be the ONLY areas that need to be subject to significant level of intensification (including 6+ stories) for the next 30-40+ years. This area is close to the amenities and work supplied in the city centre (and nearby areas e.g. Ponsonby, Mt Eden, Parnell) and would enable dedicated and focused "master planning" to be leveraged in a way that developers MUST comply with a defined plan, and are not left to build on their own. The Auckland Council would define what the hyper-local areas should contain, and developers would

be bound to develop to the exacting definitions. The plan MUST also include suitable volumes of school and green spaces.

This would also enable the focused and dedicated upgrades to water supply and wastewater networks, rapid transport options without trying to spread the improvements over the entire Auckland region.

The transport should be built to the size and scale in this area to support a large population within the Isthmus, and the current proposed light rail is FAR from what is needed. High speed underground trains must be the consideration here in terms of transport capacity, frequency.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

These all make sense, additional areas must also be considered across entire Auckland region.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Below are a few other thoughts, that don't fit into the questions asked and apply to the overall concept and areas where significant additional thought and funding is required.

Where is the related information on the substantial increased spending on:

- roading network (public transport is not enough – even AT still have cars),
- where is the funding for the significant increases in water storage and supply and treatment? Recent droughts show there isn't enough water for the current population, never mind 3 times
- Where are all the extra green spaces being created to support the significant loss of sections and play areas for kids at home (section turns into 3 houses)
- Schooling – where are all these additional children going to attend school?
- If this is what the government is planning on doing, it needs full master planning – it can't happen organically or there will be negative impacts on local amenities – roading (traffic and maintenance), schools, green spaces
- What happens to the value of a house that gets three story houses on either side resulting in significant amenity loss to the orginal house (loss of light, loss of privacy, additional noise)
- Building code standard update needs to happen to prevent low cost low quality housing that will need significant repair in a short time

The Government has failed to control house price inflation through poor management of many metrics particularly through their pandemic response with house prices having gone up around 40 per cent since Covid hit* article below

No consideration of what life in Auckland would be like with 'overcrowding'. Who is asking for the increased population? There is significant land available outside Auckland, can we not be "full" with constrained house supply?

How are the profits from the developers being managed/limited to prevent significant house price inflation anyway (and destroy current Auckland living)

15 townhouses sold for $9m** ($600,000 each), this is not making more affordable housing. There the planned approach, is just creating more low-quality poor quality of living housing, and high prices.

How to ensure sufficient number of decent healthy trees (new and existing) are provided in the face of intensified, lot-by-lot infill development. Where does this land come from?
-What increased public outdoor space will be provided in response to the increased population density and reduced private outdoor space. Where does this land come from?
-How to allow for new /improved connections through a neighbourhood when walking/riding to amenities/public transport is more widespread – for example how to connect up the ends of cul-de-sacs to allow good through-access for active modes? Where does this land come from?

Framework planning at a neighbourhood level (as is done for greenfield development) is needed if decent homes and decent neighbourhoods are to develop, with the density that supports local servicing and local living, as well as transport accessibility. Sausage mansions (5 detached 2-3 storey houses with a driveway and no green space) are not the housing that delivers on this.

We are considering, for front sites, encouraging buildings to face the street and have less bulk at the rear of sites, to reduce the shading and dominance over side boundaries."

Further, it assumes that the most highly trafficked public area – the street outside – which is public and they want us to use more without using our cars – can be sacrificed to perpetual gloom and shade. The suggestion further down that a 1.5m front yard will address this is just b.s. of the highest order when the shading effects of a six-storey building are considered and only slightly less b.s. if the building is 8m high as most terraced houses are.

In other cities with town planners the set back (front yard) differs on each side of a east-west street even if they are perimeter blocks! i.e. In NZ the northern side would be subject to a larger setback while the southern side may have none. Other techniques are used too like limiting the height on the northern side closer to the street while allowing the southern side to get to full height immediately

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Auckland is not flat, it is not nice to walk around, the footpaths are in terrible condition for prams, mobility scooters, scooters, bikes and walking due to tree roots breaking them up. If a bus stop or train station is not within a block of where I currently am, I am more likely to get in a uber than walk to get to public transportation.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Auckland is not flat, it is not nice to walk around, the footpaths are in terrible condition for prams, mobility scooters, scooters, bikes and walking due to tree roots breaking them up. If a bus stop or train station is not within a block of where I currently am, I am more likely to get in a uber than walk to get to public transportation.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Auckland is not flat, it is not nice to walk around, the footpaths are in terrible condition for prams, mobility scooters, scooters, bikes and walking due to tree roots breaking them up. If a bus stop or train station is not within a block of where I currently am, I am more likely to get in a uber than walk to get to public transportation.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

