AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: However the food scrap bins should also be allowed to take other biodegradable waste like weeds.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction waste is a huge portion and much of it could be recycled if sorted at source

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Domestic green waste should be able to go with good scraps

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I expect to see weekly rubbish collections. We dont want overflowing rubbish bins and smelly rubbish around the place.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Good idea to reduce this. it should not be 40% of all waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Getting rid of plastic out of landfills is good. BUT there should be more recycling of plastics which means the type of plastic to be recycled must be increased to include all plastics and not just items such as 5.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: BUT make sure there is handy local return availability.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: While I support the theory behind the option, my concern is something that is never spoken of. Many of my neighbours do not adhear to any directives even when they are provided in their native language! Even now, after even I have offered advice, neighbour's overflowing recycle bins are stuffed with the wrong things covered in food! So good luck with your good intentions - I'm not sure how successful you will be!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Again, while in theory, the plan aims at success, and is fine for our situation, I never see any of the new food scraps bins out in our immediate vicinity. We do not use it, even though we have been charged for one and have had it delivered - as we have composted for over 50 years and never throw food in the rubbish bin. The summary charging for services, whether one uses the service or not, is one reason why not only do you waste money, but why people are against everything that you do, in case they just get charged extra for it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Clean fill should never have been directed to landfil in the first place.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Your organics, containing paper and cardboard, are somewhat interesting as it is generally thought that these (clean) are recycled? The remainder, we also compost ourselves.

Plastics recycling appears to be going backwards as, we used to be able to recycle a much broader range of catagories until everything converted to a 'national' and narrow list of items.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Bigger fines and better legal tools are no substitute for having proper waste bins in parks, reserves and places where people gather or travel through. I read council comments such as some of those bins are often underutilised and this is the reason that they are being removed! Perhaps I am missing something here but there are three reasons why this is not only short-sighted, but also a sort of contradiction.

Firstly, You no doubt hope that anyone picknicking or picking up their dog waste, will take it home. If this works, it is still not reducing waste, as the litter will just go to landfill in the person's domestic rubbish.

Secondly, many who would bother to walk to a bin if they can see one, will just leave their litter on the ground. Eventually, if the council does not send staff to clean up the area regularly, we will look some of the cities in Asia and other parts of the world - a great look, I must say.

Thirdly, your rubish bin emptiers now have to probably travel the same distance as they will if there is less bins, or very similar, if not. If I bin doesn't need emptying, as it won't if in an area only used by dog walkers and picknickers, then either leave it or just emty the contents into a sack that is used for multiple bins and put the empty bag liner back.

I am sure that the figures quoted as savings are somewhat inflated by as many factors as can be found for media purposes, without any thoughts for public convenience or the look of the suburbs.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Keep the weekly collection for domestic users and not reduce it to fortnightly. I also don't agree with the stated target of zero waste by 2040. It is an impossible target so why pretend we will reach it. A more realistic and achievable target should be the goal.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps does NOT make up 41% of the rubbish in my bin. In my bin food scraps makes up 0%. I am already doing my own composting of all of my food scraps. Cost savings will be passed on to rate payers. What a load of bollocks. Council is already finding new ways to increase rates in other areas so any small savings that may accrue from any reduction in waste will be more than offset by increases in charges elsewhere. Ratepayers will not feel the benefit of any savings. Already our Mayor is signalling increases in rates to offset the government's decision to take off the fuel tax for Aucklanders.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Auckland is a city of around 1.8 million people. By global standards, out of a population of 14 billion, we are insignificant in terms of what difference we can make to global warming. Unless the other 13.998 billion people out there do there bit to reduce global warming, anything we do in Auckland is an utter waste of time!

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More affordable options for disposing of waste responsibly to avoid illegal dumping. Also a better education on people on how to dump their renovation waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Few people really need weekly waste collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: BUT we need affordable options so it is not illegally dumped.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We have to try but unsure how well this will work. Catching the bus and carrying all our stuff can be very hard at times.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am fed up with picking up other peoples litter.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

1, Since foodscrap collections started, my household rubbish consists only of soft plastic and small amounts of aluminium foil.

Soft plastic collection at my local supermarket was suspended early in the Covid outbreak and has NOT been reintroduced.

I believe council should be pressing stores to recycle soft plastics to potentially significantly reduce the total volume of material going to landfill.

2, In your summary document, you refer to the availability of 80 litre rubbish bins at a reduced cost.

How do I get one?

Local Board: Waitākere Ranges

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: no more products in any shops wrapped in soft plastic.

an additional 25 dollars environmental tax on fridges and freezers to be used for the recycling of those products.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: reduce cost of collecting waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: i like the idea but think this will ingrease building cost

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: organics, plastics, paper, glass is easily separable but all it will require more sorting.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: the user pays extra if not returned

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: high fines needed, no warning,

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Support - but have reservations about the food scrap bin. I found the bin wasn't robust enough (especially when thrown on the ground after being emptied). Plus the bags could rip/leak and on one occasion in the hot weather contained maggots - despite putting it out the week prior.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Recently saw how well the CRS works in Scandinavia; hardly any containers ending up as litter in the environment compared to NZ.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean up shoudl be a priority - not just punitive measures after the dumping has occured.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Generally supportive of this ambitious plan. Prioritising the top of the waste hierarchy is key.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Product packaging and quality is one if the biggest issues, fight the issue at the source.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already have a large bin due to our adult kids also living with us due to the cost of finding their own place. We fill the large bin every week, and put no food scraps in it. Fortnightly will be too long. It will also stink due to placing pet waste in it for up to 2 weeks.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: New clean materials can be re-used e.g. for DIY, remove this big commercial waste from landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Especially green waste, provide a solution for it to be turned into compost at commercial scale. Many people do not have the space or time to run an inefficient home compost heap which just get neglected and rot and attract flies, worse than sending to a landfill.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: It sounds like council does not want to do recycling anymore? Should be more efficient to do mass pick-up and sorting rather than running yet another scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You are wasting your time, you do not catch the people that litter. The boy racers that used to live next to us constantly dumped tires in the park across the road, not even Police could do anything about it because at 3am there is no witness... The other day a double mattress got dumped there, no one knows where it came from. The expense of getting powers to fine will be much more than actually getting the fines issued and then getting it paid.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: This is a central government responsibility and should not be used by a local council to alter its voters behaviour

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Other changes you are making or have already made will increase to amount going to landfill. In particular, the number of types of plastic that can be recycled or go in the blue bins has been halved. The only place these can now go is into the regular rubbish bin, increasing the amount of trash that now needs to go to landfill.

Although the food scraps is a good idea and needs to be supported it, there is still a need to have smelly items put into the normal collections. It will be best if these remain weekly.

Other areas have introduced fortnightly collections. This is irrelevant as their circumstances are different and the changes are not supported by many in the community. These changes in the other areas an easily cause increases in illegal and fly tipping by people who only visit their homes their occassionally. It is a bogus comparison.

.

My recommendation is that we retain weekly kerbside collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not sure about textiles

Food scrap collection is great. I use it occassionally for food I cannot put into my compost bins. However I think it is very useful for people how do not or cannot have a compost bin.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Transfers costs randomly onto other people. These should be recycled

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Instant fines should never be considered as it can lead to corruption or petty point scoring on neighbours. Retain the normal judicial process or even speed it up.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Do not believe in this strategy. It will only mean more rubbish on the streets in our areas. It's already bad enough.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: More pressure on business, and ultimately employees.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Hi

On Great Barrier Island we have public holidays and are a tourist destination

Especially during the peak summer time

So during these times a 2 weekly collection will be a great rubbish problem for many of us who have many extra visitors at thes times

Also visitors and bach owners will be leaving rubbish at curbsides for potentially 2 weeks

This will attract rat's and rubbish blowing away in the strong winds we get regularly here

Have you considered the rubbish problem that will definitely occur here during those times

We already have a problem at this time of year let alone it changing at these times to fortnightly collection

So perhaps there can be a sensible solution and during these peak holiday times can be weekly collection please?

Cheers Nikki Wimsett

Great Barrier Island

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Prioritising the actions at the top of the waste hierarchy is an ambitious and necessary direction that is evidence-based and upholds the rights of citizens to a healthy environment. However, recycling is a riskier direction for some materials, such as plastics and plastic-associated chemicals. Recycling diverts attention away from the invisible costs of waste (illustrated on page 5 of the snapshot) when closed loop circularity is unattainable, the costs of recycling and the poor recovery and recycling rates seen here, and internationally.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support fortnightly rubbish collections and action to divert other items from household rubbish. However, these actions need to be balanced with advocacy to stop waste getting into households in the first place - source reduction, re-use and right to repair are key to achieving the 2040 goal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is an opportunity for big wins in this space, especially if the main contractor companies operating in Auckland are onboard and take effective action. However, contractor/builders are directed by their clients and compliance measures so it would be great if C&D waste measurement, monitoring and reduction was mandated as part of the building consent process.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Particularly plastics (and packaging and textiles made from plastics) because the polymers that make up plastics, as well as the vast number of chemicals used in plastics, are not only in land and water, but in the air, human tissues and bioaccumulate in ecosystems.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I support shifting to producer/polluter pays, however, there is the risk that this leans too hard on recycling rather than re-use product stewardship schemes. If recycling rates of single-use plastic bottles suddenly increase, do we have the infrastructure to recycle it all? Does it continue to be shipped elsewhere with unknown consequences? And does plastic get recycled, or does it get down cycled into a lesser quality material, perpetuating the ongoing (and increasing) use of virgin plastics?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support collaboration with locals to come up with solutions that help avoid the need for punitive measures.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Supermarkets should play an important part of waste minimisation - much household waste and recycling is purchased at the supermarket, particularly single-use plastic packaging. They have influence in supply chains and must be part of the shift to' top of the waste hierarchy' solutions that go further than the recycling. Instead of 'encouraging' or asking them to 'consider' refill or reuse systems, how can this plan incentivise more ambitious actions to be taken by these powerful players?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Using our recycling to remake useful products for example recycled shopping bags etc.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Never in my life living in New Zealand we had ever had fortnightly rubbish collection. You will have a lot more rubbish to collect and may require more than one collection truck to collect and there will be more illegal dumping around Auckland because of the long wait for rubbish to be collected.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Reducing waste is good for the environment

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good because it's targeting toxic waste that needs to be addressed

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes this will encourage everyone to recycle also if we can adopt what Australia has where they offer cash for recycling returns.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People should be given fines for illegal dumping and possibly court orders

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: We should adopt the same rules for our islands

4. Any other comments

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: But as a large multigenerational household we would need a larger bin or a 2nd bin

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Do need to be careful about re-use od demolition material. Need to ensure no asbestos and lead paint which is common in many older buildings.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We need weekly rubbish removal..Whoever suggested fortnightly should be offered alternative employment.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps DO NOT make up 41% of our rubbish. Who assembled this statistical nonsense.?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: If items can be sorted and used..I am all for it AS LONG AS WE HAVE SOMEWHERE TO PUT IT.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Just don't ask me to sort it out.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Increase penalties.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why: Barge it to one massive dump with at least a 100 year life span..whilst creating additional land mass.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why: above

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why: above

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why: above

4. Any other comments

In American they instituted a waste plan, where accepting that anywhere you decide to create a massive land fil will create objections, the accepting district would specifically benefit from a fund deriving from a special rating impost, used to create new social facilities and services specific to that district... It worked a treat.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We should all be thinking of how we can reuse, repurpose, donate and minimise our waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Changing to fortnightly is definitely going to encourage more illegal dumping or people dumping their rubbish in public bins. I think the effort should be going into educating and incentives to encourage more recycling, repurposing, donating and minimising wasted.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I see so much construction waste in the new subdivsions in our area. Alot of it could be used by others if it was advertised somewhere.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good idea.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Very much support this plan. Manufacturers need to be responsible for the product they are making.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People need to be deterred from illegal dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Its not practical to have any white wear or electronic devices repaired as it's cheaper to buy new product when they get old or break down.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Manufactures continue to wrap their products in packages that require to go to landfill. Plastic, glad wrap and single use plastic bags are still being used in Supermarkets and convenience stores. Fast food out lets continue to use plastic coated paper for their cups and packets. Polystyrene packets are also used in cheaper food halls.

Food Scraps: A noticeable increase in Rats and also Dogs getting into curbside rubbish on rubbish collection day. Seagulls also.

On collection on windy days the food craps can be seen all over the footpath and road creating on big mess.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: this is just another obstacle and possible cost to builders, contractors and home owners.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: However once again. What is the council going to do to ensure manufacturers, food providers and other retail out lets have zero packaging

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: McDonals and the like need to be held more accountable. However who will police this?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I am vehemently apposed to fortnightly rubbish collections, I am capable of making a decision of what to put in my rubbish AND when to put my rubbish out, usually every 3 weeks or longer as I am on my own. All home owners pay rates to have rubbish collected, it seems the more rates we pay the LESS we get. On one hand we are being told to recycle and re-use and one the other you're saying put more rubbish in land fill etc. lids. If there is a lid that is recyclable I will be putting it in the recycling.

Have you really thought about the ramifications of the larger families in neighbourhoods? The socioeconomic area won't matter, a large family is always a large family. What about families taking care of sick, infirm loved ones and those with special needs that require diaper/medical dressing changes etc.? What do you think happens to that rubbish. It can't sit around for weeks on end! Have you thought about the consequences of overflowing rubbish?? Rotting rubbish not only creates offensive odours but also attracts disease carrying vermin, cats, dogs and birds etc.

picking though rubbish and dragging it around neighbourhoods. Are we going to go back to a time where rats start spreading disease.

Many years ago before the so called "super city" I worked for one of the councils, household rubbish was collected weekly and for quite some time inorganics were also collected weekly which reduced the amount of illegal dumping, which is another issue to be addressed. Back then incidents of illegal dumping were rarer than they are now.

I have lived in South Auckland for 12 years now. Over the past 6 years illegal dumping has a become worse. Every back road in Manurewa and surrounding suburbs has illegally dumped rubbish whether it is household bags, furniture, whiteware and car parts. What are you doing about that? The rubbish is still there, I don't see my rates cleaning it up.

These so called solutions are nothing new, they have been around for a very long time. During my childhood and adult hood we had paper and glass recycling which was frequent and worked well until someone in their infinite wisdom put a stop to that. Maybe instead of giving people a "plastic" green bin for food waste that also puts an additional diesel sucking heavy vehicle on the road, now bringing a total of 3 vehicles on the road each week to collect refuse, WHY NOT consider supplying residential houses with a nice compost bin they create their own compost with. Teach people how!. This would also help them feed their families in this cost of living crisis rather than buying compost from scraps they supplied council back off the council to grow food??? Apartment blocks would of course need your little "plastic" bins. Has the council considered the manufacturing costs of the bins and WHERE they are manufactured, the carbon emissions etc. associated with it all.

Very disappointed with the bureaucracy, think about all the possible ramifications before having a knee-jerk reaction to an idea. Things that have worked well in the past could work again.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why: The only feedback I have is that user pays for rubbish should be retained and expanded. Moving to rates funding is a retrograde step and does not incentivise waste minimization.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste

disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would like to see all lids recycled. Anything to reduce landfill.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It will provide an incentive to reduce non-recyclable waste. Admittedly I live alone and my red-lid bin goes out about once a month.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I favour redoing an existing building and making appropriate alterations.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am all for reducing landfills especially reducing emissions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I have been concerned for a long time about plastic bottles which end up shipped to China or SE Asia and virtually dumped or burned.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I arm myself with a 'litter bag' and am appalled at the casual attitude of people who leave sweet wrappers and masks, for example, on the footpath. I think we should follow Singapore's example.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Would help if we had a food scraps collection. Our section of the road has 4 houses with no collection yet the trucks drive 300 metres of our road passed our 4 houses to get from one subdivision to the next to collect food scraps.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Lots of construction around us. We see skip after skip heading off to the tip, no recycling even tried.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Unclear how Auckland Council intend to actually implement this change.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will lead to a massive increase in illegal dumping, and more litter in our streets and communities.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Sounds good to me.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Go for it.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support in principal but how will this work in principal?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: People who litter will not be deterred by instant fines - how will these be enforced? I believe this will be extremely ineffective.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I'm keen to see greater care for the environment lead by council.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: i already only put out the red bin fortnightly so I agree that fortnightly is fine. It is also very important that the whole city gets the same options for waste collection.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: If C&D waste is 40% of waste it seems logical to focus strongly on this.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Important to lobby central govt to stop products that are not flushable such as wetwipes, promoting themselves as flushable

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Would like to see more pressure put on companies who produce products that can't be repaired / produce products with unnecessary packaging.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this but what about restaurants/fast food outlets like sushi bars etc that produce so much single-use packaging that goes straight into rubbish bins - surely the council can require them not to use anything that doesn't go into compost/food waste?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It needs to happen fast!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It makes sense, given food scraps are now a separate collection. Together with recycle collection and the many soft plastic drop off points, the traditional rubbish collection is likely half the size it was.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I believe this could lead to “dumpster diving”, which would cause littering.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think being able to recycle is fantastic, BUT my worry is for plastic that cannot be recycled, I run a small volunteer (6 retirees) who "recycle, sell and demolish electronics. Old computers, household electrical goods. printers etc, There is upwards of 2 x 240 litre wheelie bins of plastic components that do not have a 1,2 or 5 stamp on them so all go into the rubbish bins, At present we spread the plastic around about 3 120 litre rubbish bins and I see your proposal is to allow us to have 240 liter bins at AN EXTRA COST!!!!. NOT satisfactory as we are a charitable organisation with all our profits going to food banks, church charities and church missions. If there is going to be a saving by introducing 2 weekly rubbish collections surely that saving should be passed onto those of us who have to have a larger bin, Taking the plastic to a transfer station is not an option as we cannot store it anywhere, waiting for an inorganic collection 6 monthly presents impossible storeage problems. .

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: see above

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: see above reply.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Nowhere except RUBBISH wheelie bins to get rid of unrecyclable plastics, !!!!!!!!!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I come from an age group who used to run bottle drives, Tin. alloy can drives to raise money for scouts etc,

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Wonderful Idea, as long as 240 litre wheelie bins are available AT NO EXTRA COST.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

EASTVIEW ELECTRONIC JUNK PROJECT

They call themselves "a few old fellows mucking about" but the group behind the Eastview Electronic Junk Project (EEJP) is raising hundreds of dollars for mission.

The idea of dismantling, recycling, scrapping and selling electronic junk as a fundraiser began when Bernard Bateman received a call from a former workmate.

"I had worked for Telecom for 50 years. After I retired I got a phone call asking if I wanted to remove an old telex exchange and scrap it for charity. I had been installing telephone exchange equipment so they figured I could pull it out," says Bernard.

Bernard at work dismantling dental equipment

He chose Habitat for Humanity as the recipient charity and, with ongoing donations of surplus equipment, made quite a lot for them. He was joined in the project by retired Air New Zealand Instrument Engineer Tony Margetts and Kevin Walker.

"Kevin works for a dental equipment repair firm. When his boss heard what Kevin did in his spare time, he told him to help himself to their jumbo bin. As a result, we get old dental chairs, sterilisers and x-ray units.

"But it didn't stop there. When our project became known by our friends at Eastview Baptist Church, our church administrator suggested there might be surplus computers etc. lying around in people's homes.

"After a couple of notices in our church newsletter, we received quite a lot of old computer and other electronic equipment from church members and friends and within a couple of weeks had raised $200 for the New Zealand Baptist Missionary Society," says Bernard.

A visit from Tranzsend's Andrew Page to Eastview Baptist for Prayer & Self Denial drew a trailer-load of surplus electronic junk from Carey Baptist College. Since then EEJP has donated a further $600 to NZBMS.

"It's lots of fun and keeps me off the streets!" says Bernard. "If other 'old fellows' in other churches want to start this sort of project and need pointers I can give them some contact details for disposing of the dismantled surplus equipment." You can email Bernard at bernard_verna@xtra.co.nz.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I like the concept of recycling and reusing items for repurposing

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have a compost which is very well used, most food scraps are fed to wildlife and our rubbish bin is always full. It's a struggle with our fortnightly recycling bin also - I try to purchase items with less packaging but I believe this is our biggest/most disposed of item.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I think these items are harder/bigger and more expensive to dispose of by the council and would like to see tighter controls as dumping is a major problem too.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: To help reduce greenhouse gases

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I like the use of the public recycling bin ranges and enjoy teaching our children (and being taught too) about how to correctly recycle items

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Most days it is heartbreaking to witness this and I feel sad about the council having to revisit sites every day

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Not attainable. There is no such thing as zero waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: storing your waste in your freezer is a no no. Militi units need a dedicated area for cleaning. Water charges are increasing.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: However, I have no faith in the disposal.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: How will you control imports?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sounds great but historical evidence is not good.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: How will it be run? Cost effective?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: Will it be cost effective? Subsidized by Auckland?

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

How will this save money?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Planned obsolescence of consumer goods needs to be lobbied against.

Recycling is a low preferred option, would rather things not be created unnecessarily in the first place.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We can't and shouldn't support the creation of the amount of landfill we currently create

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction companies need to reflect the full cost of carrying out their business

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Companies and individuals need to bear the full end to end cost of products they chose to produce and use

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Can't see a practical way to implement any meaningful change in this space

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly is the minimum. Also it will lead to more illegal dumping. Council should stop having many managers.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: best way to reduce rubbish is at its source, so anything that suppliers can do is good

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Its ridiculous, food waste does not make a third of my rubbish and it's ridiculous to think that a fortnightly rubbish collection is viable, given there are many things that cannot be recycled or composted or that should have to store rubbish for two weeks. Rubbish collection is a basic duty of councils, if you can't handle this core duty, cut costs elsewhere

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There should be more focus on commercial, instead of residential

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Seems fair

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You realise consumers and ratepayers are the same people right, so you're just shifting the buck

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Easy to see why you want to focus on illegal dumping with your crazy fortnightly collection idea, there's going to be a lot more of it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Be able to book a pick up service for broken items, that can be recycled, repaired.

Be able to book a pick up service for e-waste like computers, batteries, TV's

Be able to book pick up service for soft plastics, provide a bin for soft plastic monthly collection

Be able to book a pick up of clothing and footwear beyond repair,

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I'm living alone, so fortnightly food scrap collections are easy for me

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: left over planks of wood, going rotten, and broken pipes, not easy to transport. Being able to book a pick up of construction waste would be helpful

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The growing population is going to generate more waste, as we run short of landfil space

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If this includes beverage bottles and cans, then it is a great idea to recycle what we have rather than create more to minimize clutter in the environment

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely, but then camera would have to be installed at popular dumping sites, if not have a illegal dumping hotline to catch people in the act

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: if possible, banning of single use plastics, less plastic in use generally

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I have hardly any rubbish to put out now, fortnightly collection (or monthly) would be fine for me

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: large source of waste, separation could allow a return to builders etc (eg from metals or copper)

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: would like to see a ban on all single use plastics

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: There will always be bad lazy people who dump rubbish, Cameras at common dumping spots may help

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: General support for this direction, but targets should be set against those that create one off "stuff" that can't be easily reused or repurposed. Reduce, rethink, redesign great slogan but aim at manufacturers not the end user who has limited options in how his/her purchased goods arrive.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You can't change public attitudes from the bottom of the cliff face. You need to target a the top.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Has no bearing on domestic householders

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Are we actively capturing the biogases and using them to generate productive energy?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: good idea

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Increase the penalties further

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less waste, plastic, polystyrene. Less building waste. Greater public understanding of the environment and need to reduce personal waste

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Necessary to have larger bin for family. Concern for possible more rubbish dumping in local creeks. I have been on local clean ups. However it is possible to reduce rubbish in households.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: All resources are finite there must be reduced waste. Good sustainable building products and practices essential. Some construction materials are bad for environment such as polystyrene

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Waste of food is waste of money. Left over food can easily be recycled we have compost bin and worm farm and use council food waste bin

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Single use Plastic water bottles an environmental eyesore and just an unnecessary way to portage water

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We must protect waterways from pollutants

Not sure how fines can be managed but measures to stop dumping important

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I don’t know enough about the islands

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It used to work here so why not re-introduce it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But how do you know who dumped the goods. Illegal dumping in my area has increased since the volume restrictions have been put onto the existing inorganic scheme. Perhaps if the inorganic scheme enable you to get rid of all of your stuff there would be less illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: more than 3m 4m 5m of inorganic collection changed to unlimited per household or reduced rates to $50 yearly

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: unless you would like to see more rubbish dumped in public not a very clever idea council can't keep up with the existing dumping as it is creating another problem on top of an existing problem not to mention the rat investigation all over the country

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: not at the cost of the rate payer

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: that cost should be put back on the distribution providers of that material or product not the every day consumer or householder to start sorting rubbish

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: once again the consumer rate payer is doing the 9work saying rates will decrease when we the payers know rates will increase no matter

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: the problem is created by council in the first place when inorganic was taken away that's how that happened

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support focussing on the waste materials , but I am keen to know more about what your planning to do

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think by moving the rubbish collection. To fortnightly that that will cause an increase on illegal dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waiheke

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I strongly support working at the top of the "waste hierarchy'.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I think it will help reduce waste, and most importantly methane creation in landfill, because of food scraps being diverted from the waste stream.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Less waste, more reuse.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think it is a good approach.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Product stewardship schemes address the problem at the top of the waste hierarchy.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I would like Auckland Council to specifically rule out incineration as a disposal option. I am aware incineration of rubbish is being proposed elsewhere in the country. Should this succeed it will go directly against the low waste low emission future the draft Waste Management and Minimisation Plan is envisaging.

#1423

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: You do not need to strengthen ways of working with Maori & deliver Maori outcomes to make this work; there are more cultural communities in Auckland than just Maori. WORK WITH ALL AUCKLANDERS AND STOP THE RACIAL DIVIDE

Give people a $$ rebate for home composting and don't charge them for the kerbside food scrape collections. Give people a $$ rebate if they purchase home composting systems.

Council should focus on it's core responsibilities (water & wastewater supply, rubbish, roading & parks/sports fields) and stop interfering

with Social Engineering.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Am already composting at home and reducing our effects on the environment

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Got to help.

