Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: There will be more illegal dumping. Or people will switch to private rubbish disposal companies. Rubbish won't halve if you halve rubbish collection services. It is as simple as that. The benefactor is not the environment, but council execs who will have more money in their pockets.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: See above

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Not in construction

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: You focus on five priority waste, and...

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ok sure, but I thought these companies are already contributing something for their product recycling. Just increase their contributions.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yeah but enforcement costs will increase due to more illegal dumping, as a result of less rubbish collections. Plus enforcement is much more complex than reducing collection. You need to factor in local public behaviour. Solutions that work in the other countries may not work here.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We have 2 households - one in a multiple unit situation, the other is rural. The multiple unit one is a red bin collection that is working well for the large number of properties at our address. When we have recycling bins out there isn't enough room for both waste and recycling bins. We can't even have the food bins as they don't fit. The rural property uses prepaid bags at a designated spot (end of road) for over 50 properties. As it's rural there is often bags ripped open by animals.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: As above

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We struggle now with multiple units at our address and trying to keep the bins under control at the kerbside as there is not enough room. We can't have the food bins because they don't fit at our address. We don't have room for over 80bins every fortnight as it is let alone trying to control and contain the bins or loose rubbish.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Get rid of the mayor

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Get rid of the mayor

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Get rid of the mayor

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Get rid of the mayor

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Only sensible thing on this idiotic plan.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why:

4. Any other comments

Wasting tax payers money. By getting rid of public bins doesn't minimise rubbish. It just makes such locations messy. Last 5 years Auckland Council has been heading downhill.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I am apprehensive that fortnightly collections will not effectively reduce the amount of rubbish generated. Instead, it may lead to accumulation and overflow of waste between collections, particularly for households with larger families or those who produce a significant amount of waste due to various reasons, including dietary needs, medical conditions, or lifestyle choices.

Moreover, I am worried that fortnightly collections will make it more challenging for residents to legitimately dispose of their waste. With longer intervals between collections, there is a higher likelihood of overflowing bins, especially from households who already have a larger bin, which could attract pests and create unsanitary conditions in our neighbourhoods.

This fortnightly proposal could potentially lead to sanitation issues also contributes to environmental pollution.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Free facilities where public can dispose of their various items.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Too hard for big households. No other way to dispose of items for free ("free" in the sense it's paid by rate payers") Would have a very negative public reaction.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live in a flat of 8. We produce a lot of rubbish each week and barely have enough space as is to be taking rubbish our weekly. Moving it to every two weeks would mean we'd have a large overflow of rubbish every week and would need to find more space to store this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Arbitrarily reducing waste by relying on individuals is not eliminating the issue and instead pushing it out of sight and control of council. The metrics may improve on paper, but it's likely to turn up somewhere else such as private services, illegal dumping, etc

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Reducing the waste collection frequency is going to result in significant odour and rubbish build up. Especially in small homes. Things like diapers and other waste that cannot go into food scraps will be a major issue.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Main concern would be that we make waste disposal prohibitively expensive for small businesses who cannot afford the capital investment required to manage waste. There's a reason it's provided by a centralised council so that all of society can benefit from it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. 2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides

and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less harmful / hard to recycle packaging being used, e.g. styrofoam, etc.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Very little of our rubbish is compostable / food waste, and already use the smallest size bin available, but reducing frequency would mean storing more of this for longer, likely needing to go back to a larger bin, and have to deal with increased risk of smell, vermin, etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Firstly the amount and types of recycleble items are reduced. This increases rubbish. Then rubbish collections are reduced. This does not decrease rubbish. It will increase pest, vermin and diseases in areas where rubbish is now left to rot and fester. All the while rates and taxes are

Increased for fewer services. This is NOT in the interest of residents.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scrap bin is the first item that rots and brings pests. The food scrap bin is the most cumbersome and unhygienic collection system currently in force. People will simply dump it in the rubbish bin. Firstly the amount and types of recycleble items are reduced. This increases rubbish. Then rubbish collections are reduced. This does not decrease rubbish. It will increase pest, vermin and diseases in areas where rubbish is now left to rot and fester. All the while rates and taxes are

Increased for fewer services. This is NOT in the interest of residents.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Other areas will simply be selected for dumping outside of the recycling, reclaiming and landfill systems ie on open land. The more difficult and expensive you make disposing of waste , the more your systems will be circumventes.

on open land.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The focus areas ignore chemicals that pose an even greater risk. The proposal does nothing to dispose of these materials safely rather inconveniences resident who have to dispose of this who will simply do so by pouring down the drain or a creek or in the sea.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: More fines means more monitoring. You are unable to do so at the moment. This will also not reduce waste as the waste already exists. You can only control this by adding MORE rubbish bins. Not taking them away. I question tue numeracy skills of the committee that came up with these unworkable and ineffective proposals. Firstly the amount and types of recycleble items are reduced. This increases rubbish. Then rubbish collections are reduced. This does not decrease rubbish. It will increase pest, vermin and diseases in areas where rubbish is now left to rot and fester. All the while rates and taxes are

Increased for fewer services. This is NOT in the interest of residents.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I have seen the impact moving to fortnightly collection has had in the UK. It has increased the waste in the environment as bins are often overflowing, there is increased flytipping and rodents .

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Alternatives for nappies and wipes that isn't landfill would be fantastic. The increase in landfill rubbish as a result of having 2 toddlers (despite mostly using reusable nappies) has been eye opening.

Better plastics recycling options is an obvious area for focus and imporvrment but to make it feasible it will require a national approach owing to the small relative population of NZ.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The bottle return scheme is a great self financing sustainable approach well proven in Germany and parts of Australia.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Affordable alternatives such as easier access to waste processing facilities that aren't prohibitively expensive for parts of the population is required alongside punitive approaches such as fines and prosecution.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Much is made of consultation with iwi/maori. Surely you should be consulting with industry and commercial operators if they contribute 80% of the rubbish going into landfill?

I do not support fortnightly residential rubbish collection services. I would like it to remain weekly. I never wanted or asked for a food scrap recycling bin (as I do my own composting on my section). What would be much more use is a green waste bin for recycling green waste such as tree clippings, leaves etc to stop these ending up in the general rubbish.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Collecting rubbish is a core job of the Council. I would rather you kept doing this on a weekly basis and stopped funding 'movies in the park' and other such events. If you are serious about reducing waste in landfills give each single house property a green waste recycling bin so that any tree branches/shrubs/lawns clippings can be recycled appropriately. I was recently in Queensland and each property has a 240l green waste bin whcih is collected fortnightly. This is a marvelous initiative.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Because it is such a big contributor to landfills.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In Queensland beverage containers can get returned to shops and the person returning it gets paid 10cents. This is very worthwhile and can make some small change for retired people/kids and therefore contribute to less of these items getting dumped. This should be rolled out through NZ.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Flytippers are often difficult to catch. It is also more prevalent in low socioeconomic areas where people don't have the resources or money to take stuff to the tip or get a flexibin for disposal. I don't see how this priority area can be achieved without a lot more people on the job. ALSO - Auckland Council is removing rubbish bins from parks and other communal spaces. What do the people making those decisions think will happen to the rubbish that normally would have been put in the bin. I despair about some of the decision making coming out of Auckland Council.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It's not feasible for larger family households. Despite having recycling bins and food waste bins - these aren't enough and are causing public health hazards due to waste being left on the property until the next rubbish collection comes around. It has been noticed that more flies are coming inside the house despite efforts are made to ensure proper food/waste disposal. If this is going ahead then it needs larger family household will need to be considered and not penalised for needing extra materials (charged extra).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: When delivering bins you gave us the option of a small or large rubbish bin. We made that choice off a weekly collection now you want to make that last 2 weeks... our house hold has minimum food scraps due to our choices. We actively recycle and still fill our rubbish bin weekly... also this is just encouraging littering and dumping of trash for others in our situation or with large families. wild Animals will get into this extra trash.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I think it is realistic that household minimisation will take on more quickly. Therefore the %of waste will likely increase from construction. We need more houses not the industry being suffocated by nice to haves at the moment.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But I don't think it will be as effective as you think. You will still have the drop kicks who litter and don't care.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Separation of recycling, particularly in the regions where cans and plastics often go to landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It will increase roadside dumping and social issues with unauthorized dumping of rubbish in private and commercial bins. Additionally, rates won't decrease as a result, so homeowners are effectively paying the same, for less. If the council was delivering more they would absolutely use it as an excuse to charge more. So during a cost of living crisis, don't take from people, either give or maintain the status quo.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Here is your answer to the problems, not targeting the average people in question 2a.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Don't waste tax payers funds on organic recycling - start a marketing campaign on the benefits of home composting.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes! Pay 5c per bottle for people to return them complete to a reuse centre. It'll give the intersection window washers something better to do than harass the general public. Glass bottles are single use and should not be!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Increase fines particularly for business offenders. Introduce legislation for prosecution of repeat offenders with punishment in the form of community service, picking up litter and cleaning graffiti.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Economic benefits and quality of life improvements as those unable to afford new labour saving tools and equipment will be able to make use of refurbished equipment.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Many of us already manage our food waste, few have taken up the option to use the new food scrap bins. Leaving food waste in a bin for two weeks will have a variety of ramifications, even worse on the odd occasion that one forgets to put out the bin, now you've got four weeks of rubbish to manage.

Also as economic demands bear down on us, managing waste to this degree is overly cumbersome and many will simply ignore it as they deal with more pressing challenges.

Fortnightly rubbish collection is a bad idea that will create messy, unpleasant living conditions in our communities.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: A higher priority is reducing the production of toxic materials, and preventing useful, repairable products from entering the waste system.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Containers that are safe to dispose of might be a better priority, at least until transport is carbon neutral. The carbon and other environmental costs of shipping and cleaning containers for re-use limits the gains made from reducing waste.

Manufacturers should bear the cost of these efforts, so that the full cost of a product is present at point-of-sale, rather than some costs being born by the environment at a later time.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Social tools rather than legal tools are a better approach. Quick clean up efforts, easier options for legal dumping. Only commercial dumpers should be faced with fines.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Outside Auckland

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I strongly support efforts to reduce waste including redesigning, reusing or repairing items. It would be great to see more tool libraries and reuse-it shops in Auckland. It would also be good to see more public recycling bins to help support these goals.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I strongly support fortnightly rubbish collections. As a family of four, we only put out rubbish once every six weeks. We compost which makes less waste and our rubbish less stinky. Fortnightly is a good option especially with the food scraps bins collected weekly. It means less rubbish trucks on our streets too.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction and demolition projects need better design to minimise waste and re-use precious building materials. During renovation projects, we have re-used conctruction materials including windows, timber flooring etc to prevent construction waste. This should be the norm as building materials become more and more expensive.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea. I'm tired of seeing disposable coffee cups littering Auckland's streets. Please ban them. A beverage container return scheme like Again Again is a good start. Make people pay extra to use disposable cups, plates, etc. I always use a reusable coffee cup and it isn't difficult to do so.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea. It looks horrible seeing rubbish dumped around Auckland and it's often bad for the environment too especially if it's in our harbours or waterways.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Keep rubbish collection as a weekly occurrence

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Keep rubbish collection as a weekly occurrence. Shifting from rubbish bags to bins was already a big move. Cutting down on rubbish collection isn't magically going to cut down on the production of waste, it will most likely cause people to put rubbish in the wrong bins or illegally dump it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Encourage workers on construction sites to clean their rubbish up on a more regular basis too.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: 2 weeks of stinking nappies, no! You must have a solution for nappies before even contemplating a fortnightly rubbish service.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Papakura

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Generally support EXCEPT for removal of PAYG system in Papakura and other areas. In fact, this should be changed to a chip and scan system to eliminate the current tags. Removing PAYG will not encourage reduction in general rubbish and force 500% increases in refuse costs for those of us who currently only put our general rubbish bin every 2 months. If you do removed it then a free transfer to a smaller bin should be allowed, move to 2 week pick up and develop a 4 week alternative for low users.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Absolutely - under the PAYG system in Papakura, I only put our rubbish out every 8-9 weeks, so the less frequency the better. There is little or no organic product in the bin, so it is easy to cut frequency.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Papakura

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need less packaging on products, or atleast packaging that is easier to recycle.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps do not make up much of my rubbish. Whats makes it up is diapers, packaging waste, used tissues and other body waste products. I don't think its fair to assume that everyones rubbish usage is a one size fits all. The current weekly model allows for the option for weekly or less often which is useful for everyone.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes. Improve ways to make less waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Seems like common sense to focus on thr most common waste

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: 100% sounds like a great way for manufacturers to take responsibility.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Theres litter all over the park i live by. People ahould be held accountable

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More recycling options

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This would only work if food scraps continued to be weekly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would expect to see a proactive initiative towards recycling - something that seems to be sadly lacking at present.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is flat out wrong. Food scraps are a tiny part of overall waste, and definitely nowhere near 41%.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This waste cost should be carried by industry, not ratepayers.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastics and the management of keeping them out of the environment must be take seriously to mitigate further harm.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is a major problem, and this solution has been proven to work elsewhere.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This should be strongly policed with hefty fines for offenders.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support it but I can see that alot won't abide. We should have acted on this along long time ago.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I have been recycling and composting my own waste for as long as I can remember. I have no need for composting waste collection as all mine go into my gardens and is providing fruit and vegetables for my family for many years now. I say it's about education and not revenue new as council's will charge for the collection service.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction company's need to take accountability of their site waste. Instead of one skip bin for all waste, have several bins for selective waste. Generall, timber, steel ect the disposed accordingly.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This needs to be acted in education and not as a collection revenue in regards to composting organically.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's all about education and not revenue.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is an age old issue that's been happening for years, harsh penilties and action to those who are caught.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Recycling, reusing and composting needs to be a combined effort from everybody in order for our future generations to exist.

4. Any other comments

Recycling, reusing and composting has only become a problem now as we see the harm from years of neglection and blind eyes from corporate organisations seeking to fill their own pockets. Recycling, reusing and composting has been in my lifestyle from birth and shown to me from by my beloved grandparents who new the true meaning of being sustainable. Many people have not been privileged to have learn't or practiced this, but instead have only followed and trusted what had been put in place from previous councillors. So sad.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly rubbish collections will NOT work for too many households in Auckland, eg large families, families with young children/babies, households with disabled people, etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

Tell us why:

4. Any other comments

Our household has 7 adults. And weekly collection would require double the bin size or 2 bins.

Being on north shore we also just lost the options for plastic bagged rubbish. All the bins won't take household goods so if you produce more rubbish there should local accessible disposal options. Else this is counter to illegal dumping agenda.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support a reduction in waste. Fortnightly collections will mean our bin will smell so bad though!!! We use our food scraps bin, but we have cat litter going into our bin. I am also concerned people in my neighbourhood will just dump rubbish everywhere. They already do because so many council bins have been removed, and this will only get worse.

I am also assuming that the charge wouldn't be reduced to reflect the halving of collections.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: My neighbour already sees people massively overfilling their bins and dumping bags of rubbish at the kerb. Collecting bins less frequently is going to turn many suburbs into absolute shit holes and drastically worsen pollution.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: 1. An increase on what is recyclable to reduce what ends up in landfill and to make it easier for people to recycle the correct items. Many want to do the right thing and recycle, but the changing and challenging exemptions to what can be recycled is SO confusing, people give up trying for fear of contaminating a whole truckload or wheelie bin of recycling.

2. The ability to return glass bottles and tin cans to a every supermarket with the incentive to receive money back for the empties, like it has been done in Germany for decades.

3. Far less packaging.

4. Incentives to buy package free items. Currently the large bulk package free companies like GoodFor or BinInn are more costly than buying the same basic ingredients in the supermarket complete with packaging. Our family wants to reduce rubbish waste, but sometimes the price difference is so great, our budget can't stomach paying considerably more to not get the packaging. We don't understand how it is more expensive, when buying in bulk without packaging.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: With more people composting themselves or using the food scraps bin, we are creating far less "normal" rubbish. For this reason, we only put out our bin once a fortnight and it's still less than half full.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I was surprised that even if we do reduce our domestic waste to half, it is only a small portion of the over all waste we are creating. It all helps, but it requires much more effort from building sites

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The more we can protect the wellbeing of our environment, the better for all creatures in the future

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As I said above, this system seems to work very successfully in Germany and people will think twice about littering or throwing recyclable items into the normal bin, if they have paid a deposit for the bottle upfront when they bought the product. It encourages kids to collect beverage containers that people have thrown away or littered for extra pocket money!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Nobody likes illegal dumping that looks unsightly, maybe attracts rodents and possibly affecting the environment

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why: It sounds good in theory, but perhaps more focus should be assigned to major corporations, industrial areas, airlines and other polluters who cause greater harm to the environment.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live above some shops, which include a butcher, grocer and fish and chip store. The stores generate huge amounts of waste (packaging, spoiled food etc) which yes, is terrible for the environment. All the bins are filled in about five days. The store owners just use each other's bins, as well as the bins belonging to people living in the units above (including mine), which personally I don't have a problem with as I don't fill it up on my own.

