Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

1C. All domestic/pet cats must be contained to their owner's property

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Don't harm New Zealand.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2291

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Unsure

Tell us why

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Do not support

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I think if the cat is sick, it is reasonable to keep the cat within the house. If cat is healthy, it is free to go outside.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Keep following through.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

THAT

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Can limit number of cats.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

THAT

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

THAT

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Can make the marine life out of aggression.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

THAT

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
Can make the lakes clear without pests

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

THAT

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

THAT

Let's protect our environment: early consultation #2295

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Abortion to stabilise cats behaviour

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Easier to find.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats can go out freely, cat owners should prepare enough food for them at home.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Protection of local animal life environment.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

Should control birth rate of cats, management of pet cats.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I agree. Nature of cats may damage local wild life balance, should seperate pet cats and wild animals.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Every person who enters the island needs to obtain related notification.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Possible to work on? Will it affect the number of tourists in that area? Limit only shops can only reach that sea district

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Out coming species may affect local fisheries, should protect ocean life system.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

In order to protect marine life, appropriately to manage can inhibit the growth of pests

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

To limit only those ships registered in advance can enter the area

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

It is very hard to predict climate change, do as much as possible

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Every one has responsibility to protect the environment

Let's protect our environment: early consultation #2307

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Great barrier, Kanaui, Rakino islands because these are sensitive environments. For 1Km, I also agree it's necessary where native species are in danger.

Whole area im not agree because some people take good of their house cuts and also should be depend environment situation

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

It's not necessary for all areas, as indoor cats don't pose risks.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Focus on public education, stricter bio security checks for island and increase funding for pest trapping and monitoring programs

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Other

Tell us why

I think street cats must be deserved, domestic cats can have an age limit and all deserved is unfair to some owners, especially owners who want their cats to have a reproductive experience

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

Microchipping pest costs can ease management of lost cuts if the government has a financial support for such requirements. It will be more expensive in promoting the micro chipping of all costs.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Do not support

Tell us why

How can we keep all the car stay at home,? It's in a cats nature to explore everywhere and keeping them in the house is only possible when they're in a cage. It's not pain to cats either. They just need to be microchipped and deserved why do t they the freedom to go outside.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure

Rakino Island	Unsure
Waiheke Island	Do not support

Tell us why

The travellers have the right to decide whether or not to take their cars with them when travelling by car. As long as the car is on a leash when walking freely

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

The government provides free rates, that’s and possums eradication days to every household on an ongoing basis to ensure that every household is free of these pests.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

We owe is to our beloved NZ marine environment to do something about it and as difficult as it is to clean marine gear like this, at least we try our best to do it.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Unsure

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2310

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	

Tell us why

If they are homeless cats, I 100 % support abortion. If they are those raised at home, can give permission for nurturing according to their species

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I support

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	

Tell us why

Can let them out for activities

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

If let them going out, under controllable situations it's okay

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Enforce management, require to deal with abortion

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Getting along peacefully with animals, control the number of animals

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

Strictly control aggressive organisms

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

At appropriate situation that don't affect economy and the welfare of the people, can take consideration

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Control incoming species. Enforce protection of local species. Should consider appropriately to get along peacefully appropriate with biology

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

desexing is even good for cat's health. scaling-up might be helpful to bring the cost down

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other
Within 1km of known threatened species habitat (see map 1)	Other
All of Auckland	Other

Tell us why

I heard that the microchip is only use to record the information of owner, but it can't help to identify where the cat is. therefore, I think it is not that useful.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Unsure

Tell us why

for household that unable to provide enough enrichment for cats, it is hard to control cats at home, Is it better to provide training to cat owners on how to attack cat at home?

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

what economic support, in what way could be provided?

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I suggest 1: explore other pet options and promote. 2. understand what psychological and social factors affect the cat raising to contact be this issues.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I don't know, but I think most solutions I saw are very defensive, not active to create something. I question these actions sustainability.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

Can I know the cost, the procedure of it and who will be responsible of it? I don't see that system design for this problem.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Other

Tell us why

I agree that we should invest in this issue, but how to invest should e reconsidered.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Other

Tell us why

same as 3B

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

Is it that only or top factor attribute to this issue? if not, I think what your invest could get little impact.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Sure, climate change is the reality that we can't avoided.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

I think even survey is another way of communication, what I know though this survey is very limited. Could you please develop a summary for the issue and the rational of 2-3 options. it would be inform me on the issue and solutions.

Let's protect our environment: early consultation #2722

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

no lack of kittens form streets, help protect native species, discourages breeding and encourages adoption

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Generally just a good idea to keep those lost cat find their way home

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

to protect threatened species it's a good idea, it is remarkably difficult to keep them at home though, it in a iubllutan environment without threatened species perhaps unnecessary.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

The social benefit in decreased breed populations and native species deaths is worth the cost.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

good progress, keep it up

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

companies have a responsibility to defend ecosystem too

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

it helps reduce the number of feral cats, which are significant predators of native wildlife, including endangered species.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

the registration system can clarify the identify of the cat owner and promote the sense of responsibility of owners

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

Indoor cats cannot hunt or harm native birds, reptiles, and other wildlife, which help preserve local ecosystems

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Restricting only domestic cat from island residents to be brought to offshore islands may be considered unfair because it deprives others of the opportunity to enjoy the same rights

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

government resources are limited and may need to be prioritised for more urgent public services or infrastructure.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

the government needs to formulate reasonable policies to balance pet management and wildlife protection, and ensure that these policies are effectively implemented.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

promote cate sterilisation and chip registration to reduce the number of stray cats and ensure that cats found in protected areas can be identified and returned.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Do not support

Tell us why

no comment

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

no comment

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

no comment

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

no comment

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

no comment

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

no comment

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Let's put more effort into planting and growing as many trees as possible.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

It would be better if the policy of continuously strengthening management and supervision of the influx of alien species that may come from abroad is maintained. One way would be to more thoroughly regulate or manage alien species with strong reproductive capacity.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

1. Try to avoid the invasion of harmful species

2. Actively deal with the impact of extreme weather and avoid expansion

3. Maintain a positive and recyclable ecosystem and abide by the laws of nature

Let's protect our environment: early consultation #2755

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2771

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think it is a necessary procedure for pet care and protection.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Cats are territorial animals and are flexible and mobile, so it is difficult for humans to control them so that they only live in the house and garden.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

I think that raising a pet, not just a cat, is a decision that involves responsibility and considering everything. Increasing the financial support for neutering surgery costs would be helpful, but how would we distinguish and benefit those who cannot afford it?

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

NO

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

There are other non-motorized recreational activities available, and there are lakes and shores around the lake, so I don't think there's any reason to insist on motorboating on this lake. People and nature coexist, and there's no need to invade the ecosystem of plants and animals for human enjoyment, and I don't think there's any reason to insist on motorboating on this lake.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2805

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Tell us why

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I think it is necessary in areas that need to preserve nature, but I think we should think about it separately from cities.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

When they accept it as their pet and raise it, It's their choice. They have responsibility for it.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I think we need to create a conservation period with pets throughout the year, promote people's awareness, and campaign. Kind of an Enlightenment movement

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

None.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

We have to protect and save nature. We can't always do that, but I think it would be good to have a free of pest period of time of the years.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

I think it is the most important issue in our lives at the moment at the moment.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2815

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Tell us why

This may be difficult for many people to afford. Cats provide companionship and ‘Mental health’ support for many people. This service provided by cats should not be unrecognised or undervalued.

1C. All domestic/pet cats must be contained to their owner’s property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Cats provide companionship and ‘ mental health ‘ support for many people. Measures to confine a cat to its owners property will be very difficult for many and will therefore preclude cat ownership for many people. The service that cats provide to society in terms of stress relief and companionship should not be ignored and unvalued.

1D. Only island residents’ domestic/pet cats can be taken to offshore islands

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2832

cleaning up our environment

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

long-term investment of funds

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

it's beneficial to look at conservation in longer terms

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

keeping our harbour clean, not wasting money, everyone could be doing more in this space

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

keep clean up over ocean environment

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

cleaning up the marine environment

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

The pest fish were causing a decline in water quality and threating native biodiversity, including unique submerged native plants

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Keeping safety for Tomorata lake

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Increasing public transport options

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2839

TO PROTECT THE WIDER ENVIRONMENT

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

prioritise the higher risk areas first, affordability is a prob

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

For environment as first priority. but we need to balance the feasibility and wellbeing of cats

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

personal costs

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Improve the awareness among all communities and community partners, monitoring, checking and self-check system in place, penalty system as an enforcement

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

an effective prevention

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes, to improve the system resilience better than response and management

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Rely on our regional expertise for planning, but rely on all Aucklanders to support and implement. Environmental consultation must be the priority of prorating.

Let's protect our environment: early consultation #2847

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Lots of homeless cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Should let owners have the responsibility, don't abandon their cats.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

Cats like to stay outdoors or with other cats,some are well looked after. No one can control the cats if they do not return home at night.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Cats aren't tied, May endanger local wildlife.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

If decide to raise pets, should consider the economic level,, or adopt.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Can require owners to carry their cats in cages when at animal protection areas

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Can enforce infra-red protection on the island.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

Maybe uncontrollable in actual operation.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Local species are rather weaker, not easy to protect from aggression from outside.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Lake is a leisure place for every restaurant.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

Not very clear about the condition of Tomorata lake.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

I agree, extreme climate will only get more and more.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Enforce customs and pier control.

Let's protect our environment: early consultation #2859

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Pet cats to abort can reduce the number of cats, thus can reduce the threat to birds and other species.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This can detect lost cats, owner can find their cats as soon as possible.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

All pet cats should stay at home. This is safe for cats and would not be a threat to birds and other species.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

Not so sure.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

Now the economy is unstable, f cat owners can't afford the abortion fee, they can apply for other benefit or contact SPCA.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Management of cats can indirectly protect Auckland's wildlife.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

First priority is to control and eliminate pests.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This can make sure pests and dirt don't spread out

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

This can help protect animal life and marine life system.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Can effectively control pests to transmission in clear water, to protect water resources and lifecsystem.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Can let clear water environment safe.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Set up an effective protection system in order to prevent the impact of outcoming species, to cooperate with high-school, scientific institutes and custom.

Let's protect our environment: early consultation #2861

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Why doesn't the council and government actually care about the environment.

Living in Pukekohe we are overrun with Rabbits and possums and I know that stoats etc are also damaging the native tree species and our natural bird life.

My wife and I have planted 9500 trees and shrubs in the last 20 years on our property by ourselves, consequently we now have a huge increase in native bird life. But those ********** rabbits and possums plus feral cats. You never hear the council or elected representatives ever talk about control only about radical stories.

On similar issues why do we plant millions of acres of Pine trees that are toxic to the soil. We should be planting native trees that have by far a superior timber.

Admittedly slower growing but still grow reasonably well in the North Island.

But I feel my time in writing this will just fall on deaf ears to the civil servants.

Not that you care about that.

Same as you DO Nothing to protect our natives.

IE What you allowed so you could MAKE MONEY off the marina, and *uck the ducks.

Then the idiotic badly written last Biosecurity update.

That Imogen got so badly wrong, causing Auckland to NOW HAVE 5 known flocks of IRN's

Lying in court and not being pulled up for those lies. Shows how much you have control, over our courts.

No justice there.

Well.

We are now publicly advising bird owners to stop being freaked out by IDIOTIC council. who do nothing anyway.

IE What have you done to control the PBFD in the SC2 flocks, you now want to ban. Which just happens to Be Illegal, as they are blown in and are now come under out protection LAWs. Not you, and your Auckland Gulag.

Tell us why

Hi team, I find this exercise to be an abhorrent waste of time .As an active member of the boating community I observed members of Orakei Local Board vote to remove the Hardstand at the Landing in Okahu Bay

prior to their being any public consultation on the matter. When I finally went to the meeting to make Oral submissions the Chairman came into the lobby of the OLB offices and interrupted a private conversation with another party to say that Howard Spencer a significant player in the marine industry would be delighted with the outcome of this meeting. I was mortified that such a statement should be made, and that members of the local board were about to remove 30% of Aucklands ability to ensure that boats could be hauled and antifouled to prevent the incursion of unwanted marine organisms. We now have a crisis in Auckland with a chronic shortage of marine Hardstands and owners of vessels are now severely restricted in accessing these facilities . I have been on a waiting list since June and are still awaiting confirmation that the boat might be hauled before Xmas. Without evidence of a recent haul and antifoul you can no longer enter the waters of Great Barrier or the Bay of Islands. Auckland Council and its chief executive were made aware of our concerns and advised us that the Local boards have total autonomy and he would not direct the OLB to

reconsider their decision. I hope that you can see the reality of dealing with Council is an exercise of futility.

I trap feral cats as part of a local pest control group and I am horrified at the emaciated condition of kittens caught. It is known that 50% of kittens die within several weeks of being weaned and for most of them it is starvation. That is not a death that I wish on any animal and its time we made a major change to the way that cats are kept as pets to avoid both the damage to our native fauna but also to the starving feral cats.

Hi there

I received an email with a feedback form about cats management , Islands pests free, and a few other topics.

Thank you for drawing the forms and sending them around.

I started to fill the form, but got distracted for 3 minutes with an urgent phone call and all the information I was writing in the feedback form disappeared... That is a little frustrating. So, here below I will only give feedback about an aspect that in my opinion is the most important/urgent to consider. I am sure you will have enough people giving you feedback about the topics raised in the form. .

I would like to raise the topic of the use of roundup/glyphosate.

In many countries around the world it has been scientifically proven and widely accepted that roundup/glyphosate is highly toxic for human beings and for the life on the planet, to the point that it has been banned in many countries and the list is growing.

I would like New Zealand to have a closer look at that, in my opinion, Glyphosate should be banned also in New Zealand, and the sooner the better, the New Zealand population will be healthier and health New Zealand will be saving lots of money.

Thank you

Let's protect our environment: early consultation #2879

I think all domestic cats should be desexed, considering that an unspayed female can have up to 100 kittens in their life time. This would help stop the unwanted population of feral cats. It would stop people from just getting a kitten, then when it has a litter round 7 months old, everything gets a little difficult, they don't have the money to get the cat fixed before she is pregnant again, so they just take the cat and dump it in the countryside. I have even heard that there is a certain area south of Auckland which is known for people dumping their cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland

Tell us why

I can't really see how microchipping cats would be that beneficial to the environment. I know cats can go missing when people shift so it might help if someone finds them. I don't think we should be microchipping stray cats then placing them back in the environment. I have seen this first hand where my brother lives. The cats still hang around for food, get diseases, get hurt and end up often dying horrible deaths.

1C. All domestic/pet cats must be contained to their owner's property

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland

Tell us why

As for keeping cats indoors I just can't see that working. I feel it would be extremely difficult to police.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Also I do agree that cats should not be allowed to free roam the neighborhood and should be restricted to their owners property. But seeing as we owners due to our busy lifestyles cannot keep a constant eye on our cats while they are out, perhaps owners could consider building their cats their own catio that is an outside run that the cat could access from the house. Lots of people in the USA have for their cats to protect them from dangerous wildlife. Also in lots of other countries cat owners have built either catios or large outside cages, which protects not only the wildlife, but also your cats. It could save you money on a trip to the Vet. However, if you do not want to spend money on an outside run of any sort for your cat, then YES, your cat should be kept inside. One other way your cat could enjoy the outside, is that you could train her or him to wear a harness and walk on a leash.

The purrfect prescription: Health benefits of owning a cat

November 3, 2023 / Mental Health / 4-minute read

If you're a cat person, you're familiar with the serene calm that envelops you when your cat purrs on your lap. Surprisingly, the benefits we get from our feline friends go well beyond mere affection. Owning a cat comes with tangible health benefits that extend far beyond companionship. From stress reduction to allergy management, these independent creatures have a remarkable ability to enhance our well-being

Heart health

There's scientific evidence behind the calming effect cats have on our hearts. Cats have been proven to reduce the risk of cardiovascular diseases by lowering heart rate and blood pressure. A study published in the Journal of Vascular and Interventional Neurology demonstrated that having cats around significantly reduces the chances of dying from heart attacks or strokes. Spending time with our feline companions often leads to reduced stress levels.

.

Allergies

Contrary to popular belief, having a cat around may not trigger allergies. Early exposure to cats can help manage allergies later in life. A study published in the Clinical & Experimental Allergy Journal revealed that spending time with cats during infancy decreases the likelihood

of developing allergies. Furthermore, cats are associated with a reduced risk of minor health issues such as headaches and hay fever, making them nature's little healers.

Mental health benefits of cat ownership

The deep bond that many people have with their cats is undeniable. Cats can provide companionship, support, and unconditional love, which can benefit people with mental health conditions.

Beyond providing emotional support during challenging times, cats play a significant role in promoting psychological well-being. For individuals experiencing stress, anxiety, depression, loneliness, or even autism, the presence of a cat can offer comfort and security.

Stress

The benefits of owning a cat extend far beyond companionship. One of the primary advantages is stress reduction. Petting a cat has a calming effect, triggering the release of oxytocin, commonly known as the "love hormone." This chemical response plays a crucial role in reducing anxiety and stress, fostering feelings of trust and empathy. Studies have shown that cat owners have lower levels of cortisol, a hormone associated with stress. On a difficult day, a furry companion can make all the difference.

Anxiety and depression

Cats are exceptional companions, particularly for individuals living alone or going through challenging times. Owning a cat offers companionship that reduces feelings of loneliness. They possess a unique ability to sense when their owners need comfort and support, providing a listening ear or a gentle paw to hold.

Anxiety and depression

Cats are exceptional companions, particularly for individuals living alone or going through challenging times. Owning a cat offers companionship that reduces feelings of loneliness. They possess a unique ability to sense when their owners need comfort and support, providing a listening ear or a gentle paw to hold.

Social Interaction and Autism

For individuals on the autism spectrum, owning a cat can be particularly beneficial. Cats' remarkable ability to understand nonverbal cues improves social interactions for those who struggle with this skill set. A study conducted in 2023 even revealed that autistic children who owned cats displayed more prosocial behaviors, exhibiting more significant consideration for others' feelings and finding it easier to share their belongings.

It's good to be a cat person

Cats are undoubtedly valuable. These furry companions bring a multitude of physical and mental health benefits. Consider getting a cat for cuddles, stress relief, and overall well-being.

As can be seen from this article, there are a lot of health benefits to owning a cat.

CONCLUSION: YES by all means making spaying/neutering and microchipping should be made mandatory. As well as keeping them on your own property, unsupervised only if they are within the confines of a catio or an outside cage, or supervised on a leash under the supervision of their owner. I have little doubt that all responsible cat owners would agree with these conditions. I know I would.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I would just briefly like to have my say on the cat debate. Firstly NO I DO NOT AGREE that cats should be put on list of pest animals that DOC and councils would like to see eradicated by 2050.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

My beloved Ragdoll girl Rose aka Raggleberry Grace Kitty to give her her pedigree name. She was the last major present I got from my parents before they died.

If it was not for the companionship of my beloved fur baby above, I would be really lonely indeed.

The council needs to enforce dog bylaws on public beaches parks walkways etc.

Dogs have become a huge public nuisance. They attack children cyclists other dogs birds and cats.

Unlike cats however a bell on the collar will not change their aggression and noise.

There are too many dogs per property on the coast far outnumbering cats and this needs to change.

Like their owners dogs are now out of control. Deal to them with actions not hollow expensive words. Let’s all enjoy some peace and quiet on the coast thanks.

Mandatory sterilization is allowed within 1 km of known species habitats, but the opinions of owners should be respected in other areas and it should not be enforced. This will increase the burden on the government and taxpayers. Some families who are willing to practice birth control will also choose financial support from the government.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

It is necessary to shelter and manage feral cats, but funds should not be wasted excessively. I hope the government can prioritize and solve the difficulties of people's livelihood and the urgent environmental protection problems first.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Respect the opinions and arrangements of experts

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Do not support

Tell us why

The ocean is fluid, and new locations may have the same pests, dirt, etc. Please don't waste your time.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

In the context of economic difficulties, please develop the economy first

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2897

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

In response to your invitation to Auckland ratepayers to have our say on ways we believe the Council can improve our environment I would like to make the following comments and suggestions.

1. Please stop spraying round up around our trees. We live in Arkles Bay and all the trees along the waterfront have had large circular areas sprayed under the trees. This leaves bare earth when the trees could do with the grass ground cover and also is pretty poor for all the people who like to sit under these trees.

2. There is a huge amount of ginger and privet along the Wade River Road end of Ferry Road and down Arkles Drive. We contacted the Council about the Ferry Road weeds and were later informed that these had been dealt with. Nothing actually happened so we hope Council hasn't paid someone for work that wasnt done..

3. There is a Phoenix Palm planted by the Council on the roundabout at the bottom of Hawaian Parade. This is causing small Phoenix Palms to pop up all over the neighbourhood. These are dangerous to children and animals as they have very sharp poisonous spikes. The Phoenix Palm also drops large 2 metre plus fronds which litter the road.

4. I also have a question regarding the Liquid Ambers that were planted round the pond in Ferry Road At the time they were planted I spoke with the planters as they were not stropping the trees just putting a pole either side. They said this was the new way. Over a period of months these trees battered themselves against the poles, ring barking them, and many actually snapped off. After some months they were later stropped but not until many had had

to be replaced. This in itself is disappointing but even more so when it was a repeat of a previous attempt to plant Gingko trees in the same spot.

I belong to Legasea and Forest and Bird, and am an active trapper for Pest Free Hibiscus Coast and Pest Free Leigh so I am definitely trying to do my bit for the environment My overall concern is that Council may not be getting value for money from the people they employ.