Hate to think what this will do to the cost of building a house however.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Got to help

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Works in other cities across the world

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Punish the lazy hard

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The recent changes to what can be recycled has increased our household rubbish e.g. liquid paperboard. Until these can be recycled again we are not ready to reduce the rubbish collections

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Repairing, reusing, recycling is essential. One mans trash is another mans treasure.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: good idea promote household to voluntarily do this now

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction companies must come on board to eliminate waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Manufacturers must play their part too by minimising packaging that can't be recycled. I feel the average person is not sure of what goes into their blue lid bins

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Definitely bring in (back) CRS. Children, sports clubs & community groups used to fundraise by doing "bottle drives " in neighbourhoods this meant going door to door asking for bottles (glass) which would be returned to the manufacturer who would give them money. Manufacturers should be made to stop using plastic for drinks. Bring back glass bottles. Make NZ the first country to ban plastic bottles.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The council could start by returning all the rubbish bins they have taken out of my community!! Bit of a pot calling the kettle black scenario!!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I don't know anything about living on a gulf island so am not going to comment

It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less waste is good for the enviromment

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Its a good idea if you use the food scrap bin, we have a compost bin

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I often wonder why houses are demolished with windows, bathrooms etc are still intact when they could be removed and reused

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastic packaging on fruit & veg is such a nuisance and unnecessary, get rid of it

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Excellent idea, provides an incentive to not throw away bottles etc if you can make money from them. The can recycling that used to happen a long time ago was alaways a great fundraiser for sports teams and families

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People are lazy and its an eyesore and health issue when they just dump their rubbish on the side of the road

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Kia Ora,

I am a bit dissatisfied with the new recycling laws.

How much more is going to go to landfill because we can't put this and that in recycling.

I have expressed that recycling centers should take all items that can be recycled,soft plastics aluminum etc . Far better to have a central place for recyclers to pick up from than people having to deliver to stores and recyclers having to travel to them to pick up.

If the council wants to worry about their own environment / climate warming footprint and not New Zealand as a whole at least provide a list of where things not acceptable can be recycled and how rather than just dumping in the tip.

Fortunately I have already searched and found out that Mr metal man will take aluminum foil.

Let's be more proactive ,lead and not dictate

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: all for minimising waste and costs but lets not fall ourselves this is a cost saving measure and nothing will be passed on to ratepayers it will be absorbed by the council. Say it as it will be, no propanganda to make something seem better. be honest

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: every one should do their best to minimize their waste but how are you going to get construction to do this when easier to throw in one skip bin

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: it should be open but this is a start. all waste should be prioritized and looked at individual components

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: i support but bottom line its up to the consumer to take advantage of this and it will be the poorer economic people who will take advantage of this as others dump it.the incentive will not be high enough. make manufactururs more responsible

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: i support it strongly, i wished council did the same. i wrote to council about traffic cones dumped in Oteha vally creek two years ago, the buck went from them to Aucland transpoort/watercare and guess what these cones are still there two years later. Is that not the same pollution

instant fines - who enforces it , Auckland transport relies as watercare does for the public to do the reporting, so will this be the same. As with them illegal activities go unreported so I guess this will be the same ,maybe i could suggest more education /billboards etc

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: its more important for these communities to have good processes as they are more susceptible to pollution not only from themselves but what also gets washed up

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: its more important for these communities to have good processes as they are more susceptible to pollution not only from themselves but what also gets washed up

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: its more important for these communities to have good processes as they are more susceptible to pollution not only from themselves but what also gets washed up v

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: its more important for these communities to have good processes as they are more susceptible to pollution not only from themselves but what also gets washed up

4. Any other comments

thankyou for allowing me to do same. There should be some encouraging incentives for us who care and collect rubbish etc from streets to dispose of the same , as currently it goes into our bins

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. 2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: If you were to miss a fortnightly collection, your waste will be with you for a month. This could create odors and potential over-filling of bins. I am not against reducing the collection to fortnightly, just concerned about the waste being dumped and becoming a hazard.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Free Recycle centers where public can put recyclable furniture and household items and collect such items and not pay a large fee to take them to their local waste centre. The cost of taking such items to the dump prevents many from doing so and coupled with removal of yearly kerbside council removal has led to 'dumping' and abandoned of such items in reserves, parks and the like.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps bin, just like separate recycling bin won't work or save council money.. food scraps bins sitting kerb side all day for pick up are impractical and unhealthy and we will have a problem with not only the smell of rotting foods raps but will entice vermin. Having lived in Hong Kong and seen the rats in lanes and streets where food waste awaits collection is not appealing for clean, green nz!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Lot of waste created by small scale building franchises who cannot produce plans and material use plans at scale and its time we moved to more prefabrication and build plans that are resource effective due to production at scale. Recent 'classroom' debacle of school expansion is very revealing. Just build standard classroom with materials that have longevity and can be constructed quickly and efficiently not showpiece of some designers dreams.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The dump it all out of sight in one place is irresponsible. In our area we have recycle bins that collect recyclables separately but we know they are delivered to the same dump as our general household bins. When enquired were told it was because whole loads are contaminated by people not recycling properly so the whole lot goes to 'waste'!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If a shop sells canned drinks or bottles there should be a return option - either a return bin or deposit scheme.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: More legislation and policing is not good use of ratepayers money but addressing the reasons for illegal dumping has the potential to alleviate the problem. More free dumping options and recycle centers would help instead of continually increasing the cost for user for such facilities. Many of communities have large families and cannot afford the fees at our few waste treatment facilities.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We are a two person household, so works for us. Have heard from others that they might struggle with the reduction.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Businesses and people both need to do their parts.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If the numbers say they are the biggest then makes sense to target them.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Hit them where it hurts, so to speak.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes, yes, yes to the community collaboration. Often communities know who is causing a problem and get no action (anecdotal evidence through Facebook and Reddit lol)

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I've recently spoken to several people who believe using the waste disposal unit is as good as using food scraps or composting. Assuming that's not the case, longer term it would be good to see more education in that space.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: What about a nappy bin that can go to separate landfill?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: My waste bin is already at maximum capacity for a small family of four despite using the recycling and organic bins. All bins are full to the maximum when collection time comes and often have to be squashed downs or saved for the next week. For families this is not a viable option. We have two kids in nappies and this leads to a lot of waste. This is going to lead to making the household more unhygienic. I think this cost saving measure is coming at the cost of degrading how families live. We've already noticed the excess public litter due to reduction of bins, and this will exasperate this even further. I'm not sure your case studies are in a once case fits all, a family with small children produce significant waste that's not above normal conscious citizens. Trying to cut cost whilst compromising hygiene is not the answer. What about a dedicated nappy bin for households that need one?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Residence need options to help reduce their construction waste and dispose responsibly.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: And nappies?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I don't think this creates the benefits we seek, rather pressure on companies to create biodegradable containers/beverage containers.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As well as the reintroduction of bins in the hotspot areas. Playground should all have bins as this is where children can be exposed to waste, or hurt themselves on glass or cans.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why:

4. Any other comments

Please reintroduce the removed bins, 10million saving over 10 years in proportion to the population must be a marginal cost to benefit ration. To degrade societies cleanliness for such marginal savings per capita is a step backwards.

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Just a hypothetical situation - Illegal dumping happens when somebody buys a household item like sofa set etc. This comes in big packaging which needs to be disoposed off. Rather than disposing them off in parts every fortnightly in recycling collection, council should offer disposing off option at nominal fees to reduce illegal dumping. Not everyone has a garage or spare space in their home to keep these packaging until this is disposed off in parts.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Collect all plastics and not this nonsense of not collecting tops and certain plastics. The ones that you can't recycle at the moment should be contained in its own dump so that in the future it can be recycled as it is overseas by accessing the "plastics" dump rather than it never being accessible because it is with all the other wastes.

Also card and paper separate so it is reusable and not contaminated by other recycling eg. poorly rinsed containers.

LEARN FROM OTHER COUNTRIES MISTAKES !!!! STOP REINVENTING THE WHEEL TO A WOBBLY MODEL!!!!! MAKE RECYLING SIMPLE BY TAKING ALL PLASTICS!!!!! THE CURRENT CHANGES TO ONLY TAKE CERTAIN PLASTICS IS COUNTER-PRODUCTIVE BECAUSE IT IS TOO DIFFICULT. LET THE PLASTICS SORTING SERVICES SORT THEM AS IN THE FUTURE THEY WILL BE RECYLED AS THEY ARE IN OTHER COUNTRIES SO IT THEY ARE SORTED AND STORED FOR LATER RECYCLING IT IS BETTER THEN THROWING IT TOGETHER IN LANDFILL. NZ IS THE ONLY 3RD WORLD

COUNTRY THAT DOESN'T RECYCLE PLASTIC TOPS!!! GET REAL!!!! IF YOU MAKE IT TOO HARD THE WHOLE RECYCLING WONT WORK!!!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: FORTNIGHTLY BUT PLEASE PLEASE PLEASE TAKE ALL ALL ALL PLASTICS!!! IT TOOK ME TWO MONTHS TO FILL THE SMALLEST BIN WITH MAINLY CLING WRAP FROM MEAT TRAYS, NOW I FILL MORE OFTEN FROM ALL THE PLASTICS YOU NOW REEFUSE TO TAKE. CHANGE THIS RETROGRADE STEP. ALL OTHER COUNTRIES RECYCLE THESE SO STORE TILL NZ GETS TO DO IT

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: NO BUILDERS OR BUILDING SITES MAKE EFFORTS TO RECYCLE. THEY CHUCK EVERYTHING IN A SKIP, THE CUSTOMER PAYS SO NO INCENTIVE FOR BUILDERS & CONSTRUCTION COMPANIES TO RECYCLE. A LOTS OF CONCRETE CAN BE CRUSHED INTO REUSEABLE STRONGER CONCRETE SO THERE HAS TO BE MANADATORY SEPARATE SKIPS.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: YES BUT PLEASE PLEASE DONT HAVE PAPER AND CARD IN THE SAME BIN AS IT GETS CONTAMINATED!!!!!! USE YOUR BRAINS AND DON'T GIVE BILLSHIT THAT YOU ARE JUAST TRYING TO EDUCATE THE PUBLIC TO PUT IT IN THE RECYCLING BIN. DO IT PROPERLY. THEY CAN DO IT IN OTHERT COUNTRIES HAVING PAPRE 7 CARD IN THEIR OWN BIN SO NZ IS JUST AS CAPABLE.

COLLECT ALL PLASTICS. REVERSE THIS NONSENSE ABOUT NOT BOTTLE TOPS AND ONLY CERTAIN PLASTICS. IT IS A BACK WARD STEP!!!!!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: YES WE STILL GET STYRO CONTAINERS, AND YOU CAN GET BIODEGRADABLE CELLULOSE PACKAGING SO MAKE THIS USEABLE. ALSO DO SOMETHING ABOUT THE HUGE OVERSIZED PLASTIC CONTAINERS FOR BAKED GOODS, MEAT TRAYS IN NZ. ITS LOTS OF EXCESS PLASTIC THAT THOUGH RECYCLABLE IS TAKING UP A LOT OF BIN SPACE.

DO SOMETHING ABOUT THE PLASTIC WRAP FOR BUILDINGS AND EVEN FOR DELIVERIES FROM WAREHOUSE TO STORES: IT IS UNNECESSARY : THERE ARE OTHER MATERIALS THAT CAN BE USED

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: MORE EDUCATION IN SCHOOLS. CONCENTRATE DETENTIONS ON CLEANING UP AND ANY CAUGHT HAVE TO DO MANDATORY CLEARING AND CLEANING OF ALL ROADSIDES AND WATER COURSES

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly waste collection in Auckland is a ridiculous idea. It will simply encourage illegal dumping. We have a big bin, try to reduce our waste as much as possible but still require a weekly service. In summer, we have had maggot infestations in both our food scraps bin and our general waste bin, inspite of trying to be as clean as possible (compostible bin liners, securing the lids etc). We see weekly waste collection as an imperative service of council and would rather do without council supporting events and festivals and all the 'icing on the cake' activities, than do without a weekly collection. I think it's an insane idea. In Devonport, we are already seeing a huge surge in rubbish dumping with the removal of public bins; people do not think 'oh there's no bin, I'll take it home to fester there for a fortnight'. Just doesn't work. We have seen it in Lake Taupo where rural services were cut - people still left their dog bags etc where the bins had used to be, even though there was no longer any Council collection or bin there. As a child I saw the rubbish heaps in Naples when the Council there could not afford to collect the rubbish and the incidence of disease, rat and pest infestations, the stench etc was unbelievable. Please keep the weekly collection - and re-instate all the public bins you've removed. Cut back expenses on the frippery stuff like festivals, not the basic basic administrative services a council must provide.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea to minimise this, but you are actually encouraging it by bin removal and moving to a fortnight collection.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

A lot of this sounds great on paper and laudable in its aims, but is deeply flawed as - as we've seen with AT - trying to impose change onto people who do not operate in that manner, is just a disaster. Make your savings on the unnecessary stuff - like a Council rep in London - and keep (and increase ideally) the BASIC administrative services a Council needs to provide.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōtara-Papatoetoe

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support parts of the plan: I do not support reducing the service I receive without reducing my rates. Waste is one of the core functions of the council and it seems to be making it more and more difficult to dispose of waste. More priority needs to be placed on rewarding low waste generators. If 80% of waste is not created by residential users, why are they bearing the brunt of the changes to waste disposal?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I would support this as long as there is an increased emphasis on illegal dumping which is a real issue in my suburb (Papatoetoe). The more difficult/expensive you make it to dispose of waste, the more illegal dumping will occur

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Expect more education for consumers in terms of ways to reduce rubbish. Also expect food waste collections to be available in the outskirts of Auckland FOR THOSE who want it & an increase in recycling collections & an increase in inorganic rubbish collections so that bulk rubbish is not left lying around

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The food scraps service is not available everywhere so it is disingenuous to use this as a reason to cut back on rubbish collections. Also if a cutback on rubbish collections is even being considered then there should be an increase in recycling collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It is common sense

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The balance is not right. The food scraps collection is not available everywhere and we could recycle more if there were more recycle collections

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Doubt it will work in a practical sense. It is a nice theoretical idea

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: There should be more recycling collections and more inorganic collections or at least places in North, South, East & West Auckland where people can take inorganic rubbish for recycling, upcycling, breaking down for FREE

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Council spends a whole lot of money and provides very few services that we use weekly. Rubbish Collection is one of those very few services. To increase rates AND reduce services is ridiculous. How about educating people, cutting back on bureaucracy and implementing common sense. More recycling collections as well thanks.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Less waste can be put into the recycle bin under the new recycling rules. The plan sounds good, but it does not work in reality.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Until you have options to divert other items from household rubbish, please keep the rubbish bin collection weekly. There are strict rules in place for recycling products, therefore, the majority of the rubbish is in the rubbish bin. Two weeks of rubbish in the bin is awful, especially in the summer season. you do not want to see the rubbish bins overfull and smelly on the street on the rubbish collection day.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This issue cannot be resolved at this level. government's immigration policy gets more people come in, population growth will result in more construction and demolition activities. The so-called better use of materials, will they result in more leaky houses, in need of more construction and demolition? It is more like an excuse for more spending on consulting fees, and increasing the rates.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support punishment on litter and illegal dumping. However, the council should not cut the rubbish bin collection services and numbers of rubbish bins on the existing public areas.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Incinerating rubbish to make power like they do in Singapore

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps DO NOT make up 41% of our rubbish. We already compost this ourselves. We do not want fortnightly rubbish collection as this just makes the bin smell worse. You should also collect recycling weekly. We put some recyclable items in the rubbish because the recycle bin is full.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It costs enough to build already, without putting extra costs on this. Maybe we are better to build properly the first time, so we don't have to demolish.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: See answer to question 1

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: In the meantime, get on with cleaning up this stuff when it is reported. It can sit on the roadside or in waterways for far too long

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Regardless of what decisions are made, this is a basic function of the council and should be done effectively regardless of what it costs before all the other nice to have nonsense we see money wasted on.

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Support better recycling and kerbside rubbish collection. Do not support a reduction in bin collections.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Forcing households to hold onto their rubbish for two weeks will not reduce waste - it is simply deferring the problem and leading to more rubbish held at homes with a potential risk of increased vermin, hygiene issues and fly tipping. Working upstream to reduce the waste coming into households needs to be a bigger priority for Council.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Support the concept but do not see actual strategies from Council on how this will be achieved.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will simply increase the cost on consumers and households. We should focus on delivering an efficient kerbside recycling system rather than investing significant cost in a parallel system that will cost manufacturers and consumers. Especially when costs across the board are so high and the cost of living crisis is here to stay,

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We have waste disposer at home, but still need to dump bones or food scraps in waste bin. The small food disposal bin is not that usful thing of the size and weekly collecting will raise the unplesant smell or attract insects.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Free and frequent waste disposal for homes. Free council dumps for domestic waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Poorer households often have more rubbish collection needs as a result of owning old second hand items and older housing. Currently it is difficult and expensive to access council dumps.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: greater use of recycling. There are too many categories not currently permitted including textiles. they need to be recycled in NZ too and not sent overseas as this is counterproductive on environmental stance.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I do not use the food scraps bin. Living rurally, we feed all food waste to our dogs, cats chooks, worm bin or compost.

Support looking at diverting other items

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: As a major contributor to waste targeting this area would see significant benefit. However, for this to happen companies, both the manufacturers and the construction industry have to be fully engaged. Although a green approach is normally an indication of cost increases; this needs to be addressed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Surely that falls to the manufacturers not the government to mandate?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: good luck with that. suggest you look at supplying bins to all households for rubbish so those that live in rural communities don't pay rates AND then pay for bags or tags. Also you need to invest in better local recycling centres. The cost of taking things to the tip in rural south Aukland is excessive. No wonder people dump old mattresses and green waste (I mean for heavens sake why do you charge to drop green waste then charge for the compost at the end. Take the green waste for nothing and use it by all means)

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Work on plasic clothes and naterials needed as wee as propsed a tions

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Weely is a waste. Bigger households cab take theirs to tip ax reqirs (or have more local drop iff points) . Food scrap bin has mafe a big different BUT we do see smell and maggits after just kne week so two week is nif ideL fir food waste. The bins shoulve had a heaver top. Neec advice tk reducs issues, can we put somthing in to stl maggots et ?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Big issue, mors so in low income areas

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: You should be addressing manufacturers and resellers, my waste won't be reducing until you do.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I already have a full bin every week, where do you want me to tip the overflow if you move to fortnightly services ?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Need a plan not just an idea.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to minimise waste but its not something the end user has much contrl over ? Eat less ?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This worked before the introduction of so much plastic.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is going to be a massive issue going forward but youve removed public rubbish bins and now looking to halve collections, youre asking for trouble.

Bad people dont pay fines so the worst offenders wont change their habits.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Free recycling collection items will be expanded

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: It would cause environmental problems such as smells or increase of public bins waste. Food scraps bins are not enough to collect smelly wastes such as nappies.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I see that people with larger families may be allowed to get extra bins (at cost). This is ok. However, if you are now charging for extra bins, you should also be giving a rebate for people who have less bins. Therefore, the new rates should have a sperate charge relating to how many bins you have. For example, I have 3 flats in Otahuhu. We only have two sets of bins as we are only 4 people in 3 flats. So, we should be charged accordingly.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I see that people with larger families may be allowed to get extra bins (at cost). This is ok. However, if you are now charging for extra bins, you should also be giving a rebate for people who have less bins. Therefore, the new rates should have a sperate charge relating to how many bins you have. For example, I have 3 flats in Otahuhu. We only have two sets of bins as we are only 4 people in 3 flats. So, we should be charged accordingly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why: I think we are setting up a system that is too complicated. A complicated system is harder to manage. In Scandinavia and Germany much of the waste is incinerated to generate electricity. In this way most of the waste will be burnt and the amount of micro plastics reduced.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I think we are setting up a system that is too complicated. A complicated system is harder to manage. In Scandinavia and Germany much of the waste is incinerated to generate electricity. In this way most of the waste will be burnt and the amount of micro plastics reduced.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Tell us why: If it works in Germany and Scandinavia, then it will probably work in NZ.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why: Illegal dumping is high because the cost to dump rubbish legally is high. There will always be a direct correlation.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why:

4. Any other comments

I think we are setting up a system that is too complicated. In Scandinavia and Germany much of the waste is incinerated to generate electricity. In this way most of the waste will be burnt and the amount of micro plastics reduced. Incineration maybe the right answer for Waiheke.

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: More able to have repairs, less throwing out.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Makes sense, saves money. Larger bin option is good for those who need it

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: About time! This has been a scandal for years.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Reduce the main culprits first, then move on to concrete, which is a real polluter throughout its lifespan from production to demolition.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: About time! Should have happened years ago.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Instant fines are good, but need better surveillance. Involve community with a hotline to call or txt.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: Need serious community input here not led from top.

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Households with larger bins should pay more. At present in west Auckland I put out a rubbish bin only 4 or 5 times a year and as a result pay very little. If the prepaid rubbish tags are replaced with a uniform charge in the rates, that benefits those with lots of rubbish and penalises those who produce minimal rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: What do you mean by "making better use"?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I wonder why the shift from returnable glass bottles to disposable plastic ones was introduced in the first place. Years ago, drink manufacturers and plastic container companies asserted that there was a demand for plastic containers, without producing any evidence for this and it just seemed to be accepted. Warnings from environmental groups were ignored.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: While I support activities about reducing litter but why in earth has ACC decided to remove about 1/3 of all litter bins in parks and public places? Many people will find the existing ones and use them but a lot will just throw their rubbish anywhere. The Council's reason is to reduce costs but that contradicts the aim to reduce litter - you can't always achieve good outcomes without some effort and cost.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: this is one of your core businesses. Zero waste is completely unrealistic - YES focus on reduction, but Zero is not achieveable.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: would love to see the costings on the new food scraps program... I suspect it was/is extremely expensive - and by reducing the biodegradable component of general waste you may be prolonging the time for items to break down in landfill? I am against dropping the schedule to fortnightly - it will just increase public dumping, general litter and rubbish being discarded

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Great in concept - unsure how this will work in reality.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: in concept, I agree - however you will always have the lazy people who simply do not care. Since the change to inorganic collection, we have seen a marked increase in illegal dumping of these items. Reduction in rubbish collection will result in the same increase in littering, and dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Creating an item repair/reuse awareness in order to move away from disposables

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The households will have to keep rubbish items in bins, attracting more varmints or others

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This should be part of any company disposable plan

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Who is going to repair remodel up scale these items this will cost heaps of money to employ new council staff.. Very thoughtless.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Cost. You are enlarging the council to appease activists.

People will throw their rubbish into other peoples bins or dump it in public bins. All rubbish including recycling will be out in the same bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Good luck with that new council department and its blowout costs

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Something practical with little cost to benefit ratio

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Of course

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Nice idea but largely impractical. the cost to repair is usually too high to justify it.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: the food scrap service is a failure. At home we have a compost bin and I object strongly to compulsory payment for a service we do not use. for tenants the service is not one they use. the bins get left around full of stinking maggot infested rubbish as the tenants are not prepared to take them to the kerb.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: It has to be done in a way that does not increase construction costs and is practical.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Organics there are better solutions than the food scrap bin service - composting worm farms etc. Plastics recycling is now so complicated that it is more likely they will end up in land fill. textiles we try to put in the bins outside schools.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: it will also drive higher costs of the products and will it really mean less waste to landfill or just shift how it gets there and how it is paid for? I think you are optimistic about peoples willingness to put themselves out to deal with the rubbish responsibly given that littering along motorways and illegal dumping seems to be increasing.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: We are getting illegal dumping on our private property so if people get a fine for dumping on Council property they will just put it on private property so the problem is just shifted from Council to private landowners.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

the two weekly rubbish collection will just increase illegal dumping which is already a increasing problem. also the rubbish is going to stink particularly in summer. It should not be compulsory to use Council's services as they are not practical in a lot of multi unit situations and where tenants have to be relied on to get bins to the curb.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Despite the introduction of a food scraps bin, there is still a lot of trash, especially in a multi generational home. I do not believe fortnightly collection will be enough.

Also, there hasn't been any amount disclosed about the savings mentioned, which makes it even less worth it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: How will this be reduced? Alrhougbthe proposal sounds great, it isn't specified how this amount of rubbish will be reduced/recycled, nor how much money it would take for these new methodologies to be developed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think pushing businesses to take care of their design and development of products in a more environmentally friendly way is more reasonable than pushing it down to a consumer.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: It sounds great in theory, however there is no detail and from what I've seen over the years of council incompetence, I don't have too much faith. In 10 years time we'll find we are no better off than we are now.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We make our own compost so put bins out fortnightly so doesn't affect us too much

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's simple. If there is reward, people will ensure it's properly disposed off. We collected empty bottles as kids and took to the collection centre and were paid for it. Australia has a very successful scheme where households take their empty bottles to the collection depot rather than in bins.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fines will deter bad behaviour

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: bins now are overflowing so what is going to happen it will be dumped on the road or other people's bins and then you cant prosecute unless you can prove it we wll end up like tourists will love it

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: all batteries are to be returned to seller's otherwise stop selling them if they won't take them a large fine at once.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: how

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why: reduce packaging or must be totally

banned

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: if we get compensated those short cash will be happy

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why: what about legal right and how can we prove more lawyers have cameras every where?

No brainer

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would like to see changes at the production and packaging end, so that not so much waste is produced in the first place.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The food scraps bin is great for those who do not have a home compost bin, but I worry about places that can't have one e.g. apartments, retirement villages and some companies (what are staff supposed to do with their lunch scraps?). We ourselves do not put much rubbish in the general bin, although this is increasing because of changes to what can be recycled. I support fortnightly collection or the choice to have a smaller bin.

Better options need to be found for soft plastic disposal. This forms the bulk of our weekly general rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I did not realise C&D waste made up so much of commercial waste in landfills.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I agree with these five priorities. Biosolids are not a problem at the moment but will be when Puketutu Island is full. Can they be repurposed at the Ecogas facility at Reporoa?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: While I support this in theory, I'm not sure that a specific beverage container return scheme would deliver value for the cost of setting it up, when most beverage containers can be recycled anyway (glass and plastic bottles, cans).

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Litter and illegal dumping is a behavioural issue and I'm not sure better legal tools will address this effectively, although I support the general intent of this initiative.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Changing human behaviour is always difficult, and changing commercial behaviour may be even harder. I support moves towards a circular economy, but it means attacking the source to reduce the amount of 'stuff' produced in the first place and re-designing the way it's packaged.