If this policy is implemented, we will have a huge problem on our hands with the stores' rotten meat, fish, and other produce sitting outside our building for two whole weeks. The smell would be unimaginable, not to mention the pests it would attract. My tiny apartment would become literally uninhabitable.

Furthermore, there is absolutely no way that the bins would have capacity for two weeks' worth of rubbish. They NEED to be emptied once a week. I do not want to have to stockpile my rubbish in my own home.

Please reconsider implementing this terrible, awful policy.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this in theory but I just don't see builders and tradies caring about this issue.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I think this idea has potential but want to know more first.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agree that illegal dumping needs to be addressed.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: This part is ok

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Keep waste collection to weekly basis

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: I don't care about construction or demolition waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sure

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Wat

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sure

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: Sure

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: Sounds good

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: Alrighty

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Okay

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Love this initiative, we do need weekly food scrap collections which reduces our reliance on weekly rubbish collection.

Would love this cost savings to be passed onto the ratepayer but I am sceptic this would be felt

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Waste volume will not be reduced by fortnightly collection. Waste volume can only be reduced at the source.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support less littering, and instant fines.

Removing rubbish bins in public spaces is incompatible with reducing littering. Littering has already increased. Bring bins back. Add more even.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reduce cheap imported products that break easily.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Do a user pays method like Waitakere and you will see less waste. If someone misses a collection fortnightly then in a month their bin will overflow and there will be increase neighbourhood complaints/rubbish blowing down the street

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Beverage containers consume a lot of water to clean and reuse. I don't think this solution is better for the environment.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: No changes. Fortnightly rubbish collections is horrible. It's going to increase disgusting smells in neighbourhoods and lead to bad illegal dumping. I'm really concerned about how it's going to lead to increased in flies and vermin. The rubbish bins are already too small for most families. It is not easy to deal with refuse when you have too much rubbish.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps don't make up 41% of my rubbish bin. We have pooey nappies, cat litter, everything you are now refusing to recycle and all matter of other yucky stuff. As it is neighbourhood bins are often overflowing and the small size of the bins leads to refuse flying about in the wind around the neighbourhood. The food scraps bins end up flying about in strong winds. You lack the surveillance capabilities to enforce illegal dumping that is going to result and that is more expensive than the potential savings this bad idea is going to create.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Instead of using landfills why don't we start a land reclamation program to prepare Auckland to be larger in the future. We can use the fill to prepare dykes if sea levels rise. Be smart about it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: It seems like the only solution is to starve the population and live a subsistence lifestyle which the land in Auckland can't support and reduce the global population by at least half.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is a good idea. It needs to be good strong glass similar to Pyrex which can be properly sterilised. Milk, drinks, food (weather prepared of bulk ingredients) can all take advantage of this. Fast food corporations definitely don't contribute enough to the refuse coffers.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This needs to be enforced by police not council. Given that police are underfunded there is no real solution here. Council is too bloated with useless staff with no powers especially in the Auckland transport area. All these wages should go towards better policing in Auckland and funding better surveillance in conjunction with business associations and NZTA. Illegal dumping should be treated criminally and be at minimum as serious as graffiti. All these subjects are under prosecuted just like crime generally in Auckland.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Specialised recycling factories set up by Council that are able to sift through more waste and have the chemical and mechanical processes set up so that more waste can be recycled efficiently.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Personally, I keep my cats indoors most of the time (protects birds etc) so they use dirtboxes. This combined waste of litter plus excretions cannot be recycled and cannot go into a food scrap bin. Even though there is only one human in this household, I fill my red top bin to the top every week. Additionally if we move to fortnight collections of red top bins the smell will likely attract pests and rodents etc. We could become City of Smells. If rodents increase due to finding a way into the bins due to the smells then they will go on to attack more of our precious birdlife etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is a huge amount of plastic waste from construction as so many products are shrink wrapped etc. Is this really necessary on so much? Is the shrink wrap recycled?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Super annoying and the rubbish bin can get really disgusting. Also makes it hard to have friends or guests over or large houses, even if they don't generate much waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reduce reuse recycle,make big companies accountable for their waste e.g. packaging! Make them stop using so much plastic as it comes from them then goes down the chain to consumer who has to deal with all the unuseable,unrecyclable rubbish!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Waiheke already has this,one week its just rubbish then next week its rubbish and recyclables. What should happen is both bins need to be same size to cater for big families and all the rubbish that cant be recycled. You have got rid of a vast majority of public rubbish bins and want all Aucklanders to take it home with them so wheelie bins have to reflect this. Also on Waiheke we dont have food scrap bins,and we are probably being charged rates for this,invest in a food scrap composting facility on island that can pickup and make it into good quality compost that can be bagged up and sold to islanders and also used for council projects/plantings/parks etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: If it can be reused do so,if it can be recycled,recycle it,repurpose it if it can be. Again with packaging,make building suppliers accountable for packaging that cant be recycled,make them think about their methods for better recyclable materials in their packaging.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Get onboard with all we can use reuse and recycle,make it plain and simple for householders to know exactly what they can and cannot throw out like have it on the wheelie bins. Bring big businesses onboard to encourage them to use packaging companies that only use recyclable products. Go back to days when you could hand in bottles for money,invest in machines like they have in other countries,like vending machines that people can feed bottles cans and tins into and get money for. Include in the price of bottles etc they can be redeemable atrecycling centres.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As above comment,get up the packaging companies and get them to use only recyclable materials yes,bring back the bottles for money scheme in furthur encourage the consumer to recycle.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Look at Singapore for example,make it outrageously expensive to litter!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: You take public bins away and expect us all to take our rubbish home with us now so we will need bigger rubbish wheelie bins the same size as the recycles one would be a start as it caters for this as well as larger families but you take all bins from busstops! This is where they are needed the most as in tourist season what are they supposed to do? Surely you dont expect them to take it home with them especially if they are international tourists,they will leave it it in a busstop,then when its windy it will get blown all over the place therefore having to hire someome to collect! Sort of defeats your purpose. Also the need for bigger bins in high traffic volume areas such as beaches,many a time the piddly little bins cannot cope,overflow leaving people to just place their rubnish around or by the bin,wind comes along and blows it all over beach and roads!

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Keep rates funded refuse collection at a weekly collection frequency.

The regular collection reduces the chance of rubbish build up in the event that a collection day is missed.

Our household uses the food scraps bin provided, and the rubbish bin is still filled up with rubbish by collection day.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It would be great if we could reuse materials in the construction sector in a financially feasible manner.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: People make too much waste. However halving the capacity to dispose of it is tricky. Dumping/fly tipping is a huge issue already, particularly in reserves and parks - take a drive around the airport region and Ambury park and out around the waste water works. Its disgusting. The council badly needs to address this and be proactive (even being reactive would be an upgrade).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Support but go further. Penalise wasteful practice.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: You will put the effort onto the public, and there is no way to recycle things on a scale. This is due to the disposable culture the corporates have created with poor-quality items, from fast fashion to chipboard furniture and cheap electronics. It is waste by design. Force them to improve instead by having quality control checks and consumer guarantees.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You are putting the effort onto the public when the environmental fixes need to be done by corporations as they are the major contributors to waste on a scale far greater than the public. Targeting the public will only make life more difficult for the average person and increase pests, rats, mould and rubbish build-up, increasing the likelihood of fly-tipping and flushing items down the toilet and, in turn, affecting infrastructure and environmental damage to public spaces. Legalisation and major fines should be done for large-scale corporations and industries such as farming and shipping, the most significant contributors to today's global damage. Restricting them will have a more significant result than this poorly thought-out approach.

The question is, why is recycled material fortnightly instead of weekly?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The waste is cheap materials that will taint anything it touches; it should be ground up and reduced to materials that can make roads or rubber. As well as set better standards of materials for house by removing specific material requirements and measures that have only made the barrier of entry to create your own home impossible. This has caused an artificial limit on materials that have added fuel to the fire, which is house prices and house development. More material options mean greater competition and a reduction in cost for better quality materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You will not go through the garbage nor sift it or recycle correctly. Reduce it from the source and by that I mean corporates.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Cities used to have this and it was removed. Look into why this is and you will see why it is a bad idea.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Increase the fine to be substantial, or all you are doing is making it an extra charge the rich MIGHT pay. This has no bite to it and should be something similar to how countries like Singapore or Japan treat littering. Have severe consequences, such as time in jail for anything more significant than minor littering; otherwise, it is a pass for the rich. Those other countries that make this work are cultures with consequences.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Tax, fine, legislate business and industry and introduce jail time for them. The public has been blamed for waste and waste management for decades, and it is clearly not them who are causing the issue. Even looking back at COVID-19, when people were more in their houses, businesses were less active, which improved the environment. Business and industry not dumping at that period of time had the improvements we wanted to see.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not support this as it will not reduce the waste it will just means waste sits for longer which is a health hazard or families will have to dump rubbish themselves at landfills (leading to more emissions as a side note) . Additionally, I live in Maraetai and do not even get food scrap collection it is a joke that you are proposing fornightly collection of waste without even having the food scrap waste collection at all. A better idea would be to expand recycling so ie bins for each type so people can recycle more and expanding the food scraps initiative.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Pathetic excuse for trying to minimise cost savings.

Reducing frequency will only result in the public dumping it in uncontrolled areas instead and making it far worse for the environment.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will NOT work. With the highest density and population in New Zealand, a fortnightly occurrence will result in people dumping in places OUTSIDE of their own designated collection spots.

This will end up costing the council far more to clean up and do damage control from this lack of responsibility.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Rather than reducing frequency, make an effort on recycling and repurposing this waste. Perhaps reuse it to help reduce costs on other projects instead.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The organic food scraps is clear evidence this idealistic scheme was a clear waste of ratepayers money.

Making it more difficult for the public will result in possible non-conformity.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Only if this doesn't reduce the frequency of council services of rubbish collection, or increase in rates

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The council has already made it WORSE by taking away the majority of public rubbish bins.

Council now plans to make it more difficult for throwing away private rubbish with the fortnightly proposal.

The volume of rubbish will largely remain the same regardless of the frequency of the collection.

If you want to implement penalties, then at least make it accessible for the public to actually make their due diligence to do the right thing.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Organisation (if applicable):

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I expect that no reduction in waste would actually occur. All that would happen is simply a reduction in collection.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I don't think households should be responsible for reducing waste. That should be on the corporate companies. There should be more mandates on sustainble packaging and recycling. Banning plastic straws and bags is not enough; there should be more mandates on the higher level, rather than punishing consumers who purchase from these companies.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Where exactly does this waste come from. Is the larger percentage from households or from corporate companies?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Everything you have listed is controlled by companies. By business who decide what to use when selling their products to consumers. Since this is the case, there should be more restrictions on these companies on what they can use to sell to customers.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Reusing and recycling is always good. Producers and manufacturers should be more aware of what they are offering to the consumers.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It would be nice if the fines actually happen. It is extremely effective in Singapore, where threats of fines are actually acted upon and people have to pay up. It would be redundant if there is no enforcement though.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: It shouldn't just be on the ratepayers but also the companies who have damanged the Great Barrier Islands as well. Those who have illegally operated and harmed the nature there should have to help repair as well.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Thank you for reading.

Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will absolutely have am increase in littering and illegal dumping.

Recycling has actually worsened stricter acceptance rules so more will be going to rubbish than previously.

I doubt the 40 percent figure is food waste especially large households with children but regardless I don't support having less frequently rubbish collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Moving to bi weekly waste collection appears counter to this. I can see an increase in illegal waste dumping/fly tipping because of the reduced collection.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The green bin bags disintegrate in a couple of days and smell terrible. In spite of locking the lid will still have maggots in the bin

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

4. Any other comments

Reduce the frequency of kerb side collection is lunacy.

Given that people PAY per collection (as rates no longer cover this service) households only put their bin out when it needs collecting.

Simply reducing the frequency of collection unfairly targets households that need weekly collection and will see an increase in illegal dumping as no one can afford the Costs of refuse stations.

You lot really are thick sometimes.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps bin is smelly and disgusting to use unless changing the bag every day, which uses up more pink bags and therefore goes against the principle of reducing waste. The pink bags themselves disintegrate readily. We don't have space to store the food scraps in our fridge or freezer.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Seems logical to do as much prevention at the source as possible

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Considerations also need to be made for pet waste (e.g., cat litter, dog poo bags)

I do have some concern for the smell of some bins when waste has been sitting in a bin for 13 days during peak summer. Those most opposed to this might be those who have not taken up the food scrap bins.

Will the food scrap bins be collected weekly still?

Would moving to fortnight collections of rubbish bins also attract flies and other pests too? The rubbish bins do not seal completely which could be an issue.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I feel strongly about this. I feel like it is a large, rarely discussed element of waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Seems logical to target the areas of biggest concern first

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea. Provides an incentive to the consumer to dispose of the waste correctly. No brainer really!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Any tools to punish those who dump illegally are supported. There are plenty of ways to dispose of waste correctly

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Do NOT support the food scraps initiative. It must be extremely costly. It is ridiculous to promote that one small bin of food scraps is going to result in acceptability of a fortnightly general rubbish collection. There are other ways for households to reduce food scraps which do not involve Council introducing additional costs for limited value for the majority of Auckland communities. Instead promote alternatives for reduction in overall waste eg use of existing insinkerators for food scraps & recycling more generally. I recently complained to Council about the wide range of costs involved and got a Council diatribe about the supposed benefits without any of the concerns being addressed.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support but see comments about the ridiculous food scraps removal service

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less waste, more reusing is better for planet and future generations.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We don't generate much in the way food scraps, so therefore this does not free up much room in our rubbish

bin. If you empty rubbish bins fortnightly this potentially means that we may need a larger rubbish bin. In this current economic climate we would find it hard to finance a larger bin and any costs incurred for its emptying. I think this extra cost would hurt many families. Just to let you know we as a whanau do recycle to the best of our abilities and don't generate a lot of rubbish, but I believe fortnightly emptying would not work with our small version of your rubbish bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Less waste is best for planet and I work in civil construction. The waste I see on site is disgusting.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: About bloody time. Again, less waste, cleaner county, kids will do what I did when I was young. Clean up the empty bottles from the side of the road and earn pocket money doing it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fine them hard. Scum of society.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have young children, a food waste bin will not alleviate the amount of nappies being used in our household. To keep soiled nappies in our bin for two weeks would be incredibly unsanitary and would make our bin smell foul. I don't think this waste has been considered along with sanitary items

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: This doesn't do enough address the lack of recycling done by the council. We should increase funding for both waste and recycling disposal

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Leaving waste for two weeks is disgusting. The bins are going to stink and more chance of people dumping rubbish

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Reducing landfill waste is always positive

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sounds fine

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is an excellent step in the right direction

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Definitely there needs to be consequences for people who are dumping waste. Education may also be important, as people may be dumping waste because it's not convenient , or they don't know how to dispose it

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Do not support

Tell us why: Minimise cost

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If food scraps make up 41% why isn't the food scrap bin much closer to that percentage of the general waste bin size? Besides, having rubbish pile up for 2 weeks is digusting. If council don't collect, I'm sure there will be a lot more people dumping their rubbish elsewhere over Auckland for council to collect.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Separating waste on construction sites will greatly reduce what ends up in landfill

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fine them for sure

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We likely have more adults per household compared to every other city in New Zealand.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Industrial and commercial operations need to be more accountable for the waste they generate as they generate most of the waste. Industrial and commercial operations need to be regulated more.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Potentially could make our neighborhood smell gross. Waste from commercial and industrial operations seem to be a be a bigger concern.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Since this waste category makes up a large percentage of all waste we should be asking what could be done about it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Industrial and commercial operations need more regulation since they contribute most of the waste.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I strongly support the product stewardship schemes.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Need to work closely with people so they can make better choices.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I would like to see a focus on reducing the waste from construction and demolition operations.