If this is not the correct forum for my comments I would be grateful if they could be forwarded to the appropriate team. I believe my experiences are a small representation of what is likely happening all over Auckland.

Tell us why

We need to consider the damage straying cats do and therefore they need to be kept on the owners property if not inside.

Owners of cats need to register there cats and microchip them in case they run away, so they can be returned to there lawful owner.

Cats kill our native birds and that needs to stop.

Thanks for your time and have a wonderful day.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats mostly move around freely, and when they are out and about, they may become pregnant, which is an uncontrollable situation. Human intervention is necessary to prevent continuous reproduction.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

In the event of loss, it can be found more conveniently and quickly.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

Avoid scratching others

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support

Tell us why

It is better to keep pets at home

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

The government should spend money where it is more needed.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Clearing dirt and pests can better protect our oceans

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Good for our living environment

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes. Only by building better infrastructure can we prevent climate change from causing greater harm to cities.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2916

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Do not support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

none

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2926

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Sterilization helps cats to be better cared for, reduces unnecessary births, and is good for the environment and the wellbeing of cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Help cat owners to better raise their cats. If a cat is lost, they can find it back. Registration helps to prevent abandoned cats, so that every cat owner can take his or her own responsibility.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Every animal has its own habits. Cats need a space to play and socialize. If they are locked up at home, it is not good for their wellbeing. It also produces more garbage - cat feces.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Preventing Wildlife from Being Harmed by Cats

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

If you want to keep a cat, you need to have a certain amount of financial resources. If you don't have money, don't keep one to prevent it from being abandoned.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I agree to manage cats to protect wildlife. But as a cat, its habits need to be respected.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Agreed, put more traps, put more effective tools to kill rats, possums and stoats

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Hi

Please see photos attached first. Management of nurdles and beach litter specifically needs inclusion in the environment plan. At Waihi Beach recently there were lots of bins by carparks and a bucket that people could use for wombling - and the beach was clean. Just saying, it helps!

Cleaning this up once needn't be a major but would require a few agile helpers/workers, some gutter scoops, dustpans and brushes, sacks, PPE as in leather gloves, and a generator and a commercial vacuum (drain cleaning truck?) or battery garden vacuum. Go looking for sources if problem recurs, I think the nurdles have probably come from a plastic manufacturing business in the area, then out of a stormwater drain perhaps only in the past or perhaps ongoing. Lack of bins on the shore is an issue too with so many people having lunch in their cars and no bin in site.

I hope the photos motivate someone who works for council to do something to clean up please. Please advise me if photos are not attached and I can reduce the size of them. Or pass email onto the manager of the team responsible for the Manukau foreshore as this is not how our NZ should be, it is revolting.

Thanks

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Many people benefit from animal companionship but can't afford the fees for de-sexing

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

prevent spread of disease

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

YES!

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2936

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Submitter details:

This is a commendable call for the New Year. Having previously contributed to Auckland Council's mahi, there are many obvious areas where community input and collaboration would assist in gaining many improved outcomes.

One of those areas is superior coastal management – solid research and ecosystem restoration in Auckland is still severely lacking in this space.

However AC are creating tremendous outcomes with predator control, plus restoration of wetlands, native forest areas, but there still exists a dichotomous approach to restoration of another increasingly critical ecosystem – that of coastal margins.

While amazing results have been created with restoration at Piha and Bethell's, the people of Orewa have been 'conned' into building a seawall – the nemesis of naturally protective beaches and dune function.

As the attached documents all show, diligent dune restoration is not only less expensive (1-2% of seawall costs) this innovative world-leading option is far more enduring and sustainable while naturally creating wider beaches for improved amenity use – seawalls do not.

If the coastal engineers were brutally honest with the Orewa ratepayers, they would likely reject this $12.5 million edifice.

Your coastal scientists regrettably have not kept abreast of the enduring nature of this mahi, when it is achieved diligently.

So please do peruse the wealth of attached documents that provide far more affordable, sustainable, proven, enduring and naturally robust solutions - for a mere fraction of the cost of all other options (Jenks et al 2007, as cited by the IPCC 4AR).

BEACH RESTORATION BEGINNINGS and TIMELINES: # 2936

1993 – NOVEL COASTAL RESTORATION COMMENCED

- The Australian National Coast Care Programme initiated a new inclusive beach management style.
- This innovative concept incorporated a community-led focus into new proposals for coastal management.
- Public invited to be actively involved in 'maintaining' (but not improving?) the quality of coastal environments.
- But funding was contestable, and this proved less than ideal; creating simply excessive bureaucratic processes that forced volunteer groups to prepare "glossy" competitive funding applications for relatively naïve projects.
- The supposed 'community-focus' evaporated as volunteers found their worthy projects often did not receive any funding from disaffected bureaucrats distantly based in Canberra, who casually pitted 'group against group'.

1994 - TWO NZ REGIONAL COUNCIL'S (one being BOPRC) ADOPTED SIMILAR MANAGEMENT PRINCIPLES

- With one major & crucial modification – funding was now provided by regular annual budget allocations.
- Now being 'non-contestable', no precious community time is wasted preparing gilded funding applications.
- Therefore, extensive volunteer 'fatigue' is now minimised by that seemingly simple but vital alteration.
- Only plants and materials are supplied, but only after personal contact with a co-ordinator – no cash is involved.
- These important variations resulted in zero volunteer disappointment for environmentally valuable projects.
- Now commendable projects would simply proceed while being tailored to suit needs & available annual funding.
- We found that a bare minimum of careful planting does reverse former dune erosion (say 300-500 plants).
- Therefore, we can merely add more plants each year until the full extent of a ruined beach foredune ecosystem is fully restored, and so formerly problematic erosion issues are frequently, promptly and convincingly reversed.
- The most successful BOP-style model involves diligent use of superior indigenous-only plants - supplied by a specialist nursery committed to produce these essential species in a form proven to flourish well, with least cost.

2002 - THE AUSTRALIAN FEDERAL MODEL CEASED ABRUPTLY

- The Federal restoration programme was effectively scrapped (although it had been modestly successful and beneficial but was poorly researched) as its scarce funds were reallocated by changes in Australian Government budget priorities – just 9 years after commencement.

2024 - COAST CARE BOP (only) RECENTLY CELEBRATED ITS 30TH ANNIVERSARY – the longest of any NZ programme.

- This BOP paradigm for superior and sustainable coastal management has advanced from simple replanting of threatened native coastal plants into an increasingly researched realisation that those species, especially the 3 (of 5) most accessible (but palatable) indigenous foredune plants, possess a multitude of astonishing naturally evolved benefits to profoundly rebuild and enhance these now reliably enduring *continuing* coastal ecosystems.
- The 3 indigenous foredune plants now commonly restored (and their "Conservation Status") are:
    1. kowhangatara (*Spinifex sericeus;* or spinifex - "Not Threatened")
    2. pingao (*Ficinia spiralis;* or golden sand sedge – "At Risk – Declining")
    3. hinarepe (*Poa billardierei;* or sand tussock – "At Risk – Declining")
- The 2 indigenous foredune plants that usually **CANNOT** be restored (and their "Conservation Status") are:
    4. waiu-atua (*Euphorbia glauca;* or shore spurge - "At Risk – Declining")
    5. Holloway's crystalwort (*Atriplex hollowayi* – "Threatened - Nationally Vulnerable")
- The extreme palatability of waiu-atua and Holloway's crystalwort mean those indigenous beach plants are currently too highly at risk to be reliably utilised in diligent restoration programmes - they are readily grazed.
- A summary of the threats responsible for the serious decline of 4 of the above 5 species shows these are all human-induced; like mammalian grazing and browsing (these plants are unfortunately palatable to rabbits, sheep, cattle, goats, deer, feral pigs and horses etc.). Plus, competition from alien European marram grass, risky coastal development and use of vehicles on beaches are other induced problems. The combined and continuing impact of those detrimental effects has prompted wide losses of these species from most coastal locations – and this fact has logically induced the countless erosion problems now ubiquitously observed on littoral margins throughout NZ.

- But we now have fresh research data that proves these special plants are all incredibly tolerant of salt-water inundation, whereas nearly all introduced plants/weeds (including European marram grass) simply **ARE NOT**.
- Sea water contains about 3.5 % salt - meaning NZ's indigenous foredune plants actually possess halophyte status – and **less than 0.25% of all global terrestrial plants** possess that essential coastal survival attribute.
- **PLUS, all indigenous foredune plants are C4 species** – this is an **evolutionary advanced elaboration** of the more common C3 carbon usage for carbohydrate production in plant photosynthetic pathways.
- **This C4 innovation includes only about 3% of all terrestrial plant species**, so these few coastal C4 plants have worthy competitive advantages over all other plant species in dry, nutrient-poor environments that regularly experience high temperatures, and where nitrogen supply is naturally limited – like on coastal foredunes.
- Hence the exceptional amalgamation of habitat-essential **halophyte** PLUS **C4 status** reveal those indigenous foredune plants are highly specialised for their significant sand trapping and stabilising roles on our littoral margins – roles provided by aeons of normal natural selection and essential *continuing* evolutionary processes.
- Early NZ coastal geomorphology studies including the innate contributory roles of associated vegetation complexes began in the 1970's with botanist **Alan Esler** (DSIR): He wrote that "[Coastal dunelands] *are perhaps the most adverse of lowland environments, supporting a very limited number of native plant species suited, in various ways, to maintain themselves in such difficult conditions. However, a few species do flourish and these by their growth form and behaviour, play a large part in shaping the topography of the sand country"* (Esler 1970).
- These Esler insights were written well before recent discoveries of the halophile & C4 attributes of that "*limited number of native plant species"* (but not **uncommon**) – now making their preferential use increasingly essential.
- Diligent restoration of those few disappearing but exceptionally capable plants is now also naturally trapping increasing volumes of sand along our coastal margins, reversing formerly universal trends for beach erosion.
- Many diligently restored dunes have advanced seaward by 30-50 meters or more (Papamoa, Mt. Maunganui, Waihi beach, Coastlands, Waitohu, Tahunanui beach, Piha) with one outstanding accretion example exceeding 100m at Ohiwa beach – a duneland formerly designated as a Stock Reserve for coastal drovers back in 1906.
- Therefore, returning those indigenous halophyte C4 plants to their natural environment (on coastal foredunes) is logically providing immense benefits to the enduring integrity of those beaches and dunes while also enhancing natural biodiversity – so this is now the most ethical response to the reversal of all existing erosion concerns.
- Ongoing control of pests & weeds is imperative – which includes use of saturated salt solutions (brine – 28% salt) as a natural herbicide to control invasive introduced weeds amongst indigenous halophyte C4 foredune plants.

HUMAN IMPACTS

- Human colonisation of Aotearoa/NZ commenced in the relatively late 14th century AD ('late' in the global context of other human settlement periods – we are "the last largest landmass to be colonised by humans').
- These new influxes created major ecological damage by removal of numerous native forest ecosystems.
- Over time, those large-scale impacts also affected drier and hence more flammable back-dune climax forests, with wildfires spreading further into nearby lower stature coastal vegetation, including that on foredunes.
- "*Late-Holocene pollen and charcoal records from New Zealand provide striking evidence for initial Polynesian arrival being strongly associated with widespread burning and loss of native forest. These forests had no previous history of fire and thus showed little resilience to the introduction of a new disturbance"* (McWethy et al 2009).
- The potency of this impact remained for a considerable period and covered much of Aotearoa/NZ: "*Over much of the North Island the bracken dominance established during the early Māori deforestation phase was maintained up until the European pastoral and forestry era*. *Early fires (600 years BP) have been recorded in pollen diagrams from Northland to Southland*" (McGlone 2005).
- Our early Polynesian settlers thus unconsciously created Aotearoa/NZ's initial and substantial ecosystem impacts: *"It is probable that Māori … weakened the coastal vegetation initially with their use of fire to encourage the growth of bracken fern, a major source of starch in their diet"* (McKelvey 1999). This assertion was later confirmed by McGlone 2005: "*Māori relied on bracken rhizome starch as a major element of their diet …."*
- However, Captain Cook then only amplified those early impacts by unilaterally releasing a completely new and dangerous phenomenon into this young nation – an entirely unprecedented fresh wave of destructive mammalian herbivores that severely damaged indigenous flora and fauna. Again, our indigenous "*forests had no*

previous history of" those fresh and severe deprivations now wrought by the impacts of mammalian grazing: Cook introduced the omnivorous feral swine ('Captain Cooker pigs') during his first 1769 contact (Jenks 2018).

- This initial introduction of mammalian browsers was only destructively intensified during his next visit: "*On Cook's second voyage, he liberated goats from England in the Marlborough Sounds in 1773. Later introductions to nearshore islands, or around the coast, appear to have been to provide food for visiting ships and castaways*. *Goats were also released as food for prospectors, gold miners, and road and railway workers*" (Gillingham 2008).
- Thus, it is clear that all these grazing herbivores were simply released into our many near-pristine natural environments as living larders; to browse whatever and wherever they would or could in this hitherto mammalian herbivore-free lush new land, with no effort being made to provide constraints of any kind.
- These early impacting actions were fervently followed by even further introductions: "*British navigator James Cook also brought sheep to New Zealand on his voyages in 1773 and 1777 …*"
- And then Missionary Samuel Marsden "*brought more sheep from Australia to the Bay of Islands in 1814*" (Stringleman and Peden 2015).
- Marsden also introduced cattle to Aotearoa/NZ: "*The first dairy cows to arrive in New Zealand were Shorthorns ... They were introduced in 1814 by missionary Samuel Marsden for mission stations in the Bay of Islands*. *Shorthorns were useful draught animals, which gave good milk and provided excellent meat"* (Stringleman and Scrimgeour 2008).
- Further sheep introductions occurred in subsequent years: "*John Bell imported sheep to Mana Island, north of Wellington, in 1834 as food for whalers*".
- These unwitting but plainly anthropocentric actions plus the early local adoption of unconstrained British "Open Field" grazing systems were simply typical of those times of reduced environmental impact awareness.
- No consideration was given to any of the numerous major damaging affects created by those large grazing herbivores in this land formerly and innocuously occupied only by native invertebrates, reptiles and birds.
- **And those impacts became particularly problematic on all easily browsed indigenous low-stature, herbaceous perennial and palatable plant species, like our coastal foredune and mid-dune plants for example.**

COCKAYNE 1911: "Report on the Dune-Areas of New Zealand, Their geology, botany, and reclamation".

- This respected botanist was requested by the NZ Government in 1908 to survey all our dune lands.
- His 3-year assessment study reveals that **by 1880** the stability of **40,000 hectares** of dune lands had already been ruined by combined human impacts, and then just 28 years later (in 1908) **that area of ruined dunes had tripled** to surpass **120,000 hectares** – all this created by the unprecedented impacts of livestock grazing and fires etc.
- That is a problematic recorded impact total as the entire NZ's duneland area is estimated at **129,000 hectares**, so by 1911 the natural stability of **an area exceeding 93% of NZ's coastal margins** had been completely de-stabilised/destroyed by those combined unnatural and 'unintended' human endeavours (Cockayne 1911).
- Cockayne also reported that *"it is not altogether easy to present a picture of the virgin dunes of New Zealand...*[as] *there are few places where man, his fires, and his grazing animals have not wrought great changes"* - and that is the colonial legacy still heaving on the integrity and stability of NZ's coastal dunes.
- To hastily remedy those huge impacts Cockayne (1911) recommended the use of imported plants like European marram grass, lupins and pine trees to stabilise the massive volumes of loose and relentlessly encroaching sand.
- **But not one of Cockayne's hastily recommended species are naturally salt-tolerant,** so those colonial-era decisions again remain as a heritage of human-induced coastal erosion effects still commonly observed today.
- Those critical human-impact issues clearly precede any recent concerns over SLR with its own insidious affects.
- Thus, full reversal of those recorded human-induced effects is the most ethical and logical option now available.

COASTAL DUNES now are the long-forgotten natural ecosystem (or more correctly an ecotype)

- Humans increasingly love their coasts and its beaches – but often without even considering the historically ruined ecosystem that once flourished there to support and keep those beaches pristine and dynamically stable.
- Diligent coastal restoration simply returns (rewilds) that natural beauty and stability to our coastal landscapes.
- One example is the diligently restored Mt. Maunganui beach – awarded **the best beach in NZ** for 2018 - for the sixth consecutive year by Lonely Planet Guide **AND** TripAdvisor – a true win-win opportunity for all beach users.

- **"Mount Maunganui again topped NZ's Best Beach list for the sixth consecutive year** and took out **second place in the South Pacific Top 10 Beaches list: Users commented -** *"We loved this beach so much that we came back 3 times during our short stay in Tauranga.* ***The beach is pristine****, and the water inviting. The views are beautiful''.*

ARE INDIGENOUS COASTAL FOREDUNE PLANTS REALLY "NATURALLY UNCOMMON"?

- This fable has been languorously perpetuated by some geographers and coastal engineers who can't see past their existing interests to recognise the greater national good that could be generated by littoral restoration.
- That erroneous conclusion is based on invalid assumptions plus reliance on analogous studies of contemporary dune behaviours that have only resulted from preceding human impacts upon now devastated coastal margins.
- Not one of our five indigenous halophyte C4 foredune plants possess that claimed conservation status of "Naturally Uncommon"; rather, as stated further above, their current status varies from "Not Threatened" and "At Risk – Declining" through to "Threatened - Nationally Vulnerable", but never **"Naturally Uncommon".**
- That status is reserved for truly uncommon plants like *Carex allanii*, which evolved under unique conditions and so is "known only from the Old Man Range and several sites on the flanks of the Central Otago block mountains".
- So, these NZ coastal practitioners are erroneously revealing their unfortunate paucity of botanical research.
- And these 'experts' have not even responded to personal invitations to witness local beneficial results created by diligent dune restoration of our naturally-evolved indigenous, vigorous halophyte C4 foredune plants – even though these world-leading research results were generated right here in Aotearoa/NZ, but 'only' over 30 years.
- Compelling evidence contradicting that erroneous **NATURALLY UNCOMMON** myth is simply and easily available.

BIODIVERSITY

- So ocean beaches are really an ecotype – "*the portion of the physical world that forms a home for the organisms which inhabit it*" – a zone that fits between two recognised ecosystems – natural forest and marine ecosystems.
- This coastal interface can be brutal with extremes of temperature, wind, severe storms and dry conditions, but it contains a unique but poorly recognised assemblage of indigenous halophyte C4 sand-obligate foredune plants, plus non-halophyte successional psammophile plant species, some only occur naturally in this distinct ecotype.
- Dune lands are/were also 'home' to an equally unique array of indigenous faunal species; such as various arthropods, molluscs, invertebrates and vertebrates (like various species of reptiles and shorebirds): those faunal examples include the sand scarab beetle (or, ngungutawa), native sand locusts and grass hoppers, little known native sand-dwelling bees, katipo spiders, rauparaha butterflies, and the bivalve molluscs tuatua and toheroa, plus frequently-threatened shorebirds like the NZ dotterel, banded dotterel, NZ shore plover, oystercatchers, NZ fairy tern; plus threatened shore skinks and geckos.
- Even kiwi can still be seen keenly foraging on arthropods (sand hoppers), but now only on Stewart Island shores.
- All the above species are variably threatened currently, due to severe loss or impacts on their natural habitat.
- **Therefore, all native coastal faunal populations wholly dependent on this dune ecotype** are also naturally and increasingly **assisted** by this logical and entirely ethical dune habitat restoration ethos.

CLIMATE CHANGE IMPLICATIONS

- Enduring sand accumulations on restored beaches have been monitored over the last 16 years and quantified even more accurately following the design and installation of innovative Sand Datum Posts in 2008 (Jenks 2018).
- Those posts measure actual sand volumes now regularly accumulated by simple assiduous restoration of dunes.
- The convincingly favourable results have been collated and the raw data provided to our associate and award-winning climate change adaptation company ClimSystems Ltd, in Hamilton.
- Their Coastal Erosion computer model reveals the volumes of sand now being accumulated through simple but diligent restoration "**can completely off-set the serious effects of predicted SLR of +118cm through to 2100**".
- That computer model also incorporates the Bruun Rule for coastal retreat in response to sea level rise (SLR).

TECHNICAL PAPERS and OTHER PUBLICATIONS

- **MfE** requested useful information on early BOP beach restoration observations and results back in 2005.
- Their resultant 36-page booklet was published and titled **"Community-based Dune Management for the Mitigation of Coastal Hazards and Climate Change Effects – A guide for Local Authorities".**

- Many other science offerings have been published including 10 brochures in the "**Coast Care Information**" series, plus "**Life's a Beach**" - a coastal education kit for schools. All are stored in the Hocken Collection, Dunedin.
- Several technical papers also have been published, including one regarding the coastal protection and cost benefits stemming from diligent beach restoration, which was cited by **the IPCC in their 4AR** (Jenks *et al* 2007).
- That information proved that dune restoration is not only the most effective and enduring option, **it only costs about 1-2% of the commonly utilised alternative** – the building of seawalls, now proven to be ephemeral.
- We have collaborated with a number of university academics regarding these beneficial dune restoration results.
- Many other technical papers have also been written and published – including a series named the "21ST CENTURY PARADIGM for Superior Modern Coastal Management".
- The most recent publication – **"Restoring the natural functional capacity of coastal dune ecosystems: Utilising research records for New Zealand littoral refurbishment as a proxy for analogous global responses"**, published by SPRINGER NATURE in the May 2018 '**Journal for Coastal Conservation'** – follow this link: https://rdcu.be/NNIk
- We continue to work in collaboration with CLIMsystems Ltd, and the International Global Change Institute (IGCI).
- Plus, any other organisations wishing to have some worthy input (e.g. NZTA and PCE).