#1483

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Schemes that make council planners feel good about themselves have the real possibility of morphing costs exponentially. The producers of packaging with excessive plastic and laminated cardboard must amend their ways too.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is irresponsible. Collections should be twice a week not once a fortnight.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Exactly how would you implement this? Your plan must include actionable steps otherwise it is merely posturing by council.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: food scraps should be collected two or even three times a week. the plan to pass to a fortnightly collection doesn't take into consideration hygiene-related issues. I would like to see how the experience of Christchurch can be taken as an encouragement to longer collections. Please explain with logic, not with arrogance.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We have very little rubbish .. more bags now that recycling has changed ie Tetra Pak nut milk containers .. eg 5 a week

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Too many commercial drongos do not use their brains in this one. Suggest charges increase so they get the message.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Waiheke is already doing more than most.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Producers should be shouldering these costs instead of making huge profits.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great .. how many staff will be needed to police this minefield .. slap on the wrist fines won't cut it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Just going to encourage more illegal dumping of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The excess emissions from 3 different diesel trucks to collect each household's waste is madness, moving to fortnightly waste collection is council ignoring its core function, stop funding cultural festivals instead if you want to save money.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Council needs to leave this up to private enterprise, if it's worth doing a private company will do it otherwise just more local government inefficiency will creep in.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: If council provides a decent waste collection and keeps bins in parks illegally dumped rubbish won't be a major issue.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly collections will result in much greater rotten smelly garbage, potentially overrun with insects and animals, from the much larger sitting period. Also, you have to consider that if a collection is missed for any reason, then it is 4 weeks between collections, which is too long for household rubbish. This is dressed as an environmental issue, but is clearly a cost saving measure. I would be happy with a surcharge for weekly collection with the "default" being fortnightly. A weekly option has to remain for households unless you want the city overrun by smelly piles of rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. What do you think of these priority areas?

Other

Tell us why: The litter and public dumping issue is strongly linked to the availability of public bins and alternative dumping methods. The number of public bins has been massively reduced to cut costs, which will inevitably result in more litter. What is needed is more bins, not less - perhaps place the cost on the shops (for those outside shops) in the form of a targeted levy?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: fortnightly collections is less service for more charges. You are placing the cost back on the household to fix a problem you should solve. If fortnightly then you should offer at least a 150% bigger bin for not extra cost. You will end up with most illegal rubbish dumping, bins over filled and rubbish falling out onto the street.

What is the extent of cost savings? How do you know this will will be realised vs the extra costs of dealing with the problems it creates.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Too much construction rubbish ends up on the street or flows down storm water drains. Inadequate monitoring and enforcement.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Can you enforce manufacturers to supply their products in recyclable packaging? e.g. lot's of drinks are sold in tetra packs. Surely than can switch to a recyclable bottle.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Can you enforce manufacturers to supply their products in recyclable packaging? e.g. lot's of drinks are sold in tetra packs. Surely than can switch to a recyclable bottle.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The minimization of the cost of this direction to rate payers should be part of the Statement of Direction. Councilors need to design things with the minimization financial burden on rate payers in mind. It is a constraint that need to be factored in.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: As a multicultural country, so many families are large and therefore have more waste. Fortnightly is too long to leave rubbish lying around waiting for the next pick up.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: The aim is great but the statement is silent how the cost is handled.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: This can be solved by making dumping waste at the refuse collection stations free.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We are already doing as much as we can. There will always be waste - people don't go out of their way to creat waste and if they are doing then I will assumea very small number or % of people are creating waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly pick is best we don't have to our rubbish sitting for couple of weeks. Current system is working, also creating jobs & job security for people. It seems This is Simply Cost Cutting.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Well we kiwi's have been sold on ideas that we have a housing problem (yes there will be if we keep taking on between 70k - 100k people per year) - we bound to have problems & issues with our infrastructure & system. Until this stops or slows down drastically, we will keep on Demolishing & construction will continue.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: If we can't throw rubbish in the bin then what are people suppose to do with their rubbish. Coz just putting this in place doesn't mean that people will not have rubbish. So I'm assuming council will be suggesting people to dispose of their own rubbish at their own cost however then explain why are we pay such a hefty rates. Even if people paid to dispose of their rubbish, the rubbish collection centre then still has get ride of those rubbish and I'm assuming will end up in the land fill anyway. This just Defies the whole purpose. Again I'm assuming it is all about council cost cutting so the poor tax & rate offers are again in the firing line.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not so much of litter to be honest but illegal dumping is a hugh problem that I have personally seen places and I'm sure many people have seen. llegal dumping fine should start at $1k

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Don’t know

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: We need weekly rubbish collection. We do not need weekly food scraps. It's not utilised

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We use waste disposal and composting. There are virtually no food stuffs in rubbish.

We require weekly collection

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Too complicated

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The implementation is wrong. For example food scraps, small size of bins shows its a small problem. That you need a separate collection with new trucks creates a is wasteful in itself. Around Howick roughly 33% of houses were using this initially, now under 25% (i count the bins on my walk). There are many problems in waste, food scraps is a minnow. Focus on stuff like building waste, house wraps for example, your building regs make it impractical to reclad one side of a house at a time, which can be protected with tarpaulins, rather than the whole house that needs a plastic wrap. Also you know 80% comes from non domestic sources, yet you are moving to lower commercial rates. Throw the true cost onto the business rather than households, businesses will find solutions once it costs them. Rather than the new landfill in Dome Valley why not something like the Copenhill waste to energy plant in Copenhagen? Get people on your side rather than offside with these stupid food recycling scheme.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps do not make up 41%! Look at the size of the bins, under a quarter of the capacity of the small rubbish bin. SO stop talking rubbish for a start. But many rubbish bins are full to overflowing each week as it is. Trying to force it is unwise, will result in rubbish around the city. Better to offer an optional fortnightly collection at a reduced rate (even offer a monthly at even less cost). This opt in should also be used for the food scraps, let the user pay. Overall the Council seems to have forgotten Customer focus and the reason there is a waste collection is public health. These systems are designed to work well for the Council, not those it is serving.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I would believe 40% is construction waste but this reinforces how stupid your 41% is food waste figure is.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: What other areas are there, metals would be one.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Should never have taken the refund off bottles and cans

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Agree crack down on it, but you have the power to make bylaws, just do that. No need to involve Wellington

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Customer focus is very obviously lacking in your thought process.

Plastics, its one thing to collect the recycling, but thats not recycling, focus on using it, not shipping it offshore.

Its hard to believe that 3 regular collections (general waste, recycling, food scraps) and two annual (inorganic and hazardous) is the most efficient way to collect.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I'd like to see some original thinking and not copying what the UK and Australia do, their systems are flawed especially for food waste diversion. Do we want numerous bins stacked up on driveways with more trucks on the road? Do you want to upset more households with mandatory services that are not applicable for most households who already have effective approaches to dealing with waste. Lets have some original thinking and solutions for NZ and for Auckland.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I'd seriously question 41% of food waste making up the content of a bin, in US studies this is 20%. Can you share the data source? Food waste is 70-80% water so this will evaporate and decompose over time so the volume of waste diversion is highly exaggerated.

What parts of the world are you referring to and where is the study and data source? Christchurch is in a mess and debt with the FOGO bin scheme causing health issues and social issues in the area. It is a failed system so why use this as a positive example.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need more repair hubs! Once a month with huge queues is not helping.

Follow France and ban the likes of Temu and $2 shops. The amount of plastic waste and single use items available is shocking.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Rather have weekly pick ups and only small bin options. If you miss a collection you're in real trouble. And some rubbish still rots and festers in the bin (Dog waste)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: glass collection for reuse

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: one person households only need fortnightly collection

larger housholds may need more frequently

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: unused materials should be easier to redirect to usable poathway.

C&D waste should be segregated at source e.g timber, concrete, stone, brick enabling reuse

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: plastic packaging is an insult to the intelligent. frequently it is unnecessary e.g. plastic bags of fruit and vegetables that are easily retailed loose. meat at supermarkets more

frequently prepackaged in plastic. in former times meat was wrapped by butchers in "butchers paper". dont blame the consumers. make producers and retailers make better choices

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Paper cups are unnecessary if customers could use their own containers. cafes could sell inexpesive reusable containers and be encouraged to buy back their containers

take out food retailers could be required to use standard sized containers if durable materials that could be washed, collected and reused Remember milki and fizzy drinks came in returnable bottles?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Taking litter/waste to the dump e.g. Pikes Point requires transport that not every one has. Waste disposal charges are prohibitive. Disposal of green waste at Pikes Point should be free of charges. It is an economic input to a viable recycling business producing compost and mulch

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

two kinds of waste cause the greatest irritation and cost of disposal. unnecessary plastic packaging is one. Manufacurers and retailers should be ACTIVELY discouraged from using plastic packaging. Consumers dont want or need it. Machinery that cannot be mended by the consumer or a semiskilled are an abomination. Spare parts should be easily available.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think the aim of zero waste is unobtainable and unrealistic. If council can put pressure on manufacturers to reduce packaging, and encourage packaging to be disposable, thereby lessening waste, then that would be a good outcome.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I am not convinced that the collection of food scraps scheme is cost effective since a special vehicle and 2 men have to collect the bins, and take them to a depot, from where I understand the refuse is taken several hundred kilometres to the plant where it is dealt with. Can't see this is worthwhile. I do not agree with fortnightly rubbish collections for waste. Recycling material is fine once a fortnight.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: 40% of waste is from construction - far too much. Some control needed on construction company's and builders etc.

also think shrink wrap which all builders use to cover buildings should be banned. Huge plastic usage here. Makes plastic bags in supermarkets look like

aminor issue in comparison.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastics and packaging would seem to be the No 1 priority areas to focus on

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I partially support this premise, but if the recycling of bottles and containers means that the price rises, then I am not in favour.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping should be more closely watched, but one man's rubbish is another man's treasure. When our inorganic collection was allowed to be left on grass verge, most of it was taken by general public, and this saved the council taking it all to the dump. This should be reinstated. Or have a dump area which people can take stuff to or take stuff from.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not support this. Rubbish collection is a core council service I expect from my rate payments and this needs to be weekly. Whilst I appreciate this has an impact on the environment i.e. more rubbish truck movements (albeit not much if they were electrified), I believe this outweighs the negatives. Fortnightly rubbish collection will not change how much rubbish I have to depose so why not collect it every week.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Zero waste is a great goal, there is way too much waste in the Auckland area that can be kept of land and ocean.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I only need a fortnightly collection as I compost most of our waste.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Businesses, especially small construction businesses are wasteful and can do better.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It was dumb and shortsighted to stop using reusable containers, glad this will be coming back. The sooner the better.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Hibiscus and Bays

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I will only support if Bins are larger and other waste e.g nappies prioritised. Recycling bins need to be bigger or done weekly to encourage recycling. I hope enlarging or investing in recycling plants is a priority too.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Where will it go ??

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I applaud the Green Bin Waste initiative.

Please remove pink bag idea for bin as liner, not necessary.

Soft plastics... more outlets for these please. So hard to find.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Hopefully will encourage owners etc to think about packaging.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is an issue

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I do have concerns that reducing weekly waste to fortnightly could result in illegal dumping.

And please look at the Recycling Centre in the Uk for Whiteware etc ... great place plus could take kids trikes etc to pass on plus items were repaired and sold on.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Better recycling options at multiple locations including homes, businesses and council facilities. Penalising / 'taxing' manufacturers / suppliers that use non-recyclable packaging (takeaways, supermarkets, retail etc). Refunds on containers like bottles and cans. Fund repurposing stations.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: One size does not fit all. Unfair / inequitable.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I'm sick of seeing good building materials from demolitions just bveing smashed up by developers. Quality timber especially. Fines or penalties for this sort of destruction. Assistance for good practice. Carrot and stick might be best here.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The new recycling rationalisation is 'rubbish'. Too dumbed-down and will lead to further waste and an attitude shift "what's the point?" – in the population. I myself am less bothered with being meticulous in my recycling as I know modt of it is a waste of time, let down by lazy members of the public and lack of enforcement from the authorities.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Excellent. Must be done. People need to incentivised to change their lax behaviour. Manufacturers and suppliers are key to this. They need to pay for their own contribution to pollution and waste, which would change the way goods are supplied to a n ambivalent public where a few people can ruin it for all.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: More public bins, not less. There are too many lazy people for the deluded belief that everyone is a good citizen and will take rubbish home with them (if they have a home), to be workable without fines for dumpers and litterers. People need and easier option to do the right thing.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Considering redesigning types of materials for construction. As well as reuse and repair options in this area.

Stronger efforts for environmental education on the commercial and industrial sectors.

Great job so far

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Cost should be considered on the earnings of the repurposing of the materials as well, not only on the rates. for example, if there is surplus on the sales of recycled products this should go to cover the cost of recycling.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Is important to focus on the biggest problems first

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Is important that the new CRCs are strategically located in all neighbourhoods. The better we deal with the waste already in circulation the greater the buffer for bigger solutions we have

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Cost should also be evaluated as a responsibility of each social actor

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Cost should also be evaluated as a responsibility of each social actor

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think the proposals are all well thought out and comprehensive. Retailers / manufacturers need to be brought on board to support eg business rate discounts for selling things that can be re-cycled of renewed.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: It would hopefully encourage some people not to throw so much away. On the other hand, more illegal dumping is probable.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Commercial waste is unacceptable. Lots of building materials etc are dumped in skips and they could easily be re-purposed if made available.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: This probably needs to go through a pilot. The services available to get rid of substances like paint for eg are non-existent. So what exactly are people supposed to do with it ? You can't change people's behavior without offering a suitable alternative.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good idea. Though costs will ultimately end up with the purchaser.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's a growing problem and it needs swift, decisive and meaningful penalties. The possibilities for illegal dumping in suburban Auckland hasn't yet taken a very serious hold, but it will in places like towards Clevedon etc Easy to dump out that way, and people already do.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Greater access to items that can be reused, repurposed or repaired

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The majority of bins are full to overflowing now, a larger bin will just encourage more waste. People will fly tip rubbish if it is not collected weekly. People will still put runnish out for collection each week and leave an unsightly mess on the roadside

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Much of what is thrown out by building companies can be reused if it was made available to the public at a reasonable cost. Too much good timber and other products gets thrown away at present.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: All these products can be recycled in some way and do not need to go to landfill

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But I am against the process costs being passed on to the purcchaser, it should function at nill cost to the consumer

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It looks unsightky and spoils New Zealands clean green imak=gae for tourists, mind you the council taking away many public litter bins seems to run contrary to this policy

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A reduction in plastic use, a widening of the plastic you recycle, a method of organic material recycling that doesn't involve road transport across half the island!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I'm in an apartment block and we pay for our own rubbish removal so it doesn't really affect me but it is a good idea in principle.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: What is not to like?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We got along for many years without plastics, we can again. A ban on plastic wrapping in supermarkets would be good - but probably outside Council's powers (but you can press the Government for it).

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I participated in a local clean up at the weekend, cans were a major contributor to the bag full I collected.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fines need to be high enough that the few who get caught moan loud enough for it to be a deterrent to others. If they are too low, it just becomes a cost of disposal.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Upper Harbour

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: For starters, you need to make things easy for people. Currently, anything outside of general waste or recycling, it is often difficult to know what to do with different types of waste - this results in most things just being put into the general rubbish collections.

We are all very busy people, so if you don't make things easy, people won't go out of their way to do it...it's as simple as that.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this, but I highly doubt ratepayers will see any cost savings passed back onto us. All the council want to do is take more money from us, and deliver less.

Having said that, now with making recycling more complicated (i.e. less things can now go into it) you're going to see more stuff just get thrown into general rubbish. Again, the more complicated you make things for people, the less likely they will do it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A good start would be like what they have in Australia. 5c or 10c for every aluminium can.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: If you want to stop people dumping rubbish, then stop taking away bins from public places.

If getting rid of waste wasn't difficult or expensive, people wouldn't have a need to dump it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I cannot stress enough the idea of making things simple for people. If it's too hard or complicated, the masses won't bother.

Take recycling for example.

We should just be able to dump all plastics, glass, paper, cardboard, tins, cans, etc in here (not just certain types, and without lids). The sorting should be done after it's all collected and then recycled accordingly.

MAKE IT SIMPLE.

#1521

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The Council has a core responsibility to provide a robust waste collection system. That means weekly for basic rubbish and fortnightly for recyclying. Definately weekly for food waste. If it becomes 2 weekly we will refuse to cooperate due to the smell and possible attraction to vermon. We also require the reinstatement of the bins removeed especially the recyclying bins from areas such as Devonport. People do not take their waste away with them, never have ,never will in general.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We fill a rubbish bin each week and utilise the recyclying . A decline in this service will create overfilled bins and nuisience of rubbish blown around the streets from over filled bins.Please save mobney by stop building $500k raised walkways and reduce the nice to have(cycleways) and focus on core services such as rubbish and waste water.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is so much waste in the construction industry that there is a need to rethink. Plastic wrap should be replaced by reusable products , the pallets recycled. The list is very long and well past time to address.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastic polution is a major problem now impacting on our marine spieces. We need to work collectively to address this polution it is immense especially as you navigate Auckland Beaches. We need a solution as to how to recycle plastic and reuse. In Canada they build walkways from recycled plastic.It works well.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I did bottle recovery for money as a young person and recyclying bottles is prefable to one use cans. All for the recycling component

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is a measure that is desperately needed. To enforce we need to install cameras and issue then enforce fines. I would love to see a return to the BE A TIDY KIWI campaign. Educate but enforce as far too many litter without consequence. We need to install cameras to both deter and to help enforcement.We especially need to focus on areas of Council Land being utilised for drug dealing which is always accompanied by a great deal of rubbish.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: I am completely oposed to Co Governance which sadly unpins your programme That is a problem but improving waste management on our Islands in the Gulf is in the interest of all our community.Focus on waste management, not Political agenda (Co Governance)

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: AS Above

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: AS Above

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why:

4. Any other comments

The Argument that people will take away their rubbish is a complete falsehood. Please reinstate the bins especially the recycling bins. It is a farce to promote recycling then take away the bins .

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Franklin

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Good direction and supported fully. Why not include mandatory instruction on waste reduction in primary schools when kids are at an age where they absorb sensible/common sense ideas readily. The instruction can be calibrated for age and content can be adjusted as children grow older and can appreciate more the logic behind the thinking. If this works continue the strategy into secondary education.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Makes sense. Why not have council make simple composting systems available on request to house holds at minimal cost which will then eventually work towards reducing weekly food scrap collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Common sense to target what is already recognized as a major contributor to waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: The first priority should be food scraps because this is something EVERY house hold can engage with in terms of recycling - eg. composting. Target those areas first which can make easy gains.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Scrap glass, known as cullet, is essential in lowering energy costs during glass manufacture at the melting stage. One tonne of cullet can be converted into 1 tonne of recycled glass products after melting, whereas there is a loss of 18% of raw material in the basic glass material composition at the melting stage through particulates emmission. I remember when all households segregated glass and recycled it through collection centers in schools and other easy access local community areas. Consequently the savings in plastic materials cost through a more strictly controlled recycled beverage container system makes sense. The cost of operating these schemes can be carried by the manufacturers of such containers if it reduces manufacturing costs which I believe it does. There is therefore an overall cost saving for councils and the general public.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Makes sense to target irresponsible fly-tippers.

It's worth noting that it is VERY expensive for individuals to get rid of unwanted material through council run landfills even when they bear the cost of transporting items there themselves. This is why more local community recycling centers are required.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If food scraps make up 41% of the scraps in my bin then why is the food scrap bin so small and can only tolerate a maximum weight of 14kg? This is incorrect I formation and I would love to see where you dove into people's bins to get this data

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Part of building or commercial works should be making better use of their scraps

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I think the priority should be that these items are not available to bring into an urban house in the first place. Tackle the manufacturers of simple household items that don't need a box or bag

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will not stop them littering roadside and waterways. The people throwing their rubbish out the side of the road are not the same people that want to recycle. Different demographic

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Generally the people littering or dumping can't afford to go to the til so how will fining the help? The poor get poorer. Make the tip more accessible to the public

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: As stated earlier, places that are holiday destinations have people that don't care about what they do with their rubbish. They are just here for a good time. Every weekend there is a huge influx of visitors and holiday times more so. There needs to be enough bins and weekly collections to prevent vermin and smelly bins all over the island.

4. Any other comments

Bins sitting around peoples homes that have smelly rubbish in them, especially over summer is extremely unpleasant. I live next door to a holiday home, and every weekend those bins are full. We have no food scrap collection on Waiheke and holiday makers generally don't care which bin the rubbish is going into.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Definitely oppose changing to fortnightly general rubbish. It was a nuisance enough when recycling was changed to fortnightly. If recycling was changed back to weekly perhaps people would recycle more instead of landfill. People of Auckland already fill a recycling bin and using the food scraps, how are we going to miraculously have half the landfill! Weekly collections must continue and it's a wonderful hairbrain theory to think that they shouldn't. On paper it looks great, not in reality! Auckland already has a rodent problem, it will get so much worse. Stop this insane brainstorming and continue to provide the service us ratepayers require!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Completely agree with this approach - it is a 'no brainer'.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We don't need weekly collections now that we have the food scraps and recycling systems in place. My bin for a household of 3 - 4 people is rarely more than 1/4 full. I would reconsider my views if the food scraps were not being collected weekly though.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Everyone needs to play their part - it is a waste (no pun intended!) of time for my household to reduce waste if commercial waste-generators do not reduce theirs. If bigger waste producers reduce and recycle their waste, it will have a bigger impact than what my household can achieve alone. It will also mean that commercial waste producers factor in the true/hidden costs of their businesses (instead of society subsidising them).

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If these materials make up significant volumes in landfills and are problematic when they break down, then these are the areas we can make a significant impact. I am particularly concerned with the issue of microplastics and leaching of sewerage into the sea and waterways, so especially support the prioritisation of plastics and biosolids.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely - product stewardship schemes are well overdue! Current market settings are not currently resulting in good product stewardship from commercial manufacturers. This is resulting in significant costs being shifted to ratepayers, taxpayers, our environment, and future generations. Intervention is required to get producers/manufacturers to reduce packaging and use more sustainable alternatives, and to provide for the 'full life cost' of what they produce. However, product stewardship schemes need to have sufficient scale and homogenity to enable consumers to easily and conveniently recycle or reuse products. It won't work if it is too hard.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

We should be doing much, much more to protect the health of the Hauraki Gulf in general - I can't believe how poorly we are treating one of the best things about Auckland. We are literally sh***g in our own nest (apologies for language, but I feel so strongly about this). Addressing waste flowing into the Gulf (including plastics and biosolids) is one of the key things that we need to act on. Who wants to swim, fish, play, or sightsee along a coast that has all but been devastated by pollution?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Fully support

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fully support. The weekly food scraps bin collection has been excellent addition. This, together with other recycling options (like soft plastics bin in supermarkets), means that our rubbish bin could easily be collected fortnightly with no problem. Another major benefit is an end to the chaos in the street when all bins are emptied on the same day.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I would like to see the C&D sector take more responsibility for the waste they generate.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Shifting costs from the public sector to the private sector will generate change. Responsible companies and consumers will embrace the opportunity.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A critical element of any WMMP. There must be consequences for those who dump rubbish illegally.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Focusing on small reductions of waste to landfill is not an effective strategy to meet the zero-waste goals. Reducing consumption and funding the re-education of the general public requires far more investment than is allocated. The plan will not achieve its goal of zero waste in the current climate without a singular focus and prioritising of this effort in alignment with carbon emissions elimination.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Collecting waste in trucks and moving it around is in contradiction to a zero waste economy. Although this does help to force the issue of waste reduction on the ratepayers. -as they have to plan on a fortnightly collection and reduce their output. It will also drive misuse of segregated waste collections and general negative sentiment around separation and organic waste reuse.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Not enough effort is being made by council in this area. A much larger budget and compliance measures need to be undertaken as soon as possible. Council should be passing bylaws restricting commercial entities ability to pass the costs of business onto the environment and ratepayers.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is simply breaking down the issue into smaller parts.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: More needs to be done to shift all costs of waste generation to producers. For example : recyclables returns at the supermarket as they have in Germany.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The focus should be more orientated on providing a local solution that is so cost effective that it demotivates illegal dumping. -illegal dumping is often motivated by cost of disposal. All 'hot spot' focusing and fines will do is move the dumping to more clandestine areas. Solving the symptoms not the core issue causing the illegal dumping. -education and cost.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: Strongly support any initiatives to preserve these pristine Hauraki Gulf assets.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: We have always engaged 100% with waste recycling measures includng the recent food waste. With the recent clampdown on what can go in the recycling bins (1,2 & 5 only) our non recyclable waste will increase. It is of minimal value to attack waste at the consumer end. Central and local govt need to get brutal with the waste generation at the supplier end. So many products that cannot be recycled should be banned from sale until their packaging is addressed.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: General rubbish is fine for fortnightly but weekly must be retained for food scraps, otherwise usage wil decrease.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: No further charges for rubbish collection, on top of the rates already paid by homeowners.

I would be happy to only put rubbish and recycling out, once a fortnight.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I live alone and the current rubbish bin size is more than adequate for a fortnightly collection only.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This type of action is long overdue.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Reduction and better management of waste recycling is better for the environment.

Biosolids are in urgent need of being managed correctly. For example, it is crazy for a harbour city like Auckland, to have beaches contaminated by sewage and dangerous to swim in, as we did this past summer.

Building and construction waste needs to be managed better, as proposed, as too much currently goes into landfill.

The forestry sector needs to have more and stricter regulations and restrictions put in place, to be held accountable for cleaning up after themselves - just as the general public, householders and other businesses already are! The slash and other rubbish they leave behind, from felling trees and clearing land is messy, dangerous, unnecessary and contributes to flooding; which in turn, puts people, animals, homes, businesses and crops at risk of being destroyed. The slash itself can be reused, e.g., firewood, building materials etc.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I've often wondered why plastic medication containers aren't returned to pharmacies, for them to clean and reuse?

One business in Browns Bay, charges less for food purchased by customers, if they bring in their own containers. I think this is a great idea. Any plans to put this in place for other takeaway and supermarket businesses?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: 100%. Littering is a selfish, dirty, unhygienic, unsightly, smelly, unnecessary and lazy practice. There should be much harsher fines, powers for legal warnings to be issued, and perhaps court appearances for repeat "offenders", in holding people accountable for littering and illegally

dumping rubbish, recycling and other waste. Anyone caught repeatedly, illegally dumping household waste, could perhaps have that waste - plus more - dumped straight back to their own residence!?!😁

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The proposals should be put in place for all of the islands within the Hauraki Gulf area.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Minor changes initially as a change in direction for AC usually means a corresponding increase in costs for ratepayers and this is not an acceptable option. The current system is not broken - it just needs tweaking.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We are a family of 3 and have been using a compost bin for food scraps and similar compostable items. We still fill our red bin most weeks but if the cost saving in moving to 2 weekly red bin collections is substantial then it is worth doing.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: A cohesive policy on C & D waste is well overdue.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Moving cost to producers will simply drive up the cost of all packaged goods. It will make many everyday essentials more unaffordable when we are officially in a recession. Also overseas evidence shows that they do NOT drive higher rates of reuse. This is pure Green propaganda.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Our existing laws need to be enforced especially around large scale illegal dumping.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: I don't know

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: The old inorganic collection process worked when placed on kerb side, most of the items disappeared before pick up therefore were used by others and reduced the amount into landfill already. Now that it must be place inside the property gate, people enter unwelcome and crate a mess and trespass.

