Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: William Cook

Name of organisation/business:

Your local board: Papakura

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

We do need greater intensification. Why not allow 'Residential – Terrace Housing and Apartment Building Zone – Modified' either along the entire LOCAL bus route or within 100m on either side of a bus stop. This is in line with enabling practical higher intensification that promotes the use of public transport along these routes.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

As it is, there is no space when the new high density areas are built.Apartments are less than a metre from the walkpath in Manurewa!

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

As it is, there is no space when the new high density areas are built.Allow a bit of breathing space.We are not Singapore.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

As Covid has impeded rapid transport like trains, I don't think we should be spending more money on this.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Again,allow some breathing space. We are not Singapore and after the effects of Covid, don't think this is a good idea.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Again,allow some breathing space. We are not Singapore and after the effects of Covid, don't think this is a good idea.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Older areas need to have infra structure like earthquake reinforced buildings first, water pipes,old roads and walk paths upgraded first, not build more intensly around or on it and have more trouble if an earthquake happens. I just think the Council should concentrate on improving current services - like maintenance of cleanliness on normal roads , no one picks up litter or cleans the roads anymore-what's the excuse for this??

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

It's too special to be ruined by ugly so called development".

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

We don't want these areas to lose its character.Just have normal services like water pipes , cracked buildings re-inforced for earthquake, beautiful flowers and trees trimmed and roads tarred in real bitumen - not that stony chip stuff that flicks all over.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

It costs too much and will be a burden on Auckland tax payers as it is.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control) - please don't allow anymore tall buildings. They don't look coherent at all and most of all ugly.Does not match the Town Hall look ,plus if an earthquake were to happen,what's the use of all these tall buildings ,some empty and an eyesore.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

The willingness of people to walk depends on many other factors such as weather, pathway condition and the time of the day (midnight and morning). Having higher density further will allow more housing and providing a choice for wider people to explore the option of walking to facilities.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

The willingness of people to walk depends on many other factors such as weather, pathway condition and the time of the day (midnight and morning). Having higher density further will allow more housing and providing a choice for wider people to explore the option of walking to facilities.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

The willingness of people to walk depends on many other factors such as weather, pathway condition and the time of the day (midnight and morning). Having higher density further will allow more housing and providing a choice for wider people to explore the option of walking to facilities.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

The willingness of people to walk depends on many other factors such as weather, pathway condition and the time of the day (midnight and morning). Having higher density further will allow more housing and providing a choice for wider people to explore the option of walking to facilities.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

The willingness of people to walk depends on many other factors such as weather, pathway condition and the time of the day (midnight and morning). Having higher density further will allow more housing and providing a choice for wider people to explore the option of walking to facilities.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

We need to open up rural countryside living area. It is not used for farming and the land is usually not used in the most efficient way. Please rezone them to medium density zone so that more

buildings can be built on them. This is especially for the rural countryside living zoned property right on the boundary of RUB. i.e. Papakura-celvedon Road

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Dont include them. I support high density and we need that to be consistent with the central government.

Important privacy information

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I think the 1200m catchment area will have too big an affect on suburbs, creating pockets of high density in areas with poor amenities and old infrastructure.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

I think the 800m catchment area will have too big an affect on suburbs, creating pockets of high density in areas with poor amenities and old infrastructure.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support but also disincentivising the continuation of single story existing housing rather than redevelopment into great assets for these town centres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Support but also disincentivising the continuation of single story existing housing rather than redevelopment into great assets for these town centres. 200m is not a great deal and much could be done to extend this out further.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These houses just prevent growth in Auckland and if we remove the barriers to protect them then we can allow great intensification where people want to live, much of these suburbs are out of

reach for most to access and raise a family and just mean more sprawl in outer suburbs which adds to problems of infrastructure and congestion.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

These houses just prevent growth in Auckland and if we remove the barriers to protect them then we can allow great intensification where people want to live, much of these suburbs are out of reach for most to access and raise a family and just mean more sprawl in outer suburbs which adds to problems of infrastructure and congestion.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

This sounds a fair distance but it does depend on what is considered the edge of the city center.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

This sounds a fair distance but it does depend on what is considered the edge of the city center.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

This sounds a fair distance but it does depend on what is considered the edge of the rapid transit stops.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Again this is understanding what the measure of a large town center while it appears fair doe sit make sense for every situation.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Again this is understanding what the measure of a large town center while it appears fair doe sit make sense for every situation.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Older areas will have restrictions with how it was designed and the knowledge of the time. Unless started from scratch I think this should be excluded.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Seem fair you can't do everything

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Build roads and other major infrastructure before filling the city up with people. The public transport system is expensive and will not take people where they want to go. Also scrap the trams idea and put trains down Puhinui road better and cheaper option like Singapore and Sydney.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

Do Not support - Public transport in Auckland is an inefficient solution due to topography and the type of work New Zealanders do

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

Do not support - Intensifying housing in these areas is will increase crime and devalue existing housing stock

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Do not support - Rapid transit has been shown to be a costly installation and inefficient method of transport

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Do not support - these areas will become high in crime and become the new slums

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Do not support - This will bring crime to these areas and not be beneficial

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

Do not support - Object to any terraces or Apartments being built

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

These areas are the only areas which should be allowed high rise apartments and terraces as they already have them

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

It would appear the Auckland Town Planners are complete idiots

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

Fix the infrastructure

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

No

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Represents an easily walkable distance from a dwelling or workplace to a metropolitan centre, offering a convenient opportunity to commute by foot.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Represents an easily walkable distance from a dwelling or workplace to a metropolitan centre, offering a convenient opportunity to commute by foot.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Represents an easily walkable distance from a dwelling or workplace to an access point to the rapid transit / rail network, offering a convenient opportunity to commute by rapid transit.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I found it difficult to identify these areas on the map viewer.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Would be a rational qualifying matter.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay

- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

As a general comment, the provision of protected areas of the natures outlined would appear to be entirely reasonable.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I really do not think this has been thought through. Densification will put pressures on utilities, local parking, schools, doctors and healthcare, green spaces. Where is the plan for this. Further, this change has been mandated by a government that cannot get these changes through democratically....just like 3 waters, health care reform etc. Auckland is being forced to densify with no reference or respect to the peoples who already live in these areas.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

see below -what about everyone else? The plan for public transport should be inclusive of all, not discriminatory. What you are saying is move into high density housing and we will make public transport available?

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

what about everyone else? The plan for public transport should be inclusive of all, not discriminatory. What you are saying is move into high density housing and we will make public transport available?