#1116

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Too little targeting commercial waste. Placing the responsibility for reducing reusing and recycling on households who are responsible for the least waste is skapegoating. Instead commercial waste should be charged multiple times existing fees to drive redesign of processes and ensure the minimisation of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Other parts of the world suffer with terribly polluted public land, water ways and natural areas. Reduction in opportunity for free waste removal will result in negative consequences in the public environment for which we all pay the price. Fortnightly collection of waste is way too little, even if bins are enlarged. We only need to see the disgusting mess caused over Christmas holiday periods to understand the obvious consequences for waste piling up,

While looking abroad for comparisons, try somewhere like Singapore that has daily household waste collection. It is economically possible and prudent to minimise environmental impact through the provision of effective and readily available waste disposal at the point of need. This is the primary purpose of a local council. All other council services should be shut down before reducing the household waste and rubbish services such as public bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Why is there not a specific target for reduction of C&D waste by 50% in 3 years? It would be achievable as long as enforcement measures were well designed and enforcement resourced adequately.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The Snapshot document does not make the case for prioritising waste by the released greenhouse gas emissions. The priority should be on the total waste to reduce the total impact. Other causes of greenhouse gasses are disproportionately impactful, and there is little evidence that the proposal here will have any meaningful impact on NZ climate goals.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This is another frustrating example of skapegoating consumers when the manufacturing and other industries are multiples more impactful on waste problems. Would be better to sponsor the implementation of such schemes in other countries which contribute to the global ocean waste and waterways problem. This is not an issue in NZ and I'm sure there are better alternatives for advocating to the government.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This statement is hypocritical or nonsensical if the council is also removing bins from public spaces. More bins should be provided in more locations and waste facilities should be made as easily accessible as possible to prevent litter and dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Please take on the real challenge and address the manufacturing, building and demolition industries. Provide every possible support to households in making waste disposal as easy as possible.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There is no way we can survive with fortnight collections, this is insane, especially in summer

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: All this will do is create clutter in people's homes. It should be elective

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have very little food waste but still fill our bin every week and our recycling bin is filled every fortnight

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This should be builder responsibility not rate payers

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support and educate people on this yes

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Australia has rewards for bottle recycling good to do here

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: This will become worse if you reduce collections

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Bins full enough as is.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: One of the benefits of inorganic collections that is often overlooked is that there is commmunity industry of collecting inorganic material before the offical council collection. This greatly reduces the amount of inorganic material that needs to be collected and that ends up in the landfil. It also fits into the reuse waste hierarchy before it even hits collection. This is one of the few opportunities the community has for an organised city wide exchange of goods with no middle man costs (e.g. trademe).

While I understand that this not the true intention of organic day, nor is it something that can be measured and thefore the benefits publicised, it is a zero (rate payer) cost activity that has an impact on reducing landfills (Note: This is based on my anedoctal experiences with my inorganic items disappearing before the official collection and also my interactions with these unofficial collectors which has resulted in me providing additional items which either were in excess of the 1m3 limit or did not fit the inorganic requirements)

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Assuming that households only filled their rubbish bins over a two week period now, then collecting every week or every two weeks does not impact the amount that is taken to a landfill. I am assuming that either this is a cost saving exercise, at the cost of households that do fill their rubbish bins every week, or that this is to apply pressure on households to force them to find other means to reduce their waste volume. This may have unattended impacts if a significant number of households cannot limit their volume to fortnightly pickups. These impacts include dumping (increased costs to rate payers) and social impact if/when rubbish is dumped in neighbours bins (which doesn't seem like the right direction to take given all social pressures that everyone faces with COVID lockdowns and inflation). I highly encourage the other inititatives (such as payments for return of containers) to reduce rubbish volume before changes are made to reduce collection costs

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Saves carrying the bin up and remembering what collection cycle it is. Also our red bin is barely full now

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This should be handled seperated and make the user pay

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: NO Change. Please keep weekly. Rubbish collection reflects how well a city is managed. Do not compare us to smaller populated regions of NZ. We do not want a stinky, rat infested city.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Foodscraps make 41% of rubbish? BS! My sister lives in Hamilton and I can say definitively that no her rubbish bin is not adequate for a fortnightly pick up. It so so revolting smelly and disgusting. / public health considerations.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes demolition needs more of a focus.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Why are we focused on waste water? Isn't this water care?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Good idea. Hard to police. Fines need to outweigh the crimes.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As above like commercial... Good idea. Hard to police. Fines need to outweigh the crimes.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Practically it wouldn't work.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scrap bins are smelly & unhygienic with maggots in them. They attract vermin. Rubbish bins are more hygienic as they're larger.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I've seen loads of plastic & polystyrene waste blowing into waterways on building sites the developers should be fined a large sum of money.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Agree with everything except the foodwaste bins. They're disgusting & unhygienic.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good idea to have the responsibility put on the producer rather than consumer.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: If you cut down on rubbish collections people will dump more. There should be inorganic collections for whole areas like there used to be.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Why aren't you making supermarkets only package meat products in recyclable materials?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps do not make up 41% of my bin. If it is not collected weekly there will be an overfilled bin to collect or rubbish having to be stored at home. Don't be ridiculous

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The construction industry has always been super wasteful

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I don't think you realise that fruit and veges are now too expensive for me to buy so I don't have food scraps and if I do they go into my garden not the collection bin

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Nz doesn't recycle anything it's so wasteful

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: My favourite off leash dog park has a dumping problem I would like to see gone

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why: Make it easy and not inconvenient for people

4. Any other comments

Taking away bins and collections won’t stop people from making rubbish. You should be focusing on the people giving us the rubbish to stop the issue. Target large corporations like supermarkets to reduce their product consumables

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: In my area of South Auckland I see the weekly red rubbish bins right along my neighbourhood filled to overflowing every week. It may be related to poverty and overcrowding and poor food choices but the fact is that South Auckland is simply not ready for such a change.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The food scraps bin is a great idea, and is great for us as we cook 6 nights a week and get takeout just one night a week, but unfortunately not all households have the time and skills to do this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Rubbish will smell and attract pests. To reduce this rubbish collection needs to still be fortnightly. I've noticed most of my neighbourhood does not use the food scraps bin. As we are a lower income community, people can't afford the pink rubbish bags, so they don't use the bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don’t know

Tell us why:

4. Any other comments

Return public bins, double up on bin availability and do less frequent collections to save the same money you are trying to save. Ensure recycling is actually getting recycled and collected by the landfill trucks like I've seen so many times, aucklanders require weekly collections due to over crowding rentals, this is a housing issue first, increase supply and then fortnightly may work fine, currently, no go.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A change to fortnightly trash pickup

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

more accountability put on manufacturers and distributors than the end user. If you want to pass a bill to remove something first garner approval for the substitute. Paper straws ffs. Who thought that was a good idea while all the produce I buy in stores have oversized bags so they take up more shelf space. Have you opened a bag of crisps lately and thought he what if they didn't have all this empty space in here...

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Keep rubbish collection weekly!!!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is ridiculous!!! Keep it weekly. Food scrapes make up about 10% of waste not 41%.

This simply shows what a poor job the council has done financially and are now looking to cut costs.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Rodney customers will need to have a council bin provided.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: When I lived in the uk we had a large green bin provided which was for food scraps and also garden waste (so all green waste)

We had our general waste collected one week and then then the green waste on alternate weeks. It would be good if council could collect garden waste as well.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Support reducing waste however doing a fortnight run for household bins does not really solve the problem. It just leaves the waste longer for each household and saves cost for the council. Especially be an issue for food scraps as the bin is too small and can get funky.

Why not look at larger businesses first? Won't that be where higher amounts of waste (that you can't recycle/reuse) be generated from.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: The above is ideal. Will support if the appropriate sized bins are provided. Unfortunately, have had issues where strangers will illegally dump rubbish in bins left on the kerb. Feel the proposal above will make this a prevalent issue. Will the council be taking active action when this occurs?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: As mentioned above. Most waste (that can't be recycled/reused) are produced by commercial entities/businesses.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support a move to zero waste, but I think this needs to be hand in hand with making the worst polluters (especially packaging manufacturers and construction/demolition companies) take greater responsibility for the waste they produce.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support a gradual reduction in rubbish collection capacity alongside the introduction of new disposal and recycling vectors, but if people don't take up these new channels then this may just create further environmental stress from illegal dumping.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We can definitely improve access to facilities like building materials recycling in Auckland, and make it easier and cheaper for people to access and use recycled building materials. New builds should have targets set for the amount of recycled materials used.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Retailers and producers selling packaged good should be taking full responsibility for the waste they create.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I don't think instant fines are going to be effective if the council is also removing or reducing frequency of rubbish collection in many parks and public spaces. People have to be able to make a good choice easily, otherwise they're only going to make bad ones.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Overall I agree that the volume of rubbish going into landfills need to reduce. I don't agree with some of the initiatives that the council is talking however.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I find it hard to believe that 41% of all rubbish going into the red bin is organic food scraps. Food packaging maybe included in the 41%.

Each week for us packaging products makes up the bulk of what goes into the bin , then there are other things such as old clothes and random small inorganic items.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: If construction waste could go through a recycling process such as through Green Gorilla then the amount going to land fill may reduce but will not be eliminated . Most construction sites do not have enough space to sort rubbish on site.

I agree more needs to be done.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Also other toxic materials such as paint, old petroleum products and chemicals should be easy to dispose of.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It may be a good idea but would like to see all beverages being sold in either glass or aluminium cans. It would be good to get rid of all plastic bottles I used for drinks in New Zealand. The recycling value of the waste would increase.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I don't think that this is the role of the council

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: NO changes. No yellow bags + fortnightly collection is a terrible idea, it's already bad enough.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The cost should be covered by the manufacturer NOT consumers. It should be on manufacturers to use sustainable materials with a clear and easy way to recycle, dispose of or reuse their product.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I'd like to see government regulations requiring manufacturers to only produce goods that are meant to last for many years while also controlling the mark-ups so that these long-lasting products will be affordable and be the most appealing option for consumers. I'm done with this BS of every appliance I buy (within a price range I can afford) lasting 2-3 years max before it's run out it's life and can't be easily or affordably repaired. I'm done with this BS of any quality made item having a 1000%+ markup making it wildly out of the range of affordability for most people. Everyone wants their equipment to last, and wants to afford something that CAN last. I also want to see strict regulations for right-to-repair (LOOKING AT YOU, NINJA KITCHEN, WITH YOUR SPECIALISED SCREWS THAT CAN ONLY BE UNSCREWED WITH A SCREWDRIVER THAT CAN'T BE PURCHASED BY CONSUMERS AND YOUR REMOVAL OF ALL APPLICANCE REPAIR LOCATIONS SO YOU FORCE PURCHASERS OF YOUR PRODUCT TO BUY NEW BECAUSE YOUR PRODUCTS LITERALLY CANNOT BE FIXED).

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: I will only support this if it is guaranteed that households with 3 or more people will get bigger bins. Our household currently has 4 people, our previous household had 3, and each time we very much need weekly bins collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Yes, make better use of the demolition materials. Or better yet, repurpose as much as possible rather than demolishing everything.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Recycling plastics should be the priority. Stop excessive plastics waste from grocery stores, manufacturers, construction, etc and prioritise research and development for effective biodegredation of plastics or effective manufacturing of TRUELY biodegradable plastics (no more of this BS labelling something biodegradable because it can technically biodegrade, the fine print being in 1000+ years). Promote the use of bamboo products to replace plastics.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Needs to be paid returns, like 50c/can or bottle, to incentivize people to participate in this scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Stop the government from prioritising businesses and the highest earners in NZ over the rest of the population. We need promotion and funding for social services to invest in Kiwis and the future of NZ, not funding cuts to essential services (medical, public transport, education) to support tax cuts for the richest among us. WE NEED GOVERNMENT REGULATIONS TO STOP AND PREVENT CORPORATE GREED PRICE GOUGING EVERY CITIZEN OF NZ, STOP THE OUTRAGEOUS RENT HIKES, STOP OVERSEAS INVESTORS FROM HOARDING HOMES, STOP CAREER-LANDLORDS FROM HOARDING HOMES AND PRICE-GOUGING RENTERS, PROMOTE AND PRIORITISE ENVIRONMENTAL WELFARE.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In order to keep the resources in circulation, please bring back the old system for the inorganic collection. It should be no booking required. Householders can freely leave their inorganic waste out in the scheduled month for the relevant areas. Some waste will be picked up and reused by othe people. It was a win-win situation. Under the current system, most people just don't

bother to book online and to meet many restrictions. The system itself actually is the main cause of the illegal dumping.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: A bigger rubbish bin should be supplied to ALL householders due to the reduction of collections frequency.

The current food scraps bin needs to have a bigger size or a better design. It is not sturdy enough for the strong winds. Very often before or after the collection, they are blown to the central of the road and become a road harzad.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The executions of the plan could be very costly. Difficult to monitor and enforce.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Do everything that creates circularity, that makes people see value in waste as a resource - make it more desirable to repurpose, relife or share something than throw out. Make throwing out materials harder BUT increase support and systems for easier repurposing, free cycling and encourage more ways things to accept items and have them re-lifed

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We need less red bin access and more recycled options.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction best practice should recycle their waste and reduce silly loss of resources into landfill. I am in construction and I see recycling as what needs to be built in now - it needs mass acceptance and systems to make it totally easy

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: You need to add metal. all forms of metal need recycling better - aluminium cans, copper wires, all of it!!!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastic containers need to be better managed

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But don't focus on this over metal recycling.AND make sure bed and mattress manufacturers have a system for recycling mattresses as they are often what gets dumped.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Overall I support reducing the number of street litter bins, has to be done carefully/appropriately and probably gradually. Public concerns this not happening in practice/implementation - my word people do not trust council re implementation, while the council person I saw quoted talked very sensibly about careful selection i.e the least used ones, and speaking to the people who empty them would be a good start, is this happening in practice?

Perhaps a campaign to make schools make their (repellent littering) pupils get the message - the world is not your rubbish dump - be good citizens, and to persuade people that they can carry it further to a bin or maybe, heaven forbid, take it home.

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Cost savings not quantified. Show us the savings please per rate payer please.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: How it's going to be achieved is not described. How exactly is this going to be achieved?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The current system of weekly collection works well. Comparing Auckland's waste collection to other parts of the country who get proper large green waste and food bins is misleading. The small food scrap bins are an impractical design in that they are often knocked over by roaming animals causing mess on the roads, footpaths and on private property. If you want to use system you should look to Europe to see a workable large scale example of food scrap and green waste bins.

Reducing collections to for nightly will create health and safety issues of overflowing bins and will likely result in flytipping/rubbish dumping on public land like they have seen around the world even with enforcement e.g. London.

This move appears short sighted and is based on ideologically grounds rather than what a common aucklander needs (e.g. beyond wealthy Auckland suburbs who can easily pay to dump rubbish if needed).

People writing and proposing such changes need to consider lower socio-economic communities who have larger families and rubbish needed too. They will disproportionately bear the cost of this change if it's forced through.

Council has also removed many public rubbish bins across the region to save money and this has already resulted in people dumbing rubbish where these bins use to be. If you don't want people to dump rubbish and use your different bin systems make it as easy as possible and regular to affect habitat change

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Target commercial waster first as it's industry led

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Import the same rebate systems used across Germany in conjunction with supermarkets for bottles etc.

Influence change with central government to require all glass bottles have standard shapes so this is easier to roll out as they do in the EU.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Putting illegal dumpling stickers on things is useless.

Inorganic collection on roadside prior to the very selective system used now was better. It enabled people to gather items and reuse them within their own communities.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I strongly support the move to fortnightly collections. In our home (4 adults) we never have our landfill bin more than 1/3 full by collection day. I am curious about why it is not happening sooner. I would strongly support moving to fortnightly collections of waste to landfill by late 2024.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: However, foodscraps waste should be optional. Many people I knw have compost heaps so have never used the little bin. It's therefore a big waste of money giving it to all households without first asking if they are wanted.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Far too much valuable unused and unrecycled material is put into waste from building new or renovated builds. It has to be financially worthwhile for builders and their employers to retain and recycle.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: many households would not have the area or place to store 2 weeks worth of rubbish, even at a reduced amount.

The smell and vermin problem likely to increase with rubbish stored longer by households

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Have you set up a construction demolition site, so that people could drop off materials and others could come and collect items they want to use ?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: If plastic and packaging account for a large amount of landfill content then concentrate on reducing these at source.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why: Make it easier for people to do the right thing (i.e put their rubbish in a bin or drop off at transfer station for minimal cost (better than rate payers having to pay for the cost of illegal dumping of rubbish). Even the cost of bringing green waste to transfer station is expensive

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: So many new houses are being built and the sheer amount of broken gib/plasterboard and old timber from demolished houses seen in skips is appalling. Plasterboard is so easily recycled yet in nz we don't seem to have the ability to do so. Commercial waste is huge but there are seemingly no penalties for generating such large amounts of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Our household would easily cope with fortnightly collections but to introduce this in south Auckland where there is already an issue with overfilled bins and rubbish dumping is just foolish. Lack of education and poverty means the rubbish quantity will not magically vanish overnight from this area. Introducing measures to prevent so much rubbish produced in the first place would be better.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: When shrink-wrapping a whole house with single use plastic is cheaper than reusing tarpaulins then there is a serious problem with how companies run their businesses. Waste in the construction area is ridiculous.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Get coke and other plastic bottle manufacturers to take ownership of the problem their bottles cause.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Stop with the orange stickers and just pick up dumped rubbish in the first instance. The longer it sits around the more people see it and more rubbish gets dumped in the same spots over and over. Just like graffiti. Remove it ASAP and that helps the issue. Advertise how many infringements are issued so people get to know that dumping rubbish is risky and they're likely to get caught. Install cameras at hotspots and make infringements more than the cost of visiting the dump. Educate people on how and where to get rid of their rubbish. So much can't be left out for inorganics now and people dump what they can't get rid of in this manner.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I don't support the plan because it provides for people to upscale from a 120l bin to a 240l. Surely, if you are to discourage waste and if only 34% of bin content is waste, there will be plenty of room in a 120l bin for a further week of appropriate waste. People must make do with what they have by following the correct guidelines and advice.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps are a small part of our waste. You first need to reduce the production of waste like single use plastic, or expand recycling programs for those items which can't be recycled in the council recycling bins (styrofoam, soft plastic)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: By 2030? Start with a better goal than that.