Probably just another area the Council will introduce new charges to the taxpayer

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Reducing rubbish collection to fortnightly collection will encourage rats and pests which are already a large problem in Auckland, endangering our native birds and wildlife. Plus has the potential to become health issues to many people.

It will also,lead to illegal dumping throughout the city. Probably another way for the council to find a way to charge us more.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: Create a separate area where people can take any items to recycle.

Just another way for the council to charge us more again

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Other cities have already successfully dealt with this issue without adding huge extra costs to ratepayers.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Well I doubt this will happen.

As normal the ratepayer will fit the bill.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Good luck with that, as if it would be able to enforced.

Will end up being another cost to ratepayer

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

More extra costs to ratepayer

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I like the wholistic approach , which includes reduction and reuse. We must motivate people to see that food scraps separation and collection is critical. I would like to see an overall reduction in waste as a result of the proposed direction.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Households will be encouraged to reduce waste by having extended collection periods. Simple practices, such as box breakdown will enable space saving in bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Too much reusable construction is currently wasted. Especially timber and metal flashings, which can be reused.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Food scraps must be a top priority as they totally contaminate everything else. Then go for the volume items that should be relatively easily sorted. If need be, provide financial incentives/ disincentives to recycle.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Producers need to take a stewardship role

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to discourage the illegal dumping of rubbish. This is a really tricky one for Council, as financial penalties may not prove to be workable. People need to change habits to move towards best practice.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I prefer Island locals to comment on this.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree with this idea because I believe we need system level change to decrease everyone's waste. This may incentivise people to look for more sustainable options so the Auckland Council should make sure to also promote sustianable alternatives and options to decrease the amount of waste that must be disposed and cannot be reused, etc. I think it is likely there will be backlash because people don't like changing, so a careful change management process will be necessary. Perhaps young people and other people passionate about the environment can lead the way and Auckland Council can partner with them to promote the reasons behind waste-saving initiatives.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I think decreasing commercial and industrial waste is more important than decreasing domestic waste, due to its greater proportion.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: In order to minimize the environmental impact of consumer products, it is essential to have strict regulations in place regarding the type of packaging that these products are shipped and sold in. This includes the use of eco-friendly materials and the reduction of unnecessary packaging. Additionally, it is important to have clear strategies for the end-of-life (EOL) cycle of these products, which can include recycling, repurposing, or safe disposal. By implementing these measures, we can ensure that consumer products are produced and consumed in a sustainable and responsible manner that benefits both people and the planet.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Encourages households to make more thoughtful choices when buying and disposing of waste, leading to a cleaner and more sustainable environment.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The most important aspect of waste management is reducing the amount of commercial and construction waste that ends up in landfills. As this type of waste makes up the majority of landfill content, it is crucial to prioritize measures that minimize its output.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Incorporating all the mentioned items is essential in minimizing the amount of waste that ends up in landfills.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I fully support the stewardship scheme and strongly advocate for the inclusion of other categories such as electronics and appliances.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I strongly support the enforcement of laws and regulations against illegal dumping and littering. To protect our environment, it is important that we take strict measures to deter such activities. This could include implementing heavy fines or penalties as a way to ensure that everyone takes responsibility for keeping our surroundings clean and healthy.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Albert-Eden

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to make the producers of products use less packaging and ensure all packaging can be easily recycled. Currently, it is the ned user who has to deal with all the packaging and pay for it via our rates whilst the producer pockets the prfit.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: In my experience cost savings are never passed on to the long suffering rate payer we just get less service. Disposable nappies are a major issue and removing these from general waste is an excellent idea in theory but how will this be managed and policed?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Once again companies should be fully responsible for all the waste they produce and more recycling is required to minimise the impact on landfill. Are companies charged the full cost of taking waste to landfill sites given the land where the site is located could be put to a much more appropriate use.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Based on the data in section 4 is the construction industry paying the true cost for the significant amount of rubbish consigned to landfill?

Recycling of waste items domestically needs to be as simple as possible, the current regulations are counter productive when many items which could be recycled previously are now prohibited!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: For many years recycling of glass containers was common practice and worked very well. Bottle drives were a great way for sports teams to raise funds.

Aluminium cans are also ideal for recycling and a small financial incentive would encourage the return of these rather than just dumping them.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Whilst I fully support the use of instant fines how will this be policed when people dump unwanted items on the berm (often outside someone else's property? It is futile to have bylaws if there is no effective way of identifying the guilty party.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

As with all proposals from the council the main issue is to ensure they are cost neutral to the ratepayer or ideally reduce the rates bill. However, in most cases the promised savings never materialise and the ratepayer ends up worse off than before. Given the financial pressure ratepayers are currently under it is essential these proposals do not result in any rate increases.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would expect all that is outlined (including FREE collection facilities) would be in-place BEFORE this plan is rolled out. User pays to take various materials/garden waste/ etc is why the upsurge in dumping.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: As long as cost saving are passed on - I am sceptical that this will happen particularly for households that have a smaller bin. With costs ever-increasing it is an imperative that REAL cost savings actually occur. What is the incentive for renters as it is often landlords who pay for rates?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Waste from construction and demolition is huge - what is the incentive to developers who 'dump' and then bury a lot on the building sites as I have witnessed?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: As long as there is a benefit to ratepayers - who are also consumers.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: good luck with this one - making it easier and FREE to dispose of particularly old furniture and whiteware etc may help but people still have to have the means to transport - more regular collections of inorganic waste as use to exist is a better solution.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The target maybe OK but the focus on households is wrong.

The focus should be directed at central government to introduce rules around packaging, product design etc that actually will reduce the stuff that household are forced to trash.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I do not support the food scrap collection system because of the cost and the chemistry of food decay and breakdown will be very similar whether in managed "recycling " or as it turns to "compost" in council dumps. Maybe even the land restored over old dumps will be of better quality it it has a good mixture or organic material.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This seems like a wished for result.

It will take central government regulations to change construction packaging etc.

Much of construction waste comes from demolition- the only way to reduce this waste will be turning down consents to rebuild

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: These are all targets for central government.

Does council really believe that they can influence buyer behaviour enough to reduce consumption of products that create this waste by council alone.

If council does not collect this material it will be dumped somewhere else.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Product stewardship should be a requirement where possible.

It is a role for central government

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: You have correctly identified that this a role for central government

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We should be recycling where and what we can and making some of the discarded items available to people that can reuse them.

Not everything that ends up in the rubbish is junk and useless.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I'm against the fortunately rubbish bin collection and I will explain.

Being primary carer for my bed-bound wife requires changing her incontinence nappies three times a day. At the end of the week prior to the weekly rubbish bin collection the bin is totally full.

The majority of the material in the bin is my wife's nappies with the remainder being a little bit of household rubbish. There is NO room in the bin at the end of the week and sometimes I have had to spill over into my neighbors' bin. I'm going to be in big trouble if this proposal for a two week bin collection goes ahead. What do I do with the nappies? After 2 weeks no one will want to go near the bin because of the aroma from the bin.

P/s:- Your answer in my case will be to get a larger bin but your are the ones that are trying to save money by suggesting a 2 weekly bin collection therefor a larger bin should be at your cost and not mine. I'm 80 years old, on a pension and I cant afford it.

Thanks for the opportunity to have a say.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: An excellent idea making the manufacturer partly or fully responsible for the disposal of the packaging of the product.

It will force the manufacturer to rethink their packaging process but unfortunately any additional costs to the manufacturer will be passed onto the consumer.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Its vital that we keep the Hauraki Gulf and Islands pollution and rubbish free.

People living on the islands wouldn't be a problem, its more likely boaties leaving a mess behind when they leave.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It would be so great to see more ways to return goods to companies to re-use so that it is easier for people to do that and for us to have a truly circular economy. Recycling is also not easy. For instance none of the local supermarkets in my area accept soft plastic and we can put a lot less products in our recycling bins now. This is creating more waste from our household and that would compound across Tamaki Makaurau.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support food scrap bins but find many families in our area do not use them and put big items that shouldn't be there in their recycling bins because their rubbish bins are full. I also think that the food scraps bin should be an option only for those who are able to use one of the composting options like bokashi.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I have seen so much waste come from developments in our area - this would be a great initiative. We need to educate certain businesses to think about the amount of waste they produce too.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: E-waste needs to be included as a priority.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Great idea!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Don't know

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Completely unworkable for families and will see a proliferation of trash all over the community. This is a really bad idea.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will drive the cost of homes upwards which is not a good thing.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: These products are already collected in the yellow bins.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This will drive up the price of food. It always comes back to the consumers (one way or another).

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support this but good luck with catching them.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Franklin

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Weekly collections will minimize vermin attacks and rubbish blow by into the environment.

It will not reduce the amount or rubbish produced, just the storage time at households. a dumb idea!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: the 41% percent number is a ridiculous guess at the amount of food waste, way off the ball.

Weekly collections will minimize vermin attacks and rubbish blow by into the environment.

It will not reduce the amount or rubbish produced, just the storage time at households. a dumb idea!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: the rubbish needs to go somewhere, i believe it should be incinerated, with the fumes scrubbed & electricity generated from steam generators. there is a resource there that we a burying and then there is leaching problems later, land fills don't get rid of waste they just hide it. there are just as much greenhouse gasses leached from landfills.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why: Burn anything that cannot be repurposed, reused or recycled.

Electricity as a byproduct of the above incinerators will be a needed commodity

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: but there needs to be places for people to put there waste as, frustration of not being able to do "the right thing" leads to dumping/ littering. i.e. useable rubbish bins in parks & popular areas, or accessible drop off points for surplus recycling or rubbish.

when the fortnightly recycling bin fills early, there is back up meaning people cant sort it or put it into general waste

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: A little bit of a pipe dream. Most of our products are imported. However NZ could insist all packaging materials including those in supermarkets are recyclable. Then actually recycle them

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is crazy. Just not picking it up won't reduce rubbish. It is an ill thought out totally 'silly" idea that will create additional problems. Removing bins from participating areas is similarly a very negative idea. Not having bins doesn't mean people won't have rubbish. Considerate people won't litter but sadly so many will

Fortnightly collections overseas haven't worked - so head the warning and please use t common sense - as stated the rubbish won't go away.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: So much is not fit for purpose to reflect. If it is fit - good.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Let's do it. Legislate for packaging to be recyclable. Advocate for this legislation

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This makes good sense

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The reduced frequency of rubbish collections and removing bins from parks increases these issues. Good idea to fine but how much will be needed to spend on staff to make this workable. Especially as a lot of illegal dumping is done in the " dead of night". Instead make it easier for people to get rid of their rubbish. Not harder.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I am not knowledgeable about the rubbish situation on these islands.

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I only put my rubbish out every 6 weeks so fortnightly is not a problem for me

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: the level of construction waste is shocking and needs to be dealt with

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: not enough space in bin

if bigger bin then it's all goods

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Much better would be to tackle it at source by requiring manufacturers to pay when they use plastics for any reason. Manufacturers and retail outlets should be required to receive plastics and metal containers as part of the recycling.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Manufacturers and retail outlets should be required to receive plastics and metal containers as part of the recycling. They make the stuff and then require us to recycle it. They should be required to use properly recyclable containers for goods and be required to manage reception of used containers.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Other

Tell us why: Must be a more focussed strategy for this taonga. The present strategy is lacking in protection.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waiheke

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Packaging of goods has to be reduced if possible. Stores should be obliged to take back packing material. Clothes stores should take back textiles and recycle/reuse/take care of them

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Urban households don't have space or opportunity to compost. The food scraps scheme should not include Auckland's rural areas (Rodney, Gulf islands)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: A lot of commercial waste can be recycled and reused. It just has to be collected somewhere. On Waiheke we collect a lot of this material from our Community Resource Recovery Park where you can cheaply buy and reuse it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Almost every country in the world has one of these schemes. The beverage industry has to be responsible, too, and take this container back and recycle them.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why:

4. Any other comments

Packaging material is still not properly marked. The industry should use plastics which can easily be recycled and cleary mark them. Currently the system is very difficult, type of plastics is often not marked or mixed in the same product so you have to separate it. I also don't see why you can't recycle lids of bottles or smaller items.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Totally unrealistic - Auckland Council has zero impact on how products are designed, made or packaged.

Stop virtue signalling - stop deluding yourselves and providing misinformation to the ratepayers. In a global economy, Auckland city is, and will always be, too insignificant to influence anything.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Does the Council actually have evidence that people are paying to have their bins emptied weekly - even when they aren't full ?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: What, the Council isn't doing this already ?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: How is this different from what Council should be doing already ?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: In a global economy, where New Zealand seems to be obsessed by signing up to everything, New Zealand and Auckland city are, and will always be, too insignificant to influence anything.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: No brainer.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

What do you think of this priority area?

Do not support

Tell us why: Fly tipping in the UK has increased exponentially since they introduced 3 week collections no matter what the press says

and its bad enough here at present

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Best of Luck with this

It will only make the cost of Housing increase once again

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Does not work seen it in the US creates

Why did you change from glass to plastic in the first place?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: As long as making more use of resources (eg fixing them when broken) have a cost benefit to the public. Most folk cannot afford to pay for idealistic solutions.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: My experience, and everyone I know, is that the breakdown proportions of "type" of rubbish as shown on your website is NOT what we (and everyone else) has in their bin. Garden waste and food scraps taking over half the bin???? not a chance. Maybe the average is that if some folk are just dumping garden waste, but it is NOT TYPICAL. We use our little bin as economically as we can and it fills in a week.

Can there be some way to accommodate larger households? Able to buy/rent a second bin for example. Would be happy to do that!! Otherwise I think you will just find that folk will start putting rubbish into the recyclable etc.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Assuming there is actually a way to do this without increasing build costs significantly. Otherwise I do not support it - use the waste to reclaim some land or something.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I don't really understand how the bad stuff occurs, or if really significant? Seems like just a political "look good" option. For example, putting in thousands of speed bumps and raising pedestrian crossings causes motorists to continually brake and accelerate. This causes a much much much bigger increase in gas emissions, so all this effort into a few landfills will not be significant.

However it would be good to investigate how to better prevent the breakdown products from getting into water ways or the air. That would be a good thing, but it must be easy and cheap. Otherwise if you want to help with gas emissions, remove some speed bumps - they are ludicrous :-).

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not sure how this could be made financially viable however.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Though council needs more public bins, as a lot of "street litter" is from overflowing bins. If fined because a bin is full and that piece you tried to jam in fell out... that wouldn't be fair.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I know nothing about these Islands, except they are getting swamped by that sea grass. I feel I cannot comment.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I do support the concept but reducing the number of rubbish bins in public parks and beaches is spreading the rubbish elsewhere and not a good idea

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I am 82 and live down a right- of- way, on a sloping section. I really struggle to get my bin up to the road as it is with a weekly collection. If it was every two weeks I couldn't manage. There would be many elderly people in the same position as me I am sure.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction sites should be responsible for removing their own waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: That makes environmental sense.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: There used to be a monetary incentive to return glass bottles. Scouts used to have bottle drives around the neighborhood to fund raise.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: More cameras to catch offenders in hot spots

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: I support in general but do not support the removal of waste bins at beaches etc

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Gt Barrier has a great recycling depot Anamata, it is a huge benefit to the community and is very well operated

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I produce very little waste--and do not require a food waste bin--as all scraps are composted. Regarding recycling I prefer the pay as you throw system as again I only require collection every 1 to 2 months--and in the case of recycling -monthly collection is all I require. It appears low wastage producers are penalised under the current proposals.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We live in a throw away society and to see goods that are made to last, repairable and able to be used for longer would be great.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The rubbish that is thrown on the streets, dumped in parks etc that exists already will be exacerbated by this proposal. It is important to tidy up the streets first before making this change.

And as for cracking down on offenders - that's just idle words. Nothing is being done now and council doesn't have the power or resources.

This is just a way of cutting costs

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The sentiment is right but again the implementation isn't that easy.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We had his years ago and it worked then. Canada has it now and it also works

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support the idea but I doubt it will ever be actioned

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Far less use of polystyrene. Companies like Healthcare logistics should be fine for using it when they have alternatives

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: You need to tell people about waste food /methane gas link in landfill. Most people are ignorant and don't bother to use it. Pak n save never have the pink liners.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: So much construction waste can be recycled. Start fining companies that don't care

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's common sense

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's a positive step. The most important thing is education communication. You've got to get the public behind you.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I live in Ellersie. IT IS fill of rental accomodation . Full of new immigrants.when they vacate a flat they leave the household stuff they don't want by the footpath. I know cos I live in a block of 20 flats and it happens all the time.. they don't know what to do.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would hope that people think more carefully about the waste factor in items purchased (can they be repaired or recycled), and the material they discard.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food scraps bins serve a useful purpose with food scraps being recycled into compost or fertiliser. It would be helpful if people were reminded of everything that can go in the fs bin, emphasising the things that you wouldn't put in your home compost (e.g. meat and fish scraps and bones)

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The construction industry should take more responsibility for waste disposal

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Plastic is a huge problem that waste management just has to deal with at the end. Manufacturers should be rewarded for making things in materials other than plastics.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Agree with everything said about this

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Finding the people responsible is the hard part, like those who throw food cartons and bottles out of car window

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: This will simply encouegae more waste on kerbs and streets. Weekly is a must urban especially.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Weekly, I don't believe it should be anything else. Smells of rotting vegetation is awful. And not everyone respects what should go into the bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We should absolutely focus on incentivising re-use, and banning single-use/disposable items. I don't support recycling being a focus, given that it's been largely a distraction from truly reducing waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Sounds good to me. Also, people living in apartments/other body corp buildings haven't had access to these food scrap collections. So unfortunately in our case where our building's rubbish is managed privately by the body corp, all our food scraps go into landfill - which horrifies me, to be frank. Given that we'll likely want to see more people moving into higher density building as we plan to limit urban sprawl (a great way to reduce emissions via reduced vehicle kilometres travelled), there should be a way to collect weekly food scraps from these types of dwellings as well. This could be done through legislation, e.g. making it a legal requirement for all body corps to dispose of food waste via some separated composting method, even if they choose to engage with a private waste collection company. Basically just make food waste illegal or prohibitively expensive to do, and this will incentivise better solutions (e.g. more community compost sites & worm farms and infrastructure around to support it).

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I strongly support the focus on prioritising things based on their greenhouse gas emissions, and lasting environmental impact such as microplastics.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Product stewardship is a no brainer. It should be illegal for companies to make money off essentially creating waste. Our current systems inadvertently disadvantage conscious companies because it's cheap to create waste. If we made it expensive, it would put all companies on a level playing field and raise the bar for everyone. As for the impact on affordability for the end user, incentivising refills and making this as convenient and user-friendly as possible will become a business goal.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It is the only logical step to reduce the city's waste. Glad to see that the Central library is hosting a repair cafe shortly,, hope to see other community libraries follow suit

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There has to be a better way to reuse construction waste, and to reduce it in the first place

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: My food scraps go in to my insinkorator which I paid a large sum of money to have installed next to my sink. I did not believe the food scrap bins (which were forced in us without any choice, at a cost to us!!) I do not believe they are hygienic and they stink! I do not and will not have a need for money at all

I'm angry that this was forced upon me and I am paying for something that in my household is wasted. You talk about fixing the wasteage yet there are large numbers of people with plastic bins clogging up there homes that they will never use. Talk about hypocritical!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think recycling clean demolition waste for landfill should be in the mix

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food scraps removal seems essential as it probably produces much of the smell associated with garbage and encourages infestations of rats etc

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Top priority for me as the amount seems so large

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Packaging is a major problem and seems to increase as we buy more stuff from overseas. I would like to see more locally produced stuff with little or no packaging. It should be made easier to return packaging materials to sellers so they have a financial incentive to minimise the amount of packaging.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It used to reward kids with pocket money for collecting bottles and cans. Still a good idea.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Spot fines for people throwing litter out of vehicles need to be enforced and for people dumping rubbish on the roadside. The high price charged at recycling stations is a problem in this regard.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

These are important initiatives - I hope they prove effective.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Some areas outside council control and should be left to central government.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Not enough rubbish for weekly collection.

I prefer user pays by purchasing tickets instead of through rates. This encourages waste reduction based on the same principle that applies to water meters. Auckland uses half as much water per head compared to Wellington which is funded through rates.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: A bigger bin for food scraps. Having been to Canada hey have a rubbish bin size for food scraps and collect every two weeks. Seems to work well.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It would be good to have more places to drop off cardboard as there seems to be nothing in our area and we end up taking to refuse station. It's amazing how boxes can build up when doing online shopping

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again seems to work well in Canada

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Would like more information on how Council is ensuring industry reduces their production of waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Might reduce both waste and cost

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Wasteful use of materials creates a problem for the present and the future

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I do support this but it is not addressing the main cause of rubbish. Would be happier if this was termed 'Phase One" of priority waste materials.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I do support this but think it is unlikely to succeed.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Dumping rubbish doesn't solve a problem, just makes it someone else's problem. Higher penalties for dumping may work as a detrrent.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: Good education program supported by facilities eg recycle shop.

4. Any other comments

Boaties need to contribute to the cost of disposal of their waste.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: as you say 80% comes from business so i want to k=see more info on what you will do to hold them accountable.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: we put our rubbish out fortnightly anyway so will not affect our 4 person household. Im not sure how well that work with larger households but we are also running the smallest bin

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Especially important is to keep the pressure on for a national CRS scheme. The government should be given a deadline on this to be in place by 2025.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Ratepayers must have the option of reduced rates when they do better than others, i.e. composting, or smaller bins with less collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Just common sense.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: CRS needs to be really pushed. People who compost food waste etc, should have a rates reduction. The food scraps bin needs relooking at, as in inclement weather, they end up all over the place and create more rubbish and mess.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Just do it, and pressure the government to have this underway in 2025.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Have legislation in place to be able to enforce the regulations, and hit offenders with huge fines.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Weekly rubbish collection is a core service expectation of the Council. The research on larger families coping with fewer collections is woefully narrow and based upon a vey small sample size.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The existing food scrap waste bin roll out has been - at least from my observations - only taken up by a minority of households as evidenced by the very few bins out for collection.

In addition the food scrap bins are simply not fit for purpose- too light, flimsy and blow away in the wind - just creating more plastic waste to dispose of.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Puts some onus on the business / supplier concerned to think of the packaging lifecycle.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Need to massively increase the fines for non compliant & illegal dumping - but who will enforce this?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Local Board: Puketāpapa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: all of those

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Wonderful at last some ACTION

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: horrific at the figures quoted.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: this worked well when I was a kid - how we made our pocket money

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: 50 years ago NO one would have littered as they do today all for it !

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: try and educate boaties to take there rubbish with them

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: just TRYING to educate the public about implementing responsible behave ANYWHERE.

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Encourage recycling of white goods, furniture, glass and aluminium. Bring back the cash for glass system

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: i never put my bin out weekly. We shouldnt need to if we are recycling properly

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Commercial waste is out of control. Construction and demolition need to be closely managed

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Everyone should have a green waste bin like they do in Australia. Too much green waste is dumped in the rubbish illegally

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: totally agree.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: more patrols and must stricter enforcement

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: take your rubbish with you

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Should look at incineration as an option, water waste is a big problem, we need to start working on our glass, aluminium, timber recycling. There is way too much waste

#1589

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reducing waste is always good for the environment. Council needs to work with the Government to introduce laws that make manufacturers responsible for meeting recycling standards. If their packaging does not meet NZ recycling standards, the products should not be sold.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Although the plan may seem good, Council does not openly and transparently provide details on financial savings that would be passed to ratepayers. Moreover, there is no mention of what happens to the monies gained from selling some of the recycled items.

What about households that use private waste companies?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This needs to be addressed as a matter of priority.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Needs to be done.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Although this is a good idea, this will increase costs to consumers. As it is the cost of living has gone up and the over 65's or seniors are struggling to make ends meet.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This should have been done years ago? Why are we being too soft? Illegal dumping should be a crime punishable by heavy fines or community work.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

All islands need to be addressed.

#1590

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Leaving collection every 2 weeks without too much thought us asking for even more dumping. IF this is to go forward then why not exchange yellow top bins and have red top bins for inorganic?without further charges on households. That way it encourages people to help keep everything in order. Too many discussions are made only on the surface without general thought through. In these times of money stretching its too much to put all this on the ratepayer

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Emphasis should be on minimising building deconstruction waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Already only using waste collection fortnightly as reduction due to adoption of the weekly food waste collection.

Prefer to keep the pay as we go for waste collection as it is a further incentive to minimise which would be lost if the collection fee is just added to rates. What saving is offered for the reduced bin size?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Needs to be an incentive for building waste to be recycled.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: already using the food waste disposal weekly. Need to charge firms using excessive packaging. Stores should be penalised for offering branded carry bags, instead insisting on customers bring their own as for super market shopping.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We already have enough problems with food waste bins sitting around for a week covered in maggots and flies attracting rats and causing odours. The last thing we need is a reduced collection of general waste bins. It should remain weekly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Am opposed to the cutting of plastic types and lids that we can put in recycling bins . This has led to people including myself, not bothering to recycle plastics as it's now too complicated.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We urgently need to reduce the amount of waste households are producing but also penalise businesses for not dealing with their waste issues appropriately and more urgently.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Since the introduction of composting bins, amount of waste in red lidded bins has significantly reduced in our household; this reflects our commitment to cooking meals at home from scratch and avoiding Ultra-processed foods and takeaways as much as possible. This initiative will force more households to potentially do the same which will have far more widespread positive outcomes than just lowering landfill and emissions. No need for weekly collection when household gets serious about actually thinking how they are living.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There should be big penalties for the companies refusing to reduce waste or come up with more sustainable solutions for themselves. Other sectors have done it, and many years ago. They need to pay for the waste they produce and keep their suppliers and contractors accountable for waste as well.