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

1200 metres is not very far, and the idea of setting 1200 metres as "far" enough that you would no longer benefit from intensification of land use not true. This plan essential says that high density development in 1201 metres away from the CBD is the same as high density housing in Rodney, when we know that they will have very different trip characteristics. The catchment should be at least 5km from the CBD. However, this can only be supported if local

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

But it depends on what services are available within 800 metres. Walking for 10 minutes for groceries because you no longer have a car, will be a bit far. So it need be done in conjunction with planning for liveable areas, so some essential services will need to be spread out and not just focused in the metro area.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

About right.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

Should be 1200 metres.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Should be 400 metres.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

This is a city, not a museum. Who benefits from these policies? Because it is not the majority of the city. Only a few people get to appreciate their 100 year old villa which is quick trip to the CBD, while everyone else (all 1.5 million of them) is told they will need to live 30km and 1.5 hour commute away... what is the logic here?

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

How on earth do you get to the conclusion that the all the single lot housing along the future rapid transit corridor (Dominion Road or similar) should NOT be included in intensification??? Meanwhile, all rail stops, even as far out as Huapai, justify dense housing??? And, areas out west were developed on the promise of better public transport, which still has not delivered, but the houses are still going up. How do you conclude that the houses along a future RAPID TRANSIT CORRIDOR should be excluded from plans for intensification???

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

They are in the same layer as the residential special character layer. Two different layers have not been provided.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

The developer will need to mitigate their impacts, and as such, should be paying for these upgrades. Why would infrastructure upgrades omit an area from development? That has never stopped the urban sprawl that has been enabled in the most ridiculously hilly and generally difficult areas to develop in so far, all miles away from anything useful, forcing people into cars. Now you are trying to use it as an excuse to protect a few villas?

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Support - all of them. If you are increasing density, you need to maintain the amenity of public spaces. Protect viewshafts, protect sunlight in public spaces, and the rest! This is common throughout the world. The constant AUP is too weak to ensure good outcomes for the public. Meeting these standards cannot be a consent matter, they must be required with no leniency.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

The CBD needs to grow and be tidied up

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

It needs to go hand-in-hand with increased security, particularly in South Auckland.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

This needs to take into account community needs such as more playgrounds and other outlets for youth. Nature spaces, pools, and so on.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

The thing that concerns people is who, or what, is being put in those properties. Apartments can quickly become slums, and if Housing NZ starts sprinkling crackheads through those apartments in an attempt to integrate them into normal society, the area will quickly become unlivable. Trains are primarily for people getting to and from work; crackheads don't work, and no one with a decent job wants to live near them either, meaning your trains won't be doing a lot in that situation.

So, apartments are fine, but not if Housing NZ fills them with meth addicts.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

It should have a dedicated zone type: scalable medium density walkable mixed use zone

It should include:

- Building of up to 6 stories on any lot or average number of floors of neighbours multiplied by 1.25 rounded up

- Any building over 3 stories requires that there be a commercial space(s) on the bottom floor owned by the Body Corporate

- No more than 80% of the land can be covered in concrete or other manmade material with the other 20% being for natural environment. The fourth floor and up can overhang the land required for nature

- No more than 15% of the land or 75% of the natural environment may be made up of grass

- No less than 5% of the land can be allocated for trees, shrubbery, or flowers

- No more than 50% of plant can be non native

- The land facing the street must have no less than half of the required land are allocated to it for the public

- No on street parking, parking must be off street and would count towards the manmade limit unless underground

- Sidewalks should be extra wide and the should be build with a people first design

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government

is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

If there is a good representation of early Auckland, then it should be a single street preserved to museum level standards and should not allow people to live in them. It should be an example for public viewing and should fall under council management. Otherwise the individual hour can be preserved and if new development were to happen on that lot, then the house should be removed and placed at a new location and should be restored to modern standards but must be the same look and style as it was when first built.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

The zone should not limit what can be built but should be able to enable a limit on resources. For example if there is a limit on the water system. A building may be limited to a specific size, but if the implement a system that reduces and reuses grey water (e.g. using shower water to flush toilets or using it to water the garden) then it should be allowed to excide those limits. It would not make sense to reject a building that is bigger but uses less resources for a smaller one that uses more.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

If folk can walk to public transport they won't need cars!!

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Reduce the need for cars.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Definitely reduce the need for cars!!

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Apartment living in towns is great - especially for the older population.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

I agree with your proposal.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

I trust your assessment of these issues.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

A good idea.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Areas that are not suitable should be omitted.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

No thankyou - I commend your document

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

It seems reasonable providing these walkways allow for the physically challenged and older people

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

It appears that there will be loads of mid to high density housing all over the city not just close to the centres. Eventually there will no where for children to play as the parks will be reconsented to commercial properties.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

These properties will eventually become slums as they will all look the same, have no parking. There is no high accessibility in Auckland as the public transport system is poorly designed.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There will be no character left in any area of the city once you build 3 storey plus residential buildings. There are already 3 storey buildings in Papakura and they look terrible. There is no parking, the roads are too skinny and dangerous.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

Can't tell from the maps where the red and blue areas are

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Can't tell from the maps where the red and blue areas are

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

You'd be a fool to include these areas for development. It's no different to the Takanini area whose foundation if peat and yet there are masses of new homes built on top. Some of them have already started sinking, so why would you consider any development where there were such significant constraints.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Ignoring the current unity plan has already seen some houses lose they sunlight so the council will do whatever they feel like doing regardless. Historic sites like Stockyard Hill etc would be sacrilege to change them. However, I suspect that eventually Auckland will look like Singapore where it is simply loads of tall buildings and no character.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

There is already considerable congestion around the proposed radius in the major centers outlined.

1/Can the current access ways and carriage ways support up to 6 times more population and or how will this be addressed. 2/ Rubbish collection policy how will this be addressed. 3/ The aesthetic appeal of 6 story structures ,potentially reducing the value of surrounding homes. 4/ What are the proposed building covenants that will need to be disclosed. 5/Can the current major centers support the added population increase.6/ With residents/ families living closer together will the confined space create added psychological challenges.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

There is already considerable congestion around the proposed radius in the major centers outlined.

1/Can the current access ways and carriage ways support up to 6 times more population and or how will this be addressed. 2/ Rubbish collection policy how will this be addressed. 3/ The aesthetic appeal of 6 story structures ,potentially reducing the value of surrounding homes. 4/ What are the proposed building covenants that will need to be disclosed. 5/Can the current major centers support the added population increase.6/ With residents/ families living closer together will the confined space create added psychological challenges.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

Instead of High density housing more parking areas around Bus stations & Railway Stations should be Considered far less infrastructure & cost involved

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre

(such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Instead of High density housing more parking areas around Bus stations & Railway Stations should be Considered far less infrastructure & cost involved

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Instead of High density housing more parking areas around Bus stations & Railway Stations should be Considered far less infrastructure & cost involved

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

There Should no special character areas as this will push up prices unfairly and create a large division with the proposed planning

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There Should no special character areas as this will push up prices unfairly and create a large division with the proposed planning

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

There Should no special character areas as this will push up prices unfairly and create a large division with the proposed planning

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater

infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Critical importance as population increases can the Water ,Sewerage & Storm water networks be adequately upgraded within time constraints or not possible and/or do additional water sources, be identified be needed if not possible Water Tank Storage ? which will be even more untenable taking up more space ??