You expect residents to halve the amount of waste in 2 years but construction waste to drop by 30% with 3 times as much time to do so?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support less frequent collections - we currently put our rubbish bin out about once every 4-6 weeks (because we use the weekly food scraps service & also recycle as much as possible) - but I think it should be pay as you go rather than general rates collection. This lines up the financial incentives with the behaviour change that you want to drive.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. 2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Households in Auckland have a significantly higher number of people inside than in other cities. Even with the food scraps bin, my bin is full every week, and visually this is also true of most others on my street. This would make me deeply resentful towards council and I would consider becoming a single issue voter specifically against this issue.

For me, 0% of my rubbish is food scraps because I compost. The only thing which would reduce my waste is for more materials to be recyclable. Instead, council has changed the recycling rules to REDUCE the number of materials which can the recycled. This is hypocritical.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: 2 weeks frequency is not enough

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support Option 2, which holds a strong zero waste vision for both people and planet,

centres the waste hierarchy as a guide for action, and

sets the intention to prioritise actions at the top of the waste hierarchy.

Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

I suggest removing the decision to dispose line. This is unecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

I appreciate Auckland Councils commitment to invest in education and beaviour change (in house and by external provideders) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

I support the 7 principles that will underpin decision making.

Goals

I suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierachy

Designing out waste line needs to include: supporting the development of new business and service models, improved product design….

Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and beaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important o better understand the emisions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emisisons aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

I support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and

using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

I support priority 2 to continue expanding the resource recovery network and its services.

I appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

Deliver services communities want: behaviour change, reuse, repair, composting and recycling.

Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.

Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

Collaborate through national and local networks to share knowledge, skills and experience.

Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, ‘Right to Repair’ and sharing models.

Typo p20 row 2 eleven CRC’s other parts of document say 13.

I support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council ahas been using for the Construction and demolition sector could be usefully applied to the hospitaility sector to address sincle use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. “....including the opportunity to add new programmes and to expand and diversify programmes...

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the “What it means for Aucklanders” column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

I support Priority 3 - see response to Q2B for detail

I support Priority 4 - see response to Q2C for detail

I support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in community bulding and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of circular economy. They support the Governments Emissions Reduction Plan and Auckland's Climate Plan.

Preventing and diverting organics from landfill - links back to Objective 2

Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emisisons - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

I support Priority 6 - see response to Q2D for detail

I support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reparoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

I support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

I support to Priority 9 see response to Q 2A for detail

I support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around council leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own wasteminimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has it's own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging, new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

I support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support Priority 9 and the staged approach for the shift to fortnightly rubbish collections.

Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

I support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The ‘Men's shed’ and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support a focus on the 5 priority areas in order to prevent and reduce waste

I are encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I/we would like to see this approach to source reduction consistently applied across all the priority waste materials.

I support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to

create the circular economy. there is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

I note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

I support the recognition of the value of local scale and 'community-led' solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

I would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

I support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilience and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

I support the ambition go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the 'source reduction' language as it is more specific that 'reduction' whic often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship

actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending last part of 6.4 to read ' ... organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

I support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back scheme in Denmark. Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which over lap with this.

Textiles

I support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities like prisons and hospitals etc. As well as stream that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product Stewardship and exploring the opportunity to reduce commercial and industrial textile waste streams.

New Zealand organisations like Usedfully are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see the link being made between the waste (tonnes) and supply chain and landfill emissions generated across the textile lifecycle.

Bio-solids

I support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate "for actions to move up the waste hierarchy, including source reduction, reuse and right to repair".

I would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

I want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and Demolition and the five priority waste streams. As a core focus of working relationships with Mana Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocesses and composters.

See plastics section of this submission for comments on expanding Action 6.4 Priority Wasrte Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

I support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emissions reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

We fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.

It works – high return rates, high quality recycling, low litter, proven result in many countries over decades.

It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.

It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for for central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship schemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill,

durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

safe for people ecosystems and climate

Viable because they build in ways to cover the real costs

Accessible to everyone

Regenerative because they leave things better than they were before.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

I agree that other important actions in this space are:

Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.

Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

I think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: There are very many ethnic groups here. Iwi are just one minor group. There are many larger and more socially responsible groups like the Pakhea,Pacific Islanders, Chinese, Indian, Filipino etc etc who are better consulted with as they also are very la abiding and pay taxes.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scrap collection is extremely expensive and should be discontinued This will save tens of millions. Weekly rubbish collection should continue.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: C & D waste is not send to land fill. IT is sent to fill up the exhausted quarries to fill up the mining holes and prepare for leveling of the land for development.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will waste further millions and cause the council to cut further services.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: too expensive for the bloated council.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This is racist. I have been told it It could target the maori community

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Strongly oppose the delaying of collecting waste from 1 weekly pickups to fortnightly pickups.

Creates circumstances for fly tipping, a build up of rubbish , increase in smell.

The reduction of red lidded rubbish bins were reduced in size without our knowledge and NO consultation. Would have opposed size reduction . No reduction in Council rates concerning that.

The original red lid bins should have remained the same size as the yellow lidded recycle bins.

A same sized green bin should have been introduced for garden waste - it occurs in Sydney ,Australia - that have better collection services at a lesser cost and lesser rates than Auckland.

Council rates have gone up continually disproportionately to that of inflation or CPI - overpriced.

Council rates to value is woeful. Council is overpriced.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Ban supposedly "disposal " waste products, like flushable wipes that cause blockages in the sewer system.

Its packaging advertises its flushable.

By law require all food packaging to be recyclable

Focus on reducing the actual root cause for waste /rubbish disposal

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: All construction sites need to have seperate industrial scale skip bins for recycling stone/concrete waste. Who this can be crushed and processed for road base or aggregate for new concrete.

seperate one for any metal waste and one for wood waste.

So worksites seperate out these primary building materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Go back to legal requirement of making products recyclable.

Look at doing recycling processing far better. As landfilling is an easy fix

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: SUpport a total recycle scheme of all consumer containers based on a deposit scheme system.

This to be based off the South Australian deposit system which has been in place for decades.

For instance a 20 cent deposit cost is incorporated into the the price of the product with a return of 10 to 15 cent deposit return. That remaining difference is kept to cover operational costs

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Increasing fines doesnt fix the problem. Why is the rubbish illegally dumped -due to difficult and overprice access to waste drop off sites.

The Council proposed fortnightly collections will actually increase the illegal dumping/fly tipping.

Council is incapable and too bureaucratic - it currently cant police a local street problem with a halfway house constantly dumping furniture/waste on its bern or across the road. Council oversight is useless. So it is highly doubtful has any ability to successfully do what is proposed when it cant do it currently.

Street rubbish has started to increase at some sites where Council removed waste bins -like from our bus stop. Done without local area consultation.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Remove food waste program

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Remove this program Noone is using it .

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Tell us why: > Cities such as Christchurch, Tauranga, Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

These cities are nothing like Auckland and where Auckland is heading. Auckland is the most dense among these and will have a higher density growth as well.

Houses in Auckland are less likely to have the space to store 2 weeks worth of rubbish and the result will be more dumping of rubbish onto our parks are reserves.

Moving to a fortnightly model will have the opposite effect of what is intended. Auckland is not like those other cities.

Another option is increase the cost for rubbish collections and offer a smaller rubbish bin for those who can manage smaller collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I support efforts to reduce the amount of waste going to landfill for environmental reasons. However, I think it is a health hazard to have rubbish bins waiting two weeks for collection. Even without food waste (some people will continue to put food waste into rubbish bins though) these bins hold dirty rubbish such as nappies, pet waste, and menstruation products. These should not be allowed to accumulate for two weeks as it is unsanitary.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Your team needs to find ways to improve waste management by finding new ways to reuse the rubbish. There are examples in Europe where they burn rubbish for energy. Stop finding ways to take more rates and reduce services use that energy to find new innovative ideas.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I have seen so many plastic , cans bottles or glass bottle people are throwing at side of the road. I think we need to punish big to 2 or 3 people and then people would know how to keep our beautiful country clean. Also these bottles are everywhere

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Lots of rubbish bins every week. Support for cost cutting but i think people are throwing more rubbish on the road. Rather install lots of rubbish bin in areas like avondale. Avondale needs more rubbish bins

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. Support

Tell us why: Textile waste is often overlooked as a valuable resource, commonly perceived as a single-use item destined for recycling or shredding. However, data indicates that textiles possess a significant potential for reuse, with the capability of being utilised up to four or five times before reaching the shredding stage. Even post-shredding textiles offer numerous community opportunities, such as repurposing for pet bedding stuffing and quilt filler.

Throughout history, diverse communities have demonstrated the resourcefulness of textiles, reflecting cultural practices and traditions. Platforms like the podcast "Haptic and Hue" shed light on the myriad of ways communities creatively reuse textiles, often spearheaded by women. These textiles can be transformed into products that serve the social outcome goals of community groups, churches, and maraes, while also reducing material costs typically associated with fundraising initiatives.

Amidst challenging economic circumstances, access to materials for creating goods can provide supplementary income streams for families through side hustles. Recognising this potential, there is an opportunity to bring textile resources directly to users, akin to a mobile library, generating excitement and engagement in this space.

Presently, I am developing a proposal centred around this model, drawing upon my experience in activating communities for social outcomes. Textiles serve as an ideal medium for bringing people together for a common cause, offering benefits beyond material reuse, including combating loneliness and fostering a sense of purpose and value within communities.

By leveraging data-supported insights and community engagement strategies, we can effectively harness the untapped potential of textile waste, contributing to waste minimization efforts while simultaneously empowering communities and individuals.

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: My "red top bin" is almost full most weeks due to garden waste and other rubbish. Where can I dispose off that rubbish? In any case this is not a major contributor to the total waste generated.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Nobody can consistently predict what rubbish they will have. Expecting everyone to be able to RESPONSIBLY hold onto 2 weeks worth of rubbish no matter what's happened--moving, events, get togethers, gifting periods, new purchases, etc.--is ridiculous.

Then in the event that someone forgets to roll out their bin in time, suddenly they're expected to store up to a WHOLE MONTH'S worth of rubbish.

The new recycling rules make it very clear a lot of things NEED to go into rubbish now.

Imagine busy families with children in nappies. That's a whole month's worth of feces and urine they're expected to be holding up to a month.

What am I paying for at this point?

There are people on the regular and times of the year where rubbish is already sitting out on the kerb for weeks because they messed up on one week's worth of rubbish collection.

Sounds like it's going to encourage more random dumping around Auckland and I wouldn't blame them.

People who are responsible with their rubbish already are.

Weekly collection is more a matter of overall city hygeine.

It doesn't matter how little rubbish I'm producing. Big households are common all over Auckland and naturally they will produce more rubbish. I don't want to be living next to their rubbish problem on the off chance they forgot or were late for collection.

Also as stated by the document, most of Auckland's waste isn't coming from households anyways. So it seems silly to be focusing on the average household dealing with with everyday life.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support this as it makes sense but Aucklanders need a clear way to access these repair/re-design services

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There has been a consistent problem with illegal dumping in my and surrounding neighborhoods which this will further contribute to poor waste management. The council's removal of public bins throughout Auckland will also contribute to this issue of piling up rubbish. If this were to go through, the food waste collection needs to stay weekly for sanitary reasons and at the very least a larger bin at no extra cost for the normal rubbish bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction and demolition waste should be a big focus on minimizing waste with the amount of energy they use and greenhouse gasses they emit

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I don't think instant fines on their own would be effective in stopping people from littering or illegal dumping. The central government should provide support for communities by providing access to accessible public bins, more incentives for reuse and redesigning of materials and goods, etc.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In terms of plastic waste, I believe we need to start looking into ways to collect hard / non recyclable plastic that is used in construction, medical, automotive, and engineering purposes, and divert these away from landfill. This is by far the smallest in terms of quantity, but would also be the most detrimental as the products contain more carcinogetic chemicals than packaging that is designed to be food safe.

I would also like Auckland Council to show their support to charities, and community run recycling / e waste disposal initiatives. Even featuring these local charities and organisations on the official website to advertise to Aucklanders that these services exist would still help with raising awareness. Examples include Auckland Library of Tools, Hackland, E waste collection services etc.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: As an agrarian country, we need our cities to collaborate between farms and dinner plates. To preserve soil health we need to return nutrients back to the soil in order to preserve the quality of New Zealand produce.

Separating food waste from other household waste would also prevent contamination of items that can be diverted from landfill. E.g. E waste, clothing, books, and paper that gets thrown out with food waste would make items that could have been salvaged impossible to sort.

An improvement I would like to suggest in the current food waste recycling system, is to develop a solution that minimises spillage when shifting from the household food scraps bin, to the outside compost bin. Currenly diverting the food scraps to the compost is a messy process as the food scraps will have already started deterriorating in a week, resulting in spillage and stains within the bin lining. In addition to the compostable bin liners tearing, these factors may impose a barrier of entry to residents trying to adopt the new system.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Currently the process of construction demolition is unsustainble, especially when we consider how easily the construction industry can suffer materials and supply chain shortages. Due to competition in purchasing power, at one point it was impossible to source GIB wall linings,

or timber to carry out construction. Especially when most of the timber material in demolished residential construction is still usable to some degree, we have a responsibility to reuse these materials in some way. This is most definitely the case towards weatherboards and untreated native New Zealand timber from older houses.

Councils should require projects of a certain size need to accommodate sorting bins to minimise the amount of construction waste produced.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It would be effective to create policy that tackles the largest porportion of waste, minimise the total size of our landfills.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It is not the responsibility of council to resolve how to reclaim waste from products that have been sold without the end use of its waste in mind.

This responsibility should have been shifted to producers a long time ago, and there is no more excuses available for producers to not consider the environmental consequences for their products.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would expect to see council go after businesses (corporations etc) to reduce harmful waste. This is so that products that have less harmful waste will mean there is less to dispose of when rubbish collections come around

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Many households have big families and it would not be sustainable for fortnightly collections. You would have to drastically reduce the amount of waste from products etc for this to be a viable option

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Why: we need to reduce the amount and type of rubbish we produce.

What: generally less disposal;

Less production / reduction of rubbish at its source (eg packing sheets, food wraps, ...), banned single use products - especially ewaste such as vapes, etc...- Keep cup scheme extended to take away foods.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: No need for weekly, especially once more is done to reduce at source.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Besides generating a silly amount of rubbish, it's also "ethically disgusting".

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support, AND an concerned e- waste isn't part of the list. Many Auckland I've talked to do not know where to recycle their batteries and electronics. Most didn't know that was a thing at all.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not only to reduce rubbish now, but to educate future generations on valuing objects, not disposing.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As long as there is no real consequence for dumpers, illegal dumping will continue, meaning that ultimately, the "good guys" clean up, pay for it, get frustrated and so on. Past the rubbish issue, this goes further to add to social tension.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I generally support the idea, my concern is if a household misses there collection day due to work/sickness/holiday/etc. then 4 weeks worth of rubbish is going to be difficult to get rid of, a backlog will likely form, we have this same scenario happening a couple of times a year with the current weekly collection. When there were yellow bags we were able to put out extra bags, now they have gone we are unable to put out an extra bin!!!

I think there needs to be something in place to address this issue should it occur eg. emergency excess bags, excess drop off loctaion?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Although I don't like the nationalised plastic recycling. I think all plastic should go into the recycling bins and an the professional should decide what can be recycled or not. I know a few people now that think it is to hard and are just not recycling

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Honest debate with ratepayers involved - part of this you claim pollution of waterways and oceans yet you took away bins from beaches and parks. Your policies don't connect. Your focus needs to be with Govt on packaging of the products we purchase at supermarkets - milk containers, food packaging etc

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Your policies don't connect. Your focus needs to be with Govt on packaging of the products we purchase at supermarkets - milk containers, food packaging etc

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: plastic wraps etc are a problem.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I don't trust you - a tickbox like this leads people to the answer you want from them.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Return where ? At what cost to whom - is that not what recycling was supposed to do. Latest crap story about recycling programme can't take milk bottle lids - WHY ?? You make it my problem deal with producers or buy better recycling plant.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You idiots too away public bins

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Weekly rubbish collections must stay otherwise there will be a rise in fly tipping and rubbish strewn all over our streets. Just another stupid idea from pencil headed office types. Do you all want our streets turning into rubbish tips?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: See above comments. Just a stupid idea. We are paying more and more in rates every year, but for what? Services keep getting less and less. Where is all of our ratepayer money going? Salaries for people in Council to come up with stupid ideas? Unbelievable.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Don't have enough detail to comment further but no doubt what you are trying to do will cost that sector more than currently, meaning that extra cost is transferred to households at the end of the day ie: becomes inflationary with builders etc adding that cost into charge out rates.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: More time and effort spent sorting and educating when at the end of the day it all ends up in the same place. Another avenue for consultants to receive ratepayer funds!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Glass bottle recycling should come back, like we had in the 1970's and 1980's. This still happens in South australia, why not here?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Who will police this? Some recently arrived migrant such as all of the AT officers? Seriously? Guess what will happen.....the fly tipper will just tell the enforcement officer (with poor english) to stuff off and that will be the end of it. That is of course if they ever catch the offender/s. Fly tipping and rubbish will be everywhere.