On a separate but related point - businesses in the CBD should not be allowed to put waste out for free collection on the street every night either; it's ridiculous this is still allowed to happen. When a business doesn't have to pay to have their rubbish taken away, they won't care about reducing the problem.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: All urgent areas that need to be adequately addressed if we are serious about reducing landfill and emissions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Can't see how this is going to work - consumers throwing stuff on the side of the road without thought are not suddenly going to change bad behaviour because of this?? Fast food joints and fast food delivery companies should be paying a fee to cover the massive cost of dealing with the rubbish their services generate. the waste from Uber Eats for example is huge; they must start paying their way.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Massive fines need to be introduced and enforced. It's not hard to catch offenders given the number of security cameras everywhere these days.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Vast reduction in landfill waste.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live rurally at the end of an 850m drive. Wheeled bins are an inefficient and ineffective solution.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This is a core service I expect the Council to provide on a weekly basis. Too much rubbish is already dumped illegally and this will just make that problem worse. Reducing rubbish collection does not magically reduce rubbish people produce.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I'm afraid we (the citizens) will end up being taxed more, fined heavily, or otherwise feel restricted and controlled in our daily lives. For instance, the doing away with plastic bags at grocery stores has really become a burden for me. I reused those bags all the time, and I feel like it was just a way for the grocery stores to stop paying for this extra item. Now people end up purchasing the cloth bags at these stores, which are even LESS environmentally friendly. I regret ever supporting the abolishment of plastic bags, so I am hesitant to support MORE government control under the so-called veil of being "eco-friendly".

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I support this, as long as consumers are not required to drive far distances to return beverage containers to limited locations. It would be helpful to have a special area for these returns in each grocery store.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: How about instead of fines, the government makes it easier to dispose of items? I think it is WRONG that we are expected to PAY to dump additional rubbish at special refuse centers. It is very expensive, and this should be included in our tax dollars! Or at least up to a reasonable weight. We are delivering the rubbish ourself, using our petrol and our own vehicle. This is a big reason people dump illegally.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Yes but solutions have to be practical.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Fortnightly collection of rubbish is insufficient. Some rubbish smells, especially in summer which will be exacerbated if left up to 14 days. It will cause confusion over when bin is due for collection and if you miss a collection it will be an entire month before it's picked up. Bins will get overfilled and dumping will occur. I strongly do not support this proposal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Again, so long as solutions are practical and don't increase costs. You quote C&D making up 40% of commercial waste in landfills but don't quote % commercial waste makes up of total landfill to give us an indication of the actual size of this issue currently.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes but you're only providing us with part of the picture. It sounds good that these things should be priorities but you don't tell us what the other waste materials are.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: General recycling and food scraps have reduced our usual rubbish to less than a cornflake bag of rubbish a week! So it can be done. I think that large households might struggle with fortnightly. Maybe you have to have user pays for extra rubbish. Fortnightly collections wont work for businesses.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: household rubbish is minor compared to commercial rubbish

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: The time frame is so far out that it is a nonsense, no one will be around to be accountable and thus it is pointless. There should be smaller achievable time frames . Otherwise this is a total waste of time.

Plus it is totally unachievable no way will households or council be able to achieve this and everyone knows it so again no one will bother to try achievable aims.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We compost and use yellow bin so never fill even a small bin in two weeks.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Im sure alot of reusable material is thrown away

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Much of packaging is not under local government's control. Govt need to legislate on these issues.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: Catching litter bugs is the issue.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I initially thought, oh no, our bin will overflow. But since there are options to get larger bins and to get larger recycling bins at no cost, it will work. it's done in 20+ other councils

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Really the focus should be on manufacturers to produce less packaging. Rather than the consumer at the end trying to deal with it

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Make use of hidden cameras. Places like near aorere college, and island Rd to puketutu island are places where people constantly dump rubbish

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Limiting peoples waste collections will be catastrophic for everyone with excess rubbish being dumped parks, waterways and in backyards which will cause an infestation of rats.

This is the worst idea from those who have not polled the public .At least 90% of the public will not support this. Rate payers are not going to support cuts to services. How about cuts to councils instead.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I do not support fortnightly collections of general rubbish. This is another ill-conceived and frankly "dumb" proposal. Rubbish will end up in council rubbish bins or on the streets. One of Council's main reasons for its existence is the removal of rubbish. I suggest you stick to this.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Let me repeat the above.

I do not support fortnightly collections of general rubbish. This is another ill-conceived and frankly "dumb" proposal. Rubbish will end up in council rubbish bins or on the streets. One of Council's main reasons for its existence is the removal of rubbish. I suggest you stick to this.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why: You have no idea if this figure is correct. But I'd like to see how you intend to reduce C & D. Mind you some of it, e.g. discarded bricks is useful as good landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I think incineration should be considered for non-recycleables. Incineration procedures that produce little toxic gases are available and it's far better than landfills.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is available in Australia and works well.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Don't go to fortnightly general rubbish collections. You'll be issuing fines but unlikely to collect the money.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Recycling and composting where possible

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Fortnightly collection with emphasis on composting fo r food scraps

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: A lot of Construction waste ie wood framing could be re utilised

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We need to stop putting plastics and contaminants into our environment

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Years ago milk bottles and beverage bottles were all recycled you got a discount if you returned them.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: There should be a tough fine for deliberate dumping of rubbish into our roadside and bush and streams. Totally unacceptable behaviour and extremely harmful to our environment.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

All these Islands require comprehensive Waste Management Plans to protect the environment particularly our waterways.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The recent Govt Recyling rules were a backward step meaning more of our rubbish is filling our general rubbish bins instead of the recycle bins. Forcing change for those materials which are not easily recyclable to reusable/easily recyclable will be a step forward again

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We are a large family of 12 who have a home compost bin. The only difference to our general rubbish bin now is that bones and eggshells and the like can go in the compost bin. Therefore, our council compost amount is not very large.

With the reduction of items which go in the recycle now, our general rubbish has increased.

Until other initiatives are implemented such as those aimed at the top of the wate hierarchy, we will need a bigger bin to tide us over two weeks.

Some materials put in the bin will become quite unsavoury over two weeks - especially in Summer - attracting pests. It will be more sanitary to dispose of the bins weekly.

I have to be quite sceptical about one study on the other side of the world being used to say that illegal dumping will not increase. It only stands to reason that when a family cannot dispose of their rubbish legally, they will dump it illegally. A better study would be to see what happened when the inorganic collection got dropped.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This C&D waste doesn't break down well - wood, steel, concrete. It is usually recyclable but resource intensive to do so. Ways to economically recycle in a way to reduce the already high building costs would be ideal.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I don't understand where you got the new targets (numbers) from and what your roadmap is for how this will be achieved. The 'how' you will deliver is pretty unclear so I am doubtful you will achieve your goals. More detail is required. How impactful will reducing Council waste by 50% be as a % overall? Are you focussing on the right streams? You haven't addressed the cultural piece and how you will educate people to change.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I only support this as I have a rubbish bin which I put out every 3 months. I am very low use and would like to receive a bonus for my actions. I think people should have more say as to their bin sizes/options/and rates reductions.

Without education and ensuring people have the tools for other options some people might be unhappy with fortnightly collections. I know the current compost bin size is too small for some and they have to put food waste in rubbish which will get stinky. Yes to fortnightly if you can solve the other potential issues like ensuring people have the correct sized alternative bins.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: How will you do this? Will you refuse building consents for projects unless they have an approved waste minimisation/circular economy plan for waste? Is there enough demand for building/commercial byproducts and are you able to 'rehome' everything?

Again, the how is unclear and we need some tangible action. How will you hold businesses accountable?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again, how will you change attitudes regarding fast fashion. This is a long term plan.

What can you do to influence what products are available for sale?

Is supporting Government's stance on plastics enough? How can we reduce biosolids? What is happening overseas and how are other nations dealing with this issue? Can we look at both ends, how to reduce biosolid waste as well as alternatives come 2030?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yes, I think that we should be able to send branded products back to companies so that they are invested in both better packaging options and also product lifecycle. Is this going to be a council wide initiative? Will you sort through recycling waste and send upstream? Will there be drop sites for households? I'd like more detail.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am confused about this. You are currently removing public rubbish bins and are now planning more enforcement. Was the removal of the bins to save on wages and now are you planning on having more patrol officers so you can issue instant fines?

I support community monitoring but again, how is this going to work operationally?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I don't know where to start with Q3 so am leaving for others.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I like the idea but do not think the proposals will achieve the aim. I suspect more rubbish will just be dumped.

The removal off public rubbish bins have stopped people collecting rubbish off beaches and in parks as there is no easy way to dispose of this.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Bins become very smelly especially in the summer

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: This does not reduce the waste, merely shifts the responsibility for disposing of it

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I support the idea but think it won't work.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This works in other countries and used to work here

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again a great idea but difficult and potentially costly to implement

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Would rather have the option to use a weekly service especially over summer with dog faeces sitting in bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I would want to see residential soft plastic recycling bin options as these create a huge volume of waste and it is inconvenient taking to a local supermarket (as I have to do now).

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I would like the council to provide a tip voucher for each rate payer instead of the inorganic collections provided by council.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We live at the top of a no exit road and there is not a week that goes by when we are picking up rubbish which people throw out the window after eating their lunch or dinner. This rubbish is put in our bin for collection. We recycle, and use a worm farm for all our kitchen waste. We are renown for buying secondhand items but do not feel we would find it an easy transition to our rubbish being collected every second week. I would rather pay for a weekly collection. I fear the rubbish that will be dumped behind bushes or on the berm if rubbish collections are restricted to fortnightly collections. I would rather the council give flexibility as to whether rubbish is picked up weekly or fortnightly for each rate payer. A larger family would need weekly collections of rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: We find the food scap collection a ridiculous scheme. We use a worm farm and use the worm castings on our garden. This is handled completely on site and does not require a truck to travel 200 km to recycle. I believe the cardboard, glass and plastic recycling collection works well. It is disturbing to know that not all plastic is recycled.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It is not always easy to catch the culprits. We wake up in the morning to find rubbish on the roadside berm.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: This should be fast tracked on businesses that sell useless/breakable un repairable merchandise. Not rate payers. Why import materials that can not be recycled this should be put forward to the government. With a living crises consumers are having to buy the cheaper alternative. Remove that option entirely.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: What larger size are you proposing the same size as recycling? This will lead to more illegal dumping and that happens quite often in our area.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Housing materials don't even last more than 20years anyways

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Again this needs to be fast tracked to businesses.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Shouldn't have removed it in the first place.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Will be worst if fortnightly collections happen.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less going to land fill

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Family homes should be able to do this.we had two families living in this house and if you recycle with care it can done.

But you do a lot more education

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This industry needs more recycling with the waste with the council help

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: More education on recycling even for me

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Like to see all plastic labels can be taken off and recycled

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Living on northshore you can see illegal dumping and you would say these are normal people.

You got to go the primary schools and start there.look at the adults around you

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Local Board: Rodney

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Firstly, iwi/maori do not have any special insight in relations to waste that the rest of us dont. Secondly, dreaming about some utoppian zero waste future wont bring it to reality. The changes required for this to happen are completely outside council influence so forget trying to change the world and just get on with doing your core tasks.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Making it harder to get rid of waste will just result in people dumping rubbish. The city will end up beimg one big tip. Collect the rubbish. Its your job.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: If you want a "liveable" city, construction is a necesity. Construction waste is a reality. Little old auckland is never going to change constructions methods by imposing regulation. It will just make building more expensive and make auckland less liveable

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Yawn

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Actually a good idea

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Yep. But only if you do your job by providing ample runbish bins in public spaces and regular bin services to households

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Rubbish is a core council service. Do it properly and keep our city clean. Stop dreaming that your policies will change consumption or packaging of products and just do the job your paid to do.

#1631

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Henderson-Massey

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Reduce, reuse, recycle has been a leading way to deal with waste across the globe for decades by now. It works and can only be improved.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: While keeping the food waste and recycling separate is a good step, a bigger household can still produce a lot of general waste. If the general rubbish collection drops to fortnightly, that will mean that people might need multiple bins, which they might not have the money or space for.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I wonder why the food bins option was introduced instead of a green waste bin like Christchurch offers for garden waste and food scraps. This would remove green waste that is compostable from rubbish bins. Council's own web page says "You can put noxious weeds in your rubbish bin" https://www.aucklandcouncil.govt.nz/environment/plants-animals/pests-weeds/Pages/how-to-dispose-weeds.aspx and there are very few other options for disposing of these weeds . I would like to see more alignment between different Council policies and other options that avoid truck collections at peak times adding to congestion and vehicle emissions.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There has been a lot of infill building near us and huge amounts of unsorted demolition and building waste taken away in skips. I wonder if having differential charges for sorted waste would encourage better sorting of waste in such a way some could be re-used ?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Support this concept but don't really see how Council can implement it. Seems more like a central govt regulatory framework is required.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Frequency of rubbish collection is a fundamental service. The proposal is a reduction in the level of service by 50%. I am sceptical ratepayers will get a 50 % reduction in waste management charges.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This should be the highest priority of the strategy. It is a far bigger proportion of waste to landfill than domestic rubbish and I would prefer you put more effort into construction waste than reducing the level of service (frequency) for domestic waste.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Disagree because the focus should be on construction waste and recycling initiatives.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I agree with having a product stewardship scheme and encouraging recycling. I just don't think it's council's role - it's an MfE function.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I think much landfill volume could be saved if Council had more appropriate definitions of what is contaminated soil. Much soil is disposed of to landfill when it has relatively low levels of contamination and should not be taking up landfill volume. This is also a key factor driving up the redevelopment cost of urban land.

#1635

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Charges should only be for those using the services. Us who have Compost bins and used old bones for gardening should NOT pay, when we don't use it the bins. The old tag system means those who save the environment themselves are not PUNISHED for doing so.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: The bins are those who create rubbish and it should be the ones who pay for it. Bulk filling detergents into existing containers, using dissolvable tables, washing powder -paper that self dissolves etc. Stops CONTAINERS. Fizzy drink bottles - versus the soda streams. Taking shopping bags to shops, reuse tablets containers etc.. This is the easy way that cares for the environment and reward those who are doing so.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: The old glass milk bottles - cleaned by the company and reused. Large profit making companies glass bottles correctly recycled - washed and reused. NO plastic bottles.

RATES FUNDED.. - so those who don't use it pay for it and those who do are not encouraged to stop using it as they don't see any advantage in saving waste.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Lion Red Beer Bottles are STILL RECYCLED. A penalty on fizzy drink companies, milk companies - this will encourage the companies to recycle themselves, glass fizzy drink bottles instead of plastic.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: EG. Large group using a council park for a 3 days sports match. They leave about 12 large plastic bags of rubbish in one pile. Council has to remove it. Why??? if they booked all the area - they should be penalised. Not wasting rate payers money.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Other

Tell us why: Helensville is a good one, - Raglan is very good. Out of town and sells heaps of items. food scraps being sold as a compost, worm farms etc. Charges for those who use it.

4. Any other comments

1. Make the change - Define/remove Best before and keep Use by dates. Much food is thrown out un necessarily

2. Cooking classes - removed from most schools by National about 12 years ago, but now being taught in a few communities. One in Avondale/New Lynn area, Restaurant in Onehunga has food made from what most people would throw away. - this will enable those of tight/minimal budgets to survive. I did a pilot scheme and School sent mothers to us for cooking lessons and improving food kids wouldn't eat, it proved to be great with improvements in health and concentration.

3. Gardening - community gardens - only a few people are involved, show how compost can be self done, in old buckets. Encourage outdoor activities, even those in high rises - a vege container on the deck etc, improves health and well being - inaction, activities - not just on a computer or watching T.V.

4. Some schools are involved - but increase it so kids are taught and have the joy of - as we did at Ranui Primary - years ago, kids made their lunch for the Lettuce, Tomatoes, celery etc from the garden on 2 slices of bread. Charge was $2. Start on the young ones.

5. Fund community groups who are doing this. Seeing statistics on those attending.

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: No more landfills harder laws enforcement on environmental laws resource management acts investigation against corporate owners ,industries, companies ect.building and intensification infrastructure watercare ,Westfield, Blackrock, new zealand Company. Waste management.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: No disclosure of cost to the rate payers everyone who uses the bins should be charged .if not no need to pay.no cost to the rate payer?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: These corporations building and construction companies must be held accountable responsible to the 40%of waste because of their incompetence to recycle reuse reduce these martials an internal independent investigation must be done to their breaches to the environment act.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These issues are important and must take urgent action.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Do not support stewardship.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Where are the rubbish bins along the reserve,beaches, walkways ,streets ?where are the recycling Binns where are the clothing Binns ,where are the big Binns to dump public rubbish for 1 community.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: All these islands are precious to Aotearoa no more dumping rubbish on the islands the rubbish must be reduced education support from the residents owners environmentalists must have rights in what should happen concerning their environment home and landfills.

4. Any other comments

Resource management must not be given to corporations who decide to destroy any indigenous native species on these island putiki being an example these are breaches to the endangered spieces act.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Less organic and recyclable materials going to landfill

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Making the landfill less accessible will force people to recycle and handle their organic waste correctly

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The waste from the construction industry is sickening. But the industry is also directed by economics. Policies that reflect the true cost of our resource usage are required to make everyone respect resources more.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: was particularly interested in the life of products plan, i have lost count of for example number of bathroom heaters which fail or recalled which i have had to replace, while NZ made skope heater still going as new for over 30 years, why should world put up with such poor quality goods!? Its vital now that manufacturers cant ship products to nz unless it can last most of its lifetime and be repaired. NZ should also look at importing half the product and complete its production in nz that way repair and service comes back to life (subsidized) and more jobs loom on horizon! countries which still use polystyrene and similiar for shipping must not be allowed to do so.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: there is sense of urgency set in minds of do gooders that options are here, and idea of fuel from waste is great, it also keeps normal bins free, or less of over growing bacteria. however us apartment dwellers whom have food collection need to have our rates looked into as we are paying twice! even it means quartely discount based in ratepayers prudence.....

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: i work in factory and our 3 jumbo bins fill within 48hrs, compared to 6 days many years ago....factories and C&D should also be rewarded if they are seperating waste.....more over council needs to have all major C&D and factories have person visit and find out what efforts that business is going to in reducing landfill. Even boat builders and high resin/plastics/synthetics use firms need to rethink rubbish. one time i called pink bins and asked how they sort; metal,gibb, and some wood, rest goes landfill because cling wrap is sodden with mixed waste, plastics are contaminated by its contents, for example resin / paints/ epoxy / silicone / oil based lubes most containers cant be recycled this is sad!!! rather than continue with plastic pals buckets conform to tin....also C&D picture all those glue/sealents/etc with used in caulking guns biffed in landfill, why are we not using high density cardboard tubes made from recycled cardboard????

then we have pvc waste from electrical wiring, i spoke to a copper recycler , all stripped insulation goes to landfill which instead could transformed into other products. i work in electrical and mountains of bare pvc goes landfill as there are no recyclers or dropoff...what are uni

teachers/students doing?? Need to revisit burning - power generation. if a cremation facility has high tech air filtration why cant this be enhanced for rubbish??

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: plastics including clothing is big problem, unfortunately major drawback is kiwi attitude landbin is lot easier...ive observed from job to job most rubbish idiots just dont care - open big screwdriver blister pack and toss plastics into normal bin, buy set of utensils or electronics in blister packs toss clear virgin plastic into waste RATHER than put in recycle ..fortunately some firms are getting wiser using box with photo ...or item is tied to cardboard holder,etc....such firms should be given exposure to put others to shame....its only tip of problem, nz media and council needs to televise example how to sort such idiot attitudes....supermarkets give us impression no more plastic bags is positive yet if we use all those gift cards they toss them in footbin...why are we still making gift cards from plastic.??..all those food and meat plastic packs , why are chips still sold in plastic???, when instead use cereal box method but with corn starch , or waxed paper bag come on! lets wake up NZ! toothpaste tubes - these can replaced with tin pots or tetra type tubes, for average person 24hrs/day most things such toothpaste tube cant be recycled...whats wrong with us? bottle tops are now deemed unsafe for recycle machines ! OMG! will then modify machines lets move with times ak council..else all this can recycle this ,cant recycle that , we may as well do what uk does and incinerate to make electricity...and as for plastic in marine life, its obvious boaties/vessels are tossing waste overboard and we cant catch them...microplastics - recently i untied marine grade rope from outdoor plant ,shock of my life millions of plastic particles burst from the old rope! herein is major problem for marine goods.....fishermen behold your catch eventually swollows all this microplastic god knows whats going to happen to billions of guts in our food chain?? i could write forever, it all starts with education and public needs to be shocked whats happening...

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: great idea this was decades ago and recently in some countries a machine scans your beverage bottle and gifts you vouchers and other rewards....i still recall taking bottles back to store for cash...

however i went ak showgrounds with clearly marked tri-bin placement but noted the food vendors and coffee stalls tossing all means of bottles in landfill bag placed beside them ,yet few feet away is recycle bins clearly marked...

Again it comes down to kiwi attitudes - we are still dealing with too many idiots....council could go to great measures but first we have to change mindset and do it fast. for starters any public event bins are staffed with serious directions to public, events such as diwali,pacifica i noted public dont read bins....and i watched waste crew going thru each and every sak, i nearly cried, in workplace this is hardest..and only way reduce waste is prove the sorting/seperating then reward the company.....options are unlimited....food/cinema/grocery/travel/health/....vouchers which get passed onto workers/staff for doing right....

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: illegal dumping is tough fight, u would need cameras on every hot spot,street, river, bush u name it....night patrols, rewards to spotters, even average late workers whom witness should be rewarded, provided its not part of cash scheme else we have trouble...other option is food vouchers to those whom do right thing such as bringing their old furniture to depot or dropoff point, landlords i think could be having problems with tenants, its big topic.....

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: leave this to those living in waiheke

4. Any other comments

more needs to be done via TV, and mainstream media ,for example typical family showing how to sort / reduce/ make sensible buying choice, through to workplace and work sites, this gets idiots and dummies educated enough to hopefully rethink, also show what happens when waste is not taken seriously and future costs if we dont act now, show other countries negatives and positives that will shock viewers....adds pop up in social media....bill boards with shock images and positive images. create eyecatching messages, imagine winning celebs or sports persons , joseph parker is fighting for cleaner planet he then shows result if we loose....

All in all nz needs to be able to process and repurpose , lets look at ewaste the mountains of plastic could be reconstituted into building material such as washroom walls/panels, metal chips into floor resin (usa airports i have seen), Universities need to show us what the chemistry students have invented.....turning waste into viable resources...made right here in NZ!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Disposing household items like couch or mattresses should be free for ratepayers. The cost of disposal should be on the producers/manufacturers. Otherwise, it's the poorest who end up paying since they are often at the end of furniture's life. No wonder why they resort to illegal dumping. Fines won't solve the problem.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I think the foodscraps bins are a waste of time. Great for feeding all the starving, wandering dogs in South auckland that don't get addressed though and fortnightly rubbish collection will only encourage more illegal dumping

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Not all households have foodscraps. This scheme should be optional. People are lazy - if you have too many bins and require too much separation they won't do it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: Adding cost to an already struggling sector.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Biosolids aside why not burn it?.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I'm not sure how practical this will be

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is a huge problem but how realistic is enforcement?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I think you need to be wary of making rubbish disposal even more expensive or too difficult. Fortnightly collection will result in more illegal dumping and encourage vermin. Why not investigate burning as opposed to landfill?

#1642

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: You do not have man power to stop illegal dumping or littering currently, so when you reduce rubbish collecting this will exacerbate the situation. In theory it may sound easy to accomplish but there will be severe unsightly repercussions.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You do not have man power to stop illegal dumping or littering currently, so when you reduce rubbish collecting this will exacerbate the situation. In theory it may sound easy to accomplish but there will be severe unsightly repercussions.

Have you considered families with young children who also have other forms of rubbish e.g. dirty nappies. You expect this to be sitting in bin for 2 weeks? Yes you could argue it should be placed in plastic bags but isn't that what you are trying also to reduce plastic bag consumption. This will add cost to household in times of economic uncertainty.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: As it is many tradesmen are not utilising proper channels of waste disposal from construction sites due to costs, is what you are proposing cost neutral to the public?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: How will you police these?

As it is there is no man power to implement instant fines

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Manurewa

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: If it will benefit our ecosystem in the long run and save our enviroment then thats great.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I feel that it may create more waste being collected 2 weeks instead of 1 week as we have per normal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: It will be saving space at landfills.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This might discourage people from dumping

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Personally want to be the one to decide what I keep and throw away. Individual choice. I expect decent rubbish removal and disposal as part of this.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I need my rubbish collected weekly due to volume and smell. If you want to reduce packaging, have a go at the companies that package goods. The small bins for scrap are terrible, expensive and unnecessary. People can recycle such waste if they like on their own premises. I have a worm farm and compost bin so I will never need or want the scrap service.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I think you made an arbitrary target that makes no sense. You can keep on having a growing city fuelled by over-migration and expect less waste. Remove the target which is quite silly (like Road to Zero). Do what you can.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Those categories are not even mutually exclusive. Eg textiles, plastics and packaging can all be packaging. I oppose door to door collection of scraps. People should do this on their own property rather than drive trucks around to do it for them. Stop the scrap trucks!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: I think this will be astonishingly expensive and complicated. It will end up costing the consumer more and fueling inflation.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's about your only good idea.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Economics of CRS don't stack up.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Local Board: Waitākere Ranges

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: I support the overall direction but not some of the specific actions.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Seems reasonable for us - but we generate a low amount of rubbish. I'm not sure how this would affect large families.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Very important area to be addressed

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sensible

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Has to happen

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: About time

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: an unnecessary build up of rubbish scattered around the community which would contribute unsightly neighborhoods and residential properties

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: as per above

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: target building sites to implement harsher rules as I suspect typical households are less likely contributors

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: just becomes to difficult to implement and manage

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: as per above

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: sounds good in theory but hoe is this to be policed ?, By already removing a significant number of public rubbish bins from public area's was a stupid decision only likely to extenuated litter offending.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I object to this proposal to reduce weekly rubbish collection services to fortnightly.

As a ratepayer, I do not want to see reduced services for the rates that I pay. If rubbish collections are to be halved, I want to see a commensurate reduction in my rates.

Instead I suspect the council will use the savings in rubbish collection to fund projects outside what should be the basic remit of a council, while continuing to fail and delivering on its basic obligations to ratepayers.

I am part of a family of three, and our household fills our current red-topped bin every week with household waste. We use our blue-topped bin and am comfortable with fortnightly collections as the bin is larger.

In contrast to what is claimed by council, much of this waste in our red-topped bin is non-organic. This includes soiled nappies and material that is not recyclable. i cannot imagine how larger families could cope with fortnightly collections.

I object to this policy as it discriminates against larger families and families with babies as they have a large non-organic non-recyclable rubbish load (nappies and wipes and etc.).

I object to this policy will lead to rubbish dumping by people for whom a fortnightly collection is insufficient.