COUNCILS IN NZ

- Local authorities can at times be a disparate bunch of large egos driven by personal local agendas or interests.
- Those large ego and disparity issues are clearly demonstrated by Auckland Council's November 2024 support of the harmful Ōrewa seawall while contemporaneously seeking community input for conservation programmes.
- Therefore, due to these issues plus excessive lethargy, there has been zero uptake of the information contained in the **2005 MfE booklet**, or any of the reliable and accurate information provided in a subsequent **LGNZ** sponsored "**2005 Climate Change Roadshow**" to various councils throughout NZ.
- Many NZ councils and CRI's can be dominated by "**Business as Usual**" (BAU) personalities who simply shudder at the suggestion of pursuing any new or inconvenient "**Disruptive Innovations"**, like diligent coastal restoration.
- This is true of DOC and their retinue of 'environmental experts' who completed the last review of the NZ Coastal Policy Statement 2010 – the board of enquiry had zero knowledge of NZ's indigenous halophyte foredune plants!
- Wellington Regional Council and Kapiti Coast District Council (KCDC) staff requested a coastal restoration plan in 2008; **for solutions of the numerous existing littoral erosion problems then confronting the entire Kapiti Coast**.
- An extensive coastal condition survey of all Kapiti Coast beaches from Waikawa Beach south to Paekakariki was completed and a subsequent framework for best restoration options was presented. We received **zero** response.
- Then in September 2019, an email sent to KCDC Mayor Gurunathan outlined again how recent erosion trends highlighted by media at Paekakariki could be affordably reversed – he kindly replied stating this appreciated suggestion would be passed on to his newly appointed coastal manager for her response – we are still waiting…
- Dunedin City Council wouldn't accept a 2009 offer to restore their heavily impacted St Clair and St Kilda beaches.
- Suggestions for diligent restoration have been provided to Tasman District Council – and rejected, even though neighbouring Tahunanui beach is now successfully restored, with their erosion issues convincingly reversed.
- Similar suggestions for simple and least cost reversals of erosion on the human-induced weed dominated shores of Abel Tasman National Park have been rejected by Project Janzoon staff and DOC – now recall the introduction of goats in NZ - "*On Cook's second voyage, he liberated goats from England in the Marlborough Sounds in 1773"*.

NASA

- During a January 2018 USA trip, we observed that one public seaside (Cocoa beach) had **NOT** suffered the severity of damage wrought throughout Florida by Category 5 Hurricane Irma 4 months prior in September 2017.
- All the beaches north and south of Cocoa had been severely devastated by that brutal Category 5 storm.
- **How and why** did Cocoa (just 11km south of Cape Canaveral's **Kennedy Space Centre**) stand out as remaining apparently natural and so dramatically unaffected…**?**
- Subsequent investigation surprisingly revealed that 10 years prior **NASA** had utilised strikingly similar diligent foredune restoration techniques to those developed earlier by Coast Care in the BOP region – but logically and ethically they utilised locally native foredune plants at Cocoa beach, and also Kennedy Space Centre dunes.

- Dune restoration (plus beach nourishment) was wisely and carefully selected as **the most reliable, effective and least cost method** to protect ***"the $US10.9 billion*** (or $NZ14.2 billion) ***sandbar called the Kennedy Space Centre at Cape Canaveral"*** – as NASA concluded that restoration would provide the best and most affordable outcome.
- Two scientific teams were involved - the **Climate Adaptation Sciences Investigators Workgroup** (CASI), and the **Dune Vulnerability Team** (DVT) - both desired to regenerate dune buffer function and attendant biodiversity.
- The **DVT** team consists of staff from the University of Florida, plus the U.S. Army Corps of Engineers and the U.S. Geological Survey along with NASA's own coastal geomorphologists and environmental scientists.
- It was also noted that beach restoration also "***enhances habitats for locally indigenous coastal biodiversity*****".**
- **"*For the past few years, the dune has held strong, preventing the ocean from spilling over onto the historic shuttle railroad that traces along the coast. But in protecting its shoreline, NASA is trying to be considerate of* all *its residents*"** - Don Dankert, NASA Environmental Scientist.
- The investment at risk of loss to sea level rise (SLR) at **Kennedy Space Centre** is nearly comparable to replacing all the buildings around NZ also threatened by SLR (a cost that "**could exceed $NZ19 billion" – STUFF News Oct 2019**).
- And NASA has preferentially chosen sustainable options over any engineering options to achieve that objective!
- NASA's correspondingly learned dune renovation plans could mean that diligent beach restoration can now be referred to as the '**Rocket Science**' solution for reversing those troubling existing coastal erosion problems?
- If NASA and their CASI + DVT teams decided (on balance) that diligent dune restoration was the best option, why don't we follow suit, especially as we invented the sustainable methodology for its diligent achievement?

THE FUTURE

- To his invaluable and enduring credit, Cockayne's 1911 report to parliament also concluded that ***"A well-shaped and*** [indigenous] ***plant-fixed foredune is a land-form of the greatest importance, since it ... forms a natural protection against the inroads of the sea, thus safeguarding the coast"*** - we and NASA couldn't agree more.
- Surveys of the extensive realities and impacts of dune degradation in many global nations was recently completed, these sites include USA, Portugal, France, Spain, UK, India, China, Taiwan, Indonesia, Australia etc.
- All these temperate and tropical nations consistently reveal crucially analogous human-induced impacts as those commonly seen on NZ dunes – so this existential crisis is truly a global-scale issue **of poorly recognised impacts**.
- The only major observable international difference is their longer history and severity of human impacts.
- International coastal impacts commenced about 10-12,000 years BP – during the Neolithic Revolution period (when humans began domesticating livestock and subsequently began the 'settled agricultural' era, aka the **Anthropocene period**; beyond the Mesolithic/Palaeolithic hunter-gatherer periods).
- The results from that survey of international coastal impacts will be presented for peer review and publication – again by SPRINGER NATURE's Journal for Coastal Conservation (as requested by their Editors).
- Hopefully we will soon see some logical and practical NZ leadership and therefore an ensuing application of this ethically superior and community-involved diligent coastal restoration paradigm – honed and perfected by a 'mere' 30 years of local operational-scale innovative coastal refurbishment and research experience.
- And then perhaps some suitable NZ and/or a global organisation will treat this '**Disruptive Innovation'** with its fittingly justified recognition before all our existing **degraded** coastal margins disappear below a tide of **added SLR pressures** produced by analogous anthropic-induced climate change effects.
- Common acceptance of this new but perhaps inconvenient '**Disruptive Innovation'** could be compared to the experiences of **Galileo**, the 17th Century Italian astronomer, physicist and engineer.
- He challenged the prevailing 'business as usual' (BAU) theory of **geocentrism** (earth at centre of our universe), instead choosing to champion **heliocentrism** postulated earlier by Copernicus (a theory published in **1543**).
- **Galileo** was arrested, tried and found guilty of heresy by the Roman Inquisition in **1615** as his support of this new 'heliocentrism theory' was considered controversial and heretical, as it contradicted many Bible passages.
- **But which theory was eventually proved correct – that of Galileo** (and Copernicus) **or of the BAU brigade?**
- It's critically important to recall that diligent coastal restoration has been shown to "off-set the serious effects of predicted SLR of +118cm through to 2100".

- So, this new '**Disruptive Innovation'** appears to be an inconvenient concept for some laggards, but it must not suffer the ongoing dismissal of **heliocentrism,** due to the similarly naïve habits of our coastal BAU practitioners.
- Global beaches also need this new paradigm to ensure their ongoing security as much as we do in NZ.
- Your investment has the potential to become a diligently utilised 2!st century paradigm for aiding provisional security (at least) from coastal erosion locally and maybe globally.

The 30 years of local exceptionally reliable, uniquely beneficial and widely proven results collectively ensure this 'Kiwi-Made' option is outstandingly revolutionary, in a global context, especially now when rising sea levels must be confronted. The accompanying Orewa Beach document reveals this superior method only costs ~1-2% of building ephemeral seawalls while also providing enduring coastal home protection plus better beaches. All the above meticulous adaptive management and coastal restoration methodology research are clearly recorded for ease of use and simple transference. Now is the time to move forward and make progress with diligent restoration and reject the BAU brigade's tired and regressive theories.

TVNZ News – Marine Parade Pathway, Mount Maunganui – December 2023 **# 2936**

URL: https://www.1news.co.nz/2023/12/20/marine-parades-coastal-pathway-opens-to-sound-of-bicycle-bells/

"A significant new coastal pathway has opened in Mount Maunganui".

"The pathway is located between Hopukiore (Mount Drury Reserve) and Oceanbeach Rd. It was officially blessed on Tuesday morning. Tauranga City Council Commissioners, members of local hapū Ngāi Tūkairangi and Ngāti Kuku, and the public enjoyed food stalls, coffee, and ice-cream".

"The pathway stretches more than 3km [long] and is 4m wide, designed to safely accommodate a diverse range of users including pedestrians, cyclists, users of wheelchairs and mobility devices, skaters, and scooter riders" – TVNZ News, 20 Dec 2023.

Source: TVNZ News – December 2023 **Approximate landward extent of erosion by 2001, before diligent dune restoration.**

The new Marine Parade Pathway is a grand achievement for 'The Mount' (as shown above), however it differs significantly from New Plymouth's similarly named 'Coastal Walkway' (see further below).

The Mount Maunganui example (above) shows how its many residents and visitors can securely enjoy significantly wider protective dunes and expansive views on its ocean side, plus easy public beach access (via many modest, provided accessways) safely winding through the ever-expanding dunes to the also progressively wider sandy beach with all its natural amenity values. Growing the width of these dunes was simply and affordably encouraged by simple diligent restoration of their original and functional cohort of indigenous salt-tolerant foredune vegetation. These naturally selected, highly adapted plants simply collect and stabilise all suitable ocean-supplied beach sand to maintain local sand budgets that keep these restored beaches in a naturally dynamic equilibrium. Hence, these restored littoral margins remain fully resilient to the many impacts of repeated oceanic storms. This is the essential 'miracle' of the preferential use of indigenous halophyte foredune plants. The item above was presented just 10 months AFTER severe cyclone Gabrielle – the "destructive tropical cyclone that devastated parts of the North Island of New Zealand and affected parts of Vanuatu and Australia in February 2023. It is the costliest tropical cyclone on record in the Southern Hemisphere" (Retrieved Wikipedia August 10, 2024). But zero dune erosion is revealed above.

All the (new) land now evident to the right of the yellow arrow above - now about 50 metres wide - revealing a new average accretion rate of +2.2 metres/yr. That expansion simply represents the volume of oceanic sand collected by these naturally functional indigenous foredune plants as they progressively grow seawards from their original 3-4-metre-wide planting zone. Often-hostile beaches are the normal environment for these

naturally adapted terrestrial plants, so they just behave in a manner selected by these natural forces – by expanding their growth seawards as new sand is supplied and collected by their prodigious proliferation.

On the landward side of these expanding foredunes, some naturally established (plus planted) indigenous and distinctive mid-dune vegetation adds colour, differing textures, public interest and landscape appeal while enhancing natural dune function and fauna habitats for these relatively recently restored beach areas.

The old, eroded dune scarps (sand cliffs) were about 2 meters high and existed along the full extent of Marine Parade prior to 2001, roughly following the line of that yellow arrow above. This erosion problem only occurred as those dunes were earlier dominated by European marram, a plant used in haste after the colonial era of ubiquitous dune grazing by livestock, plus a regrettable litany of other harmful impacts. Marram grass did slow that induced erosion but is INCAPABLE of stopping it – as it's simply destroyed by the 3.5% salt in seawater. That's how all the steep dune scarps (cliffs) were formerly provoked along Marine Parade beach (and on most NZ beaches) prior to diligent restoration of our sand collecting and salt-tolerant (halophyte) indigenous foredune plant species.

New Plymouth Coastal Walkway

Source: New Plymouth District Council - URL: https://www.npdc.govt.nz/leisure-and-culture/coastal-walkway/

The New Plymouth Coastal Walkway was opened in 2010 for recreational use by locals and visitors alike. This coastal path certainly has proved very popular ever since, due to the coastal views and lengthy coastal access provided. However, this walkway offers little natural character along its extent – only fresh air and ocean views – but now over the boulders artificially placed to protect this path from ocean erosion. Some restricted access to beaches is available about 5km distant from this photo, at Fitzroy beach. But even there, those dunes are still in a degraded erosional state, and so the high tide beach is narrow, and relatively unenticing.

Hence, diligent dune restoration has again proven superior to all other commonly available coastal management options. That fact is even acknowledged by the IPCC as cited in their 4th Assessment Report: 'coastal restoration is the most enduring and least-cost option available for management of littoral margins' (Jenks *et al* 2007) – commonly **costing only 1-2%** of most other alternatives, like rockwalls for instance.

And this new coastal restoration paradigm is not confined to the Bay of Plenty region only – there are several other NZ sites where this option has been affordably and successfully implemented. Is your turn next?

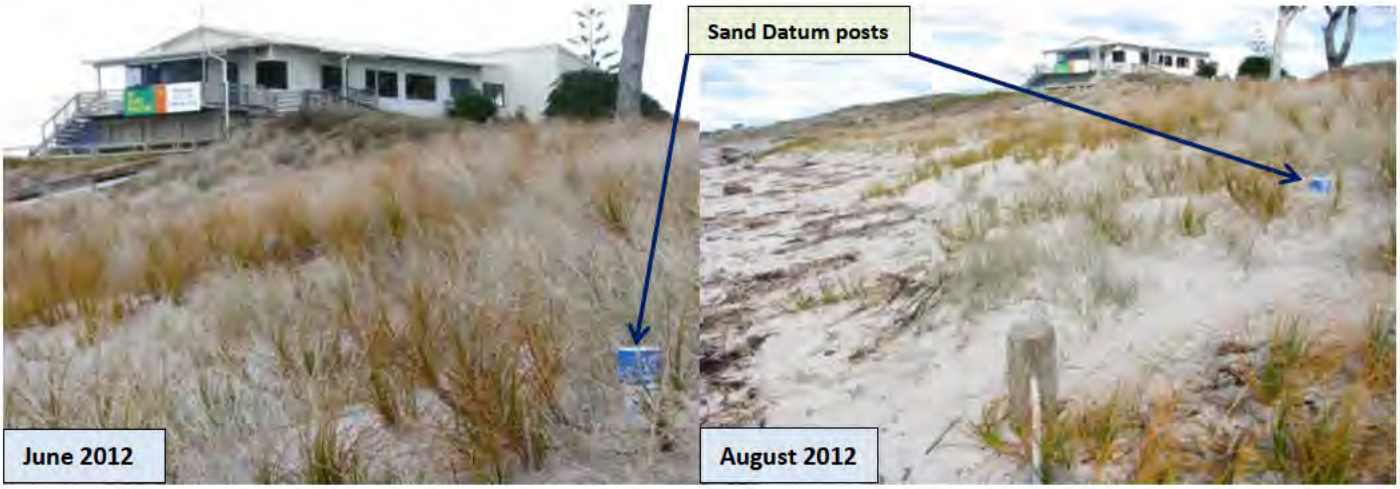

[redacted]

ADAPTATION OPTION TO MITIGATE SEA LEVEL RISE (SLR) – Papamoa, Bay of Plenty, NZ. # 2936

New Zealand and many global nations share relatively recent histories of human-induced coastal impacts, and all these have seriously impaired normal dune integrity and resilience. An early NZ botanist reported his observations of natural dune buffer function and the likely consequences of the all-pervading and escalating degradation of formerly stable NZ dunes: *"coastal dunes ... form a natural defence to the land against the encroachment of the sea, and, their movement inland is a national concern ... while yearly further destruction takes place, the evil ... becoming more difficult to suppress"* (Dr L. Cockayne 1911). And this effect has simply continued unabated to the present, even some four centuries after Denmark's King Christian II became alarmed by comparable dune degradation issues in his nation. Consequently, that King drafted the world's first Sand Drift Act 1539. But degradation & erosion continues.

The wide variety of untenable but invariably accepted and 'normalised' human impacts have only amplified the risks posed by normal coastal hazards. However, one recent mitigation method has revealed considerable success by working with - rather than battling forlornly against - natural coastal processes. The following information reveals the success of these innnovative works, the example below based on a case study at Papamoa Beach, in the Bay of Plenty region of NZ. Similar results are experienced at other diligently restored sites around this nation, providing increased veracity for this low-cost littoral management practice.

The natrual buffer function of this formerly eroding and landward-marching dune was affordably restored with indigenous psammmophile C_4 halophyte plants, and the consequent sand accumulation quantified by using 1 metre long 'Sand Datum Posts'. The positive results are presented below:

The original two diligent plantings were undertaken here in 1995 & 96, prior to the 1 metre long sand datum posts being devised in 2008. The datum posts were then installed at the zero mark - and all fresh sand accumulations recorded thereafter. **Between 2008 and June 2012, sand to a depth of 80cm was naturally accumulated; this total depth increased to 90cm by August 2012; this deposition followed further La Niña winter storms that formerly induced littoral erosion. This newly re-vegetated dune width expanded to be 25m seaward of the original 1996 line, an average dune width improvement of >1.3metres/yr.** This process accumulated 'new' porous sand totalling 90cm deep by August 2012 - a sand accumulation (accretion) total of 22 m^3/lineal metre of beach length. The increased porosity of the fresh sand accumulated by these restored native C_4 halophyte dune plants encourages increased the absorption of wave volume and lowered water tables during storm surge run-up (de Lange & Jenks 2007, Muller 2011). This increased porosity mechanism is demonstrated by the August 2012 photo (above) which also reveals the impacts of a recent storm – simple addition of extra sand and further plant nutrient-supply courtesy of the beach-cast seaweed supplied by the natural storm-surge – and now zero erosion where erosion was expected.

A subsequent 2014 site update revealed the above datum post to be completely buried by accreting sand, and dune width has increased to >30m seaward of the 1996 line, all due to this assiduous restoration and natural proliferation of indigenous C_4 psammmophile and halophyte dune plants, plus the consequential improved natural function of this

dune ecosystem. NOTE: prior to this restoration **all La Niña** storms, like those above, invariably induced problematic erosion of the dune buffer, and NOT the continuing accretionary effects continually revealed now.

The 4th Assessment Report of the IPCC[1] 2007 cites the low cost of this protective restoration work at **just 1% of all common alternatives**, and hence affords support for employing these proven and successful coastal restoration practices as a first-line defence technique for coastal communities – in ethical efforts to mitigate the early impacts of existing SLR. Data collected at the site of the **Papamoa Surf Club reveals the following information:**

ASSIDUOUS DUNE RESTORATION – PAPAMOA BEACH ECOSYSTEM RESPONSE: 1996 to JUNE 2014

ESTABLISHMENT DATES	DUNE DEPTH CHANGES to 2014	DUNE WIDTH CHANGES to 2014	DUNE VOLUME CHANGES to 2014	CHANGES PER ANNUM
1996 Planting: once only - as natural plant colonisation & proliferation ensued	**1996 – assessed as zero**	**+30metres** (m) extra width now and continuing	Not quantified originally – suitable instruments were not initially available	**Dune width growth +1.3m/year.** This rate of gain continues
2008 Datum Posts added, to quantify changes in sand depth + dune width, i.e. **dune volume changes**	**2008-2014: sand accretion 1.0m depth** (recorded after datum post placement 2008)	**+12m seaward of** the original datum post location, and still improving	**>30m^3/lineal m** of beach following the original planting, this gain continues	**Dune volume growth +1.7m^3/year/lineal metre** of beach, and this rate of gain continues

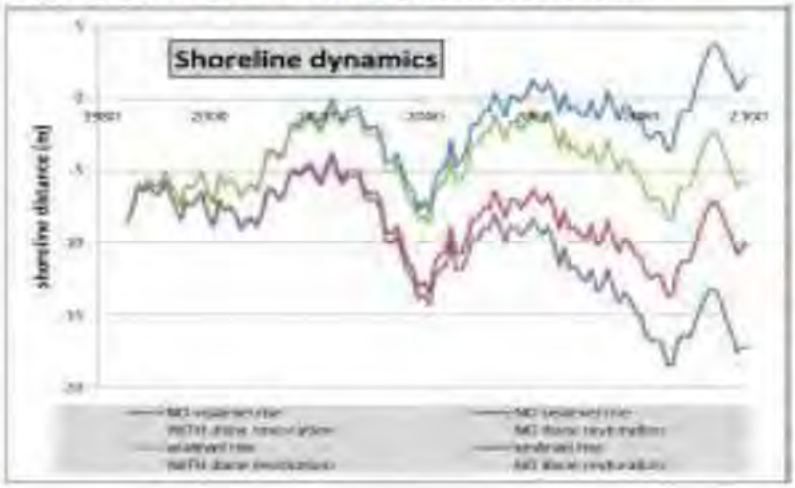

Data collected from the above and associated sites around NZ have provided the following findings about preparing for the impacts of sea level rise (SLR), and published for the ESRI Conference in San Diego 2015:

Dune Restoration

Greg Jenks, Dr Peter Kouwenhoven, CLIMsystems, Hamilton, New Zealand

Planting of native dune species in 1995 and 1996, and redirecting casual pedestrians has reversed earlier, ongoing erosion problems. Sand supplied by natural processes is being accumulated by the colonising dune plants (i.e. *Spinifex* & *Pingao*), burying fences, dramatically improving the dune buffer and beach width.