When bins are removed and rubbish services reduced the city will become a rubbish dump.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: No brainer. If you're using your food waste and recycling bins, you have barely any waste left so makes sense to move to the fortnightly. They do it in other cities too

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We currently put out our small rubbish bin once every few months - would like to see a reduced rate for people like us who are very low users

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Always sad to see how much waste is produced from home renovations and building work. Would be great to see this tackled

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support these but surprised not to see e-waste as well - I thought this was also pretty toxic. Sad that our library no longer takes batteries which makes it harder to find out where we can dispose of them easily

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Our organic waste goes into our compost; therefore, we have no use for the food scrap bin. Our refuse bin is not big enough to hold two weeks worth of general rubbish. I am concerned about the smell that two weeks of general rubbish will have. This will be unpleasant and attract rodents.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: The problem is the source. Look into the companies who sell wasteful, plastic/synthetic products (Alibaba, Temu, The Warehouse)

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It is hard enough if we accidentally miss a rubbish collection. Even the food scrap bin is not enough for our family.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You will collect, recycle and re-sell our refuse but we will not get a benefit from the system. If you however reduce the council rates, people will be more encouraged to recycle and

re-use. Why be inconvenienced with sorting rubbish when we pay you a good amount of money for that service?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This responsibility should be owned by the producers and manufacturers. Once upon a time, they collected and paid for bottles. That responsibility now lies with you and the community? How is that fair?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: In NZ, it is very expensive to get rid of inorganic waste in general. That is the root cause of the dumping. You used to have regular inorganic waste collection and during that time, we have experienced less dumping in our area. Nowadays, there are piles of rubbish every week.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Do not support

Tell us why: Responsibility should be on the producers and manufacturers.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Making it more difficult to dispose of rubbish doesn't make the rubbish reduce in size. Fortnightly collections for any family would be very difficult to manage especially when the family cant control the generation of rubbish outside of food scrapes. The food scrapes is a failure in summer conditions and just encourage the explosion of flies. Cities like Brisbane have opted for subsidies on waste disposal unites. Also unsure why Maori groups need specific engagement on rubbish, it just adds layers of unnecessary consultation costs. Agree with the container return scheme at Government level The 10c can recycling programs in Australia appear to be very popular and really drives incentive to collect and redeem. More pressure needs to be on retailers to take back cardboard and Polystyrene especially large items or drop off sites that dont incur the refuse charges

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly if you have larger bins is ok for cost reduction but for a family making it harder to remove rubbish doesn't stop the generation of rubbish. Also we don't want to have a model of several bins and moving the sorting of rubbish to the households which would be difficult to manage in apartment blocks. We are not a fan of food scrapes because of the flies and smell it generates in Summer. Putting food scrapes in the fridge or freeze isnt practical.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: This needs to engage the construction industry for feedback as we don't want a increase in compliance costs that normally comes with council polices.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: If this isn't driven at a government level with national programs then the cost to reprocess waste instead of ending up in the landfill wont be resolved. The consumer shouldn't have to pay to dispose of rubbish that they can not control in generating in the first place.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Excellent idea and agree it needs to be Government driven. If we don't get charged or get an incentive to dispose of rubbish in a better way then behaviors will change

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support but no idea how you will enforce it.

People dump are either lazy or doing to avoid a cost

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Given we have already been told of large rates increases incoming, there will be no material cost savings passed on to ratepayers. I would prefer a council campaign advising people that if their bin isn't full each week, don't put it out. I only put my bin out once every three weeks when it is full. Some people need weekly collections and others dont.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: My street always has illegal dumping and no investigations ever happen, despite it being very clear where the dumped furniture/household items have come from. I don't think instant fines will make any difference to this.

You need faster and easier ways for members of the public to report dumped rubbish and litter and a clear line of communication to make sure it is cleared in a timely fashion.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The weekly collected 23L food scrap bin is not enough for us to digest the food waste we have for the week. By giving the option to increase the the Red bin size and fortnightly collection is just another way of charging us more rates...

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The current food scraps bin is too small for us, meaning we end up using the RED bin in the end as well.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Zero waste is not realistic. You target households when waste is created by the companies we purchase products from in grocery stores.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You have imposed food scrap bins without an alternative to opt out of. Especially for households which already have gardens and compost bins. Households that are actively reducing food waste are being punished by extra charges in rates for the food scrap bins. It is a good idea but bad execution/processes.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: As long as cost for waste reduction does not dip out of worker pockets. If you charge companies it affects their workers. Auckland council should provide a solution which cost does not fall onto the public. Governments order new housing builds, then building companies meet demand yet may have to deal with the waste cost too?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support but try do it without raising rates.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Shifting cost away from rate payers. That is why I support.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: With valid/tangible visual proof this may work. Not hear say sightings/assumptions/allegations.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Health and hygiene issue. As is weekly rubbish when you drive around you most bins are overflown and many do not shut properly. If you proceed you can expect pest problems (rats, mice's, flys) , smell problems. Used sanitary products, nappies, food wrapping, pet waste, other organic that do not go into the scrap bins will cause smell issue.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You have just narrow down plastics and deduce the items that can go into the recycle bins. So naturally what cannot go into the recycle bins will have to go into general household rubbish. If you are really trying to cut down on rubbish going to the landfill suggest you have better control of packaging of products first.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less wastfull packaging from supermarkets, free minour repairs from supplyers of small electrical goods, (broken switch on a kettel for example) that would cost more to repair than replace. Home printers need to be targeted, it can cost more to buy the ink than the printer, it can be cheeper to buy the same printer again then to get replacemtnt ink.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: has been like this for our hosehold for a while now. All though an inorganic collection every now and again would be nice

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: had my house, done reciently and saw the amount of wast that went out,

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: seem resonable

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This use to be the case when we had milk deliverys, and beer creats swapps.

Less wastage in that.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: My local road is currently a dumping dround, and the councle is doing nothing

Domain road, Glenfield,

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will create an extremely unhealthy environment.

Many people's bins are already horribly smelly after a week, and this will make it disastrous.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Organics collection is a complete waste of money at the moment. I don't see it done in our area at all! Trucks collect maybe 1 tiny container per 20 houses.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I do not support this direction, as we should instead look into more efficient ways to process waste locally.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I think we should look at more efficient ways to process waste whilst still maintaining weekly collections. From the perspective of a renter, it is highly unlikely my landlord will want to pay the rates for a bigger bin for my property. We fill the one small bin per week & find the weekly collection perfect. By extending the weekly collection to fortnightly, we will struggle with what to do with excess rubbish that does not fit into the bin. We also do not have a food scraps bin available to us.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree that construction waste should be reduce and reused in other ways, instead of in landfills.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Strict rules for recycling meant more waste to household rubbish , 120/140 L, tags has gone up, 240 L will cost more. Rubbish will overflow if collection is changed to fortnightly. Rubbish will be blown onto the street if over flowed. Will be forced to use private contractor , lesser revenue to Council and extra cost to household . I do not support the change , please leave the collection as it is now, weekly ,thanks you.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Always thought these waste is deposited in skip bins , so the contractor that provide the bins should be responsible for the disposal .

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: We are already doing it, Food scrap bin, Garden bin, Recycle Bin, Household Rubbish Bin.

What more do you think ,normal household needs. More Bins!!!! I don't think so .

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Is the Central Government paying for every beverage container returned?

No rubbish bins for pet waste and food waste on road , parks and places that have high traffic .These bins has since been removed , might be a good idea to replace them , have you seen the littering because there is no rubbish bins.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Slap them with a fine , hopefully it will stop the illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The waste management hierarchy (as communicated by the '3 Rs' framework (reduce -> reuse -> recycle)--sometimes expanded to include the '5 Rs' (Rethink, Reduce, Reuse, Recycle and Recover)) is widely taught across the Ontarian public school system starting from grade 1. I support this direction, but I think it could be strengthened as the hierarchy is a hierarchy for good reason; therefore the focus needs to be at the top. Secondly, waste management as a public service should be owned, operated, and manged by the public for the public. Whether it's curbside collection or a brand new organic wastes processing facility, council spends millions of dollars each year ensuring private company's profits are maintained at the expense of public rate payers, not for public benefit. Like many municipalities across North America, Europe, and elsewhere, public delivery of public services consistently results in improved service, lower costs, and better employment conditions for those involved in delivery.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree that fortnightly waste collection is long overdue; however, that must coincide with weekly organics and recycling collection. Moving all household waste collection to a pay-per-use service would also further reduce waste and save on collection costs. I frequently put out my rubbish bin for collection with a single small bag in it for collection, whereas I could in theory get by just fine with only monthly collection. Pay-per-use, whether it's for water or curbside collection, is the easiest way to reduce consumption.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Many other municipalities or national or provincial jurisdictions have operated CRSs since the mid-20th century. We should be resuing beer bottles not crushing them after a single use. This also reduces littering of these types of containers as they have a value associated with them.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In Ontario, littering comes with an instant fine of up to $1000, depending on the municipality. Signs along roadways and public parks, town centres, and elsewhere make this abundantly clear.

Another initiative that should be looked at for Auckland to reduce the impacts of littering, is an "adopt-a-highway" programme, where companies or individuals could sign up with AT to 'adopt' a section of roadway and thereby commit to keeping their section of roadway clean and clear of litter for a minimum period. Many companies in Ontario adopt roadways to give back to the

communities they operate in and to provide an opportunity for staff to get out of the office and take part in a team-building community day once a quarter or twice a year, whereby they pick up litter along a stretch of road. The "adopt-a-highway" concept could be extended to other areas as well (e.g., adopt a park, adopt a stream, etc).

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support improvements to waste management, but oppose reductions in waste disposal options. You want to reduce waste going to landfill and recycling by removing waste management options AFTER waste has already been produced. This makes no sense. Give people MORE options for waste disposal, not less. Make it EASIER for us to throw something into a rubbish bin or a recycling bin. Don't make rubbish collection less frequent. Hold businesses accountable and make them reduce the waste they sell to consumers. Spend MORE money on waste management, not less.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The larger bins shouldn't cost more. It's the same amount of rubbish as before, and it's being picked up less frequently. If anything the smaller bins should now be cheaper. The larger bin will also be too heavy for some to haul up their steep driveways. There are heavy rubbish items besides food scraps, such as animal litter.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I would support this anyway, but it will be even more important after the rubbish bin removals, and reducing rubbish collection frequency.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I expect to see bans placed on all companies to change their products to items that can be curbside recycled. Supermarkets should offer food refilleries for pantry items such as rice, flour and oats, crackers, chips etc.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this because it would encourage people to use their food waste bins and if people can sort their recycling from their rubbish then they would be able to last a fortnightly rubbish collection

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is a lack of responsibility on demolition sites and with the right contacts and people in charge then waste can be diverted.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These are all great places to start and it would be great to see improvements made here

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes more accountability and penalties should be issued to those who are illegally dumping I think they do it because they can easily get away with it and they see this as a free rubbish removal service not understanding the consequences because there are minimal

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: '- Manufacturers, producers and companies that take from the environment to make products be incentivised and/ or regulated to redesign their products to ensure that they are ideally in the first place made of natural renewable materials that can remain in circulation for as long as possible and then continue to be reused, repaired and repurposed without poisoning the land at its end of life.

- Hospitality companies be incentivised and/ or regulated to offer a reusable option alongside or instead of a single use option when needing to takeaway as well as reusable being the default when a customer does not ask for takeaway. In order for this to happen, reusable systems would need to be put in place to make it easy for cafes, restaurants and foodtrucks.

- Events, particularly those that need resource consent from council be incentivised and/ or regulated to use reusable systems. Zero Waste Events and Community Partners could be offered to support this mahi.

- Identifying big obstacles and risks to achieving this goal and act accordingly e.g. the proposed waste to energy plant in Kaipara.

- Continue to lobby for product stewardship, right to repair legislation and CRS to be put in place.

- Every department within Auckland Council to be strategically operating under the vision of Zero Waste by 2040 and be acting in accordance with these principles for example using reusable option instead of single use building wrap on any council owned building that is getting renovated and needs this cover.

- I think that deconstruction of houses needs to be incentivised and/ or legislated so that valuable building materials do not go to waste.

In summary, all parties who create waste in the first place need to be incentivised and/ or regulated to redesign, reduce and create reusable systems so that single use becomes a thing of the past.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It is logical to move to fortnightly collections after a weekly food scraps collection is introduced to encourage people to use the food scraps bin thus diverting valuable waste from landfill as well as costs savings and less trucks on the road. As a low waste user, in a family of 2 adults and one teenager we only use 1 orange bag every 6-7 months so with a red bin, we would only need a once a year collection. However, I realise that this is not the norm (yet) and we divert waste by dropping off to special recycling streams, as well as refilling bottles etc. Most of what's in our rubbish to landfill bag is vaccum dust, rubbish we pickup and end of life items that are not currently recyclable (from secondhand stores). It is important to offer large households additional support i.e. a larger bin as well as an offer to help them do a waste audit if they would like explore

what items could be further diverted (in a non patronising or invasive way). Since some apartments do not yet have weekly foodscraps collections they may find it harder to have fortnightly collections so this may need to be taken into consideration. Property Managers/ owners of apartments should be incentivised and/ or regulated to introduce weekly food scrap collections. In terms of nappies, reusable options and innovative systems need to be incentivised so that there may be a potential for increased uptake where possible. Medical waste may need to be further understood as to whether there are safe reusable systems that can be put in place instead of single use options.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Since, construction and demolition waste make up the most waste going to landfill, its reduction is essential.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fully agree.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fully agree.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fully agree.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Yes agree but this has to be for the whole construction sector lead by Auckland Council builds to show them leading the way

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Agree with this as another way to make people aware of our waste streams. Also need a robust recycling system so everyone knows what can be recycled & the shape it needs to be in. Working on a number system will never be as good as a photographic system. This needs to be simple & foolproof

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: As the incoming President of the Auckland Registered Master Builders Association, we see this as a must for all the building & construction sector. We advocate for the introduction of waste management plans & have been working with professor Terri-Ann Berry & her team on designing these for all waste streams.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastics are such a light product that causes so much harm to the environment & most manufacturers of these products use recycling to hide the actual outcome. Between the year 2000 & 2016 there was an increase of plastic manufacturing by 29% all while saying we can recycle. Polystyrene is a product that is so cheap to create & once made can never be removed unless it is burned. To recycle any of this is just delaying the time it ends up in landfill but promotes more of it being produced. EIC is working on the harm created by it in our environment. We are also looking at other ways to use waste timber from construction outside of the current burn it system.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This need to be made mandatory to the whole manufacturing sector. By making each manufacture libel for their waste would make huge gains in reducing landfill quanties.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Higher fines would be a huge help in this area.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No. The current system works. Implementing a system where reducing collections by 50% over the year would directly result in more waste going to landfills (via transfer stations; therefore costing the ratepayer more) and illegal dumpings (also costing the ratepayer more).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This does not deal with the root cause of using more recycled materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Localised

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: 'We strongly support the proposed direction (Option 2) which:

- affirms a strong zero waste vision for both people and planet,

- centres the waste hierarchy as a guide for action, and

- sets the intention to prioritise actions at the top of the waste hierarchy.

It is extremely heartening to read the draft 2024 WMMP and see Auckland Council re-confirm its commitment and aspiration to achieving zero waste by 2040.

The emerging zero waste / circular economy requires bold thinking, action and a focus on the top of the waste hierarchy. The benefits of doing this will be inter-generational as the systems and processes are established to support resources to stay in use for as long as possible.

While we often focus on the post consumer impacts of waste, developing systems for recovery also has a positive environmental impact pre-consumer through reduced stripping of natural

resources. Similarly there is a social benefit as seen after Cyclone Gabrielle with increased community resiliency from items being available immediately following a civil defence emergency.

Auckland's participation in the C40 Advancing Towards Zero Waste Declaration, shows we are in good company with our focus on Zero Waste. Being profilled alongside 20 other cities including; Copenhagen, Milan, New York City, Stokholm, Tokyo and the others, must be good for our international profile as well as our resolve - if they're doing it, so can we!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: With the increase in other services, such as the weekly food scraps collection, it makes sense to reduce the frequency of rubbish collections, with assistance for large households as needed.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It would be fantastic to require mandatory site waste management plans. Aside from the environmental benefits resulting from diversion, it should create a commercial opportunity for resource recovery enterprises, as well as potentially reducing costs for builders and developers.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It seems to make sense based on the evidence provided in the draft plan, to focus on those areas where the biggest gains can be made from diversion.