Finally, forcing people to adopt certain behaviors is counterproductive. People do not appreciate being told what to do. All this does is create resentment. I believe a more productive policy is to encourage the use of green-topped bins such as by spot prizes in the letterbox for people putting them out. Using these bins will become a habit over time.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Council should stay out of it.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Council should stay out of it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Council should stay out of it.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I wish the council would focus on delivering basic services properly instead of trying to tell ratepayers what to do and what bad people we are for having rubbish.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Putting extra bin for food scrap is just waste of ratepayers money when the job was done by one waste bin, basically the food scrap will go weekly so the charges will increase rather than reducing cost .Which basically means you are hiring another contractor to collect Food scrap bins weekly , which indicates the weekly run is still there but only to pick up Food scrap bins , what about other waste .

totally disagree with the idea.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Dumping at wrong places makes the area look ugly and dirty.

Instead Council should start collecting Organic waste once a year as the practice was in the past.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would be more than happy to move to fortnightly collections. My rubbish is very minimal. Only concern is that bins get very stinky in summer particularly. But in genrral, I support every aspect of the plan.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Option for larger households to have a bigger bin is good. Proof that it reduces rubbish seems pretty conclusive in those places it has been implemented

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Seems a no-brainer!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I am still concerned about plastics that we are unable to recycle

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Love the idea of payment for return of items like drink cans. Make Coca-Cola and others take responsibility for their products

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support it but how do you catch illegal dumpers?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I support the principles, although I think a lot of the things are not practical because they are not convenient or are too complicated. Prevent waste in the first instance by not producing products which have a lot of waste (eg packaging, wrong plastic types, etc).

Industrial waste can be controlled by making it convenient for separate types of waste at source. There needs to be more regulations to reduce home waste. Eg. Prevent supermarkets wrapping goods in plastic. Make all suppliers only use plastics 1,2,and 5. Make it easy and free to drop off products that can be reused. If things are not convenient people will not do it. I find the new rules in Auckland to separate waste to difficult, so therefore will not do it properly. To drop off goods that can be reused is too expensive, therefore they will end up in landfill. Everything is about cost and convenience. Make it expensive to dump waste, and people will find a solution. Make it easy, convenient and cheap to recycle, and people will do a better job of it.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Christchurch had organic waste collected every two weeks, alternating with other recycle bin. Organic includes food, and garden waste. Auckland does not have combined organic waste and still expects people to do the garden waste themselves. Food scraps don't make up 41% of my families rubbish waste. I already only put out my food waste every two weeks because we don't have enough for weekly. I could easily combine with my garden waste, but that is not allowed, why? fortnightly or weekly collection is about convenience and practicality. If it is not either, there will be more waste left lying around the streets. Also, the size of the food scrap bins in Auckland are a joke. They are very small and blow away in the wind. The handles are too low for elderly people to wheel down to the curb. If they were bigger, they could also be collected fortnightly, or if they could be combined with other organic waste, in larger bins, the same fortnightly collection would work as well. I think our current system is inefficient and wasteful.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Commercial waste needs to be made easy to recycle or reuse. There are only two ways to reduce this waste. Make is economically viable and make it easy. If it is made expensive to send commercial waste to landfill, industry will look at ways of reducing waste. It it is made

convenient to separate and send for recycling, people will also do this. I have a lot of experience working in the manufacturing sector, and I know that waste from any industrial site can be reduced by 90% with a little effort. Cost is a key driver, as well as simplicity. Put the incentives in place by making is expensive to dump industrial waste, and industry will find a solution, since it affects their profitability.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Any waste is bad and needs to be reduced. Focus on the easy ones first and work your way to the more difficult is the best way to go. However, it needs to be made easy and convenient for people to do this. Currently this is not the case in Auckland. I have been to Scandinavia and looked at how they recycle, and everything is much easier. More collection points in the suburbs for different types of waste. More recycling in major shopping centers, so people can bring waste for recycling. Different attitude about waste (ie we need more education). Also, there needs to be incentive to reduce waste and in Auckland there is not. Make dumping waste really expensive and make recycling or separating waste cheap or free. In Auckland it is expensive and inconvenient to take separated waste to collection points, whether it is green waste, timber, computers, plastics, etc. This needs to be cheap or free, and put the cost on dumping to landfill.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Reduction in waste will occur when it costs more for waste and there is an incentive. This puts the costs at the source of the waste and encourages recycling because it is free and easy.

Ratepayers should not be paying for waste. The people who produce the waste should be paying for it.

There should also be a system where retailers legally have to take back the packaging waste from goods they sell. That way it can be collected more efficiently and recycled better. It will also encourage them to use less packaging in the first place. There should also be a system in place to prevent having packaging with plastics other than the 1,2,and 5. If it cannot be recycled, the make it expensive so companies don't use the others.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This is the "ambulance at the bottom of the cliff". Have less waste and make recycling easier in the first place. It also costs a lot to police.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Food scraps are one part of the smelly items to remove and it is a great initiative. But a lot of smelly / sanitary items are not food scraps, as you've identified. (E.g. the likes of baby's nappies, sanitary products, etc). At this point in time, weekly refuse collection of half-as-much rubbish seems much more first-world.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Our supermarkets and consumer goods provide a LOT of packaging. I would love to see this reduced.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Need to account for large disposal items like whiteware and furniture

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Already neighbours keep using others' bins and sometimes outright steal the bins

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Stopping the waste problem at the source is the most effective means of combating it. Also, the construction industry is rapacious in this country so they should at least have the decency to tidy up their own mess

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Should be easy to target those items

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Harks back to the glass bottle refunds of my youth. Seemed to work then plus provide pocket money for kids

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But at the same time council needs to provide legitimate workable disposal methods for large items that low income households don't have the means to dispose of. The infrequent bookable inorganic collection isn't practical

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: While we think this is quite workable for most households, it is definitely not workable for small hospitality businesses. Many of our larger restaurants have private collections, but the smaller eateries and take-away outlets cannot afford that, and rely on council collections. Many of them do not even have sufficient storage for bins either. A fortnightly collection will be really problematic for town centres, encourage rodents etc. It is not acceptable this detail was buried in the consultation material and not upfront

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: You have not given any clarity as to how this will affect or involve small business

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We often deal with illegal dumping in and around town centres and support heavy fines

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

It was really disappointing to struggle to find information that pertains to business. We made several calls to council and eventually saw this buried on page 71.

We need to be involved and have god notice of any changes to collection cycles and believe you need other solutions for small hospitality businesses

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The Council website and other information provided on resource recovery should be kept up to date with a comprehensive list of where items that are not accepted for kerbside recycling can be taken for re-use or recycling. E.g. searching on "recycle shoes" does not produce any useful information. And the infographic on what you cannot put in your recycling bin, has no information or where these items could be taken for recycling. For example, taking batteries to Bunnings.

The system and information need to be simple so that people are assisted and motivated to recycle as much as possible.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

There is another component to waste reduction. As a result of the central government changes limiting only plastic items 1, 2 & 5 to kerbside recycling. Our household of two adults is now putting items that would previously gone into the recycling bin in the rubbish. For example, small yoghurt pots are 6 (polystyrene) so no longer acceptable. These will be banned by July 2025, but that is still a lot of yoghurt pots going in the rubbish.

In addition, not all plastic is clearly labelled. For example, the trays our local Pak'n'Save is using for meat products have a symbol that looks like a cloud inside a triangle – no number! I think it is likely a 5, but they are sourcing a supply that is not appropriately marked.

This needs to be addressed by central government legislation that requires producers to use plastics that are recyclable in New Zealand to package food items, and to require all such packaging to be clearly labelled with the approved symbol.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Devonport-Takapuna

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: See the attached document.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: See the attached document.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: See the attached document.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: See the attached document.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: See the attached document.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Draft Auckland Waste Management and Minimisation Plan 2024

Dr Jeff Seadon

1. My experience has enabled me to look at this plan through several national and international lenses.
    a. Current overall coordinating lead author for the United Nations Environment Programme's Global Environmental Outlook-7 which provides guidance to UNEP on their focus post 2026.
    b. Current lead author to provide guidance for developing countries on accelerating national to local government progress in solid waste management for the United Nations Office of Sustainable Development;
    c. Recent past member of the Ministry for the Environment Waste Assessment Panel for 5 years providing advice to the Minister on projects for the contestable funding part of the Waste Levy;
    d. Lead author for three books to provide guidance for policymakers for the United Nations Environment Programme;
        i. *Guidelines for Framework Legislation for Integrated Waste Management*
        ii. *Asia Waste Management Outlook*
        iii. *Small Island Developing States Waste Management Outlook*
    e. Invited by 3 Asian governments, through the United Nations Environment Programme, to provide waste policy advice;
    f. Waste Policy Manager that led the Waste Minimisation Act (2008) through Parliament;
    g. Contracted by Auckland Council to produce guidance:
        i. *Mandatory Site Waste Management Plans*
        ii. *Residential Construction Waste Targets*
        iii. *Deconstruction of an old house: Diverting waste from landfill*
        iv. *Activating deconstruction and reuse - reducing deconstruction and demolition waste*
    h. Member of the working party that developed the first Auckland City Waste Management Plan in 1997;
    i. Work with industry, from micro-businesses to multinationals to provide advice on waste reduction; and
    j. Publish nationally and internationally at conferences and in journals.
2. It is good to see that the overall proposed direction is a continuation of the current trajectory.
3. My comments below refer to the aspects of the plan that I feel miss the mark.

Section 4 Vision

4. The aspiration of zero waste by 2040 is commendable. However, turning waste into resources is still aiming at the lower parts of New Zealand's waste management hierarchy. Reduction is at the top of the hierarchy, and this receives scant mention in the plan. If waste is not produced the in the first place, there is no need to manage it.
5. A move to a true zero waste Auckland is laudable, but this means zero solid waste, zero liquid waste and zero air emissions to make Auckland a sustainable city.

6. It is surprising to see in the vision that while people and the environment are included, there is no mention of **economic** factors. Every definition of sustainability (and its variants) that I have come across recognises that the programmes must be economically viable. This is not recognised in the Council's current vision.
7. As a statutory document, I would have thought that the Council would follow the Waste Minimisation Act (2008). However, on page 9 the draft Waste Plan talks about an '**internationally recognised waste reduction hierarchy'.** There is no such thing. There is a myriad of waste management hierarchies, with new ones popping up daily by academics and pseudo-academics who are looking to make their mark on history. They are all based on the original waste management hierarchy as laid out in the USA Resource Conservation and Recovery Act (1976) and replicated in the Waste Minimisation Act (2008). It should be noted that the latest UNEP Global Waste Management Outlook (2024), the authors have gone back to using the 1996 UNEP hierarchy (prevent, reduce, reuse, recycle, recover and dispose. It is not clear why the Council wants to add confusion when it could use terms which are already embedded in the language of the community.
8. The examples of zero waste given on page 11 are not zero waste. They are examples of reduction and reuse. Further down page 11, Council states that zero waste is not feasible.
9. It is good to see the alignment of thinking with a circular economy thinking, which is in line with central government, our trading partners and international organisations like the United Nations.

Section 6 Principles

10. On page 17, under 'Acting fairly and being responsive to need', the first bullet point contradicts itself. In the first part of the sentence, it talks about shifting the responsibility to consumers and in the second part it talks about shifting responsibility away from low-income communities (which presumably are also consumers). In West Auckland and the North Shore consumers only pay for what they dispose of and not based on their income. Likewise in central and south Auckland, it is a blanket charge which is not based on their income. The current plan's actions are not based on user pays, but on low generators subsidising large wasters. This is not an equitable outcome.

Section 8 Key Priorities

11. Page 20, Action 7. The international evidence on container deposit schemes is ambivalent. In some jurisdictions It has made a significant difference, and in others almost no difference. There is no guarantee that it will make much difference in New Zealand. The difficulty of adapting to the minor changes in plastics collections in Auckland and the difficulty of getting that message across to the community are testament that success for a whole new container deposit system is going to be a significant hurdle for the community to understand. It should also be noted that this is not a priority for the current government.
12. Page 21, Actions 8 & 9.
    a. Worldwide evidence shows that pay-as-you-throw reduces waste generation. If the Council really wanted to reduce household waste it would institute a weight-based scheme with a RFID tag that connects the weight to the household. While the excuse has been that slopes are a problem with the Weights and Measures Act (1987), simple physics can be used to allow for this situation.

b. On the positive side, moving to a fortnightly collection reduces waste capacity for households. However, in the last iteration of the idea of uniform charges, households that were to use larger bins were subsidised by those using smaller bins (i.e. a discount for bulk waste generation). Not only is this charging scheme inequitable, but it also promotes greater waste disposal. For those who can't cope with their current bin size, simply getting a bigger one (or compressing current volumes) can solve the problem. It does not reduce waste quantities.

Section 9 Targets

13. Domestic kerbside waste. The reduction of waste generation of 15% by 2028, despite food scraps representing 41% of total waste shows Council's lack of confidence in their programmes. These figures show that the Council either expects:
    a. low participation rates with just over a third of households (36%) to take part in kitchen waste collection (despite being given bins and bags, and being automatically charged for collection, whether they participate or not); or
    b. more household waste with general waste disposal will increase by 44% over the next four years resulting from changes to kerbside collections; or
    c. somewhere between these two values – though in any case Council expects general waste to increase.
14. By 2030, Council expects, at the extremes, either 100% participation rate in the kitchen waste collection or 20% increase in kerbside general waste (based on 2022), or somewhere between.

Section 12.6 Maximising household diversion

15. It is pleasing to note that there is some acknowledgement in the final paragraph that waste conscious households should be rewarded and incentivised. Hopefully this will be more than tokenism.

Section 12.8 Climate change and emergency responses

16. The Council has failed to recognise that landfills in Auckland have greenhouse gas capture and that methane emissions are burnt onsite to produce energy. This treatment significantly reduces the environmental effects of landfill gas.

Section 14 Action Plan

17. Page 65, Number 3.7. From the work I have done, other Councils in New Zealand (and overseas) are able to institute mandatory site waste management plans through bylaws. Auckland has been trying since 1998 to achieve this and. according to people from Council I have talked to, it is the building consents officials that have balked at the idea as it may slow down the consent process. Council needs to decide whether it is serious about tackling the largest waste stream or whether it is content to reduce small scale waste like plastics.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: At the moment we capitalise the profits [making the object] and socialize the losses [getting rid of the object at its end of life]. Thes need to be combined, if you make something you also need to pay the full cost of its disposal.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: BIG but. Some elderly people have trouble on steep or long driveways getting their bins in from and out to the Kerb even now. If you double the weight you are asking too much of these people. This is called elder abuse.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: When I studied construction in England in 1963 this was already in place. 60 years and we are catching up!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is UE police. Stop sending our young to America for study, send them to Europ so they can learn how to save the planet, NOT how to only make the maximum Profit.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Less rubbish from fast food out lets. Make a charge on the retailer for what is thrown on the streets and use it to pay for it to be picked up, should be a self-balancing exercise.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: It's good to see Auckland step away from relying on recycling methods. It hasn't been working.

We suggest continuing to phase out materials that can't be recycled & promote good alternatives.

Also, we noticed that already wrapped plastic vegetables have been given the greenlight to continue being sold. These should and can be phased out!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Our area, Māngere is known for it's cross & local illegal dumping volumes. Most people have become accustomed to the litter on the streets. We predict that moving to a fortnightly bin collection will only cause this issue to increase. Yes, statistically the landfill will benefit. However, where will the excess go? Dumped in our poorest areas. Fortnightly bin collections SHOULD NOT be introduced until better solutions are created for non-recyclable packaging.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: 'It's a great step in the right direction. However, we need to continue placing more regulations in the C&D space.

We recommend this. Bulldozing existing homes needs to stop! We propose a process such as:

- Resell the home

- Deconstruct & Divert the saved materials

- Landfill what can't be salvaged

Another issue is that residential home owners don't have anywhere to take their waste. They are rejected from services for not being a commercial business or are asked to go under contract which is unaffordable for them. The cheapest option is landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: My first reply mentioned wrapped plastic vegetables. An alternative could be, the cashier or buyer removes the plastic before it's taken home. Supermarkets become responsible for the packaging! It's possible! These can be diverted to the Soft Plastic Collection Scheme more efficiently. This can be pushed by phasing out single plastic or giving supermarkets this alternative.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Long overdue!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Better tools & regulations from Central Government are definitely needed! All for local solutions!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Māngere needs a recycling centre. We have a densely populated area. Not to mention a low income one as well. How is our community expected to recycle, buy alternatives for packaging and go to a recycling centre when most are struggling to survive for the week? If we had a local hub, the outcome could be great! Mangere Enviro Hub just opened its gates. Could this be a potential place to start?

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I question the 41% of the bin being food waste. In my experience, it's more like 20%. And there are international studies that support this. Ratepayers deserve the choice of services like home compost, feed animals, a bin scheme or use a food waste disposer. There are a huge number of NZ household that have a disposer.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Weird you say this though and then allow the removal of all the bins from the streets and parks. Left and right ahnd need to tlak to each other!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There doesn't seem to be many solid ideas about how C&D waste can be reduced in the snapshot document.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Other than the recently introduced food scraps bins, which has had poor uptake I don't see many specific examples suggested for these 5 points. Educating people on the value in these particular items of rubbish is needed. As these waste streams have some inherent value there should be more collections points for these items, start-up schemes that require subsisides should be encouraged. Thermal Hydrolysis at Wastewater Treatment plants to reduce and

improve the biosolids output from them is decades away and multiple funding issues currently exist for these projects.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I absolutely support this, but I don't see why Auckland needs to wait for Central Government. Auckland has the largest population of any city in the country, and we should be implementing these product stewardship schemes and leading by example for the rest of the country. Auckland should be trialling carrot and stick tools on companies that sell products that have inherent waste streams in our city. Tax and penalise companies that do not offer product stewardship, use those taxes and penalties to offer incentives to businesses to implement product stewardship. Waste minimisation and sorting should not fall only on the council.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Make penalties far harsher and public. Make it know that dumping is not tolerated.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I was a vocal proponent in 2022 against the removal of Pay-As-You-Go (I.e. bin tags) schemes in areas like the North Shore and West Auckland. While I think the method of pay-as-you-go currently is rudimentary and full of problems, the philosophy of pay-as-you-go has one of the biggest motivators to reduce people's waste. Take water use as an example, water is metered in Auckland and the average Aucklander consumes 146 litres a day. Most councils outside of Auckland do not meter water use, and as a result the average New Zealander uses 281.8 litres a day, nearly twice that of the average Aucklander, and the large population of Auckland relative to the rest of the country is also skewing the national average down. Some unmetered districts see water use climb as high as 800 litres a day per person. Why is the council not metering Aucklander's general waste? I can't think of a fairer motivator to get Aucklanders using the alterative waste streams available to them. It is surreal to me that Auckland Council is removing pay-as-you-go in the areas that has it in favour for a rates funded model everywhere. All this does is motivate people to fill up their general waste bin, as they have already paid for it in their rates. Pay-as-you-go should be spread to the rest of Auckland, not the other way around. Develop Pay-as-you-go into a better system, get rid of bin tags, have bin collection bills based on how frequently a household puts out their general waste bin, you could even develop trucks that weigh a bin as it empties it, and you can charge accordingly and gather useful data on the impact pay-as-you-go has. This single point in the WMMP disappoints me the most. Keep useful waste streams in Rates bills (food scraps, recycling), make un-useful streams (general waste) user pays, and watch the culture of waste minimisation transform in Auckland.

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Separate food scrap collection is an excellent improvement to our household.

Next step is doing something better with incontinence products.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Horrified by the waste evident in local buildings. What happens to all the plastic wrapping?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would expect the Council to publicise and encourage everyone to be mindful of anything an individual puts in the rubbish and puts out for recycling and give the public good reasons why. One good incentive which has been talked about is encouraging recycling of various containers by giving a $ deposit back e.g. 1 and 2l milk containers

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Is this to save money on collections? We need the means of disposing of certain waste - used nappies, disposable coffee cups and lids and for it to be made easier - most of us are lazy and throw things in the rubbish if it's too hard to recycle.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: If it's able to be recycled without huge cost then keep it out of landfill. However, what is the cost?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Textiles are a huge problem - especially polyester and other manmade fibres. Buy less and re-use

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: See my comments above - NZ used to do this back in the day - returnable milk bottles and soft drink bottles

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Fly tipping is awful - however, i think often it is too expensive to dispose of such rubbish legally - are incentives viable?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Don't feel I need to comment on this

Organisation (if applicable):

Local Board: Waitematā

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Because if you want something done badly have the council do it!

This will just mean more work, more cost and more disruption for us, the rate payers, who fund them!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We do not have the scale for this to work so this will only lead to greater cost, rats, smells etc. I have witnessed food scrap recycling in Korea where it is collected daily, we simply do not have the scale to do this. Costs will only rise and service levels fall!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Priorities OK but I feel like this will just be lumped onto us, will we see a resulting lower rates bill, I suspect not!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Unworkable, expensive, will just push product prices up, service decrease and as always, we will pay, and pay, and pay....

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Just enforce it, don't just threaten to!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Do not support

Tell us why: Another hairbrained plan by inept bureaucrats, this will not work, costs will rise, convenience will fall, mark my words!

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Do not support

Tell us why: Another hairbrained plan by inept bureaucrats, this will not work, costs will rise, convenience will fall, mark my words!

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Do not support

Tell us why: Another hairbrained plan by inept bureaucrats, this will not work, costs will rise, convenience will fall, mark my words!

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Tell us why: Another hairbrained plan by inept bureaucrats, this will not work, costs will rise, convenience will fall, mark my words!

4. Any other comments

Please, focus on what the services the council provides for us are and if you want to contract them out or put them back on us then reduce the rates take!

#1678

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Appliances especially eg TV's don't last as long as they used to. Big items to end up in landfill. Would love more effort and work done at reusing or redesigning some items - ie tyres.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I don't know how some families - especially those larger families would be able to manage with a fortnightly collection. Would not want more illegal dumping of rubbish as a result.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Wonderful idea. Especially the white plastic wrapping that goes around houses that are being reclad - kills me to think of that going into landfill.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Very good idea.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely hate seeing rubbish dumped. So rude and lazy and irresponsible. This didn't happen as much when we had routine yearly inorganic rubbish collection. Some people just can't be bothered to book a collection online.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

#1679

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Kaipatiki Project

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We strongly support the proposed direction (Option 2) which:

- affirms a strong zero waste vision for both people and planet,
- centres the waste hierarchy as a guide for action, and
- sets the intention to prioritise actions at the top of the waste hierarchy.

We applaud Auckland Council for showing leadership in taking a true zero waste approach to the WMMP. Preventing waste in the first place by redesigning products and business models means less litter, less plastic pollution, less landfills and no need for CO2 emitting incinerators.

Focusing at the top of the waste hierarchy will help slow down Auckland's consumption of raw materials. Keeping products and materials in circulation for longer means we don't have to pull as many resources out of our environment into the economy or create emissions to turn resources into stuff. The longer we make our things last, the less we need to extract from our environment which reduces damage to ecosystems, biodiversity loss, pollution and emissions.

Recycling is important to keep materials circulating but it needs to be the last resort after businesses and households have done everything they can to avoid using single use disposable packaging, service ware and short life products. Auckland needs to focus on shifting towards high quality, closed loop recycling systems. Source separation plays a key role in getting clean, single stream, raw materials to be incorporated as recycled content in new products and to feed organics into our composting systems. Product stewardship schemes like Deposit Return schemes for drink containers and the Resource Recovery Network will help with that.

The Waste Hierarchy p9

We suggest removing the 'decision to dispose' line. This is unnecessary and confusing. Each step in the hierarchy involves a decision to treat resources in a particular way. The position the line is in now is where a decision is made to divert to recycling or composting so the use of the word dispose is confusing.

We appreciate Auckland Council's commitment to invest in education and behaviour change (in house and by external providers) to help communities and businesses become familiar with zero waste, circular economy and emissions reduction and adaptation strategies. Changing mindsets and behaviours so that low waste, low emissions becomes the default setting is a major inter-generational change management process.

We support the 7 principles that will underpin decision making.

Goals

We suggest the following minor changes

Goal 1 Maximise circularity in line with the waste hierarchy

1. 'Designing out waste' line needs to include: supporting the development of new business and service models, improved product design….

2. Organic waste is prevented or diverted from landfill in the header and a bullet point added to cover prevention / source reduction strategies for food and organic waste including textiles and packaging. Diversion is necessary but not sufficient.

3. Network of infrastructure needs to include a bullet point that covers soft infrastructure which covers capability and capacity of organisations and staff working in service provision and behaviour change, plus systems and processes including IT and tech solutions alongside the traditional hard infrastructure of sites and equipment.

4. Data and information needs to have a bullet added on better understanding of material and product flows. Point about embodied carbon could be expanded to cover supply chain emissions and embodied carbon. Also important to better understand the emissions implications of disposal options.

Goal 2 Minimise harm

6. Add a specific reference to plastic and microplastic pollution as this shows up consistently as a key area of concern in annual public surveys.

Methods to deliver on the objectives

Add the following to create a more comprehensive list

#3 Advocating for business to adapt business and service models….

Add Use Council procurement of goods and services

Section 10 Statutory and Strategic Context

10.4 it would be useful to split out the Emissions Reduction plan from the Waste Strategy commentary - give it a separate section or a subheading. The paragraph that describes this work is a bit unclear. It would be helpful to include a few sentences about how emissions are generated from waste in landfill, the process of collecting and processing waste, recycling and organics as well as the upstream supply chain emissions. This links into the low emissions aspects of circular economy and ties back to the priority focus on product stewardship and Objective 2 - organics.

Working together

Empowering iwi and community partnerships and advocacy for product stewardship and business model changes are critical levers that will support the shift to a low waste, low emissions economy.

We support Priority 1 and celebrate Auckland Council's commitment to strengthen ways of working with Mana Whenua.

It is critical that this includes:

- practical programmes and enterprise opportunities for māori organisations alongside input into higher level policy advice and
- using the plan to embed a Te ao Māori approach and achieve outcomes that are important to mana whenua and mataawaka which include equitable access to services, meaningful participation in decision making and reducing the environmental impacts of waste.

We support priority 2 to continue expanding the resource recovery network and its services.

We appreciate the trust and confidence that council has in the community sector to deliver services and behaviour change. These organisations are kaupapa driven and embedded in their local communities. They create good jobs and put money back into their local economies.