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

1200 meter is still a long way from a city center. Secondly, what exactly is defined as a city center? The boundary of the place or the actual heart of the city? In the case of say Newmarket, where is it considered to be city center?

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Support with a caveat. It does not make any sense to have 6 story apartment blocks build in areas that are obviously residential areas designed for family villas. Doing so indiscriminately will only create many areas where people do not want to live and those that end up doing so, are forced to live there because they cannot afford anything else. Wide spread urban slum will be the result.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Can only support this if it is well planned out from the start. Random building of apartment/terrace housing in among residential single/double story housing is just creating areas that are unattractive and do not support a quality of living in urban areas.

Some of the build that is done at present is a disaster. Terrace housing with 4 bedrooms (designed for families?) with absolutely no outside space for children to enjoy. Where is the sense in this?

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

Do not support... Full Stop!

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Public transportation is difficult the further you go away from the transportation hub meaning more traffic

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Seems close enough

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Bit of a walk to get to work transportation

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Not too far to access services

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

I would be happy with that

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

These areas reflect the growth of Auckland and you can't take back a building or the story once it is destroyed

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

Stories need to be preserved

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

New building developments can look soulless, keep the older buildings, modify upwards if need space

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Need facilities in place before building starts

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Aotea - would be a cold concrete area without sun

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

people work in cities.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

High density 6 story apartment blocks do not belong in the suburbs. I did not pay record auckland housing prices in a nice street to now live down a street full of apartment blocks losing all forms of privacy.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

High density 6 story apartment blocks do not belong in the suburbs. I did not pay record auckland housing prices in a nice street to now live down a street full of apartment blocks losing all forms of privacy.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think less areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** I don't know

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Other

Tell us why

I will not support intensification until all related infrastructure is in place. Akl's still present that they want to live in low density environment. Result = incongruence.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

I will not support intensification until all related infrastructure is in place. Akl's still present that they want to live in low density environment. Result = incongruence.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Other

Tell us why

I will not support intensification until all related infrastructure is in place. Akl's still present that they want to live in low density environment. Result = incongruence.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Because these areas work for today's living and infrastructure. Secondly, they show our character.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

This must be a priority. Without keeping all infrastructure at equal pace, Auckland will be wrecked as a city as we know and want.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how

they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All qualifying matters above must be strongly considered to ensure Auckland keeps its character and uniqueness.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. 10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Your plan of building houses in residential areas is not taking into consideration of the amount of cars per family and this is making our roads conjested. Parking space is not provided. Roads are not wide enough. Infrastructure needs more planning.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Support so long as infrastructure that supports that level of dwelling intensity is the mandatory provision. I do not currently see that approach to housing planning. Currently, dwellings are built in excess of infrastructure support causing poor quality infrastructure support once houses are built and too late to put in place viable infrastructure- eg. around Murphys Road development, where houses are cramped in with no trees around to block road noise, roads that are insufficient to cope with level of traffic. Follow Singapore's example of of intensive dwelling planning. Auckland is an ugly city because of poor planning. An eyesore compared to what I have see in some cities overseas.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

As per above comment, so long as infrastructure that supports that level of dwelling intensity is the mandatory provision. I do not currently see that approach to housing planning. Currently, dwellings are built in excess of infrastructure support causing poor quality infrastructure support once houses are built and too late to put in place viable infrastructure- eg. around Murphys Road development, where houses are cramped in with no trees around to block road noise, roads that are insufficient to cope with level of traffic.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Not all suburbs have safe walkways and in most cases, public transport stations and stops are isolated and a safety risk to women and children. Public transport is abysmally unreliable in Auckland compared to other developed countries. I will only support if placement of public transport sites are better planned.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support to a certain degree so long as infrastructure that supports that level of dwelling intensity is the mandatory provision. I do not currently see that approach to housing planning. Currently, dwellings are built in excess of infrastructure support causing poor quality infrastructure support once houses are built and too late to put in place viable infrastructure- eg. around Murphys Road development, Mount Albert, where houses are cramped in with insufficient trees around to block road noise, roads that are insufficient to cope with level of traffic. Follow Singapore's example of of intensive dwelling planning. Auckland is an ugly city because of poor planning. An eyesore compared to what I have see in some cities overseas.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Support to a certain degree so long as infrastructure that supports that level of dwelling intensity is the mandatory provision. I do not currently see that approach to housing planning. Currently, dwellings are built in excess of infrastructure support causing poor quality infrastructure support once houses are built and too late to put in place viable infrastructure- eg. around Murphys Road development, Mount Albert, where houses are cramped in with insufficient trees around to block road noise, roads that are insufficient to cope with level of traffic.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Most areas with high density dwelling have been poorly planned with no consideration for aesthetics and looks like a money grab cram in at the expense of mental health with insufficient infrastructure support and no consideration of having trees to soften the concrete jungle look. If other countries are capable of having high density dwellings with good plant planning, why is Auckland so terrible at it. Our city has deteriorated to the point of being ugly in quite a few high density areas.

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

I have a place in a suburb where brown water out of taps, blockages in storm water channels are regularly occurring, regular traffic jams tripling the amount of time it takes, poor access to public transport and no walkways for pedestrians forcing us to walk on the edge of the road. It is an example of high density dwelling before infrastructure set up. Infrastructure should come first before the building, I fully support this as a criteria of special character areas as it is now too late for some suburbs and we should be adding more to the list.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

There should also be some consideration for mental health of dwellers. High density dwellings should follow Singapore's example of good city planning rather than the ugly concrete jungle of Auckland I see rising up in so many places.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

These distances feel right - a 15 minute walk home from the bus / train is about at the point at which it stops becoming pleasant. It also means if you do there and back you're getting 30 minutes of exercise a day which is perfect.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

I'd go for the longer distance for everything. You feel you're "in town" when you get to the edge not the centre.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

I'd go for the longer distance for everything. You feel you're "in town" when you get to the edge not the centre.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

200 metres isn't far at all...

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I think that having more houses is more important than keeping old ones for character reasons. It's just another artificial constraint on supply.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I'm not familiar with these areas specifically.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

I'm not familiar with these areas.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Sort the infrastructure out instead!