In particular we are excited about the recognition and consideration of local, community-led organics collections and processing where it makes sense.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As operators of CRCs and Zero Waste Hubs, we are confident that a well designed deposit scheme would remove an unfair burden for recycling collectors like us. In particular we

estimate it costs us $180 for every tonne of glass bottles we send for recycling. A container deposit scheme would mitigate that.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We believe mandatory product stewardship would be a game changer for reducing illegal dumping and litter. For example, a deposit system for containers will dramatically reduce litter, and product stewardship for things like mattresses and e-waste would reduce dumping, as we could accept these items for free at our CRCs.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: We are partners with a local community trust in operating the Warkworth CRC at Snells Beach. There may be an opportunity to provide Kawau residents with vouchers to be able to drop their waste / recycling / reuse and organic waste to that site free of charge, in return for them bringing it over from Kawau. We would certainly be keen to explore this if it was of interest.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Localised is a charitable company that partners with community organisations in order to assist them in operating CRCs. As such we are fans of the actions under Action 2. Continue expanding and strengthening the Resource Recovery Network (RRN) and its services. We have had some success in securing philanthropic funding to support our work in establishing sites, however, we think there is potential for increased contributions from third parties if the scale of the support opportunity was increased. For example, considering whether there was another way to undertake governance of the RRN that enabled third parties to bulk fund the development of the RRN as a whole rather than site by site. If this idea has merit perhaps it could be added as another item under Action 2?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: what is the business and the manufacturers doing, it looks like all emphasis are put on house holds

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: not sure ho much difference this is going to make

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: again the major contributor are the manufacturers ; for example the blame game continues, supermarket say its the manufactures and vice versa

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: another classic example of privatize profits and subsidies looses - why this is a council problem - where is the central govt on this - i know waste is a local issue but your hands are tied when it come to legistlation

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: good luck- with this mood the coalition is not going to agree on anything

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

we shouldn't be supporting their waste management plan- they chose to live on a island. they live on billion dollar properties, i am sure they have pay more, why should we subsidize them

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to reduce waste

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Should be introduced sooner and gradually extended to 3 weekly collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: They must take responsibility for it

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Core services from council are rubbish collection, i dont know anyone that is asking for their rubbish to be collected less. Your whole target for council seems to be do less and charge more. I want my rubbish collected every week please and so do others. You are pushing a view that very few support.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Your answer to try and make this work is for people to fill their freezers with food so it doesn't rot and smell, yet again inconvenience the ratepayers due to your ideological thoughts of a few sandal wearing council people. Please get back to core services only, supply water and take away sewage and rubbish. No one asked for anything else.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Packaging seem to be a big issue, many other smart ideas you have some up with in constructions have just added to the cost of building making NZ one of the dearest places to build. I dont know about you but i would like my kids to be able to afford a house and nothing you have done as a council has gone towards make this better. This like every other ideological idea you come up with just adds cost to this.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Im fine with recycling but your food scraps charge is not a good idea in my books. When i drive to work on collection day there would be less than 10% of houses that put these out so in my area 90% of people agree with me and not you. You should listen more rather than telling people what to do. Left is out now as people got sick of being micromanaged and this is what you are trying to do more of.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: im fine with current recycling systems, costing me more when everything including your rates makes it harder for people to live. I know you dont care about this but your should.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: You can call this pubic health if you want but you are the ones driving more and more of this, collecting rubbish less or as your dream never will just create more illegal dumping. When you make things harder and dearer this is what will happen.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: cost savings for rate payers

less damage to the environment

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: make the industry think about its waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: protestion of our environment is vital for the future of Auckland and all of NZ

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: makes the producers more responsible for their products

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: current policies do not have enough 'teeth' and need strengthening. residents in hot spots get fed up of their communities being used as dumping grounds with no consiquences felt by those who dump on a regular basis.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More comprehensive tools to show what can go in each bin.

E.g. some malls,businesses, venues have separate bins for different type of wastes.

Maybe get rid of the plastic rubbish bags, and use compostable ones, or reusable ones.

Pls dont increase in scarcity of collection. Also maybe add option of instead of waiting for collection, add collection stations to sort prior to collection.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Just not feasible to some household.decreased frequency just means having more build up in dwelling/residences. If the plan is to push sales of 240L bins then this move makes sense, but downright shady.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Rather than instant fines, why not reward collection/return of recyclables. Rather than punish why not give incentive (5c/can or bottle in a collection point) to return and recycle, run it for a bit get everyone in the habit to, then it sets as culture/tradition.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Maybe work together with local shops to set up another collection point where ppl shop, groceries etc.

Works with soft plastic recycling.

Instead of just reducing collection frequency, optimise collection options.

Reward incentive for sorting and cleaning, opposed to only punish littering/illegal dumping.

If an area is a hotspot for that, add bins to it, enforcement doesn't have to come in confrontation, rewarding participation might work better.

Create a system where you can grant say subsidy/meal ticket/shopping credit for necessities on certain milestones, so people/communities can potentially take part and help remedy/gradually be a part of the solution.

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support the idea but I do not support the shift to fortnightly rubbish collections. It will not work for large households. I also do not support the removal of public waste bins. There are not enough as it is - removing more will result in more littering.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I support the idea but I do not support the shift to fortnightly rubbish collections. It will not work for large households. I also do not support the removal of public waste bins. There are not enough as it is - removing more will result in more littering.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A shift to fortnightly rubbish collections will not work for large households and will cause an increase in illegal dumping. I also do not support the removal of public waste bins. There are not enough as it is - removing more will result in more littering.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Awesome!! I strongly support this. Since we started using food scraps bin, we hardly have anything going into our rubbish bin. I think this is great to get people to think more about what they're sending to landfill and what they're consuming.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I can only speak from personal experience. But, due to composting activities that were already being undertaken, the introduction of the council food scraps bin has had a minimal impact on the amount of rubbish. And I find that I do still require weekly collection. Particularly since less recycled materials are accepted now and we are advised, if in doubt, to put in rubbish, not recycling. Fortnightly collection might become more viable once packaging is redesigned (but not beforehand).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It is a large issue. So making this a priority makes sense.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support in principle. But would like to hear more detail about how scheme would work and what it would cost.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Need to toughen up on this.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Bins are small enough as it is (same bin size for 2br place and for our 5br house) so even with food scrap bin it's really not enough.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Flooding from last year has caused uptick in construction waste...not fair to penalise or jump the gun

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: There's too much traffic and congestion to keep with different bins...

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Instead of instant fines, how about providing more accessibility to waste management.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: All looks good. I agree construction waste is a big problem. A lot of re-useable product is thrown out which is a real waste of resource. I believe Green Gorrilla is doing good work sorting demolition / construction waste? Can this be supported further.

A New Zealand company called Mint is based in Australia doing urban mining projects - can we support this somehow with ewaste?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Efficiencies are important

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: So much is wasted!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely - as kids we made pocket money collecting bottles and taking them back to the shop for coin.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely, if the council need stronger legal tools to prevent littering, then I support this. People who can not afford to throw trash away, can be shown how to prepare meals from food with little packaging, or packaging that can be recycled. (soft plastics etc).

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Wet wipes need to be banned, or wet wipe importers / distributors / retailers need to be pressured to reduce the amount of wet wipes flushed down the toilet. They block our sewerage pipes and caused millions of dollars of maintenance every year. In some cases leading to the closure of our Auckland beaches. Please implement a plan to keep wet wipes out of Auckland & New Zealand toilets !!

It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: No reduction of collection weekly of rubbish

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Waste Management is a profitable business. Why Council determined to kill it?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Councill will waste millions of $$ on consultants and burocrattes how to do so and then will drop it

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Councill intent is again to meddle in established system

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will hike food prices again

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Just return rubbish bins to streets!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: i already put my rubbish mostly out every second week and use my food scrap bin nearly every week.

I put my bin out every second week (on recycling day) before the food scrap bin was introduced

I have a medium sized bin for a family of 4. Occasionally i need to put my bin out after 1 week of waste collection because my bin is full because of some unforeseen event. I don't want this option taken away from me. i don't need a bigger bin but i don't want a weekly pick-up option be taken away from me should I need it on the rare occasion. I don't want to have a full bin for a over a week (on the rare occasion) and don't think i need the bigger bin for the rest of the year.

as the bins are "user pays" with bin tags I don't see the problem.....more frequent pick ups from houses means the resident pays more, while less frequent pick ups means you are charged less.

The only way i will support a 2 week pick up is if we do not have to pay for the pick ups

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I think the principles of the direction are well intended and commendable. However the reality may not be practical for implementation across the city which could actually make things worse rather than better. For example I am not confident that the food scraps project is working effectively. As I travel through several communities a day throughout the week I see that in many communities the green food scraps bins are not being utilised on a regular basis. Even in my own street, I noticed a high uptake of usage at the beginning to now only a few bins a week being regularly used. I am concerned that this lack of usage will be reflected in other future initiatives. I think they potentially also disadvantage the already disadvantaged - those people who are disabled, without transport or childcare etc or who do not have the funds to pay for private options for waste disposal. This in turn could mean the council ends up spending more on dumped rubbish than what they end up saving both financially and environmentally.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: I feel that the costs of implementing instant fines etc will outweigh the benefits. This seems disingenuous and impossible to police consistently. An example being I had general waste dumped in my recycling bin meaning my bin was not collected. This was no fault of my own and there was space in my general waste bin. We will see more of this happening and those that do follow the rules will also become disadvantaged.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

What do you think of this priority area?

Do not support

Tell us why: The scrap bins are creating disgusting odours More Flies , Maggots. The scrap bins Smell are worser than the Big bins. I hardly see the scrap bins out

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Excellent in making it a Priority

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Don't make plastics that are harsh

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The Stewardship scheme is pretty practical

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: You already have that in place?,,, Im assuming it is hard to find these culprits for illegal dumping because your not awake

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: Management and minimisation is a great goal to begin with 👍

4. Any other comments

So far it has been fine. Just need to impact more detailing and quality

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Surely it's the time to move to fortnightly. Food scraps has meant we don't have much rubbish now. If you're using it weekly there's no way you need a rubbish collection every week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Yes I agree - If you want to reduce waste, then you need to improve recycling services. It's a shame you can't even recycle container lids or paperboard! This is all extra rubbish we've had to bin. Recycling should be extended so it can take more plastics such as soft plastics, lids and paperboard to reduce waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already struggle with weekly rubbish collection as we are a household of 6 adults and have a lot of rubbish. You need to improve recycling so less items have to be put into the rubbish bins and council should provide bigger compost/food scrap bins. The small bins for food scraps are pathetically sized.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We can hardly cope with weekly rubbish collection so fortnightly will just not work for my household .

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We can hardly cope with weekly rubbish collection so fortnightly will just not work for my household .

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Why am i paying for their 40% of waste. They should pay more

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I'm not keen on standing at my rubbish bin trying to work out what the hell goes where.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This sounds fair

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Removing public rubbish bins is a ridiculous idea. NZ parks are revolting with litter & no bins.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

User pays -I want & need a bigger bin so let me buy one & charge me more but do not take it away!

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Super important to keep the same resources going around instead of mining more all the time!!! The less packaging and excess materials we have to begin with, the less resources we use, the less discarded materials we have to deal with.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: If a good solution can be found for the nappies and medical waste, the goal could be to step down the rubbish collection from fortnightly to monthly even! (We put our landfill bin out once in about 8 months usually. Family of 4.)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Supporting the construction industry with the extra cost of pulling things apart to be reused rather than demoliting and disposing will be important here. Pricing new materials higher to make reused materials more attractive would also help.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: MAking new imported plastics and cardboard more expensive than locally recycled materials will help. Lots of consumer education will also be super important.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This needs to extend to big ticket items as well. We recently purchased a new garden shed which came flat-packed and wrapped in bubble wrap and cardboard. We contacted the store to ask if they are taking back and recycling the bubble wrap but they would only take the cardboard. I think retail stores need to be taking back all the packaging. Maybe they are then sending it back to manufacturers to deal with but it needs to be returned back up the chain in order to force the packaging to change at the product manufacturer level.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Our Red rubbish bin fills up every single week. Changing collections to once every 2 weeks will mean we will have no where to put the overflow of our Red bins. There needs to be a much more concerted effort and pressure put on wholesalers and retailers to change their packaging so that our bins are not filled up so quickly with inorganic materials from their packaging. Stop putting the ambulance at the bottom of the cliff. Have a go at the source of the problem. The wholesalers and retailers. Even with organic materials going into the red bins and changing the collections to once every two weeks, you are not going to solve the problem that you feel exists. And a rates increase as a solution to fund an alternative is going to cripple many households that are already stretched to the limit with the current cost of living crisis we are all feeling at the moment. By the way, we use our compost for the majority of our organic food waste. Rate payers like us should not be penalised with higher rates to cover the cost of the new green bins for organic waster. We are utilising our common sense and greener ways of dealing with our food scraps.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: BUT target the manufacturers, wholesalers and retailers that package their products in a way that is harmful to our environment. Encourage them to go back to what the previous generations did. Package pretty much everything in either glass bottles or butchers paper.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Bring in legislation that reintroduces glass milk bottles and glass soda bottles that can easily be reused and or recycled. I don't need my raw steaks from the supermarket wrapped up in a plastic container with a half yard of cling fill wrapped around it. I'm happy with the way the old and still some current butchers wrap up their products in butchers paper.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: This is common sense and it is already happening at the household level. I do not support all the bins being rolled out across Auckland, when we have bags that already work and bins for food scraps is just an added cost. Those of us who live rurally use food scraps in other ways and they do not go into bags or bins. A waste of money and resource.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not support all the bins being rolled out across Auckland, when we have bags that already work and bins for food scraps is just an added cost. Those of us who live rurally use food scraps in other ways and they do not go into bags or bins. A waste of money and resource. Not to mention the effects on the environments and road network of all the trucks. I note the 41% is taken from city dwellers as this most certainly is not the case rurally. Also there is the issue of places to put the bins on the kerb, when we don't have kerbs and in a number of cases there are steep or long driveways/right of ways to get these towed up.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This should have been identified in the previous WMMP and this is where the focus should be and also the producers of plastic packaging around products.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why: Council and government should be focusing on things they can legislate for - packaging (plastics), biosolids etc. Educate the ratepayers with organics etc.

I also don't believe we should be doing inorganic collections. Why not give a free voucher to ratepayers to take their 'stuff' to refuse centres?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The onius should be on the producers of the products. It will not stop rubbish from being thrown out windows of cars or being dumped roadside.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not likely to make much of a difference, people are lazy and the cost of taking stuff to refuse stations is expensive.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Greater Auckland should not be subsidising the Islands.

#1291

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I don't believe 41% is food scraps, I believe it s far less, and most people don't use the small green bins, and given many items are not recyclable anymore, I don't believe with the small red bins, most households will cope with fortnightly collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Have a way of reusing, redesigning, recycling our waste is far better than just incinerating them. Resources must be reused to get the most benefit out of them. Incinerating is the easy choice but it doesn't make sense to destroy resources that we can repurpose.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Brilliant idea. Making better use of materials from C&D is a great way to reduce waste and, again, a better way to use these resources. Rather than putting them in landfills, finding another way to use them is laudable.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Resources that are trash in the mind of most can be repurposed in some way. The creative challenge is something we can all benefit from rather than just throwing things away or incinerating them.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We're also doing something like this in my city and the beverage containers are being turned into more useful products like tables, room dividers. This also helps our waste pickers have some return for their efforts of collecting these containers as they are paid a small amount for every kilo collected.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Anything that reduces waste and the use of plastic gets my vote.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fortnightly collection is a great idea, my waste bin can take 3 to 4 weeks to fill.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Too much reusable material is dumped in these building site jumbo bins.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Requiring producers and consumers to pay for the cost of waste disposal or recycling of waste is very appropriate.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Still too much illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I'd like to see most emphasis at the top of the hierarchy where good design and close monitoring will reduce the need to rely on individual citizens / consumers to make decisions and act. That is, requiring manufacturers and distributors to minimise waste in products and, especially, their packaging, and to charge them heavily for recycling and disposal of all potential waste.

Four points here:

1. If it's done at this point, monitoring costs will be reduced - it's simpler to monitor at the top end than at the bottom (user) end.

2. If the charges are high, even higher than the cost of picking up their mess further down the line, the market is opened up for better behaved competitors to save costs by doing it better, and the market then helps us.

3. While accepting that these costs will be transferred down the chain to the end user, if the costs are high, those users will be more likely to choose cheaper options, thus rewarding manufacturers and distributors who minimise waste and therefore reduce costs.

4. There needs to be an incentive for reusing containers - bottles, boxes, etc.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It's unlikely to change behaviour and may even lead to more illegal dumping (and maybe putting rubbish into recycling bins) but this will be a small effect compared to the cost saving in reducing the collecting frequency.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The amount of polystyrene and soft plastic wrapping in construction materials is a disgrace.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: See my comments for Q1

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yep. I live across the road from a park. At least once a month I see dumped material on the berm beside the park. In addition, people using the park, empty their cars of their McDonald's and other food rubbish onto the berm outside my place. Most rubbish days I collect

several items of rubbish and place it in my bin. I have plenty of room in my bin because I don't have much rubbish, but it's infuriating.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I haven't studied this section so don't have any remarks. However, I volunteer on TiriTiri Matangi and when I visit (weekly) I notice stuff washed up on the shore most days. Anything to reduce the rubbish in our seas gets my support.