Community Resource Recovery Centres or Zero Waste Hubs:

- Deliver services communities want: behaviour change, reuse, repair, composting and recycling.
- Are ideal drop off points for future product stewardship schemes like e-waste, plastics and Deposit Return for containers.
- Combine engagement and education with service delivery. That means the households and businesses they work with come on a journey up the waste hierarchy so that reducing, reusing, recycling and composting become the norm.

- Collaborate through national and local networks to share knowledge, skills and experience.
- Collective work on behaviour change supports the shift by households and businesses away from single use, towards reuse, durability, 'Right to Repair' and sharing models.

Typo p20 row 2 eleven CRC's other parts of document say 13.

We support Priority 12 and the emphasis on Auckland Council working with others who have shared values and objectives to deliver on this plan. Empowering Iwi, Community and other partnerships is critical because we need everyone on board to achieve a zero waste Auckland built on a circular economy.

Table 1 row 12 - The list of partners is not complete - good to add Māori, Government, other councils, and regional organisations

P31 It would be useful to separate out the tertiary and commercial sectors

There is some overlap but there are also important differences, in particular the commercial opportunities for using new business and service models that design out waste and pollution and keep products and materials in circulation.

The model council has been using for the Construction and demolition sector could be usefully applied to the hospitality sector to address single use plastic and packaging issues which have been identified as priority areas.

Details in action points

12.2 Focused community programmes - leave room for new programmes that may come on stream over the next six years. "....including the opportunity to add new programmes and to expand and diversify programmes...

12.9 Strengthen Business Waste by having a separate description for the advocacy and support for designing out waste through new business and service models and putting new types of products on the shelves alongside the more standard in house diversion activities relating to resource recovery for materials, products and organics.

This two pronged approach can be carried across into the "What it means for Aucklanders" column e.g. New business and service models will make it easier for Auckland residents and businesses to use their purchasing power to drive the shift to a low waste circular economy.

Targeting specific activities and materials

We support Priority 3 - see response to Q2B for detail

We support Priority 4 - see response to Q2C for detail

We support Priority 5 - Disaster preparedness, climate change mitigation, adaptation and resilience.

Community Resource Recovery Centres play an important role in responding to community need during and after emergencies. Community and Māori organisations play an important role in

community building and creating pathways for resilience as communities work together to adapt to climate change as well as respond to ongoing emergency events.

Table 1 row 5 needs to include an additional point alongside the readiness issue.

There are two main channels for climate change mitigation through waste action which align with the low emissions aspects of the circular economy. They support the Government's Emissions Reduction Plan and Auckland's Climate Plan.

1. Preventing and diverting organics from landfill - links back to Objective 2

2. Preventing and reducing the amount of material/products flowing through the economy which reduces supply chain and embodied emissions - links back to Objective 1

It is important that these are woven into the narrative as well as the actions. The Actions under 5 relating to this section do a good job of describing the separate streams of work. The commentary just needs to be adapted so the story line is consistent across the document.

Advocacy for future action

We support Priority 6 - see response to Q2D for detail

We support Priority 7 - see response to Q2D for detail

Final disposal - Waste to energy

The WMMP outlines how some waste to energy facilities are being used to treat waste materials including anaerobic digesters in Reporoa, Watercare's wastewater treatment plant, the Golden Bay cement kiln and landfill gas to energy plants.

Incineration of mixed rubbish is being proposed in adjacent districts.

I/We urge Council to specifically rule out Incineration as a disposal option for Auckland's mixed solid waste

Burning mixed solid waste will not help us reduce waste or emissions. Incineration would take us in the opposite direction to the low waste low emissions future described in the Draft WMMP because it is just another disposal method at the bottom of the waste hierarchy.

- It works against circular economy, zero waste and resource efficiency and still requires landfills to contain toxic by-products.

- Burning or burying resources means we have to keep extracting new materials and energy to create more products which damages ecosystems and our climate.

- Investing in a large scale incineration plant would lock Auckland into a linear throwaway future because incinerators rely on long term contracts to secure a continuous supply of rubbish to burn.

- We are all working hard to reduce methane emissions from organic waste going to landfill, it doesn't make any sense to start burning fossil based plastic, which creates CO2 emissions and releases toxic pollutants.

- Incineration is out of step with New Zealand's 100% renewable electricity target, burning rubbish is an inefficient and expensive way to generate a very small amount of non-renewable electricity.

Delivering direct action

We support Priority 8 to support Aucklanders to use the services available to them.

Having the knowledge and confidence to use the systems provided and understanding why it is important to separate materials and live a zero waste lifestyle enables households to get on board with zero waste by 2040. Regular feedback to show how their actions are making a difference is a key element in maintaining trust and confidence in recycling and composting systems. Behaviour change organisations across Auckland who partner with council help achieve this.

We support to Priority 9 see response to Q 2A for detail

We support Priority 10 to minimise Councils operational waste and the intention to lead by example.

Table 1 row 10 Needs to include a separate point about the use of procurement of goods and services as a method for achieving upstream source reduction as well as downstream diversion.

Action 10.2 Target Operational waste through sustainable procurement has a focus on construction and demolition related actions. It would be clearer to give it a C&D specific label and to shift 10.2 (a) around councils leadership role into 10.1 where it is a better fit. This needs to refer to leading zero waste and waste minimisation to be consistent with the earlier commentary. On its own waste minimisation is too weak.

Also useful to tag the procurement story to the ongoing work to embed the council's Sustainable Procurement Framework across the organisation.

Council could strengthen its approach by making greater use of procurement processes to leverage its purchasing power across spending on all goods, services and contracts. This will improve zero waste outcomes and grow enterprise opportunities for Iwi and community organisations as well as businesses adopting circular business models.

This includes active support for local businesses who are leading the way with low waste, low emissions goods and services: catering, office and IT support, service models for transport, hospitality, events etc. This needs to be broadly applied across all council offices, across all operators of council facilities and all contracts not siloed in the delivery of construction and demolition and waste and resource recovery services.

10.4 to 10.6 touch on this but could be strengthened by carrying the words and language in the top of the Waste Hierarchy into these line items.

10.4 Leases of council property - Include reference to embed the requirement to put into practise and report on the zero waste policy into lease agreements so that lesees are required to deliver on the zero waste policy not just have it as a 'policy' page in their documentation.

10.5 Office waste - Needs to be a wider frame - Office waste has its own target in section 9 so it is useful to expand on what this covers. The commentary around office waste on p24 focuses on

diversion strategies. It alludes to opportunities in behaviour change, new systems and ongoing staff training but needs to specifically refer to the upstream potential of procurement and prevention to drive source reduction. This applies to fittings and furniture, office supplies, catering and smoko, cleaning for example. Good to use the source reduction, reusable packaging, new product and service models language to create a clearer picture of what will drive the achievement of this target.

10.6 Include reference to reusable serviceware, designing out single use packaging.

We support Priority 11 - Address litter and illegal dumping - see response to Q 2E for detail

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I/We support Priority 9 and the staged approach for the shift to fortnightly rubbish collections.

Global evidence shows that smaller / less frequent rubbish collections help reduce waste. Auckland Council has a solid plan for making sure households have access to regular recycling and food scraps collections (which remove volume and smell issues) and for supporting people to get on board with recycling and food scraps separation. We agree that fortnightly collections should reduce both cost and emissions overall.

We support the council considering flexible bin sizes for large households needing extra support or bin capacity, as well as the option of lower rates charges, further reduced collections and smaller bins for residents who produce low or ultra-low waste. It is important to reward residents who support the Zero Waste 2040 transition by producing less recycling, food scraps and rubbish.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We support Priority 3 to target Construction and Demolition waste.

Mandatory site waste management plans are an effective tool for getting companies on board with onsite source separation. These need to be audited to ensure they are being followed through on by the beams onsite, by the collection company and by the string and processing facilities.

Council has an important role to play in coordinating the flows of ideas and information across the construction and demolition sector. Many organisations and businesses are working together to find upstream solutions which design C&D waste it out in the design and construction stages. Others like TROW focus on deconstruction and demolition to make sure materials and products get recovered and reused.

The Resource Recovery Network provides outlets for reusable timber, metals, kitchens, plumbing and other reusable materials that can be incorporated into building projects. Some of these are new surplus items from construction, others second hand. The 'Men's shed' and other community maker space and tool share projects enable people to make use of waste materials and learn skills to repair and build.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support a focus on the 5 priority areas in order to prevent and reduce waste

We are encouraged to see Council focusing on source reduction to embed actions up the waste hierarchy to address these streams. This includes ambitious actions that go beyond diversion to focus on reducing plastic waste 4.5 and to move towards reusable packaging systems 4.6. I/we would like to see this approach to source reduction consistently applied across all the priority waste materials.

We support the intention in Priority 4 to work to change behaviour in relation to these waste streams. It is critical that producers and businesses are included in this alongside consumers and households. Business models, service delivery models and product designs all need to change to create the circular economy. There is no silver bullet so the concept of a suite of solutions is a good way to frame the complementary actions necessary to shift the dial so our economy becomes more circular.

Once businesses and industry mainstream the new business models that are creating systems for sharing, reusing and repairing (e.g. car sharing, product rentals, reusable packaging systems and product maintenance and servicing), then it will be easier for consumers to change their buying behaviour and to shift to low emission zero waste lifestyles.

We note that the behaviour change, engagement and education work required to shift awareness and understanding and catalyse action are included in other Priority action lists primarily 12. Partnering with others.

Organics

We support the recognition of the value of local scale and 'community-led' solutions for organics collections and processing, with accompanying actions (particularly actions 4.2 and 4.3).

We would like to see these framed as critical parts of an integrated citywide ecosystem approach to organics diversion, where collections, education and local processing can mutually support one another. This could involve developing an organics diversion system strategy, to avoid the different levels of organics diversion activities remaining disjointed and at odds with each other.

We support Auckland Council working with existing organisations with the relevant expertise in small & medium scale organics collections and processing, particularly the Tāmaki Makaurau Composters Network, as a local branch of the Aotearoa Composters Network (ACN).

Action 4.2 needs to include a specific reference to revenue models.

What it means for Aucklanders box could include points on: local access to compost and worm casts, Resilience built into the collection system, economic development and community building opportunities, links with food resilience and local food production.

Action 6.2 Regulatory change needs to include a reference to the requirement to source separate materials to create clean streams for composters and material reprocessors.

Plastics

We support the ambition go beyond diversion to focus on reducing plastic waste (action 4.5)

It would be good to include the ‘source reduction’ language as it is more specific that ‘reduction’ which often gets used to describe diversion and overlooks prevention.

The definition and discussion of plastics needs to be expanded to include both whole plastic items and microplastics. Recent research shows 3 million bottles worth of microplastics fall in rain onto Auckland each year. Products containing plastic/synthetic polymers and fibres (especially those that contribute microplastic pollution, such as furniture/carpets) need to be treated as part of the plastics priority waste streams.

Advocacy for a suite of regulatory and legislated solutions for plastic items and microplastics is a critical action for council that needs to be specifically captured under the product stewardship actions. Action 6.4 needs to include a reference to plastics and packaging. Suggest amending the last part of 6.4 to read ‘ … organics and/or that represent significant economic, environmental and social costs such as overreliance on single use packaging, plastic and microplastic pollution and textiles. Advocacy for a strong Global Plastics Treaty is an important element in this.

Auckland Council has an important role to play in advocating to the Central Government for an ambitious Global Plastics Treaty. This could be included in Action 4.5 or as a separate line in Action 6.4.

Packaging

We support packaging being included in the 5 priorities

Packaging coming into the market imposes cost and management burdens on Councils, ratepayers and households and creates environmental impacts across the supply, use, recovery and disposal chain. Strong advocacy by Auckland Council to prevent and reduce the use of chemical contaminated packaging, non recyclable packaging and the overreliance on single disposable packaging is critical.

Council investment in raising awareness about packaging issues will help build informed public opinion to support regional and national changes to business models and packaging design as well regulation and legislation in support of low waste low emissions outcomes.

New solutions for reusable packaging are coming on stream and some of these require a city wide focus to make them viable and practical e.g. this reusable cup take back scheme in Denmark https://www.tomra.com/en/news-and-media/news/2024/tomra-launches-system-for-reusable-takeaway-packaging . Action 4.6 practical action to support businesses across the city that are bringing practical reusable and alternative solutions to the market is an important action.

See the Advocacy section of our submission for comments which overlap with this.

Textiles

We support including textiles in the 5 priority products

The textiles workstream has been framed up too narrowly which makes the large volume of textiles coming through the commercial and industrial channels invisible. Domestic textiles, clothing and fast fashion are only a small fraction of the textiles flowing through our economy.

The focus needs to be broader to include commercial and industrial textiles, including corporate/public sector uniforms, linen from accommodation providers and large public facilities like prisons and hospitals etc. As well as streams that will flow through refit, construction and demolition processes like carpets, curtains and furniture.

Action 4.8 Textile waste behaviours needs to be expanded out to include business and industry in the target audience. It also needs to cover supporting the development of Textile Product Stewardship and exploring the opportunity to reduce commercial and industrial textile waste streams.

New Zealand organisations like UsedFULLY textilereuse.com are leading work to develop effective product stewardship for textiles as well as downstream markets for source separated waste textiles.

It is good to see the link being made between the waste (tonnes) and supply chain and landfill emissions generated across the textile life cycle.

Bio-solids

We support the use of biosolids being used beneficially, in culturally appropriate ways including working with mana whenua, communities and stakeholders to develop future solutions.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support Priority 6 Advocacy for actions to move up the waste hierarchy. We are 100% in support of the intention to Advocate “for actions to move up the waste hierarchy, including source reduction, reuse and right to repair”.

We would like to see even more direct actions, monitoring and reporting indicators, methods of assessment, and specific targets which help define, drive and measure progress towards source reduction embedded in this WMMP.

This would help reduce the amount of single use, disposable packaging being used to supply food and drinks by shifting to reusable packaging, cups and serviceware (plates, cutlery etc).

We want to see Council maximise promotion, support and advocacy for source reduction measures like redesign, reuse and repair across the board. This includes: in Construction and

Demolition and the five priority waste streams. As a core focus of working relationships with Mana Whenua and community partners in behaviour change organisations and across the resource recovery network. As a central element in criteria for procurement decision making.

Action 6.2 needs to include requirements for source separation to support making high quality raw materials available for reprocessors and composters.

See plastics section of this submission for comments on expanding Action 6.4 Priority Waste Advocacy regarding inclusion of plastics and microplastics, overreliance on single use packaging, advocacy for a strong global plastics treaty.

We support Priority 7 advocacy for a Container Return Scheme for drink containers and other mandatory product stewardship.

Councils, communities and households can do a lot to drive zero waste transformation. But businesses/industry and Government are the ones with the power to pull the big levers.

Businesses and industry can develop new business and service models and put better designed products on the shelves. Government can create the regulatory framework that establishes the rules of engagement so that funding, processes, and compliance, monitoring and enforcement are aligned with waste and emissions reduction goals.

We can't run the circular economy on grants and subsidies. Product stewardship is the tool that creates the revenue flows we need to fund reuse and recycling systems.

We fully support strong advocacy for the implementation of an effective Container Return Scheme under Action 7.1 Implementing the container return scheme will help fund the transition to more effective recycling systems.

The Container Return Scheme is a good stepping stone towards large scale, nationwide product stewardship schemes. It is also a better way to recycle drink containers:

- Everybody loves it – 98% of the responses to the 2022 Government consultation were in support.
- It works – high return rates, high quality recycling, low litter, proven results in many countries over decades.
- It pays for itself – covers all the real costs of recycling so we don't have to use rates budgets to subsidise drink container recycling.
- It sets us up with infrastructure – establishes a nationwide network of take-back sites that can also be used by emerging Reuse and Refill business models.

Creating deposit return systems so that items have a value at the end of their life has multiple benefits. This means the last user of the product can redeem the deposit which creates an incentive for people to recycle items that may otherwise be lost into the environment. Deposit return schemes for drink containers are a good example of how this works. A 20c deposit is paid by the person who buys the drink, they get this back when they recycle it. Any one who finds the drink container lying around can claim the deposit if it is littered, and Councils can use the deposits to cover the cost of public space bin collections and kerbside collections.

Action 7.1 needs to include advocacy for the central govt to put the National investigation of reusable beverage packaging back into the workplan. This was progressing but got cut at the same time as the CRS went into the policy bonfire in Feb 2023. Beverage packaging is a key opportunity area for expanding reusable packaging, and we don't want to miss the opportunity the CRS presents to increase both reuse and recycling.

Just having mandatory or voluntary product stewardship schemes in place will not guarantee good outcomes. Action 7.2 and 7.3 both need to include a second element - Advocacy to central government and other stakeholders for better, more transparent and democratic/participatory processes for designing product stewardship schemes that are robust, ambitious and serve the public interest.

Many of the current systems for recovering end of life packaging and products are underfunded 'token gestures' with a low return rate and a large amount of promotional fanfare. Real solutions follow the waste Hierarchy. Shifting to a circular economy means we have to rethink and redesign products and business models. Legislation, regulation and policy need to incentivise reuse, refill, durability and repair in order to reduce single use packaging and create long lasting, non toxic products.

Real solutions focus investment and innovation at the top of the waste Hierarchy and clearly signal the direction of travel. Real solutions are:

- safe for people ecosystems and climate
- Viable because they build in ways to cover the real costs
- Accessible to everyone
- Regenerative because they leave things better than they were before.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We support Priority 11 to address litter and illegal dumping with the Council protecting our environment and keeping people safe by providing public litter and recycling bins, picking up litter and illegal dumping and running effective compliance, monitoring and enforcement systems as described in the action plan.

We agree that other important actions in this space are:

- Education to support Aucklanders to understand the impacts of litter, hazardous chemicals and materials and the flow on environmental effects of microplastics.
- Supporting organisations who focus on advocacy, education, citizen science and other practical actions to raise awareness and do practical clean ups.

We think advocacy needs to be specifically included in the litter actions list to harness the power of upstream measures to prevent and reduce litter alongside the downstream measures outlined in Action 11.3.

Table 1 row 11 needs to include a point about this as well.

Issues with litter and illegal dumping can be effectively targeted by working to reduce the upstream causes. Advocacy and support for new funding methods, collection methods, product and business model design are the key to reducing our litter and dumping problems.

For example:

Reducing the amount of single use, disposable packaging which is commonly littered

Creating deposit return systems so that items like drink containers have a value

Putting advance disposal fees in place means the end of life cost for recycling and safe disposal are paid by the original purchaser.

Establishing effective funding and collection methods for larger items like mattresses, tyres and e-waste will reduce illegal dumping and stockpiling.

The ability for households to pay for, and access waste management and resource recovery services is also a critical factor. It is good to see there are methods in the plan to support large households to manage their rubbish, recycling and food scraps.

Cost of living means some households struggle to pay for the basics like safe methods of rubbish disposal. Low income households are often at the end of the use chain for products because they need to buy second hand or cheap brands. These are likely to have a shorter life and the household has to pay for disposal each time they replace the item.

The responsibility for end of life disposal falls on these people who are least able to pay the cost of safe disposal and product stewardship fees collected at the end of life. Some households will struggle to manage the logistics having no trailer or ute to take items to the transfer station or resource recovery centre.

The evolution of the Inorganics collection through action 2.4 is an important way to support these households.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The old non organic collections were fabulous, we all put stuff out and everyone went shopping on other peoples front yards, this minimised the amount that was then collected. now people have to leave stuff inside there property and it is collected and sorted, but you have elimiated the option for people to easily repurpose. this needs to be rethought and there needs to be a place where you can take old stuff, and for it to be classed as junk or for future use, and people can go and freely look around and take the old stuff, to upcycle, this is what happened with this inorganise collection process, these is now no trasnparency to me on where my inorganice goes to.

Recycling centres easily accessable for product disposal so not everything goes into the red and blue bins.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: If we used the composting bins, then our red bin will contain much less waste that will go "Off" only question is as you say nappies (but there are systems buillt for this where you compact and seal these) and meat scraps which could be a concern. finding solutions for these types of items will make a huge difference to frequency of rubish collection requirements.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We have just done a build and have a huge amount of left over product that we simiply can not get rid of, again if this could be like inorganic be collected from our home and be repurposed, it would make a huge difference.

Also the wrapping and packaing in building products need to be looked at. huge issues here.

Having a recycle center for builing supplies, paint etc would be amazing providing is easily accessable. woul dbe a hany mans dream. could have a man shed attached for the products to be repurposed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: These make up a good % of waste, and if we can start to be aware an minimise it would be good.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: My nephew in Australia makes money returning bottles and cans to a machine in his local area in sydney. we so need this as kids become involved and people pick up litter to make money from it.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: especially water ways, beaches and parklands. we need to keep our oceans clean and litter is have a disastrous impact.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Worthy goal, but not clear that it is affordable while we have an infrastructure crisis. Its a nice-to-have but not essential if there has to be savings

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Doesn't need to be weekly, BUT how does this saving compare to the weekly costs of the food bins which appears to be highly manual and most of which wont be used after 6 months.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Worthy goal, but not clear that it is affordable while we have an infrastructure crisis. Its a nice-to-have but not essential if there has to be savings

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support organics, plastics and biosolids - reduce the budget for this activity by sharpening the focus.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Wasteful expenditure - just one group of public servants telling another group what they should do - this policy should be driven at central government level.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Essential service

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Rethinking our packaging so it can be reused & recycled is the best option for everyone.

Continuing phasing out items that can't be recycled.

Make it easier for consumers where manufacturers and producers of food must only be in approved recyclable packaging

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: South Auckland in particular already faces the issue of illegal dumping and most of these items are household/family/baby items.

It's clear our families can't handle the excess waste.

Also, I find that most of my waste is in the way of unrecyclable packing(which is out of my control), I process my own food waste in home composting for my garden and recycle all items that are within the #s.

Many households are multi-generation or multi-family where the weekly bins are overflowing now, this will lead to further costs to families or more dumping than what we already see.

Fortnightly bin collections SHOULD NOT be introduced until better solutions are created for non-recyclable packaging

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: 'It's a step in the right direction. However, more regulations should be put in place for C&D

(Construction & Demolition).

Before giving resource consent, existing homes on properties should follow this process

in their construction plans!

Resell / Deconstruct & Divert / Landfill

Bulldozing should be the last option (I mostly see this occur in development areas in our community, where it is faster and easier to just bulldoze than find ways to resell, reuse, recycle usable materials).

● Ensuring that developers have a waste minimisation service to guide them through the

process.

- Creating a department that focuses on this area?

- Create a waste diversion guideline for all developers & residential (showing all the

places developers should take their waste)

- Residential places that are in development are rejected from recycling services!

Individuals working on home projects need a place to divert their waste, instead of to landfill

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Manufacturers and distributors should be responsible for these plastics since they cannot be recycled by residents.

Already wrapped vegetables in plastics should be phased out & banned. Why can't these be unwrapped at the counter and kept at the supermarket? That makes the distributors responsible for the plastic. This could also become good quality control for the Soft Plastics Recycling Scheme.

Or all producers of packaging that is not recyclable in NZ must pay a waste levy? There is the risk of this cost being passed onto consumers indirectly through price increase, but we need manufacturers, supplier and food producers to think about the waste they make consumers have to deal with

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Can't wait for this to be in NZ

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Support on island slutions

We need a recycling centre in MĀNGERE! Onehunga is too far for our families! If the council wants to decrease illegal dumping especially in this area, we need a site our families WILL engage with. Considering how densely populated our area is, this would be highly beneficial!!!

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I live in a South Auckland community where come rubbish pick up day alot of the red bins are overflowing with rubbish and reducing the pick up will result in more rubbish being illegally dumped. We have already seen an increase in dumping in our area and ratepayers having to pay for a larger bin is just not going to bappen for many households that are already struggling

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: YES! bring this in its a win for the environment and people taking the time to return the items

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Māngere-Ōtāhuhu

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: Trial of free Waste disposal depot's

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Don't know

Tell us why: We are asked to freeze the food waste bag, which we actually have an issue with in terms of the smell it generates alot of the time when we go to freeze a day before collection day but it just screams not healthy to have smelly food scraps with other household foods?...

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: If we are going to foot the bill to have this form of waste material disposed of I have to ask why?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Because of the 5 priority's mentioned...

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This could incentivise the young one's to re-use, recycle said products

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I agree with penalising those for illegal dumping! Don't support the instant fine!

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Our throw away mentality needs to change

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: No impact on my household

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I support so long as the implemented changes do not increase the cost of construction. If they do then im opposed

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: I fail to understand why biosolids are included as s waste priority when Auckland has s couple of sewerage treatment plants which handle the biosolids

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: So much for progress when all glass bottles used to include a refund. Maybe some other old fashioned ideas may still have merit

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ping the low life who litter....great idea

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Our rubbish bin STINKS in summer within a week. A combination of meat scraps but also dog pooh. If it moves to fortnightly collection that will be even worse. We would like to pay a private company to continue weekly collection if the council won't do it - so we would not think it fair if we had to pay for a service we weren't using.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: I'm happy with the food waste service and it's noticeably reduced the amount we throw out every week. We're only half filling the bin. BUT it still gets very smelly (probably partly because of dog poo waste), especially in summer. I'm happy to pay for weekly collection. Unless you can come up with a bin that contains the smell - which current bins do not. Otherwise I want to opt out and making it part of my rates is unfair.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Focus on the major waste providers leave the 20% alone

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: What solutions is Council providing or will it just tax its way out of any problems as per usual

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Focus on the 80%

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: You are just passing the buck to other parties

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I want to have recycling bins for plastic and bpxes around where people go put their recycling items in like recycling clothes bins..

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Food scrap bins should be bigger and good seal lids to minimise the bad odors

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: This is fine, but if costs are not associate with the size of a bin, why not move to 1 standard size? everyone would choose the largest anyway?

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I actually oppose the move to rates funded rubbish collection. The ticket system is a bit annoying but it incentivises more recycling. Have you seen differences in un-recyclables in recycling? otherwise how will this impact rubbish volumes? i know I will care less about recycling if it doesn't save me money. If you do go ahead with this you need to communicate it and reimburse pre-purchased tickets.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: There are better ways to reduce waste. I have worked as a scientist consulting to the industry and know how little of collected plastics, glass etc are ever recycled. All ends up in landfill anyhow.

Council needs to look at this properly

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We were rural. now swallowed up in Auckland. Al;l our food rubbish is recycled via chickens and composting. Everyone grows vegetables now so better give them a compost bin rather than a scrap bin....which gets kicked around the streets.

Fortnightly rubbish collections will not work. It will mean more rubbish gets dumped in and around whitford as peoples bins fill up.

The cost of going to a recycle centre is also too high. It should be a SERVICE. it is cheaper to drive out and dump the old TV or sofa on the side of a rural road.