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across

areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Crikey at this rate you will build so many exceptions in the legislation will hardly apply anywhere!

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

I think psychologically people would walk 1km, but not further. It would be better expressed in terms of an 'average' walk time rather than a distance.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

800m walkable is a good target

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

800m is very 'walkable' for most people. Maybe 10 mins.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Town centre sprawl.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

This rule will enable people in better off, or older areas, to avoid intensification by claiming special character status.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

The map is of such poor quality with no discernable key, I can't tell.

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

1200m is not ambitious enough and doesn't go far enough to support Auckland's climate goals

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

800m is not ambitious enough and doesn't go far enough to support Auckland's climate goals

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

800m is not ambitious enough and doesn't go far enough to support Auckland's climate goals
Rapid transit infrastructure is expensive and difficult for our communities to build, we should do everything we can to locate more people and businesses nearby to the stops

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Other

Tell us why

I think the proposal is fine but we should have a high bar for properties to be considered as special character. Inclusion should be decided independently with a bias towards not qualifying.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

Too many of the areas are on the isthmus which is the part of the city with the best amenities and connectivity, more people should have the option of living there

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

As long as adequate off-street parking is required as part of building higher intensity housing. Aucklanders will continue to own vehicles even if they are using public transport regularly and on-street parking is not viable.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

As long as adequate off-street parking is required as part of building higher intensity housing. Aucklanders will continue to own vehicles even if they are using public transport regularly and on-street parking is not viable.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

As long as adequate off-street parking is required as part of building higher intensity housing. Aucklanders will continue to own vehicles even if they are using public transport regularly and on-street parking is not viable.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

As long as adequate off-street parking is required as part of building higher intensity housing. Aucklanders will continue to own vehicles even if they are using public transport regularly and on-street parking is not viable.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

As long as adequate off-street parking is required as part of building higher intensity housing. Aucklanders will continue to own vehicles even if they are using public transport regularly and on-street parking is not viable.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** I don't know

Tell us why

I am in two minds about this. I understand the desire to preserve the character of the older areas of the city, but this shouldn't be used as a NIMBY excuse for the rich areas to make intensification something that just happens to the Poors

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

I can't understand the layers on the map to see this information

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Protect any building or feature that has special character

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

I am wary that this would be used as an excuse to avoid fixing the city's problems

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Places change according to moving time. A new special character can be created with the development.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

Please look for innovative ways to develop and enhance existing sites/properties for efficient disposal. Case studies from around the world. Would recommend working closely with the students from planning and engg. course.

Vertical growth is the way forward and we should avoid expanding horizontally as it will have detrimental impact in long run due to loss of green/brown fields.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Infrastructure of public transport is not adequate/perfect. Also I suggest there should be more parkings.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Public transport infrastructure is imperfect.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Rapid transport stops is not perfectly set up and very pricey. It only is achievable when we accomplished the traffic structure like Tokyo or Beijing. Forcible implementation (To enforce) is a disaster.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Support, but there must be supplementary parking spaces. Even in China, every household has a parking space.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Support, but there must be supplementary parking spaces. Even in China, every household has a parking space. Also, a minimum living area (like 70 square meters) must be guaranteed. The policy of balcony ratio should be determined according to the size ratio of the occupants. And no blanket rules (shouldn't be the one-size-fits-all approach).

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Rules that are overly complicated will only make things more chaotic. At the beginning, the Unitary Plan was for unified planning, but then it resulted in lots of precincts, which makes the Unitary Plan - zone division meaningless.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Policies should be simple and clear. Don't leave any rooms for controversy when applying for RC.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Policies should be simple and clear. Don't leave any rooms for controversy when applying for RC.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Other

Tell us why

There is no need for qualifying matter, and restrictions should be fully liberalized. As long as there are professionals who give relevant designs and issue relevant calculation certificates. Alternatives can be used when the technology meets the standards. The Auckland approval process is now too bureaucratic - it just looks at whether the program is qualified, ignoring the facts.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Overall agree.

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I live on Taraire Drive Drury. It is less than one km long. It is a dead end road. This is deemed rural, yet it is a dead end road and therefore to drive away from it, one must enter Drury Hills Road, a highly urban classified location. It makes no sense that Taraire Drive is classified as rural, unless there is a road created at the other end to link it to other rural roadways. Strong suggestion is that Taraire Drive Drury is grouped in teh same bracket as Drury Hills Road i.e urban

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

More than 6 storeys 1200 m away from the transport hub changes the city's skyline and is starting to make it not the best liveable city. It might have high accessibility but there will still be too many vehicles for available parking.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

It might have high accessibility but there will still be too many vehicles for available parking.

The metropolitan areas all have their own character and turning them into high rise dense areas changes that character and attractiveness to live with the higher density population.

Currently, some of the housing density and build quality leaves a lot to be desired where the space between single story dwellings is only enough to fit a wheelie bin between the houses. This density also applies to higher rise apartments and town houses where ongoing maintenance will be an issue as it will be impossible to erect scaffolding between the buildings. This will lead to slum looking areas. Not the look of the look of a desirable place to live.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

Apartments shouldn't be in excess of 4 storeys to maintain a decent population level without overcrowding.

It might have high accessibility but there will still be too many vehicles for available parking.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Apartments shouldn't be great than 3 storeys to stop population overcrowding. It might have high accessibility but there will still be too many vehicles for available parking.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government’s direction to enable more housing.

Special Character Areas

‘Special character areas’ are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland’s older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more)

within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

Changing the look of the area by ripping out older residences and replacing them with multi storey dwellings makes the place depressing to live in. It gets rid of the history of the place.

The Government doesn't have to live in these areas but Aucklanders do. It's all very well making a sweeping statement or law that says that there has to be more housing but at what cost to the character of Auckland. At some point the rest of NZ should be directed to increase their housing and infrastructure to relieve the pressure on Auckland.

7. **What do you think of the proposed residential special character areas that we have identified?** I don't know

Tell us why

Impossible to tell from the map provided - detail gets too blurred when enlarged

8. **What do you think of the proposed business special character areas that we have identified?** I don't know

Tell us why

Impossible to tell from the map provided - detail gets too blurred when enlarged

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Due to the poor public transport facilities available in Auckland vehicles will remain the main form of transport for the forseeable future so families of 4 will still have a minimum number of 3 vehicles per residence for home owners and more than that for people renting rooms in dwellings where a 3 bedroom dwelling will have between 3 and 6 vehicles needing parking. Multiply that by the number of storeys in an apartment block and streets have already become cluttered and impassable. Auckland is already having to draw water off the Waikato River to augment its supplies so how much more in 30 years time will it need to take?

