

Highgrove Park - Totara Vale

Highgrove Playground Renewal

The existing playground has come to the end of its life and is programmed to be replaced with a new module that fits in the existing playground footprint.

There are two options provided for consideration:

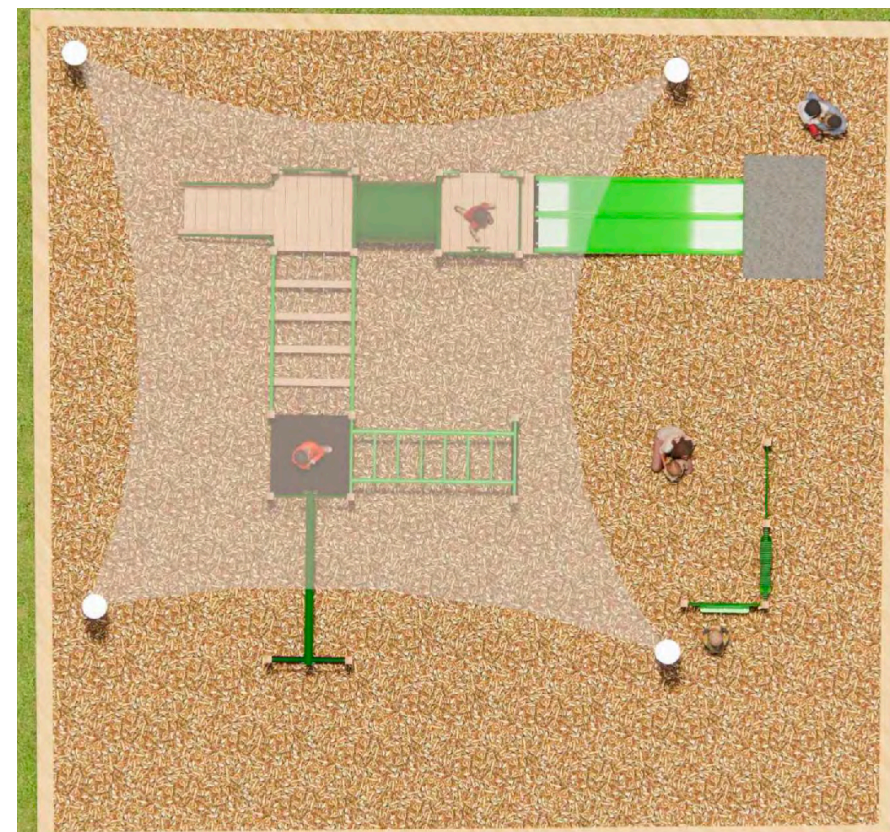

Option A - Parks Supplies

Option A

This module provides upper body challenges in the form of a track glide and monkey bars, which leads to a platform via a wobbly bridge. A tunnel takes you to a 1500mm platform with a double slide off it providing endless fun and social play.

To the side interactive panels are positioned at ground level which provide a shop front, and an abacus ball panel ensuring inclusive fun for younger children.

Option B - Playground Centre

Metal

May need to adjust the slide to fit around the shade pole

Option B

This option provides play opportunities for both toddler and junior children. The toddler end provides a small car with two steering wheels, and a seat for social play, with a single slide off a 900mm deck above.

A tunnel with peep holes, links the two platforms from a junior platform to a large wide platform allowing for children to gather and have fun with a double wave slide and 3 play panels at the top of the unit and a shop front below.

Two options are provided, one in metal and the other in timber