CLIMsystems

With SimCLIM2013's coastal erosion model the shoreline dynamics were simulated, both without and with sea level rise (RCP8.5-high climate sensitivity) and without and with dune restoration. This shows that the restoration can off-set the serious effects of SLR (of 118cm increase) completely.

[1] Jenks, G. K. *et al.* 2007. *Coastal Systems and Low-lying Areas,* Chapter 6, IPCC 4th Assessment Report

Assiduous Restoration of Natural Dune Function, Marine Parade Beach, Mount Maunganui, NZ

The Problem

Destruction of native sand binding plants by dune bulldozing in 1965 and subsequent poor management of pedestrian use. Repeated wind erosion of dune dominated by kikuyu and ice plant.

Effect

Sand blowing up from the beach during the storm and blocking the road for 3 days. Removal to re-open the road cost about $10,000. Sand is clearly being lost from the active beach system.

Restoration Project

Mount Maunganui Coast Care decided that kikuyu and ice plant must be replaced by native sand binding species. Bollards and ropes are being used to protect the planting and delineate the formed accessways.

Project Result

The sand no longer reaches the road, instead it is now trapped in the leading 4-5m of dune plants. Bollards and ropes have subsequently been moved seaward to protect advancing plant growth.

Project Update February 2006

Restored dunes improve many natural beach features:

- Enhanced dune function, especially the sand trapping function after storms when cross-shore sand exchange is particularly active.
- Improved dune resilience and buffer function.
- Often an improvement to beach width and biodiversity.
- With careful planning and implementation, increased space for people and recreation occurs as an unprecedented benefit of dune enhancement.

THE GOOD(ish), THE BAD, THE UGLY - AND THE CONTRASTING DUNE MANAGEMENT OPTIONS

OREWA & PAPAMOA Beaches - this photo essay shows the contrasting effects of a severe onshore (easterly) storm on 9 July 2014

THE GOOD(ish):

This dune area has been 'modestly' restored at low cost (utilising **only one** of the existing **four indigenous** dune plant species) but this area displays some restored storm resilience, so is still capable of resisting some of the erosional effects of these storm-surges, **caused by the 3-4metre maximum wave height** conditions. Stolons of these spinifex plants are still present seaward of the barrier and will resume active growth when conditions improve, additionally boosted by the nutrients provided by decaying seaweed delivered naturally by these stormy conditions.

THE BAD:

In this case, sand has simply and repeatedly been dumped on this eroding dune (costing >$50,000 per annum) - with the **same result every time – active erosion**. This work is described as beach nourishment, known globally as an excessively expensive method of simply delaying the inevitable. This is undertaken without any consideration of the obvious problem – coastal ecosystem degradation. The **only** sustainable response here is transformation of the degraded dune by assiduous restoration of the original halophyte indigenous sand-trapping and dune-building plants.

THE UGLY – a prime example of token planting and management:

An initial and probably eager burst of 'fashionable' dune planting at this northern end was both poorly considered and maintained – resulting in the whole area becoming overrun by salt-susceptible weed species and so losing any briefly improved resilience to storm surges. Predictably, the whole planting has now eroded back to this weedy bank. That problem will continue now, further degrading this beach and weedy bank, exposing nearby houses to increasing risk. Posts should now be removed along with the redundant and insincere "Dune Protection" signs, as this area is not attracting any new or assiduous restoration attention. This modest or token coastal planting at Orewa contrasts markedly to the thorough and transformational restoration at Papamoa, shown on the following page, **in a photo taken during the same storm.**

AND THE CONTRASTING DUNE MANAGEMENT OPTION: Papamoa beach, and the impact of Assiduous Restoration:

Bay of Plenty Times photo: **# 2936**

Cruisy day at the beach - Friday Jul 11, 2014

A seal was spotted in the sand dunes at Papamoa Beach yesterday morning. It had the beach to itself on this stormy day.

This beach and dune have been transformed from earlier domination by the introduced and inferior marram grass, which proved to not tolerate salt water contact. This assiduously restoration using the simple and systematic techniques is described as **"A-Rest Systems"**. Importantly, at least two species of our indigenous and **salt-tolerant** foredune plant species have been successfully established here - to provide sustainable long-term sand accumulation results that also enhance biodiversity values. And so the seal pictured above (and other native fauna) can safely seek refuge here from storms - and people - on this increasingly wide beach and dune.

Even during these storm surge conditions (**with maximum wave height of 7.6 metres**; measured by the BOP Regional Council wave buoy) sand is still being accumulated by these very effective salt-tolerant plants, unaffected by any encroaching weeds or other unnatural and damaging influences. Weed invasion is easily controlled at the landward margin of such dunes, and by continuing simple vigilance of the seaward face.

ANALYSIS: Both of these North Island east coast beaches were exposed to the same onshore storm conditions and over the same time period. Orewa beach has suffered considerable erosional effects, while the wave climate at Orewa is markedly less energetic – 4m maximum wave height vs 7.6 m at Papamoa. The smaller swells here are attributable to the relatively shallow depth of the adjacent Hauraki Gulf and its many islands, naturally providing increased shelter from larger on-shore storm settings. **So why does Orewa beach exhibit increased erosion??** This problem is principally due to one singular factor – poor foredune condition. Human-induced impacts at Orewa have clearly **not** been resolved successfully, in contrast to the Papamoa dunes. Papamoa is clearly also exposed to more severe wave heights (7.6m in this July storm) rolling in through deeper and more exposed ocean conditions, which result in higher wave energies impacting on these dynamic beach systems, protected now by visibly increased resilience provided by **A-Rest Systems** restoration. Additionally, recent data gathered from assiduous restoration sites at Papamoa beach show that this transformation option will completely off-set the effects of +118cm of sea level rise predicted by the IPCC 5 AR through to at least year 2100, by the SimCLIM2013 Coastal Erosion computer model. Orewa beach will **not** enjoy this same advantage.

Greg Jenks: Coastal Restoration Specialist, CLIMsystems Associate, International Global Change Institute foundation member

HEADLINE NEWS: "Work starts on Ōrewa beach erosion – prevention seawall"
URL: https://www.localmatters.co.nz/news/work-starts-on-orewa-beach-erosion-prevention-seawall/#gf_17

"Work on the long-awaited Ōrewa seawall is set to start this month. The first stage will cover the stretch of beach between Kohu Street and Kinloch Reserve, followed by the section south to Marine View".

"The $12.5 million seawall contract covers a shared space and beach enhancements at Kinloch Reserve, and construction of the shared walkway between Kohu Street and Marine View. The project includes planting along the walkway and in Kinloch and Kohu Street Reserves, inground lighting, three ramps and five sets of stairs to improve accessibility to the beach. The work is designed to minimise impact on existing vegetation and to protect the pōhutukawa trees currently at threat from erosion".

COMMENT – G. Jenks

- The modest length of proposed new armouring for this universally and heavily degraded beach is just 600m, shown on the Google Maps image below - but with 'hard engineering', the beach still won't be truly protected.
- The (astonishingly huge) cost estimate of $12.5 million (still subject to inflation – see below) amounts to approximately $21,000 per lineal metre of that beach/dune ecosystem.
- Note, in 2015, this project was originally scheduled to cost "$4.5-$5 million for spending over two years on top of $347,000 for (the) consultants' draft design for protecting a 600m area between Kohu St and Marine View Parade, near the town centre" (NZ Herald – 2 November 2015).
- That same November 2015 news item contained at least one voice of reason - the "Save Orewa Beach Trust chairman Ian Inglis said residents believed that a "hard engineering" solution was not as cost-effective and as pleasing to the eye as the regular transfer of sand".

- But there was no mention of other options or real concerns about the limited duration of rock armouring (normally~20 to 40 years in NZ), which would then require full replacement of considerably larger rocks when this recognised short life span occurs (Jenks et al. 2007, cited by IPCC 4AR) – so merely a 'Band-Aid' idea.
- The immediate impact of such rock placements is still further rapid loss of beach sand, so the remaining high tide beach width will reduce subsequently (as explained below & shown in August 2022 photo of this beach).
- Those regrettable, entirely predictable and known outcomes will then severely reduce the recreation and amenity values of the now narrowing remains of Ōrewa beach – thus destroying the very reason most people moved there initially – i.e. a case of private property 'protection' at the loss of wider public amenity use.
- The lengthy history of analogous NZ and global rockwalls reveals that these artifices simply reflect wave action and in so doing always create backwash turbulence that further impacts those 'protected' beaches; tidal turmoil that only strips more sand off already weakened and unstable intertidal beach zones.
- The world's beaches are full of similar retrograde self-serving examples where armoured coastlines (with rocks, concrete, wooden walls and/groynes) have destroyed multitudinous beaches that whole communities once naturally enjoyed.
- These built artifices are always mere knee-jerk reactions often prompted by beach front property owners seeking a 'quick fix' in their now proven erroneous efforts to protect their often-expensive coastal homes.
- And we all can sympathise with that strong motive, but not with the "hard engineering" option sold to them – and recall the often proved lifespan of only "~20 to 40 years" (Jenks et al. 2007, cited by IPCC 4AR).
- NZ contained four such 'hard engineering' responses following the heavy erosion impacts prompted by 1968's cyclone Giselle (aka the Wahine Storm). These four affected beaches are Omaha, Waihi, Ohiwa and Raumati – all four had seawalls erected in the 1970's in vain attempts to stem those erosion processes.
- Only Raumati and Waihi beach seawalls now remain - but both were rebuilt at even higher costs due to that turbulence effect and it's inevitable lowering and consequential creation of 'wet sand' beaches.
- The walls at Omaha and Ohiwa also failed, but those communities took advantage of newer technologies which included restoration of native salt tolerant (halophyte) foredune plants – these plants then naturally collected sand (instead of losing it by reflective turbulence) and so these beach ecosystems are presently 170-200m wider (further seaward) than where their old seawalls were located, and homes secure.
- So, the residents of Ōrewa should be informed that further beach erosion will occur apace, and subsequent rock armouring will be required when this first effort eventually fails, and that will entail even greater volumes of potentially larger rocks to maintain any sort of property 'protection' – as these locals obviously desire.
- All other residents/ratepayers will then be forced by those selfish desires for private property protection (now proven erroneous) to suffer the consequences of amenity losses from this once popular public beach.
- The proven fallacious hard engineering response also has a multitude of environmental consequences, including losses of coastal flora and fauna. More information is available if required.
- And pivotally, the original human induced losses of indigenous foredune plants is now known as the real cause of these calamitous erosion problems, and reversing that issue is not only more effective for protecting beach front properties, but this beneficial option is also proven far more affordable and critically more enduring (Jenks et al. 2007, cited by IPCC 4AR; Jenks 2018; Sampath, Beattie and de Freitas 2021).
- The existing beneficial effects from Omaha and Ohiwa beaches assist in proving these differing approaches.
- This more recent proven 'Rewilding' methodology (of diligent restoration of indigenous halophyte foredune species) proves that beneficial reversal of erosion impacts and subsequent creation of wider and more naturally protective beaches AND dunes is the superior option and one that only costs "1-2% of building seawalls and is proven far more enduring" (Jenks et al. 2007, cited by IPCC 4AR).
- So, the real cost of diligent restoration here would be in the order of only ~$250/metre of beach, for a 'grand' total of $150,000 (incl. GST) for the same beach extent. And this restoration method has a lengthy lifespan as no project installed using these methods has yet failed in its existing 30-year history, even though all restored beaches (on west and east coasts, in both main NZ islands) have been exposed to many severe storms over that lengthy period - including that of the more damaging recent cyclone Gabrielle. All those high tide beaches now are over 30m wider than in their original eroded state, plus their associated dunes now consistently exceed 40m+ further seaward from their original and once-only planting zone.
- The recent severe storms prove that diligently restored dunes are more resilient, and they increase real protection for coastal ecosystems and beachfront properties, while costing only 1%-2% of any other option.

Source: Google Maps - retrieved 7 November 2024 – shows the 600m length of beach works at Ōrewa.

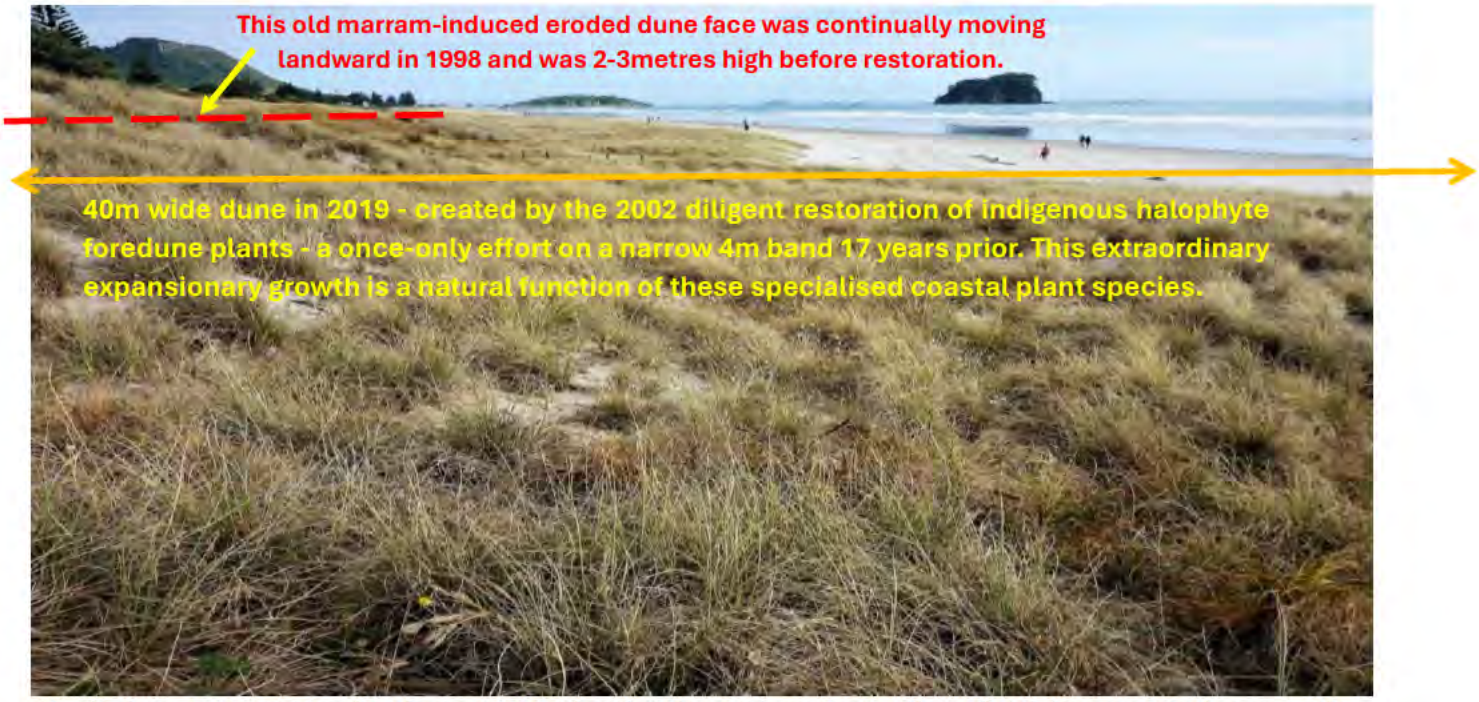

- International authors Sampath, Beattie and de Freitas (2021) support this assertion by importantly stating "These restoration efforts have allowed dunes to achieve the natural character of an active system. Thus, ecologist Greg Jenks suggests that this successful, affordable dune restoration work has extensive benefits for other nations experiencing degraded coastal zones".
- This 'new' methodology reveals that this nature-based solution offers far superior (and lower cost) outcomes than forlornly battling against these often-immense forces.

Ōrewa beach, adjacent to Ōrewa Reserve – August 2022 photo: predictable outcome of the first armoured section.

- This older seawall has induced 'wet' high tide beach conditions which is the direct result of placing rock armouring on the seaward side of old eroded dunes, thus reducing public access to only lower tide times.
- Ocean waves now interact with those massive boulders, and so the resulting unnatural interface turbulence simply and readily removes that liquified sand by reflective wave backwash action.
- This incredibly ubiquitous outcome is commonly expected but NOT commonly presented to ratepayers.
- But the contrasting photo below reveals a typical response for diligent restoration of eroding dunes.

- A band of sand only 3-5m wide on the foredune toe was diligently planted below - on the long eroding dune scarp, and in a once-only endeavour that has created wider protective dunes and 'dry' high tide beaches.
- Only two species of indigenous salt-tolerant foredune plants were utilised here – kowhangatara (*Spinifex sericeus)* and pīngao (*Ficinia spiralis*).
- The natural burgeoning growth habit of these naturally salt-tolerant (or halophyte) plants is to rapidly expand their natural growth in a seaward direction, collecting all loose sand as they progress.
- This natural growth habit builds wider but gently sloped dunes AND beaches that naturally dissipate wind and wave action, even during severe storms, including all previous cyclones.
- Minor foredune impacts may occur occasionally, but those effects soon self-repair when calmer weather returns in longer post-storm periods, aided by those natural sand collection powers of indigenous vegetation.
- Over the fullness of time, these restored dunes maintain an average annual seaward growth rate proved to exceed 2m seaward expansion per year (actually 2.35m since this once-only restoration in 2002).
- If the degraded Ōrewa beach had been similarly diligently restored in 2002, locals would be enjoying a wider and protective dune, an increasingly wide and dry high tide beach - and this costly "hard engineering" option would not have been suggested. That's the harsh reality facing many coastal communities currently.
- Emeritus Professor Karl Nordstrom (Rutgers University, New Jersey) also supports beach restoration: "There is greater potential for restoring these habitats in intensively developed locations than has been realized..."
- **Important note:** Ōrewa beach had a token replanting effort undertaken by Rodney District Council in the late 1990's, but this cursory undertaking was doomed to fail by a simple lack of suitable planning and completion, in contrast to the diligent planning and restoration shown below – further information available on request.

Tay St dune, Mt Maunganui, February 2019: showing the stark contrast of beneficial dune restoration vs. rocks.

- In 2024, 30 years of sustainable, nature-based beneficial success was celebrated with this affordable, enduring and readily transferrable truly diligent dune restoration experience – with all projects still intact.
- That expertise has been generated in many locations throughout Aotearoa/NZ, including West Coast sites (like Piha, Opunake, Waitohu and wider Kapiti Coast areas), plus in many East Coast sites (like Bay of Plenty, Castlepoint, Petone Beach) and in the South Island (at Tahunanui – Nelson).
- All these projects sites are still benefitting from diligently restored, enduring coastal ecosystems and so are still expanding seawards while also enjoying greater amenity and beachfront security aspects for their communities while enhancing natural biodiversity opportunities. If you ever wanted a win/win/win, this is it.
- But this new paradigm for coastal management regrettably receives little support from traditional coastal engineers, as this considerably less expensive option not only costs significantly less that their offerings (only 1-2% of those costs), but this outrageously more sustainable option has proven more enduring, even in recent times of existing sea level rise and increasing storm frequency and intensities.

PĀPĀMOA DOMAIN SURF CLUB – The ferocious impacts of ex-tropical Cyclone Drena: # 2936

The natural transformational and recuperative effects on natural dune function plus wave run-up resilience during a significant oceanic storm - by simple but astute restoration of indigenous herbaceous halophyte coastal plants.

Pāpāmoa Domain beach in the grasp of a savage cyclonic storm, January 1997: this photo shows the actual physical effects of ex-Cyclone Drena on indigenous beach plants, just 2 years after planting. This reveals the incredibly positive sand accumulation effects of indigenous herbaceous halophyte coastal plants - on this previously barren eroding dune between the surf club building and beach. Large volumes of sand (stored offshore) are now being returned by cross-shore exchange and accumulated by these young plants even during this violent onshore storm, significantly increasing the functional width of this beach and its shielding dune ecosystem. This new porous beach berm and foredune remarkably resisted the effects of storm surge run-up produced by significant cyclonic waves (maximum-height 11 metres) running up into this recently restored dune protection zone. This severe storm actually initiated the dune re-building process subsequent to restoration. See how the plants are already occupying the beach berm seaward of the old 'protective' fence and doing as nature selected – trapping large volumes of fresh sand where it matters, on porous functional foredunes.

- Intense 130km/h storm winds and associated massive storm wave action are now simply **BOOSTING** continuing and obvious upper beach proliferation of the restored indigenous C_4 herbaceous salt-tolerant (halophyte) plants, by adding nutrients and large accumulations of fresh aerated sand - both factors contributing significantly to dune volume AND natural porosity, plus assisting newly appreciated functional protection capabilities.
- This natural deposition of critically porous sediment supplied by truly natural cross-shore exchange and subsequent aeolian processes also increases the critical natural resilience of the upper-beach and foredunes during storm-surge induced wave run-up, by significantly reducing wave-swash saturation of sand on unstable beach berms. That natural functionality reduces pore-water pressure on diligently restored beaches and the consequent unnatural but frequently 'normalised' backwash erosion – a ubiquitous but poorly comprehended problem that existed prior to this diligent restoration procedure, largely induced by a plethora of human impacts (e.g., dune mismanagement including the planting of non-halophyte marram grass and sand mining).
- Only two low-density indigenous halophyte plantings occurred here (1995 & 1996) – this action encouraged natural plant colonisation to subsequently occur – the plants seaward of the old-style barrier fence (shown above) have self-established and expanded naturally (by seeding and rapid stolon growth), revealing significantly superior colonising and salt-tolerance capacities of these indigenous foredune halophyte plant species. This native plant restoration and colonisation/proliferation reveals the rapid renewal principle of natural and durable dune function.
- The newly beneficial dune function shown above is a complete contrast to the impacts of inferior marram that was habitually experienced here prior to successful astute but simple and low-cost coastal restoration activity.
- International reports of ex-Cyclone Drena's severe impacts for the many other non-restored NZ beach locations include: **"***Overall, damage totalled … US$6.7 million. Meanwhile, damage to NZ roads totalled to US$2 million, and over $1.5 million damage was caused to property. High waves from Cyclone Drena crashed against sea walls along the northern coast ...*" (Chopra 2005). Those damaging effects recorded elsewhere in NZ were transformed into beneficial effects on Pāpāmoa Domain beach, as detailed above.
- This beach ecosystem continues to accumulate extra sand with each new storm, and so this sea-change reveals the tipping point for **beach erosion** has been reversed to now favour **beach accretion** – simply by the action of two low-cost astute plantings of NZ's indigenous halophyte short-stature herbaceous foredune plant species.