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

You do not consider the area.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

Each area needs to be considered separately depending on its facilities and environment.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Considering the green spaces needed as yards are getting smaller or non existent. Children suffer as less spaces to run around safely.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

This intensive housing has not been successful in other countries and has destroyed the atmosphere of towns and created undesirable places to shop and live.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Other

Tell us why

I do not support this as this intensification is not ideal for small towns. It destroys the town's atmosphere and with clothes hanging everywhere, looking like an ancient laundry and too many residential cars parked without adequate parking starts to look like a slum and cause safety issues for drivers nd pedestrians.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

Little respect is given to the history of each era. Living in your house for 40 years then having apartments or intensive housing built near blocking your light, causing congested roads from parking where no provision for parking has been made, destroys your way of life, peace and enjoyment which you work hard to build over a lifetime of work. Driven by money, greed instead of concentrating on revitalizing getto areas created by the last time the government intensified without considering the area.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

*Poor survey that deletes your answers when you click on the links using an iPad. Few areas identified. No consideration of areas prone to flooding etc. where the springs have been poorly managed.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Limited area. Little consideration to future business.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Transparency is important with budget restrictions.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Housing should also have the consideration of sunlight blocking and light pollution from intensive building in what should be a residential area.

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be closer

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I think all existing special character areas should be a qualifying matter

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are more areas that should be identified as a qualifying matter

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I think more areas or parts of areas should be identified as a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft

- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be closer

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be closer

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

And I would like some more information on building safety to decide. It seems there are many news talked about the risks of earthquake, volcanic activities etc, and there is Chch tv building collapsed during earthquake. Which leads me to think having a dense 6 storey building or 3 storey building could be a safety concern.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

If the building is safe and compatible to the NZ environment, the 800m walkable catchment is too general to apply. Also why only these area becomes a metropolitan centre? What about Manukau? What about Manurewa? What about Onehunga? Why those big centres have not made the list?

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Please also consider the points in previous survey questions. If the building is safe and compatible to the NZ environment, the 800m walkable catchment is too general to apply. Also why only these area becomes a metropolitan centre? What about Manukau? What about Manurewa? What about Onehunga? Why those big centres have not made the list?

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Other

Tell us why

Auckland has become the city of commerce, many people who seeks better employments would go there. Therefore it will always make auckland the city to have more housing issues. What about developing strong commerce/industry in other big cities such as Wellington, Christchurch? Development will always grow but auckland is only one city to cope it all.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be closer

Tell us why

Parking and driving can be an issue. As the years pass when the centres need to expand again, the parking and driving lanes won't be changed easily. I would prefer to know more information on how the parking driving lane structure is designed in these town centres to make a decision.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Other

Tell us why

Unable to view the map clearly on the subject matter. Is it possible to attach a link of a PDF format of highlighted only area?

8. **What do you think of the proposed business special character areas that we have identified?** Other

Tell us why

Unable to view the map clearly on the subject matter. Is it possible to attach a link of a PDF format of highlighted only area?

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this

as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Unable to understand the map, but support the logic.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

I support these views to create a better living / working area.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be closer

Tell us why

Living in centres such as Papakura I think thete needs to bevmore thought put into safery requirements. Due to the length of travel time and lack of frequent/affirdable public transport it is often dark when people are walking home. Having older teens, women and other mire vulnerable community members walking long dustances from transport centres is a serious concern

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** I don't know

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

For younger people this seems fine, but stabdard of living is important so apartment sizes and shared green spaces around apartments are important.

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** I don't know

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Do not support - I think it should be further

Tell us why

Make it 20min

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

But allow more mixed use and more floors.

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Some of the old housing should be kept but not all. Places like Ponsonby should large scale perimeter blocks at 6 stories.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I think there are areas that should not be identified as a qualifying matter

Tell us why

Old junk houses down in Kingsland valley have done their time and are due for replacement.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Slight tremor and these are gone. Too much risk.

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

They need they pay.

Also older areas with rundown pipes should pay for their upgrades. Not the rest of the city.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

All these should be put up for discussion. For instance height restrictions in Panmure do not allow the metro station to reach its full potential.

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

good development

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

good for community

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

My family would be interested if there are accommodation within walking distance to the main centre where there is a lot access to services

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Good for our young children to get to and from the local services

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I guess it would be good, my familiy relies on transport to get us around

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

It would be good for our towncentre

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. The privacy policy explains how we can use and share your personal information in relation to any interaction you have with the council, and how you can access and correct that information. You should familiarise yourself with this policy before submitting this form.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Brings employment opportunities

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Other

Tell us why

It does disrupt traffic

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

My extended family may move to the area, and it won't be far from City Centre

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Easier use of public transport to get to work, appointments and school

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Important privacy information

The personal information that you provide in this form will be held and protected by Auckland Council in accordance with our privacy policy (available at **aucklandcouncil.govt.nz/privacy** and at our libraries and service centres) and with the Privacy Act 1993. Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

The Proposal brings development potential

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Helps alleviate the current lack of control, but allows access to the service

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** I don't know

Tell us why

I don't have an answer right

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

My family would be interested if there are accommodation within walking distance to the main centre where there is a lot of access to services

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

This will develop much needed services in the area that is accessible

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

Like my husband, it would help those not wanting to live too far away from the city centre

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

This will develop much needed services in the area that is accessible

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

I will be looking to live in those areas that is not to far from main metro hub, in terms of walking distance

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

Close to amenities

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?**

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?**

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?**

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?**

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?**

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?**

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?**

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct

- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

15 minutes is a well accepted walkable catchment so you have indicated an absolute minimum of what's acceptable.

I would add that interpreting the city centre as done seems suspect. A lot of the area excluded has more urban amenities and other infrastructure than one expects in the metropolitan centres. And in turn, there are places which have the concentration of features which we'd understand in respect of objective one of the NPS to provide for, at minimum, social and cultural wellbeing.

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Do not support - I think it should be further

Tell us why

The question you have to ask yourself is this... are our town centres sites of employment or sites of use? The answer is the latter. It follows that there is no distinction to be made between the walkable catchment suitable for the city and metropolitan centres... both should be 1200m/15 minutes.

If no-one wishes to live in a dwelling within a six storey building 15 minutes' from, say, Papakura, so be it. However, the decision to not build such a dwelling isn't best made by regulators but, instead, by allowing agents to contract within the law. If no-one actually wishes to live like so, no such buildings will be constructed. However, the possibility that some large number of people might want to is obvious. You, as the primary regulatory body, have a moral duty to allow that possibility to be tested in the market.

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Do not support - I think it should be further

Tell us why

It might seem inane to suggest a six storey building fifteen minutes from Pukekohe train station. After all, you walk for 15 minutes and then spend another twenty to thirty minutes on the train and you're only as far as Papakura. Which is to say, in forty-five minutes of travel you've only managed to get as far as Papakura. However, this reveals only that you underestimate Papakura! And ignore the possibilities of Papakura, Drury and Paerata (to say nothing of the prospect of public transport to locations further south along the NIMT).