You are punishing the people who already use these locations by removing parking due to residents parking their vehicles at their terraced apartments as they will not have sufficient (at least 3 parks per unit) off street parking. It is 2022, you've played your public transport card for 20 years, it hasn't worked, you have to understand it is not going to work people dont want it. All your surveys of people who do want it are the minority that actually fill in your surveys. You need to do proper involuntary surveying to get an actual cross section of the community. So until you mandate 3 off street parks per unit in any intensified (move than single house zone) areas, your plan is doomed to fail.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

You are punishing the people who already use these locations by removing parking due to residents parking their vehicles at their terraced apartments as they will not have sufficient (at least 3 parks per unit) off street parking. It is 2022, you've played your public transport card for 20 years, it hasn't worked, you have to understand it is not going to work people dont want it. All your surveys of people who do want it are the minority that actually fill in your surveys. You need to do proper involuntary surveying to get an actual cross section of the community. So until you mandate 3 off street parks per unit in any intensified (move than single house zone) areas, your plan is doomed to fail.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

You are already allowing intensification too close to existing natural landscapes such as reserves etc, which is causing issues with flooding, sewage overflow and degradation of these areas. You cant keep on top of what you've already got now you want to build even more with pipes that dont and cant support it. You should allow any intensification within 2km of any natural reserve or place of significance such as legacy army outpost etc.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Anywhere you cannot upgrade the waste/fresh/storm water, power, gas and internet infrastructure without works that will impact any roadway for longer than a week should have this constrain. Existing citizens of this city do not need or want any more civil works to live through.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

No intensification within 5km of any existing reserve, there is already too much damage from the current level of intensification for the infrastructure to support and we are losing our reserves to erosion, pollution and sewage/stormwater overflows.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Housing options should be maximized in walkable areas around our city centre to bring people into the area

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Housing options should be maximized in walkable areas around our metropolitan centres to bring people into the area. Please see attached documentation indicating that the Manukau metropolitan centre walking catchment should be adjusted.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Transit stops need more people living around them to create a positive cycle of usage and number of services provided.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

More people living in close proximity to these centres will create more vibrant and sustainable communities.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

More people living in close proximity to these centres will create more vibrant and sustainable communities.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

The properties considered a qualifying mater should be uniquely valuable in their own right, not based purely on their age, or their neighbouring properties.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I'm not interested in this aspect of the proposed changes.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I'm not interested in this aspect of the proposed changes.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

This is a city wide problem, that should be tackled with an open canvas, to apply the best value of investment to return (available development), in areas of the city people want to live. This will

inherently mean the existing problems are where people want to live and are the places we should leave open for increased density if the economics be it private or public infrastructure projects.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

I support the upzoning of areas within walkable catchments, I have an interest in the properties of 9 and 11 Sikkim Crescent that will, in time, be developed or sold for development as amalgamated properties.

I am submitting on an area of missed upzoning in the Clover Park area of Manukau, based on a missed walkway, and inconsistent application of walking distances.

Existing proposal

In figure 1 below I have captured the existing zoning and walkable area as presented on the official maps