#1295

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I do not support fortnightly rubbish collection

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It will mean smelly bins overflowing on the streets which will make it horrible for people walking. People will dump their excess rubbish in other people's rubbish bins especially multi housing developments. Fly tipping will increase.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This is already in place in some construction areas. Zero waste reduces costs.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Most of these are already in place in

Auckland. Soft plastic packaging needs to be reduced by manufacturers and supermarkets.

Manufacturers should be penalized for using plastic containers that can not be recycled such as black plastic.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support glass collection separate from other recycling

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Collection points for rubbish are needed in more areas. People would not dump illegally if there were more collection points eg large bins. In our area the fly tipping I've seen appears to be people moving out eg broken furniture, mattresses and small appliances.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Your current recycling rules are very difficult to adhere to, because we have multiple enforced options: Hard plastics to recycling and soft plastics to stores. It should be made much easier and we need assurance that recycling is ACTUALLY happening and our waste not just being shipped off to Indonesia where it ends up in the sea!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Too many other options for recycling. EVERYthing which can be recycled should be sent to ONE point, not ten different places.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Tell us why: Create Seagull centres in convenient locations

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps was stupid idea that has no cost benefit - most houses uise a wastemaster already. We don't need more of the same stupid ideas. However, I'm ok with fortnightly collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction and demolition waste does need better approach to recycling and recovery - builders are shockers for wasting re-usable and recyclable materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Frankly I don't think you have a clue how to minismise these wate products. The best answer is goverment regulation prohibing use or certain types of materials.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Most containers that are littered are already recyclable - it is not a legislative issue. It is a population issue that reflects the lack of concern certain segments of the poulation have for the city they live in. If you want to do some good how about getting litter enforcement patrols active and putting more recycle bins in places where people congregate and litter.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Most containers that are littered are already recyclable - it is not a legislative issue. It is a population issue that reflects the lack of concern certain segments of the poulation have for the city they live in. If you want to do some good how about getting litter enforcement patrols active and putting more recycle bins in places where people congregate and litter.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Waiheke residents and vistors need to fully cover the cost of their specific waste.

4. Any other comments

Save money - don't waste it on idealistic outcomes. Any initiative must have a demonstrable and proven economic benefit to ratepayers that is measured constantly after implementation too - don't simply shift cost burdens from indirect via Council to ratepayers directly.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why: the council needs to strengthen its legal regulation and enforcement to tackle those illegal dumping of consultation and emollition. No consequence, no results.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: corporate companies should take their social and environmental responsibility to reduce products waste.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: it needs to have more community-led activates and neighborhood campions to address the litter and illegal dumping. More social media championing to deal with behavioral changes.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Auckland has a fast-growing population with more than 200 different ethnicities. Overall, people from ethnic communities make up over 31% of Auckland's population. I want to see this updated plan to acknowledge ethnic communities' engagement and contribution to waste minimization.

In particular, the plan needs to truly reflect on the population and communities critical to the council's strategic plan and essential services and programmers. It should demonstrate the council's commitment to diversity and inclusion.

It would be encouraging if the plan could especially showcase some ethnic community organizations that provide culturally appropriate engagement and support initiatives to diverse communities. This would ensure that the diverse communities are included and respected and that their unique needs and perspectives are considered in the waste minimization efforts.

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Council is out to lunch and out of touch with families on the ground.

Council should be asking questions like

1. Is taking rubbish to refuse centres tips affordable for areas in Auckland

2. Is our inorganic collection fit for purpose as larger families produce more rubbish

3. Central govt already has issues with police numbers so how does council expect to cover costs for policing and does this mean that more CCTV in suburban areas

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Because these things (reduce/reuse) are not really within council control. They are an industry issue. The council plan can't prevent the sale of dj how use plastics, so it's just words

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Many households (especially bigger ones) end up putting recycling into their waste bin because there's no room in the recycling bin. Recycling should be picked up every week, minimum. Only reduce waste pickup if recycling is increased. Otherwise you are just encouraging littering, not recycling etc. it's the biggest thing council can contribute and you're trying to opt out of it

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Large companies that make lots of profit should have more responsibility to reduce their impact on the environment.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: product stewardship in place, supporting alteratives to single use items (coffee cups etc, particulary at events), more options to repair, less cost to recycle eg electronic waste. support for container return scheme

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: need more options for extrememly low waste generators on the Hibiscus Coast who currently use a rubbish bag infrequently but would now be required to pay for a service they would get little use from. A bin vs the current bag system doesn't encourage people to reduce their waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: very supportive of this. Many businesses and events currently don't separate recycling but a crs would mean those items do get recycled. Would reduce the load on public bins also. Paying for electronic waste is out of the reach of some people so they landfill it

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS would solve some of the littering problems

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Much of the plan focuses on Maori outcomes with that as a high priority. This excludes most Aucklanders. A waste minimisation plan should be focused on that, not ethnicity. I think many Aucklanders would read this plan and feel it doesn't include them.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: About time. We need to reduce the creation of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fortnightly: excellent idea. A small bin suits me because I have little waste - buying lightly packaged material where possible, recycling (including soft plastic), reusing (e.g. bread bags for freezer and fridge), compost, etc. However, I'm unsure about charging more for bigger bins. Large and poor families may either be paying more (that they can't afford), or choosing a small bin option and illegally dumping excess.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Current construction waste is a disgrace.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's probably more efficient to focus on the manufacturing end (including carriers and warehouses). Fewer people to deal with and simpler to monitor.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Education would help. I

m unsure where to take some stuff, especially stuff that might be useful for someone else - e.g., old appliances.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: less construction waste going to the land fill and more house hold items being repaired or recycled

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: many small 1 person households do not produce much food waste each week so the frequency of food waste collection can be reduced

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: many products are thrown away every time a company upgrades there office that could be reused. the same applies for residential construction projects

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: these products are some of the most common in use. Though steel and aluminium should be added to the list

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: many households are large users of such items and will have no where to recycle them

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: many items are dumped illegally and cost ratepayers money to remove so this cost should be recovered where possible

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: What are maori Outcomes waste initiatives? Waste bins should be like Wellington/Hutt Valley with rubber straps to hold contents in climate change wind events.Container return schemes were great in a low cost environment but in todays world they are uneconomic which is why they died out decades ago. kerbside recycling is a wasted resource as the majority of homes have wastemaster type tech and Watercare have already paid and operate a waste solids recycling system which produces fertilizer more efficiently. Fortnightly rubbish collection is deluded and will result in an increase in illegal dumping. Reductions in ACC public rubbish bins will result in more rubbish on the streets and in our harbour. Existing bins are already filled to overflowing and need more frequent collection. Less bins are NOT the answer.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Deluded idealisation. See previous comments on food scraps. Bigger bins emptied less frequently = more rubbish is encouraged. Less frequent collection encourages rodent, odour, flies, risk of spills . A disaster of an idea

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The challenge will be in cost to reprocess. Many commercial construction demolition sites contain asbestos waste which contaminates all other waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Maybe swap priority to biosolids and do away with food scraps. I would be much more supportive of a full green waste bin which collected garden organic waste as well as food scraps.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: See earlier comments. This works on a low cost/low wage/ low inflation economy and we now have the opposite. Consumers won't have an appetite for considerable increase in cost of products and vendors of these products will revolt.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Unfortunately many of the initiatives in your plan will be counter productive in that they will encourage illegal dumping. The people who illegally dump won't pay fines and won't care. This is a people problem in our society and will take more than instant fines to correct

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

When I moved to Auckland about 8 months ago I inherited 2 x 240 litre recycling and waste bins. The previous owners of our property were 3 times the number of people. In order to return and reduce the bins to the smallest available , I was required to pay a $50 fee for each and the rating charge would continue for the larger bins unaltered for the next 12 months (It was at the beginning of a new rates year) I declined and decided to retain the larger bins and use the rubbish bin for green waste as well . Two weeks later a food scraps bin was thrown over my fence. I tried to make use of this but the compostable bags split after a couple of days and I then find that Watercare has a system to more efficiently process food waste through the sewerage network. Personally I would be most supportive of a european designed incineration system which would emit near zero pollution and the heat is used to generate electricity. This would be much better and more efficient than most of your plan initiatives and a much cleaner way of dealing with all rubbish than terrible landfill alternatives. Rubbish would become a resource and Auckland could lead the way and assist the rest of the North Island in dealing with it's waste. Other councils would pay Auckland to take way their waste and buy back our surplus electricity.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The retailers should be made to reduce bulky packaging such as crisp/chip wrappers and other plastic wrappings that makes the rubbish bin full

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Large family like ours (7 people) cannot be expected to do this fortnightly idea, the rubbish would overflow and cause environment issues with cats and dogs getting into it. There needs to be exemption for large families , 4 members and below should be fine on fornightly but not 5 and up

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Bigger bins for bigger families but what if the bigger families are renting and the owner doesn't want to pay for a larger bin (rates funded)? There could be an increase in illegal dumping.

There should be no $40 admin to exchange to a larger bin between certain dates before fortnightly rubbish collection roles out (if it does). Obvi it'll cost for marketing

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I'm pretty sure there was a recycling aluminum can machine for cash back found at the petrol station back in the day (Christchurch)

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: signage in hot spot areas - some people have asked for camera's in some hotspot areas

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I am neither for nor against this since, despite having the food scrap bin, I have noticed that only about four households use it on my street. This led me to believe that people don't care. With this being said, I believe moving to fortnightly pickups would lead to trash being dumped on the street or people resorting to using the local business bins to dump their rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I assume that "waste" refers to wood, metal, bricks, and other building materials. If so, they may be reused or donated to people who have a use for or want it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This pretty much sums up the waste that most, if not all, houses produce.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It's great to see such a comprehensive view being taken, with due recognition of the importance of also working with the commercial sector to reduce their waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: If people are recycling and using the food waste service, it should be very easy to deal with a fortnightly general rubbish collection - we're definitely generating far less waste in our general wheely bin now that we use food recycling in particular.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Hugely important, so I totally support this. Also keen to hear more about ways that commercial waste, like rubble, can be repurposed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS schemes seem to be well established overseas, so it's great to see that this is planned here as well.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fortnightly collection can potentially reduce the amount going to landfill if there is good info about what is and isn't recyclable. I would like to see recycling bin audits conducted and offenders notified that their bin can't be collected if full of non-recyclables.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I recently had a bathroom renovation. I removed lots of paper, cardboard, plastic etc from the contractor's skip. I'm sick of contractors just tipping everything into skips without any penalty. Why not introduce regulations?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support the priorities, but never use the food scraps bin as my household is vegan and composts all plant material. The bin should be opt-in.

Paper and cardboard require separate collection. It's pointless to collect them in the same truck that picks up glass bottles which will break and contaminate the paper and cardboard.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: But also keen to keep seeing action at the top of the production line, to limit waste being produced, cradle to cradle, recyclable/reusable packaging/nappies, etc.

We produce less than a rubbish bag of waste a month, and this includes the rubbish of guests staying in our accommodation. Keeping chickens is a great way to reduce organic waste as all our food waste goes to them. It also ensures our bin is never smelly.

Make sharing stories about reducing waste a priority, educating builders and households.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: What we have a problem with on Great Barrier Island is that no provisions are made for organic construction materials, such as soil, large scrub and tree stumps. There is no 'cleanfill' as such, which is a problem.

Also, concrete and glass bottles could be recycled for fill, but there currently is no facility for this on the island.

Going through a building process twice, I think it would be helpful for builders to have different bins (large) for different materials, to make it easy to split different waste types. It could be a requirement for builds to have such a container on site. As different types of waste are recycled separately throughout a build, the main builder would have to indicate which types of containers are required on site. 'Clean' bins, i.e. bins with one type of waste could go back to the producers to be reprocessed, thinking roofing, polystryrene or glasswool insulation, gib, to reduce dumping fees for the client and divert waste from landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Organics and biowaste can be used in food growing businesses.

Textiles: use/import of synthetic clothing could be reduced? Only compostable clothing allowed into the country :-D

If all packaging was either paper/cardboard or recyclable (easily washable) plastic, it could all be reused. Meat packaging for instance has much improved. This could just be a vacuum packed plastic bag, doesn't need a tray.

Separating all my soft plastic, it does hurt me to see whole house wrapped in the stuff. Why is that allowed?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great. Is done in many countries. On Great Barrier Island we can fill up beer/combucha at refilleries. Water from the tap is great to drink, too, and much healthier than fizzy drinks and fruit juice.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: Shocked by the waste cost on island though Anamata is great. We need a cleanfill location on the island. If there is still organic waste going to the landfill on the island, households producing this, could perhaps be given a couple of chickens or a home composting bin each. Also, if there are still nappies going to the main land, it may be worthwhile supplying households with babies with reusable nappies.

There is a lot of building going on on the island. Ask builders to use precut wood, roofing, etc. and architects to use standard sizings. 1200/2400mms, etc. Provide bins that enable builders to separate construction waste, so that clean waste can go back to producers (roofing, polystyrene, gib) and other waste is recyclable (paper/carboard, soft plastics, untreated wood, treated wood).

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Great work. Together we'll get there.

#1323

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitākere Ranges

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I can see no way in which "Strengthening ways of working with mana whenua and deliver Māori outcomes through waste initiatives" could have any meaningful impact on general waste management. Probably this will only waste time, money and resources. Otherwise, I support other initiatives.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Already seen a reduction in household rubbish from food scraps being diverted to a separate collection. However, the realistic reduction is nowhere near 41%, much closer to 15% for my household, and probably it is similar for the majority of others.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support all points, except i think it could be extended to include a much wider section of business and industry, to also target things like environmentally damaging, and/or non-recyclable packaging.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Large volumes of these materials could be eliminated by limiting or banning them from being imported into the country in the first place. Most international suppliers will change how the export their goods if they are required to do so.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I Support all points but i feel waste engine oil should be included. There are stewardship schemes already in place for engine oil but the companies that should be managing these schemes are doing so in a way that perhaps meets the legal requirements but does not do anything to actually reduce waste and especially dumping. Eg. retailers of automotive oils supply an oil return bin, but it is only available on one randomly selected day per month, and therefore useless to people who would otherwise use this service.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: People often only dump rubbish because it is too difficult to get rid of any other way.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Suggestions:

1) Not many people are aware of the repair cafe and in most area, it is only on once a month. Would love to see more marketing about it and see it runs more frequently.

2) A clear direction of how and where to dispose construction waste properly (eg. families do small project themselves)

3) The public is still very confused with the new recycling rule. There was not enough public communication before it was implemented. More public education / information requires

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I am working in a Environmental organization supporting AC with this service. The feedback we get from the public is more education required, through different channels, social media etc. There is also a clear voice of education on children, not just school level but ECE too. Tamariki can make a difference.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This is a good imitative. Please explain to the public how does below 'government 100 day promise' fit into reducing construction waste. Looks like more construction waste will be produced and less accountability requires.

1) The government repealed the Spatial Planning and Natural and Built Environment Act and introduce a fast-track consenting regime.

2) The government is planning to take policy decisions to amend the Overseas Investment Act 2005 to make it easier for build-to-rent housing to be developed in New Zealand.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: construction waste needs to be proritised too.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Public education. More public education. Also get tamariki involved. Think cultural responsive approach. It can not be a one solution fits all approach.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Auckland is such a cultural diverse city. We need to adapt a cultural responsive approach to deal with any environmental issues. We want to see less aggregation, more cooperation and more collaborative working.

#1326

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Complete focus on Commercial & Industrial and C&D waste as its consitututes 80% of total waste generated. The majority, if not all, strategic plans and direct action plans should be focused on these areas.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Complete focus on Commercial & Industrial and C&D waste as its consitututes 80% of total waste generated.

If fortnightly collection is introduced then the Waste Management - Refuse Standard should immediately halved for all rateable properties

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There is little indication of the plans or action that the WMMP is taking with respect to C&D waste (or industrial/commercial). Looking at Figure 7 should indicate where the priorities for reducing waste. the WMMP plan does not articulate anything but the vague "partnering with industry" and research to understand waste. Full charge for disposal (including market price of emission), requirement for use as hard fill or other priority steps should be introduced.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Focus should be specifically on Special Waste, Rubble/Concrete, Plastics and Timber as they generate the vast majority of tonnage

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Dont advocate. Introduce - lead by example and demand Govt follow. The RRN should be used for a CRS at a minimum.

RRN needs to be significantly increased as it accounted for just 5,000T of the 1.5mT going to municipal landfills. For the investment this is paltry.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Māngere-Ōtāhuhu

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The phase out on packaging bans has been doing well. So, I think it's time to promote alternatives more for the community. Many people are still unaware of what they could use besides their plastic counterparts.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I understand the thinking behind why this could work. Especially in our higher income areas. However, I wonder if illegal dumping statistics was included in this research. South Auckland already faces the issue of illegal dumping and most of these items are household/family/baby items. It's clear our families can't handle the excess waste. Also, it would be interesting to see if Auckland Council did a study based on volume rather than weight. I am certain most waste in the landfill bins are actually packaging & household item waste by volume. Further in this response, I bring up existing issues that contribute to why fortnightly bins SHOULD NOT be introduced until better solutions are created for non-recyclable packaging.