But even if we were to accept this (appalling) line of reasoning, if you were to use Middlemore train station as a referent instead, we'd find that the majority of train stations in Auckland are within thirty minutes' trip. It follows that it is wholly inappropriate to treat Middlemore to a ten minute catchment merely because you think Pukekohe cannot justify fifteen minutes.

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Do not support - I think it should be further

Tell us why

I understand that the practice of planning in the last seventy years has given people like yourselves control over the built form of cities an enormous amount of power. However, it remains that this worldwide planning regime has failed to replicate the quality of urban form produced by the more laissez faire habits of the previous four-ten thousand thousand years. What we consider "best practice" today is, I argue, clearly /not/ best practice.

It is entirely appropriate to micromanage dangerous and/or polluting industries and practices (e.g. driving). Time and time again, the "free market" has produced unsafe environments in pursuit of profit and we now have an intellectual framework to explain such outcomes (externalities as a cause of market failure). However, it is not necessary to micromanage everything in order to micromanage these circumstances. A terrace house should not be treated the same as a factory!

Now, I further understand you probably have some reluctance about allowing intensification in these areas because people can't be trusted not to own more cars than they can afford to store. However, this is the wrong regulatory remedy for such a problem! We live in wonder at the mysterious legal opinion that controls parking management in Auckland, but even it says placing signs allows management to occur. Thus, place the signs! I suggest Auckland's public transport network is in substantially better shape than people give it credit for (at least, when operating at 2019 levels).

And this brings me to the last objection I foresee... the need to be able to ensure those areas which /do/ need infrastructure to be upgraded aren't re-developed before the capacity to support that re-development exists.

As I have just said, I do not accept this argument's default application. In many places where people would attempt to argue it, I suggest it comes from a place of ignorance. That is, they have not attempted to imagine anything other than having six cars for every seven adults. And they further ignore that the Three Waters reforms will allow substantial capacity increases for water infrastructure.

The question, then, is why stop at THAB? By the arguments I made before (wrt the city and metropolitan centres), "the market" ought to be able to choose more if people want it, right? Well, THAB is appropriate because the government does not seem to require more than THAB and no democratic mandate exists for more than it, either. So, I do not emphasise why THAB was chosen as the limit. (Except in the oblique sense that, perhaps, more employment opportunities ought to be allowed, cf mixed use development as a contemporary version of historical urban development patterns.) But having decided on no more than THAB, it follows by the above chain of reasoning that you have pulled 400 metres from the aether.

As I opened with, 15 minutes is accepted as the standard of walkability. I put it to you, that either it is or it isn't. And unlike the micromanagement addiction I have just complained about, I suggest that 15 minutes is not a number people have mistakenly come to accept as best practice. That, instead, it is a true notion (or, at least, defensible).

I am also concerned about the insertion of "high accessibility". I could find no mention of it in the NPS and nor have you explained it in this form or in the page I was directed to this form from. I suspect a rhetorical sleight of hand intended to avoid upzoning as much land as the NPS intended. *wags finger*

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Do not support - I think it should be further

Tell us why

It might appear that I have no respect for proportionality. I disagree. I just do not confuse "we allow for more" with "we require more" and allow the profit motive the capacity to determine proportionality.

For example, I notice many new developments have separated bike lanes. These invariably cease as soon as the new development is exited and the pre-existing road network is entered. Not very helpful, I think you can agree! Clearly, the pre-existing network would not have been allowed to develop the way it was, were it made from scratch. This is not proof of a need to restrict the market's ability to build more but rather of the folly of the planning rules!

Given the nature of roads in Auckland, there are few places where the removal of parking on arterial or main roads would not free up sufficient space to plonk down a kerb or bollards. It follows that the actual barrier to allowing intensification is fiscal. And the solution is either to pressure Council and government to create mechanisms to capture funding from development activities or to start utilising those that exist. Even if the separated cycleway is built piecemeal by developers putting in the kerbs along the road that their sites border, it still happens!

If it happens that no additional justification for living in an area ever arises, the only consequence of not allowing more in a broader catchment is that the opportunity to build a terraced house or an apartment is never taken up! (Mixed use development would allow a virtuous cycle, of course.)

Once again, I have to question where 200 metres came from, when you recognise yourself the validity of fifteen minutes as the definition of a walkable catchment!

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Not every representative of an architectural style is a useful representative. Suppose, for example, a property cannot be seen from the street... what possible character value that all Aucklanders can benefit from does it possess? None. And what of a, say, Art Deco property that doesn't actually fit the Art Deco style of the two properties either side?

Similarly, a six storey building can easily possess the same character as a one storey bungalow. It may or may not be as old as the bungalow, but it's either Art Deco or it's not. They may be imitation (being built in entirely the wrong country, hundreds of years later) but the Tudor Style houses in Home Alone 3 aren't *not* Tudor Style.

Ah, you say, but a six storey building must inherently possess a different character to a one storey one! Well, why? Trees can easily exceed the height of such a building, which might be barely taller than 18m. In other words, both can be dominated by the non-built elements of the space. And this is doubly so if the trees are between the street and the building in question. The character of such a space is, in effect, "leafy"... which is a well known description of much of Auckland "the leafy suburbs".

Indeed, in general, six storeys is recognised to still be capable of "human scale design". To be fair, so are skyscrapers, when they don't have massive pediments. But that just brings us to another point... high rise buildings are taller than ten storeys, nearly twice as tall as a six storey building. Which is to say, six storey and one storey buildings belong, to everyone other than Auckland Council, within the same category!

Auckland's architectural heritage needs to be protected and maybe there is a case for a design aesthetic, but neither are achieved through "special character areas" as defined here. If a building is a good example of a style and is visible by people other than its occupants and neighbours, it probably should be considered worthy. But that is a character of an individual building, not an area! Historical significance is, also, an individual building character (and shouldn't have the "visible to the public" limitation).

I am afraid I cannot understand this definition of "special character area" to be anything other than a mechanism to isolate certain well off neighbourhoods. Auckland's developmental patterns exist in multiple areas. They don't produce the same style, but either whole areas need protecting to preserve heritage/authentic representatives of a style or they do not.

7. **What do you think of the proposed residential special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

I do not know and lack the time to investigate these areas in detail. But I can tell by the near total absence of special character areas in South Auckland that there has been no consistent application of principles to the designation of areas.