[redacted]

EFFECTS OF PAPAMOA EAST SUBDIVISION, TAURANGA, NZ

The true impacts of uncontrolled 1958 development of coastal dune lands

Wairakei Stream used to exit on the beach, but was blocked by developers at Marjori Lane. The front dune was destroyed by being bulldozed back into the stream to create more building sections. Karewa Parade is being formed by machinery in the white sand area to the left of Marjori Lane. Water from the stream system can now only reach the sea by flowing through the sand under the houses.

(low tide photo)
The heavily modified "dune" front is very unstable. The now dominant Kikuyu grass is not able to perform the accretion function of native dune plants. Water from the Wairakei Stream system is visible on the beach in this photo. This water saturates the sand, making it very prone to erosion.

(high tide photo)
The first year plantings did not succeed. Subsequent plantings of vigorous hardened-off plants in 1998 and 1999 have produced these results. Photo was taken after the impact of 10m waves from Cyclone Ivy in February. The restored front dune is now functioning reliably. Remnant Kikuyu will be replaced by native mid and back dune species.

Anxious beach neighbours restored the indigenous C_4 halophyte (salt-tolerant) vegetation, and natural dune function, substantially reversing the extensive 1958 ecosystem impacts. Voluntary assiduous beach and dune restoration has rehabilitated sand accumulation processes and facilitated restoration of the normal and protective coastal buffer role for the dunes - and for housing established by the developers literally **too** close to disaster. The 2015 high-tide beach currently has more resilience to storm events and is >25 metres wider than in 1996, with active sediment accumulation still continuing. Steps shown in the 1996 photo are now largely buried.

The Short-term Folly of Seawall Construction: Reuters News, with graphic supplied by US Army Corps of Engineers #2936

The 2014 graphic shown on left summarises the futility of installing coastal 'armouring' when attempting to defeat coastal erosion problems (i.e. seawalls, revetments, bulkheads etc.). International consensus increasingly reveals these fixed coastal structures provide only limited or ephemeral succour while also being demonstrably extraneous due to their short lifespan (20-40 years on average). They are also vastly expense (up to US$12,000+/lineal metre of beach – that's US$12million+/km) while similarly having a record of enormously increased costs with each subsequently required rebuild (Jenks *et al*, IPCC 4AR 2007). Added to all these preceding adverse factors, coastal 'armouring' **DOES NOT** even remedy the true root cause of coastal erosion. So what actually does cause or prompt that problematic erosion?

The harsh reality behind the summary at left is that dune margins in USA (and in NZ & internationally) are largely barren of functional salt-tolerant foredune vegetation; a simple and normalised fact that causes the problems demonstrated in the first image adjacent where **'Sand is dragged by the waves and redeposited farther down the beach'.**

Affordable community-engaged dune restoration work pioneered in NZ significantly improves that situation by returning the original native plants to dunes. This action changes beach drainage and function to naturally mitigate sediment loss by ensuring sand on the beach face and foredunes has significantly increased porosity – this critical and largely unrecognised functional factor minimises the removal of sand off the beach (de Lange and Jenks 2007, Müller 2011). So this natural, practical advantage then ensures all restored beach systems have increased resilience to sand losses during storms, thus ensuring more sand remains on beaches to thus avoid **any** requirement for seawall construction. And this proven protective action costs less than 1% of coastal 'armouring' while also being more naturally enduring and effective.

In fact, NZ beaches diligently restored with low-stature indigenous salt-tolerant vegetation (plants provided and perfected by harsh evolutionary processes) now actually **accumulate** further sand on coastlines, even during large oceanic storm events - storms that formerly induced significant coastal erosion. Two local beaches where this has been closely researched and monitored reveal **dune width increases** over 20 years **averaging +1.6m / year of lateral increase** (and **dune volume growth of between 1.2 and 1.7m^3 / lineal metre of beach / year).** This useful and natural resumption of progradation has occurred in conjunction with regular cyclonic storms and existing sea level rise. These results simply reflect the recorded progradation rate over the previous 7,000 years (during this sea level rise maximum or stillstand), and the era before these pivotal coastal plants were widely removed by human activity through preceding centuries.

This is the new **21st Century Paradigm** for coastal management – one that truly works in harmony with and actually enhances natural coastal processes rather than forlornly battling against them with futilely expensive extraneous structures. And significantly, this new paradigm is recognised by the IPCC as the most affordable and successful littoral management system known for reversing human-induced coastal erosion processes (Jenks *et al*, IPCC 4AR 2007).

STATE HIGHWAY 2: Beach Restoration to Protect Waiotahe Bluff
- low-cost restoration of the natural storm buffer for truly sustainable protection of SH2:

State Highway 2 (SH 2) is a critically important transport link joining Western Bay of Plenty to Opotiki. That highway then provides vital connections to all the smaller coastal towns further east of this essential service town.

State Highway 2 at coastal Waiotahe was impacted by several compounding erosion events, including ex-Cyclone Fergus (late December 1996), ex-Cyclone Drina (shortly after in January 1997, in combination with a spring tide) and ex-Cyclone Gavin (March 1997). Ex-Cyclone Gavin produced heavy rain, gale force winds with wind gusts up to 130 km/h (NIWA 2015) tracking out east past Cape Runaway but sending big waves into the Eastern Bay of Plenty.

Subsequently, this area endured the 'big flood' of 1-2 July 1998 – this storm was assessed as a 1 in 40-year event at nearby Waioeka. This was caused by a "*very strong, moist northerly flow ahead of the front … and the wind flow was at the ideal angle of onshore flow into the Bay of Plenty region*" (NIWA 1998).

This La Niña weather pattern also culminated in a massive land slip at Waiotahe Beach, which essentially blocked this indispensable SH2 transport link. Coastal erosion of the highway added to those damaging impacts, events which forced relocation plans for two significant Te Whakatōhea pouwhenua to a more secure location further east.

The road was subsequently cleared of slip debris and the highway partially reinstated. Then, solving the contributory coastal erosion issue was the next pressing concern. Ubiquitous and problematic littoral erosion here (analogous for all NZ coastal margins) was exacerbated by the common utilisation of non-salt-tolerant (non-halophyte) imported plants in flawed efforts to stabilise increasingly erosion-prone littoral margins. This erroneous plant usage simply arose from the earlier and similarly disastrous colonial-era practice of regular grazing of the now proven-effective short-stature herbaceous (and regrettably palatable) salt-tolerant indigenous dune plants with farmed livestock.

As an initial coastal defence, engineers at Waiotahe placed a series of useful 'Reno Mattresses' placed on a 30° slope along the road margin to reduce future wave impacts on the new highway frontage.

FIGURE 1: Reno mattresses placed to stabilise the damaged SH2 road margin, and then covered with soil. The low-slope and gaps among the large rocks contained by wire baskets did encourage some useful dissipation of wave energy during subsequent storm surges. Note the complete absence of native (or alien) plants now on this scraped beach. Replanting the beach with functional indigenous salt-tolerant foredune plants was NOT included in the engineer's scope of works.

These hard engineering devices remain today, but they are now obscured by various species of grass (mainly kikuyu), which requires regularly mowing of that slope by contractors (shown in figure 3 below).

Additional, more enduring 'second tier' works were required: this involved rallying community support for the increasingly logical restoration of the original indigenous and naturally evolved salt-tolerant (halophyte) foredune plants, seaward of those mattresses. The principal, teachers and students from nearby Waiotahe Valley School (including a young Lisa Carrington – now Multi-Olympic Gold Medallist and 5 times K1 canoe World Champion) provided immensely valuable input for this indigenous foredune plant restoration. This work was completed swiftly and extremely inexpensively (only 1% of common seawall costs) with single 5metre wide plantings along this beachfront. The impressive and enduring beach plus highway protection results now serve as a testament to their fine efforts.

FIGURE 2: Location map showing the difficult coastal restoration site, between two significant river systems delivering occasionally large volumes of fresh water and consequent potential erosion effects to the restoration site.

(NOTE: grazing only ceased here in **1985**, when Opotiki District Council banned stock droving through the town).

The notable, positive and proven sustainable natural restoration results by Waiotahe Valley School staff and students plus other volunteer inputs are clearly obvious in figure 3 below:

FIGURE 3: SH2 Waiotahe beach – Nov 2018. The 40-metre-wide continually accreting dune & beach are moving seaward of the engineered defences. The Reno backstop wall is thus now fully protected by the effects of foredune plant restoration.

The Reno mattresses remain completely covered by sand and non-functional salt-sensitive kikuyu grass. These now merely act as a landward backstop 'defence' – whereas the flexible dune ethically and affordably revegetated by locals with low-stature indigenous foredune plants continually accumulates large volumes of sand to provide the most active and exceptionally functional buffer for this important highway connecting the entire Opotiki District to the wider Western Bay of Plenty region.

Simple restoration of the naturally selected low-stature indigenous salt-tolerant herbaceous perennial plant species is increasingly providing enduring and ecology-enhancing functional buffers to the impacts of severe ocean storms and even sea level rise through to at least year 2100 (Jenks and Kouwenhoven 2014, Jenks 2018). Following the 2001 restoration effort by the students shown below, a large number of significant storm events have been endured by this new accreting dune, including: The 2002 'Weather Bomb' (damaging onshore winds > 140km/hr); 2004 ex-Cyclone Ivy (nearshore wave heights > 10m - BOPRC wave buoy data); a July 2007 winter storm (with 9.8m max wave height); the July / Aug 2008 'Weather Bombs' (9.2m max wave height); Jan 2012 ex-Cyclone Fina; Jan 2013 ex-Cyclone Oswald; March 2014 ex-Cyclone Lusi (10.4m max wave height); July 2014 winter storm (7.6m max wave height), March 2015 ex-Cyclone Pam (9.2m max wave height); Jan 2016 ex-Cyclone Victor (5.8m max wave height) etc.

Hence these diligently restored dunes and their long-associated beaches have all been severely tested by multiple La Niña storms and their attendant damaging surges ever since this sustainable ecosystem refurbishment was completed. The most compelling reasons for the obvious and hence logical increased resilience of restored landscapes is the natural abilities of our highly specialised indigenous shoreline plants to improve dune morphology; **maximise sand porosity**; induce gentler and wider beach/dune slopes: *"water drains more easily into the beach sand adjacent to dunes dominated by native plants, and this attribute enhances upper beach face accretion"* (Müller 2011). These now gentler, wider and free-draining slopes naturally re-create beaches and dunes that more effectively and naturally dissipate the energy of the largest storm waves, in complete contrast to all introduced coastal plants like marram, kikuyu etc. Those large storm waves now simply relocate beach sand to offshore storm bars from where it is returned to the beach berm by subsequent calm weather wave conditions – the 'Cut and Fill Cycle' back in action.

As calm conditions permit, that returned beach sand dries and is blown landward by any inshore coastal winds exceeding 14km/hr (Müller 2011). Short-stature and sparse growing salt-tolerant native foredune plants then slow wind sufficiently to ensure any suspended sand drops out of the airflow, naturally depositing it in the lee of and around these plants. These foredune plants bind sand particles together on the most seaward 5-10m of dunes, so in tandem with improved sediment porosity plus gentle slopes they minimise sand loss during subsequent storm events (including wave run-up and backwash erosion) - in complete contrast to the ineffective marram, kikuyu, lupins etc.

These increasingly natural and resilient dunes also ensure natural restoration of important amenity and ecological values, thereby dramatically enhancing coastal biodiversity – due to more stable and secure ecosystem services.

Natural shoreline function is most often restored in 3-5 years after just one planting, thus reversing erosion initiated by >100 years of degradation. These benefits are world-leading results and are clearly presented in the following photos.

The photos below were taken by Greg Jenks and latterly provided by Bay of Plenty Regional Council:

Lisa (left) and schoolmates dune planting at Waiotahe, 2001

Waiotahe Beach 2014

In the left photo, the bright green non-salt tolerant kikuyu grass can be observed directly landward of the youthful beach planters. That photo also reveals the real reason for erosion of this beach – the ubiquitous domination of non-salt tolerant and hence ineffective grasses on the steep dune face, and its grazing-induced absence on the beach berm. The tiny and entirely logical indigenous halophyte plants now installed in front of the students are difficult to distinguish in that left photo, but they naturally expanded in stature and spread to subsequently provide the 40-metre-wide dune and enduring storm buffer seen in the right-side photo above.

That work has produced an average sand accretion rate of 2metres/yr. moving the shoreline seawards by that margin.

The results shown at Waiotahe Beach above are now not unique – they occur wherever the naturally selected low-stature indigenous salt-tolerant (halophyte) herbaceous foredune plant species are returned to their rightful location – the beaches / dunelands of Aotearoa/NZ. Shown below are some similar results from nearby Bryans Beach, at Ohiwa.

Once again, carefully observe the erosion effects where formerly protective dunelands become dominated by tragically ineffective and inappropriate non-salt tolerant grass species, like kikuyu shown below left. The 1995 photo reveals a beach suffering from 'unstoppable' erosion processes – with the only access road to the Bryans Beach community just landward of this storm scarp. And see the kikuyu on higher reaches of the dune face where sea water rarely reaches. **Its total absence on the lower dune + beach berm = continuous beach erosion.**

1995 Bryans Beach, Ōpōtiki - Greg Jenks photo

"On behalf of the Regional Council, Tauranga City, Western Bay, Whakatane and Ōpōtiki District Councils, and the Department of Conservation, I would like to sincerely thank you for your part in that effort".

2014 Bryans Beach, Ōpōtiki. Nearby monitoring site at Ōhiwa shows 175m of dune accretion over 20 years - Greg Jenks photo

Similar indigenous plant restoration shown at Bryans Beach above has similarly reversed the effects of over 200 years of human impacts to provide the fastest growing (or prograding) beach in the Bay of Plenty – 175m of dune accretion over 20 years, or 8.75m of sand accretion per year. (source – Bay of Plenty Regional Council beach profile data).

With grateful thanks to Opotiki District Council (especially CEO Vaughan Payne) for approving these beach restoration works within his local community; and the youthful pupils of Waiotahe Valley School, their teachers and principal, Pat Carrington; plus, trainees from the Whakatōhea Education & Training Unit. These compelling and expanding accretion results would not have been possible without your valued agreement and resolute inputs – kia kaha!

 # 2936

1. DUNE RESTORATION, KAPITI COAST, WEST COAST, NORTH ISLAND.

- naturally & economically progressing from human-induced beach *retreat* to sustainable beach *advance*

Waitohu beach, Kapiti Coast: Aotearoa/New Zealand (A/NZ) has a relatively recent history of coastal impacts induced by human activities, but those effects have seriously impaired natural dune integrity and resilience. An early A/NZ botanist reported his observations of past natural dune buffer function and the likely consequences of escalating the potent degradation of the formerly stable NZ dunes unleashed by colonial settlers: "*coastal dunes ... form a natural defence to the land against the encroachment of the sea, and, their movement inland is a national concern ... while yearly further destruction takes place,* ***the evil*** *... becoming more difficult to suppress*" (Dr L. Cockayne 1911). Remarkably this was some 4 centuries **after** King Christian II first became alarmed by comparable issues of analogous dune degradation in his native Denmark. He consequently drafted the world's earliest Sand Drift Act, in **1539**. Here in A/NZ Cockayne hastily and erroneously established the use of foreign coastal plants in vain attempts to control this freshly induced "*sand menace*", plants like European marram grass and Californian lupins. Regrettably, all these new plants are salt-sensitive; the unintended consequences of those unsuitable plants are demonstrated below. These adverse dune process limitation plantings resulted in beach sand only being 'modestly' stabilised, with that functionally valuable sand often now loosely contained in abnormally steep and tall sand-hills still prone to ocean erosion. Sadly, this is the most familiar legacy of that induced coastal state observed on many littoral margins today – locally and globally. However, the photos below also reveal the many new and remarkable benefits of economical restoration utilising our superior indigenous salt-tolerant (halophyte) foredune plant species. The first example is a dune project by the Waitohu Beach Care group, led by Drs. Richard Herdegen and Jo Rosier, senior environmental planning lecturers from Massey University. Dr. Rosier also reviewed the NZ Coastal Policy Statement, in 2004.

The new community-led planting (shown above) preferentially utilised only **salt-tolerant** indigenous pioneer dune species (like kowhangatara and pingao). These plants have re-established essential truly natural form and function to this and other NZ beaches. These dunes now have a more natural height of only about 5-6m, gently rising dune slopes, increased sand porosity (Muller 2011), and have gained an important extra width of *c.*40m. Unconstrained growth of these halophyte plants has thus increased the width and protective function of this now naturally effective storm buffer; in total contrast to the poor performing salt-sensitive lupins and marram that previously dominated here. New information reveals that increased percolation of wave swash (storm surge) into this now porous sand

means that dunes dominated by native plants absorb high-energy waves in a superior manner evolved by natural forces. The average rate of sand collection/accumulation here now is about **4 metres/year** of continuing lateral dune extension **seaward**, due to native dune plant restoration and their characteristic, superior sand colonising ability and induced porosity. This compares very favorably to previous records of coastal retreat. This action has reversed those earlier induced erosion trends and ensures this beach, and others similarly and sustainably restored, will continue to provide increasing security from storm impacts through enduring sand accumulations (**Natural dunes never sleep!**)

This should only be the start of further restoration efforts on NZ coastal margins; at least 35 species of indigenous plants are suitable for increasing the natural floral biodiversity in coastal zones – from coastal shrubs grading through to back-dune climax forest species, and their intimately associated but now rare faunal populations. These forest types are extremely suitable for carbon-sink zones, as this dry coastal land is often drought-prone and relatively unproductive in a traditional farm use sense. Forests of this nature are currently exceptionally rare - the remnant areas cover less than 1% of the original total area of indigenous NZ dune forest (NZ Landcare Research).

The photo below reveals another nearby dune restored with native kowhangatara & pingao, just south of Waitohu Beach. This new dune has similarly accreted significant quantities of fresh beach sand, resulting in the dune toe currently **30 metres seaward** of old marram scarp seen in the background. This dune is also still ***increasing*** in width.

ABOVE: Restored kowhangatara and pingao new dunes in 2008, now at least 30m seaward of old marram scarp at Waitohu beach. As with the previous photo, this area was planted with indigenous beach species *c.*1999.

ABOVE: New but now known as 'normal' coastal landform and improved storm resilience when again dominated by indigenous spinifex: gentle new-dune slopes and associated wide high-tide beach at Peka Peka beach, Kapiti Coast.

2. OPUNAKE BEACH RESTORATION, TARANAKI, WEST COAST, NORTH ISLAND # 2936

The eroding beach at Opunake, with early and failed erosion 'protection & management' measures still in place. Sand is simply being blown off the beach and lost to wide areas further inland, outside the beach compartment.

This is the same beach area as in the above 2010 photo: now just 2 years after restoration with NZ indigenous halophyte dune plants by local community members. The restoration plan was prepared and supervised by Greg Jenks. Precious and porous sand is increasingly being trapped on the upper beach face and foredune areas, now kept entirely ***within*** this beach compartment. This ***renewed*** reality reveals increasing beach and dune width, storm resilience and function of this natural storm buffer. Restored dunes now economically and successfully protect the previously impacted surf club, nearby road, car park & other infrastructural assets at this hostile Taranaki location.

3. TAHUNANUI BEACH RESTORATION, NELSON, SOUTH ISLAND.

 # 2936

TripAdvisor world's "best beaches" 2023 listed Tahunanui for inclusion – and so this restored beach has significantly scored a mention for the second year in a row. The ensuing extract comes from a report prepared by the writer for Nelson City Council in regard to this most affordable and sustainable restoration project:

"The field visit to these dune systems in September 2001 left an abiding impression of the paucity of functional dune plants throughout this region. The on-going erosion of many of these dune systems would seem to be directly related to this almost-total absence of indigenous salt-tolerant sand trapping plants. In the Bay of Plenty, diligent restoration the four functional indigenous foredune species of plants (kowhangatara/spinifex, pingao, waiuu atua/beach spurge, and hinarepe/golden sand tussock) has graphically demonstrated superior abilities to collect and stabilise mobile sand far more effectively than introduced & inferior plants like marram, ice plant and lupin.

Dune restoration programmes focus on harnessing community enthusiasm to re-plant these four indigenous species to effectively remedy and reverse existing serious erosion problems, with considerable success.

It is therefore suggested that similar use of all four of these native sand-trapping plants occurs in the Nelson/Golden Bay areas, by harnessing the obvious existing enthusiasm of local communities."