Here is a suggestion.

We should change our bins to crates of the same size first before implementing a fortnightly collection. Crates are see through, so everyone including waste collectors know what is in the bins. They are also cheap to implement. An issue would be the trucks picking the crates up. However, switching to a manual system is the solution. This increases job opportunities & quality control. Furthermore, this cuts costs on machine maintenance. It could potentially help save money in the long run.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Great step in the right direction!

But I also have some suggestions to that as well.

Before giving resource consent, existing homes on properties should follow this process in their construction plans!

Resell / Deconstruct & Divert / Landfill

Most existing homes are bulldozed! Nothing is diverted and contributes to the landfill.

Another suggestion is ensuring that developers have a waste minimisation service to guide them through the process.

Upskill wastewise advisors in the C&D Space?

Creating a department that focuses on this area?

Create a waste diversion guideline for all developers & residential (showing all the places developers should take their waste)

Residential places that are in development are rejected from recycling services because they are not commercial businesses! Individuals working on home projects need a place to divert their waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great start! Another suggestion.

In terms of plastic packaging for vegetables. These plastics should be phased out & replaced with paper bags in supermarkets. It's very possible. Local vegetable & fruit growers use bags & cardboard boxes, why can't our supermarkets?

Manufacturers and distributors should be responsible for these plastics since they cannot be recycled for residents.

Also, for already wrapped vegetables, why can't these be unwrapped at the counter and kept at the supermarket? Or inform buyers that they must unwrap the plastic before purchase? That makes the distributors responsible for the plastic. This could also become good quality control for the Soft Plastics Recycling Scheme.

I understand that this may be more of a business responsibility, but it can be enforced by creating a ban on single plastic wrapped vegetables. Then, providing the alternative.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These should've been introduced a long time ago! Product stewardship is a perfect way to engage the community. Especially our low income areas. It's an instant pay off for our people.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need better tools to counter illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We need a recycling centre in MĀNGERE! Onehunga is too far for our families! If the council wants to decrease illegal dumping especially in this area, we need a site our families WILL engage with. Considering how densely populated our area is, this would be highly beneficial!!!

Also, why are mainland rates so high for the islands? That seems unfair to me. Considering most residents are home owners or have baches on these places. They should have more responsibility for these costs. NOT FAIR!

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Need soft plastic recycling as well

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Rubbish bins need to be owned by the premises and barcode scanned when collected. Then people can choose when to put out their bins as it costs them via a debit method of their choice linked to their bin barcode. There needs to be security to stop misuse.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is not specific. Which plastic, where does it go? Why are non recyclable plastics and materials not being heat furnaced into usable products?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Back to 1950s and 1960s. Finally.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sturges and Simpson Roads in Henderson have daily dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

4. Any other comments

I live in an apartment/town house complex in west Auckland. Firstly west Aucklanders are the only parts of Auckland that use bin tags. I hear a lots of comments against this not being fair to west Aucklanders, as they are still paying for a bin tag and also waste removal in their rates

Also where i live in an apartment, the council WILL NOT collect our rubbish/recycling waste, so we have to use, and pay for a commercial waste removal. However we are still charged in our rates for for waste removal, which we are not able to have access to. With so many of these complexes going up, those living in these complexes, should not be charged in their rates if the council will not collect their rubbish waste

maybe changing all of Auckland to bin tags or other user pays scheme and not double charging people also in their rates could be another option

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: While it makes a catchy slogan, the objective of zero waste is not realistic or achievable. There will always be waste from households that is not recyclable, reusable, repairable. Household rubbish is dictated to by the types of materials that they receive from businesses as part of the general purchasing process. This goal needs rewording - "Waste Minimisation" or something ....

The thought that households can simply reduce the bin pick up to every 2 weeks without increasing the size of the bin (except if we pay more) is not feasible. The generalised statement that most households will be able to do this has no evidence. At our residence we currently have 2 adults; we compost our own vegetable mater; use the green waste bin from council; recycle materials into the blue bin and then the remainder goes into the red lid bin. Most weeks this red bin is nearly full.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

At our residence we currently have 2 adults; we compost our own vegetable mater; use the green waste bin from council; recycle materials into the blue bin and then the remainder goes into the red lid bin. Most weeks this red bin is nearly full.

A fortnightly collection will make for a very stinky bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There may be significant improvements that businesses can make and this is potentially realistic - businesses will be able to tell you more - they need the infrastructure and places available to enable this to happen though.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes I agree - but also we need to make it easier for people to manage their waste. It makes no sense that taking extra rubbish to a refuse center costs so much. The costs is prohibitive and so people will just dump rubbish in our environment. Another idea to help is to have large dumping spots/ machines where people can take their rubbish (bagged) and pay $2 or something small to have it taken in. They have this system at Matarangi on the Coromandel and it works very well. We must try and make it easier for people to do the right thing with rubbish.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I am inclined to support the idea in principle. However I have concerns about two aspects of fortnightly collection, based on past experience with specific situations:

1/ I have in the past had to use up a large proportion of my bin volume when disposing of moth vine pods collected from the adjoining public reserve. This will in future severely limit the amount of space available for our own household refuse if collected only fortnightly. Inability to send the pods to waste will encourage the spread of this pernicious weed.

2/ We have a problem here with preventing infestation by vermin (rats and mice) and have to operate a trapping policy. The dead animals have in the past been placed in the refuse bin -- and they can cause a severely unpleasant smell. I would hate to have to tolerate such a stench for up to two weeks.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The basic networks and services for a circular economy don't exist on a widespread accessible scale, and creating a few community hubs or relying on voluntary services is not going to change behaviours significantly. All council/public buildings should provide drop-off points for difficult to recycle materials that should not be going into waste streams. All businesses should be responsible for taking back and paying for the disposal of the goods they import and sell. A stronger emphasis should be placed on the prevention of waste by not creating it in the first place, rather than figuring out what to do with it once it is created. Creating a culture of zero-waste in a consumer oriented society, is an attempt to transform values. People won't change/compromise on their values unless they have a compelling reason to do so.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Bring forward the timeline on the fortnightly rubbish collection proposal. Offer a one-off, low-cost compost bin to properties rather than producing more and larger bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There should be much heftier charges for C&D waste. The waste of building materials is horrendous and homeowners should be taking this into consideration when contracting builders.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If you target the producers, manufacturers, and sellers of inorganic waste streams, you may achieve more and quicker in these areas.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I don't see the central government being all that helpful.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again, I don't see central government being all that helpful.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Keep weekly collections especially in the Waitakere Ranges Heritage Area. We get tons of rubbish and every kind of waste you could think of thrown on our roads, verges drains. creeks and streams. The Council is not the speediest people/organisation at removing this often smelly and offensive garbage.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: People should be able to select or purchase unwanted materials on special areas of building sites.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Just move quickly to do this please!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: New Zealand used to do this many years go and should restart the CRS immediately!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This needs priority because the Waitakere Ranges Heritage Area does not get enough prompt litter including bottles, removed quickly enough.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Don’t know

Tell us why: Don't visit there much, but it needs greater attention to removal of plastics!

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Don’t know

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Don’t know

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less waste going to land fill the better

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We recycle, use for waste collection and compost. On a weekly basis we often end up with one small rubbish bag going to the landfill for our family of 5. Seems a waste of effort to collect every week

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We have had construction around our place and I have been appalled at the waste generated. No apparent thought given to what could be reused

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Franklin

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Construction waste and paper waste could be banned from landfill. The use of these materials in biodigesters to generate energy is viable and in use in many parts of the OECD.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Before rubbish collection frequency can be reduced there needs to be broader education of the community about how to reduce their waste. I see households in my area putting out multiple rubbish bags each week. Diversion of food scraps is not enough and could lead to such households engaging in illegal dumping.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: But this doesn't go far enough. Ban this kind of waste once alternative uses are established e.g. biodigester constructed in a public/private partnership model.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Options for recycling especially for textiles are not easily accessible in Auckland - this must change.

Plastic recycling responsibilities should be shouldered by manufacturers.

Composting at home or at community composting areas would also help, along with more education about home composting.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Instant fines as well as public naming of those dumping where possible. Social pressure is also helpful and relatively cheap to create.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): NZ Green Building Council

Local Board: Regional organisation

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It would be useful to see more systemic thinking.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The proposals seem quite piecemeal. The NZGBC suggests thinking about systemic change instead. One way would be to incentivise lower waste construction. Auckland Council currently has partnership status for developers. This is highly valued. A suggestion is requiring those that have partnership status to deliver less waste to landfill in the homes they build. You could also ask them to build to lower carbon healthier standards in return for this significant benefit. That way you are transforming how builders build in order to normalise designing out construction. This could be evidenced with Homestar certificates at build completion stage therefore ensuring that the reduced waste to landfill does take place. Evidence is required otherwise Homestar certificates are not provided. This would also mean lower running costs and lower carbon homes for the kiwi families that end up living in these homes. I hope that helps. Happy to discuss further.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We are a family of six and have full rubbish bins on weekly collections. We also have an overflowing recycle bin on fortnightly collections. We won't be able to wait for fortnightly rubbish collections and will need to locate alternative sources to dispose of rubbish. Fortnightly collection is a stupid idea as we are already on a "pay as you use" basis. Another stupid idea from Council.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: we already use the 120l Bin and only put is out every 2 weeks. We also use the food waste bin and put out one mini caddy(bag) full every week. that amount of food waste has made no difference on how often we have to put out our bin as the VAST MAJORITY of our rubbish is unrecyclable packaging and contaminate recyclables. The food waste service has literally increased our waste costs by 50% BECAUSE OTHER PEOPLE CANT BE BOTHERED and now you want us to Pay More again and have no alternative because we cant opt out!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Sick of subsidizing businesses

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I support this if it's affordable. I don't, if it's not affordable, increases costs and would increase rates

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food waste bin process if inefficient and not cost effective. Many people do not use it or can't use it eg apartments. To remove a weekly red bin collection is not efficient, and is not desirable.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I support this if it's affordable. I don't, if it's not affordable, increases costs and would increase rates

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: With the amount of illegal dumping already happening, I feel that changing the rubbish collection from weekly to fortnightly will increase illegal dumping. This will cause more harm to the environment, whereas if left to a weekly collection, at least services are collecting from roadsides curbs rather than some park or in much worst situations in a creek. Perhaps have an incentive for people to recycle items rather than resorting to a landfill, have some sort of recycling station where people can get some credit/funds for recycling. Great job with the food bins, that has encouraged a lot of families to dispose of their food scraps accordingly

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Construction and demolition companies should be paying an extra fee for the waste they produce and look at materials that either can be recycled or re-used.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I definitely support this, I think more people would be more onboard to dispose of their rubbish correctly and make a bit money in return.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I want to see that 13% recovery of recycle-able plastics from households lifted. Reducing the number of plastics types to 3 to bring Auckland into line with the rest of the country is unfathomable and should be overturned. As the countrt's largest city we should be leading the way and bring the rest of the country with us.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Given that only 20% of waste comes from households, then achieving a 30% reduction in total waste implies that most of that will need to be achieved from commercially generated waste. This seems unrealistic given the tools you have available and the timeframe you wish to achieve it. It has taken you 14 years to implement the current waste services (which you present as not fully rolled out). I can't see you being able to meet your target within the next 6 years.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: All you will do is encourage unintended consequences like people cramming more into their rubbish bins (compacting waste before it's put in the bin), putting in into neighbours bins, illegal dumping, or dumping in public bins. People will just throw it out on the curbside, in parks, or vacant lots, and you will have to pick it up anyway.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Council efforts are going to be very limited. Businesses will only divert materials if it is financially viable. In the medium to long term any increased costs for construction will only be passed on to property owners and make housing even more expensive than what it is.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: You are going to need to, particularly if you shift to fortnightly rubbish collection.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: The region-wide waste subsidy should be removed. They should pay for the full cost of their waste services.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: The region-wide waste subsidy should be removed. They should pay for the full cost of their waste services.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: The region-wide waste subsidy should be removed. They should pay for the full cost of their waste services.

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: The region-wide waste subsidy should be removed. They should pay for the full cost of their waste services.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We have a green waste bin (private operatives) which, coupled with our large recycling bin, home composting and our new AC food waste scraps bin, mean we have about 20litres of waste per week for 2 people.

Fortnightly collections will be fine for us.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I work in this sector (Architect) and it always surprises me the approach to demolition is to bulldoze not dismantle for reuse. Council are uniquely placed to redress this to push more for reuse of materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Support generally but plastics and packaging should be the responsibility of the manufacturers/sellers as they're uniquely placed to collect large quantities at the point of sale and also the delivery trucks should be able to return them to source instead of driving onwards with reducing loads.

The logistics industry should pair their massive sheds with smaller waste collection areas so the number of road trips can be reduced through sharing……. the way ships would always collect either new goods or materials as ballast for a return journey

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea! But be ready to defend against the same arguments that were used to get rid of the same idea in the early 1970s.

I.e. be prepared and know your enemy

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Also it should be possible to shame large offenders by publicising e.g. McDonalds this month has been found in 50% more cases of littering than KFC

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The authors of this plan are fantasising. There are almost no financial numbers - so we now allocate Council financial resources based on feelings and nice to have ideas supported by schematics.

How about a proper financial cost/benefit analysis and outline of various options to deal with waste streams

This all has the look of a manufactured problem - what is the financial cost of landfill (collection and landfill less any recycling revenues) per tonne vs these plan approaches?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You ate joking. On what planet does the Council executive think you have any mandate to charge ever increasing rates and reduce services at the same time? How about cutting Council costs first before reducing services? Start with an immediate hiring freeze and a 15% headcount reduction based on an alphabetical list of employees names including all senior management? Auckland Council have become the enemy of their constituents and the parasites are killing the host.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Stop the prescriptive central planning approach - you do not know best - provide economic incentives and the C&I waste will reduce. i have been in the C&I waste business (not in NZ) and the returns vary enormously depending on prices of various commodities in the waste streams. Also the cleaner the waste stream the more valuable - so have you considered using modern automated sorting technologies that have been developed in recent years? Also look at current robotics technologies for AI robots to do the sorting - check out Agility Robotics

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: No reasoning is provided

Organics -,there are plenty of technologies to evaluate tomdesl with these and create economic product streams including energy

This show a complete lack of industry knowledge - the stuff of a Year 1 University student - borders on the pathetic

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: CRS does NOT ensure. containers are returned

Get the facts on how this has/has not worked overseas and what the recycling rates become.

Sheer ignorance being demonstrated

Great way of adding to producers costs and helping drive inflation higher - does that seem like a priority now?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Parts of Auckland already look like a rubbish tip. Those people are responsible do need to be punished severely for fly tipping especially - making an example of a few that get lots of publicity will have an impact on many who are otherwise tempted.

Of course, with fortnighly waste collection this issue will only get materially worse - the unintended consequence

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

none

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: RWC to happen and free/low cost support /education and classes for people to learn to repair and upcycle things (electronics/clothing etc)

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Less rubbish expected.

Medical waste, colostomy bags with poo? Think this would be rubbish still?

Great to divert nappies and encourage people to convert to washable nappies where possible, again education (free or cheap) on how to reduce waste, incl food waste (online video on youtube for max reach?)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Concerned commercial waste is getting away with it, compared to residential, time to come down on commercial and suppliers to commercial for unnescary packaging etc

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great, how about e-waste though? Expensive to e-cycle, make it free or $5 per item to encoruage.

What about retailers selling us things with unrequired packaging, how can we as consumers know it's there and send a message we dont support it (apart from writing a letter to the supplier which I do).

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Litter is a big issue and esp with McDonalds...McDinals need to step up and be involved in cleaning up their consumers messd with education etc and make it cool to put your litter in the bin not the carpark or out the window...

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: In my household of 2, we do just fine with only putting our bins out once a fortnight. However, larger families, especially those with newborns in nappies, would likely not cope with such an arrangement. Is there a way to opt into a fortnightly service so that those who can hold off will do so, while those who need weekly collections can still receive them?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Regulation rolled out to companies and producers in support of reducing waste and hazardous products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: It has to be easy for households to follow , encourage recycling by moving to weekly service for this and reduce waste collection to fortnightly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Needs to be supported throughout all council policies and specified during build project requests.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Believe more can be done elsewhere too and we shouldn't forget other things by solely focusing on these. Broad messaging to those already converted on what else they can do whilst converting the masses to this focus would be ideal.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Nothing here suggests how it can be managed or policed just having the focus wont change behaviours more detail is needed on what this means and what council will do to encourage behaviour change

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again great idea but can it really be implemented without going to full police state cameras everywhere.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I agree to fortnightly collections

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree to fortnightly collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.