Council need to make it free and easy to dispose of waste/rubbish or it will simply build up in the streets.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: the only way to reduce construction waste is by effective recycling of concretes into aggregates etc.

Gypsum board can go back into boards or golden bay cement plant

It requires considered action with suitable industry partners.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**

- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: as said before . Give households/communities a compost bin instead of a food scrap bin and free up city land for community veggie gardens. Community recycle centre for compostables? It is done elsewhere

What do you propose to do with plastics. We do not recycle in NZ and can no longer send it to china or Indonesia

Packaging. Ban plastic meat trays which seem to comprise most peoples rubbish.

Packaging. Cardboard is readily recyclable into packaging and can be used several times but requires industry relationships and guarantee on supply

Textiles the same

Bio solids are readily reprocessed in may european countries. Where is the will to do it here and where are the business partners?

Council needs to go out and find business partners for reprocessing and help them secure supply chains of materials they need.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: it used to work fine with milk and beer bottles. Why not restart it?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: You need to provide free and accessible sites where people can dump old sofas, car batteries etc not penalize those who cannot afford to go to the transfer stations.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Do not support

Tell us why: Again, in principle I agree with the inhabitants of Waiheke paying their own way but this starts to become an additional tax on island life. There needs to be free transfer stations for locals to dump waste where it can be sorted and reprocessed as far as practical

4. Any other comments

Waste collection and associated costs should not be an additional tax, depending upon where you live. It is the councils job to provide free waste disposal services/transfer sites whilst it works to reduce packaging in general. We should for example make electronic goods suppliers take back packaging. Some do now but the program could be enforced.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Collection is already fortnightly for recycling bins and almost everyone composts their food scraps anyway. So this won't save much money.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: How can you possibly "reduce" waste from construction and development?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Focus on?? What does that mean?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: This is not relevant to Waiheke, where THERE ARE no containers litterling roadsides and waterways.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Ditto. Sounds like mainland Auckland has become a pretty horrible place, but I haven't been there in years so can't comment. Why am I having to pay for remedies for things I don't do?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Don’t know

Tell us why: I find you glossy brochures unbelievably uninformative. Can't understand what they're trying to say. What ARE the "the goals and actions for addressing waste management and minimisation on Waiheke"??? You could tell us in two sentences. Stop wasting my money on unreadable, uninformative, expensively designed STUFF that basically says nothing.

4. Any other comments

Yes. Please stop paying out my ever-increasing rates money for stupidly designed,glossy BUMPH I still don't know what Auckland Council plans to do the IMPROVE WASTE MANAGEMENT on Waiheke. Looks like nothing. Most of what you say seems to relate to some completely different environment from the one where I live. Please LET WAIHEKE SECEDE FROM AUCKLAND COUNCIL and handle our own basic services. (Yeah right .... like you'd ever do that. We're just cash cows. Yet the people who actually LIVE here earn the least of those who live in any of the many, MANY regions controlled by Auckland Council).

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: STOP BEING STUPID - ZERO WASTE is just a waste of breath. This is not visionary, aspirational, incentivising. It is UTTERLY impractical. Get into the real world - even if you take the Alfredo Parento 80/20 rule, you would NEVER aim for 0 or 100. Look - the last 20% of any achievement takes 80% of energy and resources to achieve. SO NEVER AIM FOR 100% or ZERO. A complete recycling system is just fanastical rhetori that should never be allowed to influence actual rational policy making.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: You have forced this on people, by requiring them to pay for this additional service. When did you actually think about helping people to start their own composting systems, as opposed to just using your power to force this. Moving to fortnightly bin collections is just another way of cutting Council costs, but without cutting, in fact just adding an increase to individual rate payers bills. Thanks very much for nothing.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Again, no level of innovation being applied here - builders have NO incentives to economise, re-use, or recylce. In fact everything in the Building Code and building regulations disincentivise this. House owners are paying and paying for the excessively expensive costs of building, and now you want them to pay Your summary is just all rhetoric - there are no actual actions proposed, just do more research, and encourage this and that. This is not a PLAN; it is just a concept.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Look, you have just said that 40% of waste is construction waste, and that only 20% of waste comes from individual households (that produce organic material). So, no the issue is volume as much as any focus on bio-gases. Sort the first, and the second issue is less.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Oh come on - get real "sift from the rate payer to the producer" What a load of - this simply means that the price of goods and services that RATE-PAYERS have to buy goes up. Product stewardship - another buzz word without real action or meaning.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: About time, but then let's get real - who is going to enforce these rules? The Police???? Oh, they only enforce the laws they want to, or which are not going to cause any bother from all the special interest groups.. So while I support, I just don't see it happening.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

You want people to recycle, then make it easy; not hard. You are already asking people to separate out all their recyclbles and then charging them for the privilege. Incentivise, incentivise - rewards for bringing your cardboard cartons, bottles, plastics, to a recylcing centre, instead of charging people. Think about it - you will get vastly more enthusiasm and commitment to this effort when you reward people for good behaviour, as opposed to charging them.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I would like cheap electrical goods to be repairable instead of disposable. This may require legislation.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: The only way to find out is to try it.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I expect enormous practical difficulties in sorting construction and demolition waste. I am sure it can be made worthwhile.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: I am surprised that building and construction waste are not a priority. Perhaps I have misunderstood.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I remember, as a child, carefully sorting the high-deposit soft drink bottles from the comparatively worthless beer bottles, which we smashed.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Cameras are cheap and effective.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: there is a percentage of the population that will always litter - I work in mental health and I know this - I see rubbish dumped along the roads all the way from Maraetai to manukau - we need regular free rubbish collection to avoid local pollution fine to educate the motivated people too, who will always do their best, but some folk will always dump if its not made easy for them.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: This will encourage rats. Auckland is not like the other cities, especially South Auckland. you need to collect all the rubbish regularly.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: good idea

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: microplastic pollution and climate change concern me massively

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: we need this so badly

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: some people will always dump - in our area they do it at night in places without cameras. you'll never get on top of it - you need to have free rubbish disposal or local massive littering will happen - fact.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I think it makes good sense to reuse materials that otherwise end up in landfills. My question though is this going to be cost-effective or just another nice thing to do with ratepayers picking up more of the bill? There are some good recycling efforts being made but many people do not know about them.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I support this because many people already make their own compost and this will help those who are unable to. Again I ask, looking at the current food waste collection system, is it cost-effective? Can anyone give a breakdown of the cost of another refuse truck on the road, the carbon footprint, labour, real estate to process the waste, labour at the waste plant, electricity and the returns made from selling the compost? I cannot see this adding up at all.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: This makes good common sense. The commercial waste from building sites is on going.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Common sense as long as this is economically viable and not another burden for ratepayers.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It worked back inthe 50s and 60s. Why not now?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: A good idea but like so many of our silly laws, who will police this?

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Support

Tell us why: I do not fully understand the current situation on these islands but assume it is harder for them than on the mainland.

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Support

Tell us why: As above

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Support

Tell us why: As above

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: As above

4. Any other comments

What is this cultural cost mentioned in the plan?

When fortnightly rubbish collections are introduced will the collection bags be dropped? I do not want another bin. We should have a choice.

What is the difference between working with Mana Whenua and the rest of the majority of New Zealanders? Are you telling us that Maori do not know how to recycle and need to be trained?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Whau

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Changes to what you accept in recycling mean I am now generating more landfill. eg metal jar lids & plastic bottle tops & lids. This is not moving in the right direction!

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: This will not change how much landfill I generate but can see the cost saving benefit

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We need more repurposing & reusing of materials. Separating of materials - timber, concrete, metals, glass may be difficult but should be included as part of the cost of any redevolopment

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This is where the real reduction in household waste generation can be made

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I often collect broken plastic material & general waste from the street after the rubbish trucks have been round - not everything is successfully transferred from bin to truck

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Could timber from construction be burnt to produce electricity. Whatever happened to the cogeneration power plant Auckland had once.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Support most of it but plastic recycling is just too hard.

Should definitely be a refundable tax on empty plastic bottles so they don't end up in gutters and in the sea.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: People should be taught at school to not litter.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Fortnightly is fine for small households for Recycling (as at present) and ordinary rubbish collection BUT for the food waste bins they are often already full after a week (for a two person household) AND we notice that on occasions when left longer they have increased propensity to attract ants and maggots, even when contents are well wrapped. Putting this material in the ordinary bin would be ok as they are taller, BUT defeats the whole purpose of the food bin.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Hope to see an overall reduction in landfill

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I hope that the reduction in the frequency of collections will help people to focus on minimisation, correct sorting of recycling and even product purchased keeping packaging and recycling in mind.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Poly-bloody-styrene needs to be elimi ated from packaging. Could there be provision of a multi compartment skip bin for individual sites so that recyclables (timber, cardboard, concrete) can be kept in seperate streams. Cost incentives work!!

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Important areas and possibly low hanging fruit. Can there be a tarriff introduced on non-recyclable plastics? Can't biosolids be processed to the point where they can be used on gardens and farms?

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Not only beverage containers but "take-away" packaging generally. The quantity of identifable roadside packaging within a few KMs of a fast food outlet is astounding. If the purpetrators can't be made accountable could we not put the onus back onto the food outlet?

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: How can we assist these people to dispose of their rubbish more easily? Surely there must be a carrot. The stick hasn't been working, or maybe the stick isn't big enough.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

The new recycling rules don't include caps. Could the council provide specific bins at community centres like supermarket carparks to take bottle tops, and a bin for milk bottle tops, or even an incentive scheme for kids to take them to school for collection.

#1710

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: National implementation of vendor responsibility for packaging disposal.

Less use of non-recyclable plastics

Scale up the soft plastics recycling schemes already in place.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your

rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Save money to be used in other areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This will help to put the full costs of the products on the users and lead to more helpful innovation in packaging.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Stricter controls on single-use plastics, manufacturing regulations for minimum life span of products sold, more community recycling days and centres, more repair workshops. Reduce household waste through pay per use. Strict recycling regs for contruction

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: I support reducing the frequency of collections, but want to see usage charges. At the moment there is no incentive for people to reduce their waste or participate in the food scraps programme (very few of neighbours use their food waste bins). Charging for rubbish, according to volume and frequency would encourage behaviour change

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is a huge amount of waste, primarily through laziness. Offcuts could be re-used, packaging could be recycled. All construction should be tightly regulated to require re-use and recycling

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Ban plastic packaging immediately. Ban any installation of new insinkerators to reduce waste in the water.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Strongly support

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Refuse collection needs to be harmonised across the Auckland area. If some areas are rates-funded, all areas should be rates-funded. Alternatively, all refuse collection should be outsourced, with a commensurate reduction in rates bills.

The food scraps bins should have an opt-out option, with commensurate reduction in rates bills.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: It depends how you intend to accomplish this reduction. If it will result in an increase to the already eye-watering cost of construction then it should not be a target.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Encouraging recycling is an admirable activity. Forcing a food scrap bin onto every household, and charging them for the privilege whether they need it or not, is daft.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Requiring producers to offer a container return scheme will increase the cost to the consumer. Producers and manufacturers will not pay, and you need to be honest.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: The proposals are well structured & we have ensure we are moving in the correct direction for waste reduction & a circular economy

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Encourages waste minimisation

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The construction industry & all businesses must do their part to reach the desired waste minimisation future

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: You are covering the important areas to achieve the desired outcome

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: This be a good incentive

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Illegal dumping is a disgrace and all measures appropriate should be pursued to stop the people who do this

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Support

Tell us why: Makes sense

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Less waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good thinking

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: When younger doing bottle drives made our sports club money

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: To many fly flippers and make them at fine new

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Howick

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We would easily manage with fortnightly rubbish and weekly food collection. We are a family of 6 in AKL

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Make people practice and think about their waste

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Recyling is not supported by Government building standards.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Until government change the laws on how products are packaged here in NZ and imported (plastics) nothing will change.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Reason #1: The weekly food scraps collection has some blindsight. For instance, during hot weather, the food scrap bin is unhealthy. Another example, if one misses a collection, the food scrap bin becomes unhealthy as well. This leads to a lack of adoption in our neighbourhood.

Reason #2: The size of the food scrap bin is not 41% of the size of the red bin. It may be around 20% max. Therefore, it is my belief that the food scrap bin was designed for singles or for small families, not for large families. I would expect the adoption of the food scrap bin in large families is quite low.

Reason #3: Without any number to confirm, I believe that the cost of the collection of food scrap bin is likely to be higher than the collection of the red bins.

As a summary, food scrap bins are unlikely to be adopted the same way the other type of bins have been adopted. Moreover, they had cost to an already very expensive council. I would suggest to remove the food scrap bins and keep a weekly red bin collection, instead of your proposal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Don't know

Tell us why: It was very unclear what actions was directed to this priority, except lobbying the central government.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**

- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: The idea sounds compelling, but I wonder why it should be part of the remit of our public services. If this idea makes economic sense, then private actors should compete to do this. I would be supportive of a temporary incentive for this to kick start.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: It was very unclear what actions was directed to this priority, except lobbying the central government.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: 1 greenhouse gas CO2 is not hazardous. In fact if it goes any lower plants will die off, animals and people will follow.

2 look at the science, do not follow media

3 Known FACT. climate change is a hoax. Wealthy investors have made BILLIONS of dollars and most kids are brainwashed.

4 While the populations work to carryout ways to reduce CO2, corporations such as WEF, UN, etc.

have no care as they fly all over the world supposedly creating co2. Yet telling believers reduce..reduce.

5 the top 10 creators of vast amounts of pollution do nothing.

6 Stop the lies about climate change

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: In many countries concrete and steel are crushed and reused as base for roads [as an example] if such was done in Auckland the Crushers would only pay a portion for delivery. It could well be a lucrative business.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Micro plastics start breaking down in plastic bottles containing of all kinds of liquids. As do take away plastic coffee cups. People drink micro plastics.

Consider return bottle deposit scheme at recycle centers. Product buyers pay for the scheme.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: NZ market is small for all products. Do you really think they would A -listen B- laugh C- increase prices to recover costs

Hint-- they are all the right answer

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Central govt are the last to ask. Just do it.

Fines should adjust for amount dumped

ie cigarette $20 plastic or paper bag of rubbish small medium large $50 t0 200, trailer $2000 first offence to include vehicle loss plus ?? 100's of hours community service.. Truck loads , cleanup costs x 50 =$ per load further offences, loss of vehicle, 50k to $ 500,000.

Once people get the idea it is going to cost far more than their walk to a bin or correct disposal method most will observe the rules

Maybe a weekly prize those reporting larger instances.

Ensure the media provides the number of fines and $ amount each week or so.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

I recently had a bunch of old computers and e-waste to get rid of. I was very very hard to find a way to do this properly. I even had to call waste management to ask them about it. In the end we just chucked it in the rubbish bin. It needs to be easier to send e-waste to the right place.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: We need to focus on minimum harm to the environment

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Cost saving while also protecting the environment, some resistance from local residents but once food scraps become the new norm the resistance will fade.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: I agree with a focus on reducing landfill waste

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Reducing volume to landfill a priority

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Motivates people to recycle!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: We already put our bins at the kerb once per fortnight only.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: There is a lot of building waste that can be repurposed.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: a) We don't use our foodscrap bin, all foodscrap go in our garden waste bin.

b) The government should push/ force companies to use plastics that can be recycled.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: We should be able to return all plastics that currently cannot be recycled to the manufacturer/selling company

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Bring back the previous form of collecting once per year the inorganic rubbish collection. It is a disgrace to see all the rubbish dumped along roads in rural areas. Disgusting and you will never find the dumper so we pay for that collection anyway.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Ōrākei

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Because another cost and doing a weekly collection keeps people jobs. We live on a park edge and we have things dumped here and I think it will happen more with less collections.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: NZ is not regulating building materials from transportation to waste handling - it is mandatory in many countries to cover the mud etc in lorries while running on roads. Dangerous and dirty.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Focus on improving the recycling rate first rather than more complex system which cannot handled. I know the system in Japan - they are a lot more serious besides the highly categorisation of recyclable materials.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Before the food scraps collection, we were doing 1 plastic bag (the plastic produce bags we'd get from the supermarket) per week. Then the food scraps reduced our rubbish to about 1 paper produce bag a week so they really do a great job of cutting down our rubbish. While we're probably an outlier household, we have consciously decided to cut our waste down, I think there are many households in Auckland who need the pressure of fortnightly collections to force behaviour change because they're not going to change under the current system. And I'm all for everyone reducing their waste.

I do think something better needs to be done for business waste (both recycling and food scraps) to support overall waste reduction. But that's a separate question I'm sure.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Construction waste is horrendous, especially with the whole "flip" renovation sub industry

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Tell us why: People who are focused on reducing/recycling etc waste will continue to do so. So many residents simply do not care ... you can take a horse to water but you cannot force it to drink.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: We are already seeing rubbish bags dumped on our road and this proposal will increase the dumping of rubbish on our streets. Carter Road in Oratia is currently used as a dumping ground... and this proposal will only exacerbate this behaviour. You can notice the difference with the removal of majority of public rubbish bins ... rubbish is dumped wherever! Absolutely "no" to this proposal.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Tell us why: If this can be achieved in a logical and meaningful manner - if not - waste of time and money.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Our household already reuses/recycles everything. So many do not care ... good luck with your plans!

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: Hmmmm ... it may work for some but so many DO NOT CARE!

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Our road has bags of rubbish etc dumped roadside ... how many have been prosecuted??? Words are easy - action is necessary and that has not been evident in our road.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Papakura

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: return to glass milk bottles would be a good start

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: Good idea but how are you going to implement it are you going to set up recycling centres ?

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good idea, hopefully people will collect any empty containers & return them for cash

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Sick of seeing lazy people throwing their rubbish out of their cars or leaving mattresses on the kerb side

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Sounds great but many things made today are very hard or can't be repaired, spare parts are expense or none. Also you need people who can do the repairs. People need to change as well we don't need the latest thing out.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: Can't see why people throw away so much food. As for nappies make people go back to cloth ones.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: A lot of this could be reused for other things again people need to change their mind set about reusing stuff

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Paper take out of the recycle bin and go back to when it was picked up by itself sorted and it is clean. Why pay people to sort it. Dirty paper can not be sold or reused as happens

now when it goes in with glass tins etc. As for biosolids they need more treatment as they have heavy metal in it. This product is increasing all the time as more people come into the area a lot of work needs to be done to find ways to use it safety

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Stop stuffing around and get it up and running. when drinks came in reusable bottles and you got a refund there was never any lying around.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Stop talking about it and get it done this has been going on for years and nothing has been done about it just a lot of talking.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: Getting rid of big rubbish is expensive and inconvenient. The price should go down

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Absolutely do not support. It will smell worst, attract more pest. Provoke more street dumping.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Do not support

Tell us why: Getting rid of construction waste is already plenty expensive.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Don't know

Tell us why: Focus on increasing productivity and lower cost on ALL rubbish

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: If city council can make a plan that wouldnt force producers to increase food price then i am for the plan.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Don’t know

Tell us why: Make getting rid of rubbish cheaper and easier. Problem solved.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: Start at the beginning

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Hardly use red top bin. Fortnightly is enough for recycle

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: We have to reduce this volume of waste... change the mindset.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I thought green waste was made into compost and cardboard/paper/packaging materials were re-cyclable. Not so ?

Beware of mixed and confusing messaging.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Absolutely. This issue needs strong leads and clear messaging from Council and government ....that does not change when government changes.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: But this needs attention. There are anomalies, e.g. having to put inorganic waste on own property, not grass verge, when you live in a flat or ROW section.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable): Honest SKincare

Local Board: Maungakiekie-Tāmaki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Do not support

Tell us why: I would expect to see overflowing rubbish bins and maggots. While some people will be conscientious about reducing their landfill, many will not. Some people have no choice - you cannot compost when you live in an apartment or townhouse with no garden for example.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Do not support

Tell us why: There is a lot of smelly stuff that goes into peoples bins, I think we will have a fly population explosion.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: It's a good idea but I think illegal dumping will increase in the portion of the population who just don't care, don't want to pay to dump their rubbish and do it in the middle of the night on rural roads anyway.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Support

Tell us why: 20 years ago Waiheke had an excellent rubbish sorting and recycling facility, which really went downhill when the WMM took over. Now it is really just a dump.

4. Any other comments

Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: I consider my family to be very conservative with food waste and our rubbish bin is often only half full when putting it out for the weekly collection. I am careful of smelly rubbish like diapers but worry about the smell in urban environments and the effect on illegal dumping which is already a serious problem in public areas.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why: I expect to see less litter on our streets.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Good idea but do not understand why the cost to ratepayers is going up.

Our food scraps are all composted. Our rubbish bin goes out on average each 6 weeks - and yet we are paying more each year. I support what is being proposed but should not be paying for what we are not using.

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why: The current lazy approach to C & D product disposal is a disgrace, any proposal to rationalize these products has to be good value.

It never used to be as bad and is partly down to the Building Act and the limitation on use of recycled materials.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Any thing that cleans up New Zealand's scruffiest and dirtiest city has to be better than the status quo.

Auckland's current condition is an embarrassment when compared to other cities and towns throughout New Zealand.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Good idea - it's what we used to do and it is what much of the rest of the world does.

Ratepayers will still pay just not through rates (as if the rates will reduce because of this).

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: Council needs to take responsibility for keeping the streets and environs clear of rubbish - as they used to. We need streets sweepers back. It has to be a core council activity. Trying to charge higher fines to the scum-baggers has never and will never work - their are too many of them and they simply ignore paying fines - just look at the amount of outstanding debt in the legal system. And where are you going to find the judiciary to administer the end process.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

Thanks for the oppertunity.

AUCKLAND'S DRAFT WASTE MANAGEMENT AND MINIMISATION PLAN 2024

Note: this simplified version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed, and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Kaipātiki

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Other

Tell us why: You ended private composting by making part of rates. Therefore your direction shows you are simply in it for control and a way to take money, not give a service.

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the

world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Other

Tell us why: We find it hard to fill an 80L bin every 2 weeks so don't care either way.

If this was to go ahead, it can not be done with the food bins. These are not compost bins after all

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Other

Tell us why: This has to be a separate issue that commercial groups need to negotiate with landfill providers, council should keep out of it, unless they own the landfill and don't contract it out.

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Other

Tell us why: You are making recycling harder and more confusing for most people. Some will just put things in trash and your, "it's your fault" approach creates resentment.

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: This is recycling and it sounds like you want to just hire another 100 people to do the same thing.

Council is the waste that needs to be reduced

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Do not support

Tell us why: littering is a social issue and councils will look like authoritarians giving fines, making more people not care.

Dumping is an issue of things being too expensive and too difficult to sort out. You create too many rules and people get annoyed so will give up and dump things.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

3D. What is your opinion on the goals and actions for addressing waste management and minimisation on Waiheke Island?

Tell us why:

4. Any other comments

What do you think of this priority area?

Do not support

Tell us why:

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: For future residual waste problems

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Back to the old days, it worked well then and should never have been changed.

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: Bring back inorganic collections annually, this will minimise dumping as ppl know it can be collected. Tip fees are high and not everyone has or can afford a trailer.

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?

Tell us why:

3C. What is your opinion on the goals and actions for addressing waste management and minimisation on Rakino Island?

Tell us why:

Local Board: Waitākere Ranges

Your feedback

1. Direction

The draft WMMP focuses on ways to reduce waste being created and sent to landfill, with actions aimed at the top of the 'waste hierarchy', e.g. redesigning, reusing or repairing items. It also supports actions further down, e.g. recycling materials. The WMMP's goals centre on keeping resources in circulation and minimising harm to the environment and communities from waste. See section 3 of the Snapshot document.

What do you think of this direction?

Support

Tell us why:

2. Priorities for action

The draft plan includes 12 priorities for action. The following questions relate to specific priorities. See section 3 of the Snapshot document.

2A. Fortnightly rubbish collections

Food scraps make up 41% of the rubbish in your rubbish bin. We have introduced a weekly food scraps collection service in mainland urban areas so you will have more space in your rubbish bin. Cities such as Christchurch, Tauranga and Hamilton, and in other parts of the world, show that by using a weekly food scraps bin households can comfortably make do with a fortnightly rubbish collection.

We propose introducing a fortnightly rubbish collection for most Auckland households from 2026, with options for a larger bin for households that need it. Cost savings will be passed on to ratepayers. We will also investigate options to divert other items from household rubbish e.g. nappies and medical waste. See Section 4 of the snapshot document.

What do you think of this priority area?

Support

Tell us why: Weekly is absolutely unnecessary... I fully support fortnightly and a reduced bill!

2B. Construction and demolition waste

Waste from construction and demolition (C&D) activity makes up almost 40% of commercial waste in landfills. Reducing this waste and making better use of materials from C&D is a priority in the draft WMMP over the next six years. This will help us reduce Auckland's total waste to landfill by 30% by 2030. See section 4 of the Snapshot document.

What do you think of this priority area?

Support

Tell us why:

2C. Priority waste materials

We propose to focus on five priority waste materials:

- **organics (including food scraps, green waste, timber and cardboard/paper)**
- **plastics**
- **packaging**
- **textiles**
- **biosolids (the organic material resulting from sewage and wastewater treatment).**

These are the materials that make up significant volumes in landfills, release greenhouse gases, or are problematic when they break down – such as microplastics in the environment. See section 4 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

2D. Product stewardship

Advocating to central government for a beverage container return scheme (CRS) and other mandatory product stewardship schemes is a key priority action within the draft WMMP. The

CRS will ensure containers are returned for re-use and recycling instead of littering roadsides and waterways. This and other product stewardship schemes will shift the cost of waste disposal from ratepayers to producers, manufacturers and consumers, and drive higher rates of reuse and resource recovery. See section 5 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why: I absolutely think we should be cleaning and re-using plastic bottles etc, not just recycling them

2E. Litter and illegal dumping

Addressing litter and illegal dumping to protect public health and the environment includes advocating to central government for better legal tools (e.g. instant fines) to deal with litter and collaborating with communities on local solutions for hot spot areas. See section 6 of the Snapshot document.

What do you think of these priority areas?

Support

Tell us why:

3. Draft Hauraki Gulf Islands Plan

The Hauraki Gulf Islands Waste Plan has been developed as an appendix to the draft WMMP in recognition of the unique nature of waste management and minimisation on the islands. See section 4 of the Snapshot document, and the HGI Waste Plan 2024-2030.

The plan includes goals and actions for waste management and minimisation on these islands.

3A. What is your opinion on the goals and actions for addressing waste management and minimisation on Aotea/Great Barrier Island?

Tell us why:

3B. What is your opinion on the goals and actions for addressing waste management and minimisation on Kawau Island?