NOTE: the car park and macrocarpa trees behind the old marram-dominated foredunes (shown below) were all in serious and imminent danger of falling into the sea before restoration commenced in 2002 - this sustainable and most ethical option was based exclusively upon this author's recommendations.

Tahunanui Beach 2001 – the eroded, narrow beach state prior to restoration commencement (D. Sissons NCC photo)

Tahunanui beach 2023 – this foredune has now advanced seaward by >30m, and the backslope of this naturally protective area is now planted with habitat-appropriate indigenous mid-dune plant species. Seaward expansion of this burgeoning dune buffer area has continued even when exposed to regular La Nina-forced oceanic storms.

The renewed and still expanding beach and dune state shown above are once again naturally dominated by indigenous halophyte herbaceous perennial species, plants that continue to proliferate on these formerly and seriously eroding beaches by simply collecting and stabilising all sand provided by natural cross-shore exchange processes seaward of the old marram erosion scarps. A survey in 2008 revealed these dunes had increased their protective buffer width by >15m. And then subsequent observations in 2023 shows these restored dunes have reliably expanded >30m since diligent planting in 2002 – for an average rate of seaward dune advance exceeding 1.4m/year. These developments have now permitted restoration of indigenous (but seawater sensitive) mid-dune plants, to provide increased foraging opportunities for indigenous fauna species in this once normal habitat zone.

The GOVERNING factor that has changed here (and in **all** the preceding examples) is merely the simple affordable and diligent restoration of indigenous plants along with the unconstrained growth of original indigenous salt-tolerant (halophyte) foredune plant species. The subsequent sizable dune and beach expansions plus truly sustainable sand collection and inherent dune stability benefits provide a wholly natural ecosystem response consequent to this simple and inexpensive procedure. This new science endeavour also reveals that such ecosystem restoration typically costs less than 2% of the common alternatives (like seawalls, beach nourishment) and is the most sustainable, enduring, and low-cost beach erosion solution known globally (IPCC 4th Assessment Report, Jenks *et al* 2007).

These ecosystem restoration advantages are found on both coasts of New Zealand, and on both main islands – as demonstrated above. These results depend solely on the quality of the restoration effort, rather than the happenchance of location. Such recurring restoration successes shows that this work should be duplicated globally - anywhere that locally indigenous halophyte dune vegetation can be assiduously and successfully restored on erosion-affected beaches, for the combined benefit of renewed beach ecology and dependant humans.

4. CASTLEPOINT BEACH RESTORATION, WAIRARAPA COAST, EAST COAST, NORH ISLAND.

Regrettably, 'before' photos are not available for the restoration project on this beach but work in partnership with the Department of Conservation (DOC) and local residents has again revealed the many beneficial advantages of restoring indigenous salt-tolerant dune plants on eroding NZ beaches. The clear trend for improvements to dune function **AND** sand volume should be emulated by further restoration work throughout this heavily degraded area.

The introduced European marram grass - universally used to replace indigenous dune species impacted by unwitting but harmful colonial era practices - are obviously poorly adept at trapping and binding sand volumes where the sediment is required – on upper beach berms and foredunes. That limiting issue is <u>completely</u> resolved by re-introducing native salt-tolerant beach species, like spinifex and pingao, as shown below. Just compare the marram dominated and abnormally tall dune (left photo) with its large area of barren beach, with the burgeoning dune tongue dominated by native salt-tolerant functional dune plants in the photo below right.

Source: Garry Foster, DOC (both photos, taken on same day)

The photo above demonstrates the simple failings of European marram – this introduced mid-dune plant does not tolerate saltwater contact and so is typically confined to areas above the reach of normal storm surges. That scenario means that if saltwater reaches these plants, then all the contacted growth will be destroyed – forcing the plants plus their beaches & dunes ever landward & taller. That is the erosion process observed commonly where plants are utilised that <u>do not</u> tolerate salt water (i.e. on most NZ coastal margins).

This photo reveals the significant advantages of restoring native salt-tolerant low-stature dune plants. These grow <u>unimpeded</u> onto the beach berm due solely to their salt-tolerance feature. This means they collect more sand than any other plant available in NZ, and that sand is also usefully more porous. Those advantages are naturally provided by evolutionary forces that honed and tested these superior plants over many millennia to now provide the most helpful, reliable, least-expensive, and best sand-accumulating coastal buffer option available.

The obvious improvements provided by the above nationwide coastal exemplars are unequivocal - affordable, unconstrained and enduring restoration of indigenous halophyte coastal plant species by local communities and their consequential effect on natural dune function is now proven by nearly 30 years of operational-scale research. This small restoration effort provides increasingly secure beaches, maximises amenity space while also enhancing coastal biodiversity values. Why not employ these simple, low-cost benefits for your local beach?

THE REAL IMPACTS OF TOKEN OR CURSORY DUNE PLANTING
– Taylor's Mistake, Christchurch, August 2017

The 'dune' plants shown above are all adventive weeds that can NOT tolerate saltwater inundation – see the dishevelled state of the dying South African iceplant on the eroded dune toe. All these plants were either planted or they arrived by chance to fill the void created by a much earlier dune destruction era. The long period in our coastal history has witnessed many incredible impacts on the original low-stature indigenous dune flora and fauna.

14th century Polynesian settlers created the first impacts (mainly fire for forest clearance), while newer colonial settlers introduced the first herbivorous mammals (pigs, sheep, cattle, goats, rabbits, hares etc.) in the relatively late 19th & 20th centuries, escalating those existing minor impacts. By 1909, the colonial government requested botanist (Dr. Leonard Cockayne) to survey the areas of destroyed dunelands throughout NZ, in attempts to gauge the scale of such damage and to recommend remediation methods. In 1911 Cockayne presented his "*Report on the Dune-Areas of New Zealand, Their geology, botany, and reclamation*" to parliament. He had found that 40,000ha of dunes were destroyed by 1880, that rising to about 120,000 hectares (or >93%) of NZ dune lands by 1911. All these dunes were comprehensively damaged by human activity, as documented by Cockayne. Many coastal farms, settlements, roads, railway lines etc. were being buried by sand now free to wildly blow inland, so an effective solution was urgent.

In haste, Cockayne recommended using foreign plants like European marram grass, Californian lupins, South African iceplant and various alien pines to stabilise the readily shifting coastal sands. But we now know that all those plants have one critical failing – none can tolerate saltwater contact, so these alien weeds were all doomed to fail where planted and exposed to normal storm surge run-ups.

Only NZ's native dune plants are salt-tolerant (halophiles), but they were now long gone. So the plants shown in the photo are being used. Although these plants are not suitable, some organisations still use them inappropriately – and then erroneously label their shabby work as "Sand Dune Restoration Areas". Such cursory attempts should preferably be terminated as they infer that **all dune restoration** will produce the same wretched failures. **But diligent dune restoration succeeds admirably, rebuilding dunes and beaches for people, flora, fauna and for good.**

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

Too many cats are a big threat to birds. Sterilization and orderly breeding are good for the environment and birds.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

Orderly management also has the benefit of increasing the owner's responsibility

1C. All domestic/pet cats must be contained to their owner's property

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

Avoid disturbing your neighbors by visiting them or eating their cat food

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location

Aotea/Great Barrier Island Unsure

Kawau Island

Rakino Island

Waiheke Island

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

If you can't afford it, don't keep a cat.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Keeping cats is a personal preference. The owner should supervise them properly, be responsible to society, the environment and birds.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2940

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Tell us why

Control should be consistent across the mentioned areas

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This is the first step in accountability

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats will otherwise range. Males average 6.3 KM and Females average 3.8km.

- New Zealand Journal of Ecology (1986) 9:71 - 81

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Keeping up the accountability

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

The environment is far more important to protect. I think if people can't afford to desex cats they should not have them as pets. Pets bring responsibility

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Anchors are a good way to spread Caulerpa. People's vigilance in cleaning anchors will help.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

We don't have a choice. We must do this.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

As you say in the preamble once introduced these things are very hard to control. It is better to keep them out.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

The apparent problem with motorised boats is the difficulty with drying them out. I think this could also be an issue with kayaks

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2943

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Feral pigs in Aotea

These should be identified as noxious pests!

Pigs cause a lot of damage of Aotea and should be eliminated as soon as possible

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Other

Tell us why

this should depend on various situations if cats stay at home only, there's no need to desex them.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I support this only if this is done for free

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other
Within 1km of known threatened species habitat (see map 1)	Other
All of Auckland	Other

Tell us why

there is need to define"房产物业"in this situation. without a clear definition, it's hard for people to choose among the options.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

taxpayers' money should be used in more meaningful ways

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

People who abandon their cats should be heavily fined.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

More traps should be put in Puhor and Makarau areas where there are increasing number of possum.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

there should be more specific ways and methods to help people to do this, rather than asking people to support it or not.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2951

Tell us why

So they can be found and returned to their owners

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

So they can be safe and no harm

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

The owners would have to be truly responsible and use a leash to safe guard wildlife

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

Just avoid having feral cats on the island

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Separate is best for this

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Just as present no feral creatures on the island sanctuaries

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Any species indigenous and introduced has rights but boundaries too

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Keep them safe and protected

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

I don't support desexing animals

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

More research and cooperation needed

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Responsibility is core

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2974

Tell us why

Cats kill rodents, such as rats. If cats don't, the invasive rodent population will significantly grow, leading to detrimental effects on native bird populations.

Studies have shown that cats who are both regularly played with (cat toys) and well-fed do not catch a significant number of birds, as their hunting instinct / stimulation requirements are met by regular cat toys, and food stops being a motivation.

This is difficult to achieve, as well as having significant poor effects on the mental and physical health of cats - it is unnatural for them to be indoors, and keeping them in a fence etc is unrealistic.

An alternative solution is having cats wear collars with bells, so birds can hear them.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Tell us why

Microchipping and registering a family feline pet would ensure that feral cats without this precaution could be more easily identified and destroyed.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats contained on the owner's property are less likely to roam into areas where wildlife is more vulnerable to predation.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support

Waiheke Island Support

Tell us why

Pets taken on holiday are likely to wander in unfamiliar surroundings, get lost and then mate with feral cats adding to the problem of overpopulation and predation on native wildlife.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

To encourage all households to conform to desexing as it could seem like an unnecessary expense to those on a limited budget.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Definitely, at the very least, keeping cats inside or at least on the owner's property would safeguard the cat from road accidents and cat fights, and hopefully reduce the amount of wildlife predated by the cat.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Bringing the responsibility down to a resident level - Eastern Songbird has been instrumental in educating and distributing free rat traps to people's backyards. Continue this program region wide. Also maybe have a hotline for possum, stoat and weasel trapping if a resident has become aware of their presence. Also encourage mouse and hedgehog trapping.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

With nasty invasive seaweeds such as caulerpa spreading, this action should be mandatory.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

We need healthy marine ecosystems as fish species can spread and influence those less protected areas. Invasive marine species compete for food with our native species and stir up the sediment. This makes it harder for a species like bittern and eels to feed. All ecosystems are interconnected - marine life feeds sea bird life which in turn fertilizes the land with guano.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Ideally control pests at all of the region's lakes but practically as many as possible for all of the reasons given above.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

As stated above, this is a high ecological value lake and banning motorized boats would reduce the risk of an invasion of freshwater gold clams.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, definitely. it is important to control the destruction of large trees, exotic and native, to ensure that there are adequate roosting and nesting places for wildlife and retain root systems that will help stabilize ground during these storm events.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

I would like to see more protection for trees across the region, both exotic and native. Extensive housing developments have seen the destruction of species that could otherwise have been saved if they were made a higher priority, for example, housing developments designed to include any established trees and any areas of established leafy trees protected to ensure shade and shelter for people and wildlife.

Let's protect our environment: early consultation #2987

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Do not support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #2998

You know where they are

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

There are too many cats

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No sorry

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

More rubbish bins, rubbish attracts rats

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

You have to have a rule or they won't do it

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

These ecosystems are important

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
We need this level of support intervention

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

No

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3052

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

We need to control the cat population. There's a lady near where I live who always feeds stray cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It's about monitoring and knowing the numbers of cats out there

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

There'd be fewer on the streets

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

The cats live on the island

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Needed

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No sorry

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Keep the cat popuwdown by using some of these suggestions

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

I'm an avid boatie and fisherman, so I'd to see things preserved for prosperity

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Again, cos I'm a boatie

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
Central irradication

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Monitor the numbers luring if we can

Only if there gonna live there

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

People are broke and it's important

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Supervise and train your cat

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I feel like its a super cool and good idea but you can never be full proof but I still like the idea of getting rid of pests

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

One less thing to worry about

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Unsure

Tell us why

It depends if the animal is apart of the culture

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
Less pests

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

You can travel other places

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yah but not the main focus and you shouldn't put taxes on things that could harm the environment

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Nope :)

Let's protect our environment: early consultation #3391

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Submitter details:

Organisation (if applicable):

Local Board: Not Specified

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I think on islands all cats should be desexed because the population of cars can be controlled and won't threaten wild life as much rather as in the city I feel there is not as many birds left to protect but also I think it would be to hard to control the population of desexed cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

If all or most cats are microchipped it will be much easier to maintain cats health and if lost they can be tracked back to their owners much easier and faster which would (assumingly) cost less money for the government.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do Not Support

Tell us why

Cats naturally roam around and unless they are an indoor cat would be hard to constantly monitor where your cat is. Most cats don't roam far from home as it is so I don't think it would be too much of an issue but again when they are near a known threatend wildlife site, it should be something owners of cats take into consideration and where their cats go, how far etc.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support

Kawau Island	Do Not Support
Rakino Island	Do Not Support
Waiheke Island	Unsure

Tell us why

On bigger islands shouldn't be too much of an issue to wildlife I think it's more of the smaller islands as the wildlife would be higher in numbers and the cats if let out of the owners site would most likely go and attack the wildlife or could get lost etc. however on the bigger areas like Great barrier island there is more people around and if the cat gets lost there is more people around to find the cat, but there is still a big risk the cat can kill wildlife.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

If the councils decide they want more cats to be desexed they should provide financial aid to family's who needs it specificly to get their cat desexed because the reality is alot of people cannot afford it and/or don't make it a first priority if they have kids they're trying to feed and raise and can't spend the money to get their cat desexed.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I think getting farmers onboard with the plan will be good as they can manage the possums and other predators in the open lands up north and down south. Starting with clearing the predators in the islands and then moving to the mainlands could combat the issue faster, as the mainland will be alot harder ro clear from all predators compared to the islands.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This would prevent more predators from moving around the country as that's how they got here in the first place.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

If they can get the invasive species to a manageable amount would be better rather than getting rid of the species completely as it could cause more harm than good to the marine eco-system.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Because the lakes are important in keeping many ecosystems alive and alot of people tend to swim in them so keeping them clean and free of pests will be good for humans health and other organisms living in the lakes.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I don't know much about the topic.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

No

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Unsure

Tell us why

I don't know what desexing means and I don't know which of those areas have a lot of wildlife that need to be protected so I am unsure about it

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I know what microchipped is and it makes sense to track the cat. I don’t know the cons to microchipping tho so yea

1C. All domestic/pet cats must be contained to their owner’s property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Unsure

Tell us why

well the cat needs freedom and some owners may want their cat to be free but we also need to protect our wildlife so I don’t know

1D. Only island residents’ domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

I don’t know what it means what the question is asking

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

I think support because if the owners want to help wildlife but they can’t because of financial struggles then sure they should get help. I also think our wildlife is super important to take care of.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I don’t

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

no

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

It’s important that it isn’t invasive. It also might not take much to check the anchor for those things.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Unsure

Tell us why

i don’t know

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region’s lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

It’s a good thing to take care of pests right?

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

well there is pros and cons the pros are the wildlife are protected from the invasive species but the cons are the people who prob need to use their motorised boat

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

no

Let's protect our environment: early consultation #3393

Tell us why

K

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

K

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

K

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

K

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

K

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

K

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

11

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

K

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

K

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

K

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

Cats don't even belong here, the birds do

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do Not Support

Tell us why

Birds are important and as long as the microchip doesn't affect the cat in any other way

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do Not Support

Tell us why

Islands have birds Auckland has less and more people with cats so yeah

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do Not Support
Kawau Island	Do Not Support
Rakino Island	Do Not Support
Waiheke Island	Unsure

Tell us why

Idk many islands but the important small islands can't have cats

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

So they don't breed and aren't as hostile or whatever the cats feel

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Value wildlife more than cats bru

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

It's important

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Marine life is important, I watched a documentary about it on Netflix

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

These creatures are important

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Invasive species spread like bacteria

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Well you need to do something

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Value the environment

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Prioritize the species because you'll never see them again

Let's protect our environment: early consultation #3396

Tell us why

Easier to manage with fewer people but might not be achieveable in more populated areas.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Unsure

Tell us why

Waiheke is still large compared to other islands so perhaps groups with greater Akl?

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Eventually this expenditure would lead to less money spent on protecting native wildlife and overall payoff.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Focus on islands as more achievable, supporting community groups with projects locally eg. replanting, awareness campaigns.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Stop spread of marine pests, also probably just good for general upkeep of boat. More access to cleaning facilities would support this.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
As long as it isn't invasive to locals

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

Perhaps restrictions but not full ban.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, they go hand in hand. Replanting for example will help both climate resilience and regeneration of native flora.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Education and awareness is always good, making sure people know about local initiatives so they can take part.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Where there are lots of native wildlife, cats should be desexed, but there is no reason for this to happen in urban areas - only problem is enforecement.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think microchipping cats would be a great first step to creating a sense of management over cats - it would allow us to keep track of them better.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Maybe if the property is very large. I think it would be cruel to stop cats from being allowed to roam - but maybe during night time would be good. Also there is a problem with trying to enforce this.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support

Tell us why

I think this is a good step - you don't need your cat while on holiday on an island. Waiheke is a little too populated for this.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Other

Tell us why

Provide depending on income.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I like the idea of cat registration - maybe the keep cats inside at night but some people might not follow this rule - maybe the application is required before owning a cat to make sure the owner understands their responsibilities

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I think that it will be a challenge to make the mainland predator free so we'll need to take it in small but enforced steps. Expanding pest traps to a radius outside of protected areas could stop the flow of more predators into them.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Other

Tell us why

It can be a bit of a hassle to clean everything that's a pest off your boating gear, so maybe it could be for if you have/will be travelling over Xkm then you must clean gear so you don't have to do it for only travelling in the same area.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

We should try and control invasive species because otherwise the population of invasive species will increase - manage it and reduce it while possible

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

If we rake other lakes into account we can try and make a difference - otherwise the invasive species could accellerate growth, so at least keep the other lakes from getting any worse and then later work on restoration

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

They should be required to have a license to use the boat which ensures they will clean their boat which ensures they will clean their boat efficiently because some people may be careless about looking after the lake

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

I think it would be good to make sure we are aware of what the effects of climate change can have on our environment and take action

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3421

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Other

Tell us why

I feel that pet owners must be encouraged to desex their cats all over Auckland, but definately those within at least 1km of known threatened species habitat. Although probably more than a 1km. This is because cats wander quite far.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

I think this would help with cat management and if they get lost it makes it easier to return them. However, something would have to be done about the price because some people may not want to pay to have their cat microchipped.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Other

Tell us why

It would heavily depend on the cat. I feel some cats might become depressed without the ability to wander as well as any costs to keep the cat contained within their property. Perhaps cats could be kept indoors during the night.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure

Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

I think this would be good but I think some of the logistics would have to be sorted out first like if their were to be exceptions and such.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Some people need the support to support; especially if this becomes mandated.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No comment.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Perhaps making isolated areas with high biodiversity should be prioritised.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

These can harm our marine spaces - so anything to protect it would be ideal. But perhaps cleaning equipment should be provided.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

They need, and should get the protection.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

It would be good to protect those environments. However, it may be costly and prevent those that want to enjoy the lake from doing that.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I feel that their should be restrictions but it would probably be difficult and costly to maintain. It may also anger that community.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, climate change is a big issue that causes many bad issues in turn, anything to prevent harm should be done.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

No comment.

Let's protect our environment: early consultation #3423

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Increase welfare of cats

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

- Can keep track of amount of cats in country.

- Helpful for when they get lost/for details.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

- This depends on how it would affect the welfare of cats.

- In areas that are threatened could prevent native animals/plants being harmed. Easier to keep track.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other

Waiheke Island Other

Tell us why

- Could depend whether or not it is mandatory for cats to be microchipped

- It could work to allow them to go onto the islands if there are rules in place (microchipping, keeping close at all times)

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Improve welfare of cats and may help with population of stray cats.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Collars with bells to alert animals.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

- Prioritising sensitive areas

- Supporting community groups with funding for traps and skills to manage

- Could have workshops for skills/info/awareness

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Other

Tell us why

Not sure how we would go about it but finding/locating sensitive areas/affected areas can help with keeping track

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

Introducing rules when it comes to taking their boats out (cleaning gear/boots/can't go if been in certain areas for ___ days).