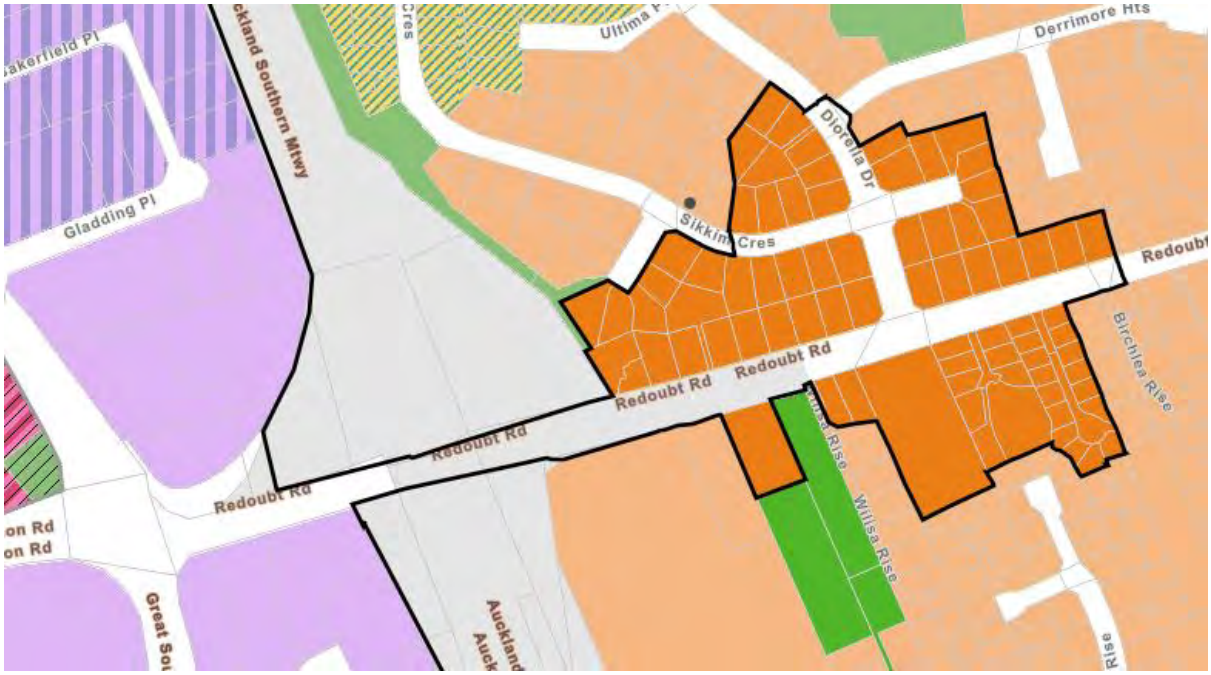

Figure 1 Existing zoning and walkable area

Missed walkable catchment

The presented walkable catchment does not appear to account for an existing pathway, below I present updated maps that account for this walkway, and alternatively that the walkable area should be extended down Sikkim Crescent so it matches the North and South sides of Sikkim.

Redoubt Road to Juvena Place pathway

Pictured below is the pathway as represented on Google Maps (Fig 2), the entrance from Redoubt Road (Fig 3) and from Juvena Place (Fig 4)

Figure 2 Google Maps representation of pathway

Figure 3 Redoubt Road view of pathway

Figure 4 Juvena Place view of pathway

In Figure 5 below the walkable catchment and how it relates to pathway have been reviewed in the following manner:

- Take the start of the pathway as a reference point in the walkable catchment
- 3 distances to the edge of the proposed walkable catchment have been measured and presented as the black and white lines
    - Existing 1: 404m
    - Existing 2: 422m
    - Existing 3: 410m
- 3 distances have been measured from the reference point, along the missed pathway, extending to the maximum distance of 422m

Figure 5 Walkable catchment with existing and missing walkable distances

With this walkable area represented the area of Residential - Terrace Housing and Apartment Building Zone should extend down Sikkim Crescent as pictured in Figure 6.

Figure 6 Representation of corrected walkable catchment applied

Sikkim Crescent North side vs South side walkable catchment

As presented above, Sikkim should have significantly more area represented as walkable, but even with the current plans there is inconsistencies across the north and south side of the road. This is presented below in Figure 7.

Figure 7 THAB applied consistently across Sikkim Crescent

Conclusion

The increased opportunity to provide housing within Auckland is a great initiative that should be supported by looking at the small details that will make a difference even at individual lots level.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

The area around the immediate Auckland city centre, within walking distance of Britomart transport should be the first priority for intensified housing. Given recent changes in working patterns due to Covid, there is scope for redevelopment of older office spaces.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I agree with the principle of living locally and 20-minute neighbourhoods (being able to meet the majority of daily needs within a 20-minute return walk from home). However, this means that an 800 metre radius needs to be measured from the transport hub or centre of the metropolitan area and NOT from the edge of the metropolitan centre.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

I agree with a transition from high density to medium density zones around rapid transit stops.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

The current Unitary Plan provides for a considerable volume of terraced/apartment housing around Auckland's town centres. A distance of 400m makes sense around the larger town cetres listed above (Glenfield, Parnell, Papatoetoe, typically thse with large shopping malls), but needs to be smaller around the Local Centres, many of which have seen a reduction in the number of local shops.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Should be a priority over many of the other proposed medium-density changes

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Auckland has relatively few existing areas of special character and I believe their historic, architectural and aesthetic features define the city as much as its volcanoes, harbour and people. Our own neighbourhood of Rugby Road and Palmerston Road features cottages built as part of the Raven Hill estate by William Francis Hammond between 1889 and the First World War. Last year's lockdowns and days like Mother's Day today bring many visitors to the neighbourhood to exercise, admire the houses and visit the local heritage shops. The special character is not defined by any one building or even by 66% of buildings, but by the general uniformity of architectural styles and features that has been preserved by the existing special character designation. Destroying that special character is destroying what makes Auckland a distinct city.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

I think that as a minimum all the existing areas of special character should be maintained. In particular, changes should not be made that keep one side of a street as an area of special character and exclude the opposite side of the street. This will have the effect of destroying the special character of the entire street.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

It is excellent that the historic business buildings such as Hellaby's Butchers on Hinemoa Street are retained in the proposed special character overlay. We have so few historic commercial and industrial buildings in Auckland.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

A consideration that does not papear to be taken into account by the proposed changes is the stormwater run-off from the steep headlands of Birkenhead and Northcote Points to the harbour at Telephone Bay and Little Shoal Bay. The existing storm water system struggles with the current housing density and any increase in that density would require new infrastructure.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information.