I find much of these weatherboard houses in South Auckland to be boring at best and immensely unattractive at wort (read: whenever it's overcast) but they are as much Auckland's character and architectural heritage as, say, Arney Road in Remuera (which I have some familiarity with). It is possible to recognise which episodes of One Of Us Is Lying are filmed in NZ not because of buildings like those on Arney Road, but because of the boring and ubiquitous houses of the post-1950s suburban sprawl.

8. **What do you think of the proposed business special character areas that we have identified?** Do not support – I do not think special character areas should be a qualifying matter

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Do not support

Tell us why

As I have discussed, at some length, above, the issue here is one of value capture at best and, at worst, a beat up based in sophistry.

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay

- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)

I will not be clear because I have thirty minutes to hit submit and therefore lack time to see which of the above the following principles apply to.

As I have said, the protection of architectural heritage must be on a case by case basis. It must also be visible to the public.

The protection of other forms of heritage and historically significant buildings must also be on a case by case basis. The need to be visible to the public does not matter here.

The protection of particular views must be considered only with respect to public spaces and should not come at the cost of tree heights. Where public views of interesting or significant things exist, they must be considered amenities (as per my earlier point about city centre exclusions). However, tradeoffs exist and the presence of a view from, say, a footpath must not become an insurmountable barrier. Though, as London teaches us, architectural creativity and the creation of new forms of heritage architecture may be stimulated by the need to respect views.

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Government's new housing rules: What it means for Auckland

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your details

Your name and feedback will be included in public documents. All other personal details will be kept private.

Name: Nick Lloyd

Name of organisation/business:

Your local board: Papakura

Your feedback (all questions are optional)

Requirements for intensification

Intensification inside walkable catchments

A walkable catchment (required by the NPS-UD) is the area around a train or busway station, or a large urban centre within which an average person will walk to that location.

The government requires councils to identify walkable catchments around the city centre, metropolitan centres and rapid transit stops (train or busway stations) where buildings of six storeys or more must be enabled.

We are proposing:

- a 15-minute walk (around 1200 metres) from the edge of the city centre.
- a 10-minute walk (around 800 metres) from the edge of the metropolitan centres and around rapid transit stops, such as a train station or stop along the Northern and Eastern Busways.

These are subject to modifying factors such as landscape, for example steep hills, and physical barriers including motorways.

1. **What do you think of our proposed walkable catchment of 1200 metres from the edge of the city centre?** Support

Tell us why

2. **What do you think of our proposed walkable catchment of 800 metres from the edge of the metropolitan centres?** Support

Tell us why

3. **What do you think of our proposed walkable catchment of 800 metres around rapid transit stops?** Support

Tell us why

Intensification around town and local centres

Central government has told us that we need to enable building height and density (for example terrace housing and apartment buildings) in and around our neighbourhood, local and town centres that matches the level of commercial activity and community services in each centre (such as jobs, shops and businesses). This is achieved by applying the Residential – Terrace Housing and Apartment Buildings Zone.

Town centres are larger suburban centres in Auckland that provide for a wide range of shops, services and activities for their surrounding districts. They are often spread across a couple of city blocks, and along main roads. Some examples are Glenfield, Glen Eden, Parnell and Papatoetoe town centres.

Local centres include a larger number of smaller suburban centres that serve local areas and neighbourhoods. Local centres might have 20 or 30 shops and some small offices.

4. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings Zone to residential areas up to around 400 metres from large town centres with high accessibility?** Support

Tell us why

5. **What do you think of our proposal to apply the Terrace Housing and Apartment Buildings zone to residential areas up to around 200 metres from small town centres or large local centres with high accessibility?** Support

Tell us why

Qualifying matters

The government allows for some qualifying matters - exemptions to modify three-storey and six-storey building heights. Qualifying matters are a characteristic which can be used to protect sites of cultural, historic, or ecological significance or to avoid development in areas with natural hazards.

The government has already identified a number of qualifying matters and allows us to include other qualifying matters relevant to our city.

To include our own qualifying matters, we must provide robust evidence to justify why it should reduce building heights and density in a particular area in light of the government's direction to enable more housing.

Special Character Areas

'Special character areas' are older parts of the city that have special architectural or other built character value. They are covered by the Special Character Area Overlay in the Auckland Unitary Plan.

Many of Auckland's older residential suburbs were built around the early public transport network and emerging town centres. This is where our special character areas are located. The government is now directing us to enable increased housing density (e.g. buildings of six-storeys or more) within walkable catchments of town centres and public transport networks, and up to three storey buildings elsewhere.

The government has not included special character areas as a qualifying matter. However, we are proposing to include identified areas of special character as a qualifying matter that reduces limits on building heights and density to ensure the character values of these areas are retained.

6. **What do you think of our proposal to include identified special character areas as a qualifying matter?** Support

Tell us why

7. **What do you think of the proposed residential special character areas that we have identified?** Support

Tell us why

8. **What do you think of the proposed business special character areas that we have identified?** Support

Tell us why

Infrastructure constraints

We are looking to identify areas in Auckland with long-term significant infrastructure constraints as a qualifying matter. As with special character areas, this is not a qualifying matter that is listed in the NPS-UD or the Act.

This may include areas where water supply and wastewater networks may not be adequate to cope with more growth and are very costly and/or difficult to upgrade, or stormwater infrastructure is not adequate and very costly and/or difficult to provide, or where access to transport infrastructure is not adequate and very costly and/or difficult to provide.

By including this as a qualifying matter, it would reduce the limit on building heights and density that would otherwise be enabled.

We have not yet determined how we would apply this qualifying matter as the NPS-UD and the Act do not provide any specific support. At this stage, we want feedback on whether to consider this as a qualifying matter or not. If we include it as a qualifying matter, we will show the extent and location of any changes to height and density requirements in our plan change in August 2022.

9. **What do you think of our proposal to include areas in Auckland with long-term significant infrastructure constraints as a qualifying matter?** Support

Tell us why

Other qualifying matters

We are also proposing to include a number of other overlays and controls in the Auckland Unitary Plan as qualifying matters that limit the height and density of development on sites or across areas to retain the values they reflect. A description of these proposed qualifying matters and how they are proposed to be protected or kept is shown in the consultation document and information sheets available on akhaveyoursay.nz/housing.

These additional qualifying matters include:

- Ridgeline Protection Overlay
- Local Public Views Overlay
- Auckland War Memorial Museum Viewshaft
- Stockade Hill Viewshaft
- Character buildings in City Centre zone and Queen Street Valley Precinct
- Some of the existing built form controls in City Centre (e.g. allowing sunlight into public places, Aotea Square height control).

10. **Do you have feedback on any other qualifying matters? (please be clear which proposal you are talking about)**

Subject: Feedback on the proposed changes to the Unitary Plan to address the National Policy Statement: Urban Development and the Housing Enabling Act 2021.