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Improving resilience for natural disasters/floods. Would introducing more plants help with landslides? Think about ways of introducing greenery to urban areas keeping amount of space available in mind.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3424

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think it would be better to desex domestic cats because there are already so many stray cats and bad owners if there are too many cats

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Unsure

Tell us why

It seems like an unnecessary use of resources and people can just get collars or not lose their cats.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other
Within 1km of known threatened species habitat (see map 1)	Other
All of Auckland	

Tell us why

It depends on the size of the owner's property - if they live in an apartment then yes the cat should be contained. Everyone's environment at home is different.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

That would encourage more households to desex.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Supporting groups and initiatives in multiple communities to encourage more participation. Make sure everyone wants and is going for the same goal.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This solution makes the most sense since everyone can do that - if they can't then they probably shouldn't be in the field.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

I support because they are controlling invasive species in order to protect the indigenous species.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

They should start by educating others and sharing more resources. It would be good if they promoted different resources for different age groups.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

It not only helps the environment but also keeps people safe. If people are seriously mad about motorboating being banned the council should say "why can't you use this negative energy towards people DAMAGING the environment? gosh"

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes. We should do everything we can to improve our environment especially since it is getting worse everyday.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

This might just be from my school, but I think it would help if there were people that could come by schools in Aotearoa to educate students and even teachers about the current events related to climate change and invasive species.

Let's protect our environment: early consultation #3425

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Dear Auckland Council Environment Team,

I am writing to express concern about the current lack of clear guidelines and oversight surrounding trapping activities, particularly in areas where domestic pets, such as cats, are common members of households. This issue has highlighted a critical need for Auckland Council to implement comprehensive and enforceable procedures to ensure that trapping is conducted responsibly, with full consideration of its impact on communities.

Due to the lack of procedures and enforcement to ensure that trapping is conducted correctly, we are facing a huge issue in Paerata Rise, where nearly 30 cats—both companion pets and community-fed strays—have gone missing over the past two years. This year alone, 20 cats have disappeared, leaving families devastated and concerned.

Key Information About Paerata Rise

1. Witness Reports

o A witness observed an older Caucasian man in a ute laying traps near the Wesley School area, close to residential properties.

o The same individual was heard collecting trapped cats, with cats screaming in the night, and later seen taking the traps away.

o One cat was found hanging by its neck in a tree, further raising concerns about humane practices.

2. Community Impact

o These disappearances have caused immense distress in the community, with families fearing for the safety of their pets and the lack of accountability surrounding these activities.

3. Lack of Oversight

o It appears that trapping in this area is being conducted by an independent individual, rather than an organised group, with no clear adherence to Auckland Council guidelines for humane trapping and identification.

The Need for Community Input

New Zealand is a nation where many families own and cherish cats as companion animals. Trapping activities, while vital for conservation goals, have significant implications for these pets if not properly managed. It is crucial that local residents are informed and consulted

about trapping plans in their area. Community input would not only foster understanding but also help mitigate potential conflicts and protect the well-being of companion animals.

The Role of Responsibility

While responsible pet ownership—including microchipping, collars, and containment—is a key factor in ensuring pets' safety, it is equally important that trappers and conservation initiatives operate within a robust framework. This includes:

- Mandatory microchip scanning to distinguish companion animals from feral cats.
- Humane practices to ensure that animals are treated with care.
- Clear communication with communities to raise awareness about trapping activities and how residents can safeguard their pets.

Request for Action

To address these concerns, I urge Auckland Council to:

1. Establish Comprehensive Guidelines: Develop clear, enforceable protocols for trapping activities that prioritise the humane treatment of animals and the protection of companion pets.

2. Require Community Consultation: Make it mandatory for trapping plans in residential or semi-rural areas to include community input and clear communication about what measures are in place to protect pets.

3. Implement Accountability Measures: Ensure there are consequences for failing to adhere to these guidelines, including oversight to monitor compliance.

By fostering a balanced approach that includes both conservation efforts and the protection of companion animals, Auckland Council can set a standard that benefits both wildlife and communities.

Thank you for your attention to this important matter. I look forward to hearing how Auckland Council plans to address these concerns and involve communities in shaping better practices for trapping activities.

[redacted]

Kia ora,

Effective cat management is crucial to balancing the protection of native wildlife with the wellbeing of domestic cats and their owners. Below is feedback on management strategies, including potential challenges and recommendations:

1. Cat Containment (Indoor Cats or Enclosed Outdoor Spaces)

• Effectiveness: Containment eliminates predation risk, protecting native wildlife while keeping cats safe from accidents, predators, and disease.

• Practicality: While effective, many cat owners may lack the financial resources to purchase or construct enclosures ("catios") or adapt their homes for full-time indoor cats. This could lead to non-compliance or stress for the cats if owners cannot afford alternatives.

• Ethical Considerations: While beneficial for wildlife and cat safety, mandatory containment could disproportionately affect low-income households.

• Recommendation: Consider introducing phased regulations where all newly registered cats after a certain date must be kept indoors or in enclosed spaces, allowing existing cat owners time to adapt. Provide subsidies or support for low-income households to encourage compliance.

2. Curfews (No Cats Outdoors at Night)

• Effectiveness: Reduces predation during peak wildlife activity times. However, it does not eliminate the risk entirely, as some cats hunt during the day.

• Practicality: Easier to implement than full containment, but enforcement in free-roaming cats is difficult without proper identification.

• Ethical Considerations: A reasonable compromise that balances cat freedom with wildlife protection.

• Recommendation: Promote curfews alongside mandatory registration and microchipping to improve accountability and compliance.

3. Compulsory Microchipping and Registration

• Effectiveness: Helps distinguish owned cats from feral cats, ensuring companion cats are protected and making it easier to enforce containment or curfew rules.

• Practicality: Microchipping is cost-effective and already required in some regions. Registration systems, however, require robust infrastructure and enforcement.

• Ethical Considerations: Protects companion animals while holding owners accountable.

• Recommendation: Mandate microchipping and registration for all cats. Introduce regulations requiring trappers in high cat-ownership areas to carry and use chip readers to ensure owned cats are not mistakenly trapped or euthanised.

4. Feral Cat Control (Trapping, Neutering, or Culling)

• Effectiveness: Essential in areas where feral cats pose a significant threat to endangered wildlife. However, the process must be humane and carefully monitored.

• Practicality: Requires resources, clear communication, and adherence to ethical standards to avoid targeting owned cats.

• Ethical Considerations: Highly controversial, particularly in areas like Paerata Rise, where Auckland Council and Pukekohe-Paerata documents explicitly state that the local ecology does not support endangered native species. Targeting companion cats under the guise of “Predator Free” initiatives in such areas is unethical and undermines community trust.

• Recommendation: Trapping efforts in urban areas must prioritise transparency and collaboration with local residents. Mandate the use of chip readers and ensure clear communication between trappers and the community to prevent unnecessary harm to companion animals.

5. Owner Education and Advocacy

• Effectiveness: Empowers owners to adopt responsible practices such as containment, curfews, and desexing. Education builds public support for broader management policies.

• Practicality: Requires sustained campaigns and collaboration with local organisations and councils.

• Ethical Considerations: Encourages voluntary compliance and reduces resistance to more formal regulations.

• Recommendation: Advocate for widespread education initiatives, highlighting the impact of free-roaming cats on wildlife and providing practical advice on responsible ownership.

General Concerns

The situation in Paerata Rise highlights the importance of clear, evidence-based policies. Reports of companion cats being killed under the guise of conservation in areas where Auckland Council has stated no threat to endangered species exists undermine public trust. Effective cat management in such areas must prioritise:

• Transparency: Clear, open communication between trappers, local authorities, and residents.

• Accountability: Mandatory use of microchip scanners to distinguish owned cats from feral populations.

• Evidence-Based Action: Focus conservation efforts on areas with verified threats to native wildlife, avoiding unnecessary or unjustified measures in regions with limited ecological risk.

Conclusion

Successful cat management requires a balanced approach that addresses the needs of native wildlife, companion animals, and their owners. It is essential to base policies on evidence and ensure ethical practices, clear communication, and community collaboration to achieve lasting success.

Kind regards

[redacted]

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Desexing in areas of lots of native bush, flora, fauna, and animals.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Easy option for cat control

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Cat ownership is difficult - puts a lot of pressure on cat owner to even try to contain cats

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

To the extent that if the person visiting off-shore islands is only staying short-term (1-2 weeks) vs long term (3 months or more)

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

To help those who are struggling financially.

+ increasing financial support will avoid costs towards protecting the wildlife down the road/in the future.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Cat registration (like dogs)

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

First start by prioritising sensitive areas eg places with threatened species and off shore islands. Then increase financial support towards pest management initiatives. Increase awareness about the cause on social media platforms to get more people involved (especially the youth).

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Control should make cleaning facilities are easily accessible to all eg like how we must spray before entering kauri forests.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Unsure

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Other

Tell us why
As long as it doesn't affect people's recreation

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

People have a right to go motor boating for recreational purposes - maybe just implement a rule where all boats must be cleaned before entering a new body of water.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes as protecting the environment protects us

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3428

I personally feel as if it may fail down the line as some may become "depressed" and find it weird to adjust.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Because if this were to become a law I feel it should be provided.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I feel as if we should tackle known mass pest areas first.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Yes, as it will prevent or reduce the spread of marine pests.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Yes, as we need to take care of high value marine areas and we need to provide the most protection we can provide.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

To allow life to form and people to enjoy.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

We should check impacted area to base it and helping it tackle other areas.

Let's protect our environment: early consultation #3429

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Other
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

The bigger islands have larger populations of cats and therefore might be a bit more important.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think that it would be beneficial anyways both for the location and other benefits if the cat is lost or roaming.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Unsure
Rakino Island	Other
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This would be beneficial because then there would be at least some restrictions on cats with bigger populations.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

The residents can have their own cats if they do have them but other people have more of a chance of leaving cats but residents of the islands should be able to still have them with them.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Other

Tell us why

Really, I feel like it depends on the financial status of people who have cats. I think a study should be done on owner with no desexing of a cats and their financial status.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

There are also pest plants and I feel like that should also be considered in the wider idea of 'pests'. Like moth plants or gorse have a big impact on native plants and these also should be protected as well.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

I feel like I thought that this was already happening but this rule would benefit the ecosystem because then native species of flora and fauna would not be disturbed in their environment.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

There should definitely be some management of pest marine life because the under the sea is also vulnerable and at risk and this should definitely be protected like on the lands as well.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Yes, I think that there should be some management plans on the lakes because there are also vulnerable to the lakes, I feel they underestimated as already controlled areas.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

I feel like if the lakes are contained within land and don't feed onto the sea then I feel like that they should be able to use them but if they do feed onto the sea then I think that it would apply.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

There should be more improvements on the substantial move of climate change. The pathway that the world is going is that these events will become more frequent. There should definitely be some climate change resilience because there are a lot of ways to protect the land full of communities.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

There should definitely be more support towards weed control and pest plants. I feel strongly effected by this as I have seen one of my local reserves going from a higher concentration of pest plants to a lower one. It has taken around 3 years for William Gamble Reserve to fully outgrow those harmful plants. More support for weeds and pest plants.

Let's protect our environment: early consultation #3430

Auckland RPMP Feedback Form

About Predator Free 2050 Limited:
Predator Free 2050 Limited is a Crown-owned, charitable company established to help deliver the New Zealand government's ambitious goal of eradicating possums, mustelids and rats by 2050. Funded by the New Zealand government, PF2050 Limited provides co-funding to enable predator elimination projects at large landscape scale and the necessary innovation (including tools, techniques, regulatory and social innovations) needed to underpin them.

We invest in large-scale predator elimination projects across Aotearoa that collectively contribute towards the Predator Free 2050 goal by unlocking cost effective and scalable techniques. The Crown funding we provide is also leveraged by projects to generate additional funding from third party investors to boost the projects' scale and success. Our funding into research development projects, and new tools are focused on delivering the more effective, and efficient elimination and eradication methods in urban and rural environments.

Section 2

Submission:
We acknowledge the work and investment of Auckland Council, iwi/hāpu, landowners and communities to eradicate rats, possums, mustelids and other invasive mammal species from islands in the Hauraki Gulf.

We encourage Council's further sustained investment into biosecurity measures to prevent re-invasion of these species on islands that are pest free.

We encourage further investment to eradicate these species from all remaining Hauraki Gulf islands so that all islands and islets in the Hauraki Gulf are predator free.

We encourage the inclusion of rules that:

- Prohibits the movement of rats, possums and mustelids to, from, between and within Hauraki Gulf islands and islets.

- Requires the owner and/or tenant of a property on a Hauraki Gulf island or islet where rats, possums and mustelids have been previously eradicated, to provide access to an authorised person onto a property where rats, possums and mustelids are considered to be present in order for those species to be controlled.

Section 6

Submission:
Predator Free 2050 Limited takes this opportunity to acknowledge and recognise the vital work of Auckland Council towards achieving Predator Free 2050 goals. We recognise Councils involvement in leadership of the sector, willingness to collaborate with the Company and other national partners on strategic issues, ability to co-invest in operational projects (such as Tu Mai Taonga, Te Korowai o Waiheke, Predator Free Kaipara and Pest Free Kawau) and the development of emerging tools for increased effectiveness and efficiency, and support research and breakthrough science.

We encourage Auckland Council to continue its willingness, ability and commitment to work with the Company and other national partners on strategic, operational, embedded research and the development of technology, tools and blueprints that can be deployed in other areas.

By 2030, we encourage Council to partner with the Company, and others, to co-invest in leading-edge work to eliminate predators from defendable urban area/s of Auckland so that we have blueprints for scalable deployment to other urban environments towards achieving Predator Free 2050.

In the development of the RPMP, we encourage Council to classify the species described in the Predator Free 2050 strategy in a manner that aligns with, and enables the achievement of, the Predator Free 2050.

Let's protect our environment: early consultation #3432

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island	Support
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	

Tell us why

Domestic cats support the feral cat population especially those that "go bush" or are left behind

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location

Aotea/Great Barrier Island	Support
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	

Tell us why

1C. All domestic/pet cats must be contained to their owner's property

Location

Aotea/Great Barrier Island	Support
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location

Aotea/Great Barrier Island	Support
Kawau Island	
Rakino Island	
Waiheke Island	

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

people with limited resources will not address the issue of their cats interbreeding with feral cats unless incentivised. All should be a cap of 2 cats only for people who are subsidised

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Limit of 2 cats per household

Cats collared

Cats should be contained the owners propertyt - kept in the day (when birds are about) and only let out at night when rats are about.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Predator Free 2050 must add feral cats to the priority list

Make Aotea Great Barrier Pest Free

This could hugely advance PF2050 goals

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

But very difficult to enforce

Global Trade will continue to expose us to exotic pests

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

As best as we can

But also to know when to stop investing in a pest that has already bolted, like Calurpa

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Freshwater systems are under real threat

No farming should be permitted within 1km of freshwater

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Plenty of ocean for boaties

Don't need to use these precious lakes

Orakei Basin good for skiing etc

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Priority here would be pest free Aotea

Huge biodiversity gain - leaving species here to adapt to climate change without the pressure of pests

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Strong biosecurity at places in Auckland like marinas.

Strong biosecurity programme on Aotea

Wing and a prayer

Support local food resilience so we import less + lower risk of pest invasion

Address the issue of feral pigs on Aotea - restrict the areas they may be permitted - eradicate off rest of island. Huge ecological impact!

Let's protect our environment: early consultation #3433

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

Some people may want to breed cats - with control, and

I think some should be allowed, but definitely desex within threatened species and dense natural places.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think microchipping is a more achievable goal - and would help a lot keeping track of where many of our cat populations are verses dense natural areas with natives - especially native birds.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I am more inclined with Do not support as some cats can't stay in one place, they need to roam and explore.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure

Waiheke Island Unsure

Tell us why

I'm not sure because I feel like it could go wrong if they get lost and so I'm more inclined to not support but I know that many people like keeping their pets cats close to them - especially travelling

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

It's important because not everyone can afford to desex their cats and so it would mean more people would be able to control the number of cats in NZ.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Consider cats nature. They love roaming and exploring so we can't really put bans over that because we can't really control every cat's movement. They love roaming.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Since we have already focused on offshore islands, next I think we should focus more on mainland areas with threatened species or dense native life. And creating predator free pockets of mainland which we can slowly expand.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

I think it's a very simple rule to inforce and would be so effective - however some may still not do it - so a law might be more important to get more people to actually clean properly.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Marine environments are so important considering NZ is surrounded by so much marine life - they need to be protected and controlled.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Freshwater is very important and so many people love swimming/boating in lakes so they need to be controlled.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

People can still enjoy the lake with kayaks - or non-motorised boats. So I think there's still options for people who love boating.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, because some climatic events we can't always control so management and adaptation is really important.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

More community projects getting more people involved in smaller projects such as weed control and pests that are more prevalent in specific areas.

Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

Useless, spend money elsewhere

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

N/A

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

N/A

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

N/A

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Good

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

N/A

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3442

All of Auckland	Unsure

Tell us why

I think it's important to protect our natural species in important areas by taking the appropriate measures.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

Keeping track of domestic animals could make it simpler to monitor the ratio of predators to prey. Therefore making it easier to see how the measures being taken influence the numbers.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

Less chances of pets attacking natura species

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

N/A

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
It protects natural species.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Motorised boats are a possible threat.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, to counter climate change is to protect the current state of the environment and improve it for future generations.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

No

Let's protect our environment: early consultation #3453

3470

[redacted]

Dear Sir/Madam,

I am aware of your intention to achieve a "predator free New Zealand" by 2050. But classifying cats as "pests" is wrong in my opinion. I always had at least one pet cat and I can guarantee that they are not causing damages to the "native wildlife". They are a valuable part of the ecosystem, they keep the rodent population under control.

I have lived next to a natural reserve since 2002. Always had pet cats and my neighbours had too. Still, every morning around 5 am I have the pleasure of waking up by lovely bird songs and I am pleased not to have rodents in my home.

Thousands of years ago the Egyptians treated the cats as gods! How and why Humanity regressed so much to treat the smallest feline as pest nowadays?! It is hard to comprehend.

I think that compulsory registration will help reduce the number of abandoned pet cats. But if you force people to spend on expensive microchipping they may stop adopting and some pet cat owners may dump their cats. So, my suggestion is - small fee for annual registration, let's say $10 and supplying the cat pet owners with educational booklets about responsible pet ownership for free.

And please, no poisoning, no trapping and no shooting stray and wild cats. Thank you!

Kind regards,

[redacted]

Hi there, I have been a volunteer for 5years with PFK eradicating pest plants in our local community -reserves .parks /private land/ commercial premises and am seeing an increased presence of this runaway wild Monstera deliciosa (the fruit salad plant).As most people will know this has been a favorite house plant in NZs homes for well over 55 years that I can remember as an apprentice in the horticulture trade Pettits Nurseries Otahuhu and Mangere.This plant has become more common in our Auckland gardens due to warming climate and frosts almost a thing of the past.Its so sad as a volunteer to see these houseplants now dominating our bush understory and blocking out light to native seedlings struggling to get thro the tangle of fleshy stems and vigorous fleshy root systems that assist this plant to climb up native trees and seen some as high as 15m onto Kahikatea trees.Control of these plants is a major problem as every node on stem regrows if left laying on ground much like the Yucca elephantes.Both these plants are another worry to us volunteers trying to eradicate Mothplant and Woolly nightshade.Please explore the possibilities of working with the NZTA /plant nurseries/Trade Me and garden centres to stop sales of these 2 shocking plants as they are too cumbersome and heavy for us older volunteers.

Regards PFK volunteer

Let's protect our environment: early consultation #3473

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Local Board: Not Specified

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

To minimise wild cats

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Not so much in Auckland, I would think

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3474

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Tell us why

As there are too many cats loose around my neighbourhood

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

Depends on the reason

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Highly, but I don't know how much it costs without the financial support

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Some kind of monitoring alarms of some sort

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Safe traps

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Good for the eco system

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
but havent heard of these areas

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

most definitely

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3487

Tell us why

When they need to go out they can in certain areas or when species are endangered it poses a risk

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

Not educated enough to comment on the issue

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

It is expensive and important to do at times

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

N/A

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Traps put out more frequently to make safe pest trap happen quickly to ensure no cruelty is imposed

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

Don't understand

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Ensure better ecosystems

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Small lakes cause pests to spread more so its important

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

Impact may not be as much if it is just one boat

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, because it is a very prominent and an issue of late

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3494

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

I was expecting to be able to give feedback to the "Meows Your Chance – Have Your Say" which I understand was open until 8th Dec. However, although I can log in and find many different subjects/places listed under "Have Your Say", nowhere can I find where I can give my feedback on Cats.

For the record: I firmly believe we need to be changing the mindset of cat owners so that they take more responsibility on confining their cats to their own properties, particularly at night.

The harm cats are doing to our native wildlife is well documented. We risk losing many species already ont eh brink of extinction if nothing is done.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

If they're domestic cats, I don't believe it should be Council's role to mandate desexing. It should be the responsibility of the homeowner!

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This seems a responsible measure to ensure there is a register of which cats are domesticated and which are feral - as long as this is actually updated to reflect which cats go missing.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Cats should not be contained to a small house, even if a property contained a backyard, they wouldn't be able to roam free. This should only be for situations where it is overwhelmingly persuasive - in rural wildlife environments.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

There seems no reason to take feral or stray cats to other islands; this is reasonable!

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

A limited support may be useful, but this should be limited.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Ensure the rights of homeowners does have a weighting in this discussion and resort to mandates only in extraordinary scenarios.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Keep up the good work, focusing on islands and protected areas first

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Other

Tell us why

As long as this isn't tedious, it seems fair!

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

A good way of protecting the environment!

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

As long as this is at a reasonable costs this is a logical next step!