Good afternoon,

Please find **attached** feedback on the proposed changes to the Unitary Plan to address the National Policy Statement: Urban Development and the Housing Enabling Act 2021.

The submitter appreciates the opportunity to provide informal feedback on the proposed changes to Unitary Plan.

The submitter would welcome contact from staff in the Unitary Plan team if any clarification or further information is required.

Kind regards | Ngā mihi nui

FEEDBACK ON THE AUCKLAND COUNCIL'S CONSULTATION ON PROPOSED CHANGES TO UNITARY PLAN TO ADDRESS THE NATIONAL POLICY STATEMENT: URBAN DEVELOPMENT AND THE HOUSING ENABLING ACT 2021

To: Auckland Council

Name of submitter: Classic Developments Limited

This submission provides feedback on the proposed changes to the Unitary Plan to address the National Policy Statement: Urban development and the Housing Enabling Act 2021. In particular, this feedback relates to land located in Takanini. This property falls within the Papakura Local Board area.

The submission is concerned with the land that is located at 118 Manuroa Road in Takanini.

The specific provisions addressed by this feedback are as follows:

a) Proposed Zoning - The proposed zoning for the above site has not yet been determined. The Preliminary response for NPS-UD and MDRS indicates that this area is "Precinct Under Investigation" as indicated in **Figure 1.**

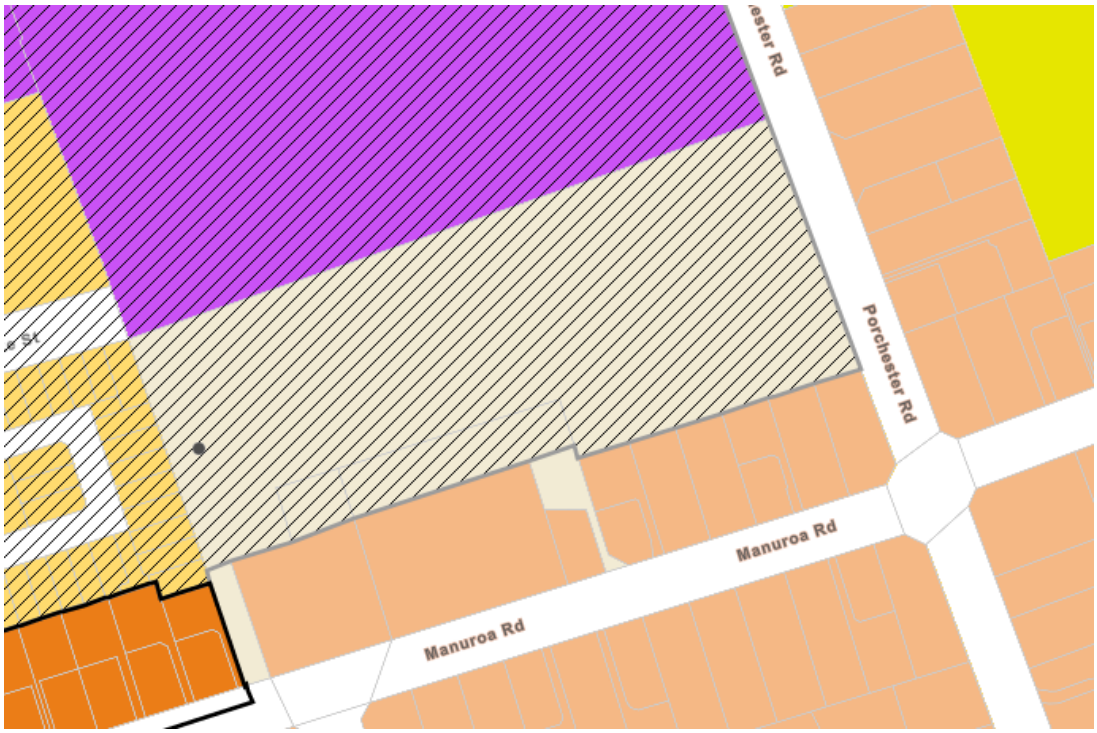

Figure 1 – Proposed Zoning Chang

The submitter has the following feedback in relation to the proposed zoning:

a) The submitter notes that a resource consent has been granted for a medium density development on the site. That development granted resource consent for 81 dwellings in terraced and duplex housing typologies.

b) The surrounding areas located outside the precinct are proposed to be rezoned as Residential – Mixed Housing Urban Zone – Modified and Residential – Terrace Housing and Apartment Building Zone – Modified.

c) The site has walkable access to public transport, local services, amenities and open space.

d) There are no identified qualifying matters that would appear to prevent the Council from giving effect to the Housing Enabling Act 2021 for this parcel of land.

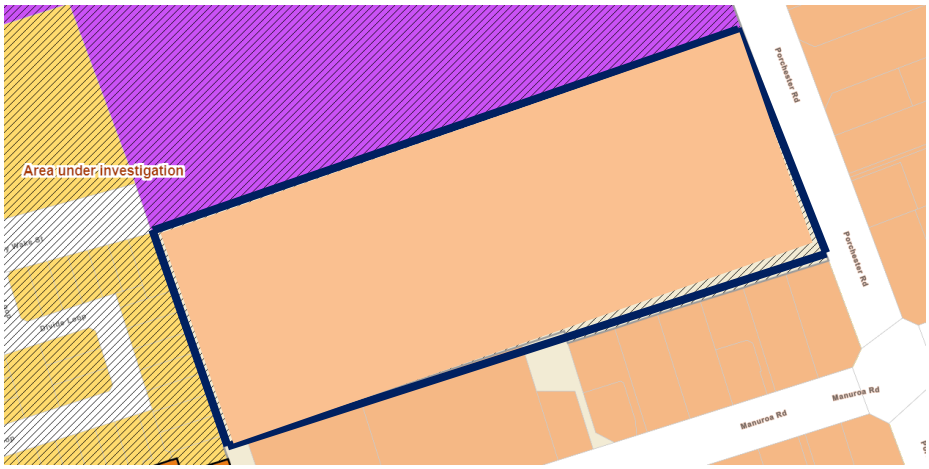

Figure 2 – Proposed Zoning Change

The submitter's concerns would be addressed if Unitary Plan was amended in the following way:

a) That the area of land at 118 Manuroa Road in Takanini is rezoned to Residential – Mixed Housing Urban Zone – Modified as set out in **Figure 2** above.
b) Any other changes that would address the concerns raised in this feedback.

The submitter appreciates the opportunity to provide informal feedback on the proposed changes to Unitary Plan and thanks the Council staff and elected members for their time in considering the matters that have been raised in this feedback. The submitter would welcome contact from staff in the Unitary Plan team if any clarification or further information is required.