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I think this is probably disproportionate, so leaning oppose, but I could be persuaded.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3510

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

We support

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

We should control freshwater pests for all our lakes

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

We strongly support management of the natural environment

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

We should protect our natural environment for the future generation

Let's protect our environment: early consultation #3511

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

I believe it is important to protect native birds in key areas however if all cats are desexed then we will have no domestic cats within a generation

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Micro chipping is an important tool for identification, and care

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Cats in areas where they may cause harm should be contained but keeping them in Auckland at large is restricting their own right to roam according to their nature

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Who else would bring their cat to those places?

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

It's important for those who can not pay for it especially if it becomes law

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Support

Tell us why

All cats should be desexed on the mainland and Aotea Island to uphold animal welfare. On the other offshore islands all domestic rather should be supervised or confined to a set area to allow for reproduction and conservation of the offshore wildlife.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

For data conservation and record of what the cat is

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Unsure

Tell us why

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

If there is an added fee + responsibility to take care of a cat, support is beneficial by council to allow for communal support and record.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

To provide a safer approach by introducing more native species and wildlife to an area while keeping the current pest control constant to prevent any more damage to a community and any man-made damage to the native ecosystem.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

All anchor chains must be cleared as to prevent any contamination of native bodies of water and movement of species BUT must provide an accessible facility to aid in the cleaning process.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Pls control it. :)

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

The Council should prioritise controlling those pests but must have facilities that consider religious/cultural practices in order to uphold community.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

People should not motorboat in freshwater lakes and should only be allowed to do it in more open spaces that don't destroy native life.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, as this will keep the community more informed. Considering that the older communities won't be willing to be adaptive and informed, more concepts should be introduced to school curriculums to balance out academics and being practical with environmental awareness.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

- Education

- Providing posters/informative maps to residents living by shorelines to keep the marine life alive and information to non-shore residents as to rules and regulations on how to keep themselves safe and where these islands are.

Let's protect our environment: early consultation #3529

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Private property rules are explicit

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3531

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3546

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I've never owned a cat before but I believe they will be hard to contain

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I don't think we will ever be predator free due to the cycle of life

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes to prioritise climate change.

Make awareness in primary schools (making fun)

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3549

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Yes, but only with financial support for lower income household. It would help the environment as well as keep the cat population down. This means less cats harming the environment, and less cats ending up without homes and in shelters.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It's a relativly cheap one off procedure which benefits both cat owners (if they look their pet) plus its good for the environment + data.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

I think its way too high of a financial cost and it's impractical. It should be encouraged but 100% not law or enforced. The training of a cat would also be an issue. It feels cruel.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support

Waiheke Island Support

Tell us why

There are already many issues with stray cats on offshore islands and allowing other cats onto the island which could become strays, would harm the environment. It's especially important considering how vital the environment is on our islands.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

I think everyone deserves a chance to own a cat and if we were to put a blanket ban that all cats must be desexed we should let lower income households apply for a subsidized desexing like the SPCA is doing currently for cats within 1km of high ecological diversity hotspots with threatened species. It also saves costs in the long run and keeps the cat population down.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Same rules for all

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

It only takes one or two cases to have the problem continued

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Building a "catio" on homes seems to be a good idea

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Of course - so efforts made so fare are not for nothing

To help educate all marine users about the issues

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
It is probably best suited to being able to educate people and to make use of resources

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

If it is causing a problem - why not?

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes. Isn't this becoming an urgent priority everywhere

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Continue the good work of experts and volunteers, so their knowledge and kills are not lost or forgotten. They are still too many (global) people in authority that are in demand

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This can prevent overpopulation and

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This can give the public information and helps if cats get lost to find them and keep track of where they go, which can help in finding out if they are going places they shouldn't.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I think that depends on the area and the cat. This is because not all cats will explore around

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

This protects the islands habitat and environment because cats that do not live on these islands may hunt native animals

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Because if more financial aid is provided, that encourages more people to de-sex their cats.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Keeping cats inside is a good starting point because it can help protect native wildlife that are nocturnal and prevent them from being hunted or eaten

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I think areas with lots of native animals should be prioritised and they should reach out to local people and organisations to report if they see any pests, cats, stoats, or possums so the eradication can be more targeted.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Because if a boat comes from a non-protected area into a more protected area or a more endangered area and brings pests that can damage those areas a lot. Even encouraging/mandating cleaning boats and the rest of the gear.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Because the invasive species will damage and multiply and to get rid of them, starting by controlling what we have is good.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

lakes are all unique environments and contain many native fish and plants

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

It would be very difficult to manage this ban and maybe more rules about motor boating to discourage motorboating in lake Tomorata.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes. This is because while we should focus on preventing climate change worsening, prioritising resilience is really important because of how bad climate change has gotten.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Cultural considerations should be taken into consideration and to do this with working with those who know that land the best to move forward while still including viewpoints from Māori iwi.

Let's protect our environment: early consultation #3601

Note: this version of the feedback form has been created for the purpose of publishing submissions. As such, contact and demographic information has been removed and handwritten submissions have been transcribed.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland — Do not support

Tell us why

I am all for promoting responsible cat ownership, but I do not agree whatsoever keeping cats at home, indoors. Cats need to be able to come and go as they please and my cat would go mad if she was required to stay indoors. It's unreasonable. Cats are not designed to be locked inside. She does not catch birds and is well fed. She is a homebody and I think you will find that most cat owners would fight against keeping their pet indoors.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It will be difficult to do this, but I think it is sensible to help cat owners be responsible.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Because cats cannot be contained in the city. For the islands mentioned, there are more protected species than in the city. But for central Auckland, it is unrealistic and ridiculous that cats have to be contained in their owner's property. You'd have to have everyone's property fenced, which is unrealistic. Cats can get around. My cat would climb the walls and tear up the place if she wasn't able to go outdoors.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Unsure

Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure

Tell us why

Your question is unclear. We all live on an island. Are you saying that only cats from Rakino or Kawau can be taken to another offshore island. It doesn't make sense.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Cats should be desexed to keep the population down, but not all.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No. I just do not want the council to rule that all cats have to stay on their owners property. It's totally ridiculous.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

I do not know how realistic that is to achieve. Agree that marine gear needs

to be free of pests, but not sure of how realistic it is.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I am not a boat owner and don't know Lake Tomorata to be able to give

an informed opinion.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Absolutely.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3604

Tell us why

There owners live there and cat microchipped and desexed

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

why should the working class support people who cannot afford it. If they cant afford geting a cat then they cannot afford feeding one.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

have coverence on house around houses where wildlife are so people dont buy or rent in these areas.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This really is for big ships or fishing vessels as 99% of the time recreation fishing pool wash there boats or have pull anchors

Yes to travellers & ships

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

- Only industrial trawlers not recreational

Id support it but not for recreational fishing as fishing trawlers & stirring the waters & dumping all there **********

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

stop introducting new species also clean up our sewers so they dont go into lakes rivers & sea. we are the problem

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

they should have designated areas to put boat in and out and picnic areas to land the boat.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

No - stop cloud seeding and weather modification problem solved

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Do something about our drains theres no reason for floods/sewer going into the sea. but you all let it

Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Yes, but only with financial support for low income household. It would help the environment (as well as keep the cat population down). This means less cats harming the environment, and less cats ending up without homes and shelters.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It's a relativly cheap one off procedure which benefits both cat owners (if they look their pet) plus its good for the environmnt + data.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

I think its way too high of a financial cost and it's impractical. It should be encourged but 100% not law or enforced. The training of a cat would also be an issue. It feels cruel.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support

Waiheke Island Support

Tell us why

There are already many issues with stray cats on offshore islands and allowing other cats onto the island which could become strays, would harm the environment. It's especially important considering how vital the environment is on our islands.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

I think everyone deserves a chance to own a cat and if we were to pull a blanket ban that all cats must be desexed we should let lower income households apply for a subsidized desexing. Like the SPCA is doing currently for cats within 1km of high ecological diversity hotspots with threatened species. It also saves costs in the long run and keeps the cat population down.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3608

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It is important to be a responsible pet owner desexing prevents uncontrolled litters

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Important to keep track of cat numbers. Goes back to owners it escaped, more education if cats escaped to areas they're not supposed to.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Keeping cats inside reduce harms to native animals assuming cats are well looked after. Must = is there going to be a fine?

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Also support cats to be completely banned from islands.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Will this increase rates greatly? Prefer support prioritising at risk areas with more wildlife.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Campaign on benefits of keeping cats indoors. Tiktok? Social media.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

More strict checks on boats, ie. clean anchors as well as hulls, extend the eradications of pests in the mainland.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

extra cost but its for the greater good.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

marine ecosystems are just as important.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why
protecting all ecosystems in NZ is important.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

whats the different motorised boats and non-motorised boats? rules should be applied to all.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, need to understand costs, impacts to ratepayers taxes etc

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

- can we expedite this proposal? costs of "planning" till 2030-2040, can this be used to implement the changes and see results.

- experts should know better than the public, why don't we have the experts decide for everyone?

- what are the consequences if someone breaks the rules?

Let's protect our environment: early consultation #3610

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Support present control measures

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

It doesn't seem that there is much other option at present since it appears to be spreading easily

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Have to protect what we can

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

to saving established trees from careless development e.g Canal Rd Avondale + wholesale demolition e.g Unitec

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Difficult! Education and promoting awareness e.g weeds prompt response to threats (not leaving a situation until it gets out of hand!) (ps it would have been a good thing to have put out information about the guava mth problem before it spread over the North and then down the island gardeners could, haver been better prepared! and better informed!

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

I think that it's important that cats are kept away from killing natural wildlife, but completely getting rid of cats is the best option. There should be a law about desexing cats in wildlife places that are threatened

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think microchipping is very important for cats, as free roaming creatures, to have. It would not only benefit the owners but it could also be beneficial to see how many cats are actually in Auckland.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other
Within 1km of known threatened species habitat (see map 1)	Other
All of Auckland	Other

Tell us why

People often get cats because of their easy going nature so enforcing rules about keeping cats inside at all times could be hard for some families and for cats. Cats are very adventurous animals so you can't just lock them inside.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location
Aotea/Great Barrier Island
Kawau Island

Rakino Island

Waiheke Island

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Desexing cats is important and can be quite expensive for people. I think if the council gives financial support to people who can't afford to desex would be very helpful to a lot of families struggling.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

I think it's important to focus on the islands struggling with pests, if we are able to conserve the smaller islands we might then be able to find ways to rid the mainland of pests.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

A lot of boat owners might not think or be bothered to clean their gear. I think that maybe council should give support like cleaning stations and that council should put posters up and make people aware of what's going on because I think a lot of people don't know the damage that a bit of seaweed could have.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Our oceans, though harder to protect, should be protected just as our native trees and birds are being protected

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Lakes and streams are often forgotten about when talking about pests, but really they're just as important.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

I think we need to act fast so that the current pests can be eliminated as soon as possible and maybe that putting dates on when people can use the lakes or having regular checks to make sure that the pests aren't spreading to other lakes.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

I think should prioritise increased climate change resilience. I think we should look at other countries pests to help us prepare for what might be coming in the future. I also think that we need to look at environmental alternatives for products that can be changed.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3613

Tell us why

True for the islands as wildlife there is precious. Unfeasible in Auckland. Cats are cats and need freedom in general.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

No brainer, this is a risk mitigation meaning one less issue to think about and deal with.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

It must be cat owner's responsibility and be funded by them. The financial implications should not be shared with other tax payers.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Let's have a National cat legislation, just like one we have for dogs.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No comment

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

It helps to prevent spread of invasive species & another risk mitigation tool.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

We need to keep NZ marine life as unique as possible and limit the spread of invasive species.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

It is not only Tomarata/Rototoa, but all lakes shall be protected. NZ has unique ecosystem which needs to be protected.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Other

Tell us why

Not banning but limiting shall be introduced.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, climate change is a real issue and can affect NZ ecosystem's future.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Introduce stricter protection measures, promote NZ specific plants, or NZ specific pets.

Let's protect our environment: early consultation #3616

Support

Tell us why
To retain the natural environment of this 'hidden gem' as much as possible

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

There have been too many motorized boats in lake Tomarata for some years, and since Jetskis have arrived the lake has had major changes- sediment stirred up affecting lake - bed vegetation, more fuel residues + the lake edge has been collapsing on the wetland side with large chucks being blown over to the sand beaches + swimming areas = golden clam arrival in the jet engines will be the final straw. There is the occasional butteru nesting around Lake Tomarata. Too much motor-boat noise with constantly increasing populations nearby with all the local "development" is sound to chase them away. The spraying of kata some years ago as left the lake edges vulnerable to collapse, and the increased number of "wild" jetskis has continued to cause wave erosion + also disturbs the sediment leading to reduced light for plant growth on the lake bed. It is well poor time to ban motorised boats on this fragile dune lake. I've been a waterskier all my life - but after seeing 25 ski boats on the lake in one day I stopped skiing in there its dangerous too!

Please see me in your records: "The impacts of recreational activities on late tomaratas ecology + water quality" August 2016 Technical report 2016/033 (I can email you a copy if you can't locate it! - send me your email -> debbiestone49@hotmail.com)

P.s please preserve this fragile dune lake so future generations can at least swim in it - and don't let it go the way of Slipper + Spectacle - both have been unswimmable for decades

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Native NZ species are threatened everywhere in Auckland. Feral cats could be found everywhere.

The death of native species should not be the price to pay because pet owners do not desex their cats. At the moment organisations struggle to find good homes for all the unwanted kittens born.

One rule for the whole of Auckland simplifies the rule, making it easier for people to remember.

One rule for the whole of Auckland would mean less paper work.

Waiheke Island	Support

Tell us why

Domestic cats on an island holiday continue to hunt native species.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Desex cats from a certain age.

Micro-chip pet cats so they can be returned to their owners and be distinguished from feral cats.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

To help stop the spread of invasive seaweeds and other marine pests.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

High value marine ecosystems will not remain of high value if Auckland Council does not help to protect these areas.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

Motorised boats could be required to kept clean before being allowed to enter the lake.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Tell us why

I think encouraging indoor pet ownership is a positive and perhaps gradually containing cats indoors at night within 1km is a good idea. I think pedigree cats could be kept in.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Reduce long term spending and resources on wildlife protection as well as prevent the cycle of un-desexed cats, where most needed.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Cat registry and a public awareness, need to define what is 'cat ownership' to be able to enforce responsibility.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Establishing on land pest free zones, as well as water safety and preserving existing spaces from new threats.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Yes, reduce spread through clear concise rules like how we clean shoes before Kauri walks. If done right it should be very approachable, perhaps stations for cleaning gear.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Livelihoods, and the cost of reclaiming land, high value ecosystems are more important below land. Reefs etc. require protection as they are very delicate.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Auckland Council should support and establish wider regional programs around prevention and help local boards establish gear cleaning rules

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

A sensitive to population ban should be established. So at high levels of freshwater clams motor boating is restricted and when the lake is more stable motor boating is allowed.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, Auckland isn't spongey enough so by increasing native plants we fortify the land against floods and increase protections for people through things such as landslides being prevented by root work.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

The coastal protections in areas such as Orewa beach is great and I think preventing errosion of land should be more publicised. In terms of pests rat programs and trapping programs in local bush and lakes should continue and a website which is updated with pests and how to handle them, there is this, but it's pushed too little.

Let's protect our environment: early consultation #3620

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Control of the species & avoiding producing feral animals

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

know whose cat is when I find unattended cat in the bus or reserve (happened a few times). Easier to locate the owner.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

They are more likely to go where there are more native birds. Cats like to hunt, it is in their nature & we can't do anything about that. Solution: keep them in enclosure.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support

Tell us why

Cats must stay put at home. When one misplace them, cats tend to roam unknown territory more & make more damage. I experience that: when holidaymakers bring their cats to Waiheke these f... creatures kill native birds on my property.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Council should provide the support & control the execution. Cats must be desexed.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

All above + make the colors with bells & tracking chips mandatory by law. Bells help (sometimes) to scare birds when cat is approaching.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Focus more on Waiheke. Install bio-/pest- security control on car-ferries & passenger ferries

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

It is must be enforced. A lot of boaties are careless & disrespectful

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Important to keep in control

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Very important for native species

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Helps to keep control

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Make more strict enforcement. E.g., when boaties drop the anchor in rahui area, they must pay fine for misconduct. This will prevent others to break rules + top-up the budget.

Tell us why

So that cats can be traced.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This may not be practical. That is the problem with cats, they can access anywhere and everywhere. A household cat is still basically a wild animal incapable of being contained.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

A cat can easily go missing with no way of retrieving it so it becomes feral.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

The Council has a lot of costs to meet - this is a nice to have.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Register, de-sex and microchip cats. Keep them indoors at night. They should have the same regulations as dogs except you cannot stop a cat from roaming.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

De-sex, register and microchip cats. Cats should be kept indoors at night.

3. Protecting our moana from Caulerpa seaweed and other marine pests

Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I think that liscensed breeders should be allowed to keep their cats un-neutered while being cautious of native wildlife.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

It's not just native animals that this will help with. It is vital to have information stored about ALL the animals in New Zealand. If a pet gets lost, all of its information could be stored on this chip.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Unsure
All of Auckland	Do not support

Tell us why

I think it's unreasonable to expect owners to be able to confine their cats to their property. This is especially true as an umbrella rule for strays that have been rescued.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other

Tell us why

I don't think that you should bring your cat into any situation where it has access to endangered species.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

I think there are other parts of the environment that could use the money.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

As a boat owner, I think that cleaning boats and equiptment is an incredibly important part of boat maintanance - not just for the integrity of the boat, but the integrity of the marine life.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Our oceans are a vital source of oxygen for all living things and if they aren't healthy and thriving, neither are we.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

We should be working hard on both our lands and seas because otherwise they will become unbalanced. They are supposed to live in harmony.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

It's the same as why you shouldn't wear togs you have just worn in the ocean in a pool or vis versa.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, I think New Zealand should also work on her carbon footprint.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

#3653

I think the Moth Plant weed should have more attention as it continues to strangle our forest silently.

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

Mainly looking at threatened species habitat and do not think it feasible to manage all of Auckland

the logistics of it would be extremely expensive possibly more than 1km around threatened species habitat

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Other

Tell us why

once again although a nice idea cannot see it being feasible for whole Auckland

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Too many stray wandering cats = predation of bird and reptile life

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Other
Kawau Island	Other
Rakino Island	Other
Waiheke Island	Other

Tell us why

I think per cats should be fazed out from islands to allow the islands to become sanctuaries

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Unsure

Tell us why

costing issue

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

yes keep all cats inside at night or in enclosed areas overnight

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Continue utilising volunteers and organisations to enhance pest free areas

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This would help in raising awareness of the situation

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Other

Tell us why

In theory this is a nice idea but wandering about the logistics and cost of this. Better to try to prevent invasive species rather than letting them spread and then repeating

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Unsure

Tell us why

Once again it becomes a financial issues

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Better environment for wildlife

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

should use a case by case basis

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3666

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Reduce cat population, less cats harmed by neglect, less predation on native birds + skinks

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

As a cat owner this makes sense, dogs are registered, why not cats

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

It is hard to contain cats as they general think on roaming + being independent but in sensitive areas it would be a good idea.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

I'm amazed this isn't already a rule!

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Our cat is adopted- many of the cats who need adoption are from poorer areas where people cant afford to desex their cats

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Only registered breeders should be able to have not desexed cats

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Invest in technology to improve traps

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

As sea pets spread commonly by attacking boats this makes sense, but I imagine it's hard to patrol?

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Marine environments face to many pressures, we must help if we can

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I don't particularly have any knowledge or stake in this issue

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Auckland residents need more info about weeds + pest plants. I see them whenever I look!

Perhaps we could have a target species each year and subsidies for herbicides e.g cut + paste gel.

e.g this year all of Auckland aims to eradicate most -plants from their area - leaflets, brochures, billboards, interviews on e.g RNZ

Let's protect our environment: early consultation #3675

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

To stop proliferation of cats, Expressly feral cats whose owners refuse to desex cats on perverge unatural grounds

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

To ensure cats are well cared for. Neglect, lost or stolen cats will benefit from identification

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

So cats can or will soil and kill birds on their owners property exclusively

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support

Tell us why

Risk of birdlife kill is increased greatly due to the absence of pests through fencing and trapping and releasing of endangered species in a safe sanctury

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

it is the cost of being a responsible cat owner

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

cats on leashes and in cages at down and dusk mainly

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

microchipping, registration, of dogs and cats. including desexing. Enforcement of registrations of pets, and adherence to rules around parks and reserves about pets being leashed. South Auckland is bad for non-compliance.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

To halt the transference of introduced invasive species across the moana. The introduction of the rule urgently is crucial, followed by meticulous enforcement in my opinion,.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

It is important to implement this approach as these high ecological and marine ecosystems will be ruined or at best decimated.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

The control of pests in more of the regions lakes, the invaders should be exterminated.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Yes ban motorised boats, stop the spread of the freshwater pests and shore line flora.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes climate change will devastate the whenua and flora. Extreme weather is mother nature being extremely cruel.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

#3675

Stop the cutting of mangrove seedlings at parhurehure inlet at Papakura, important store of CO2 I think, the locals want the mangroves eradicated so they can have a nice view from their houses on the surrounding shoreline,.

Let's protect our environment: early consultation #3676

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats are a menace to native wildlife. If you want to have a cat then be responsible.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Doing this would reduce the number of stray cars. You can easily identify cat owners and see if the cats have stayed outside their property.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Should be the same rule as dogs. Do not let your cat harm others. If all cats were on the owners property then they would do less harm.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Our offshore islands are treasures. the more cats there are, the more harm they cause. unless there is a requirement that all cats are desexed and microchipped then there is no way of keeping the islands safe from stray cats,

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Without help owners likely will not comply.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Cat owners should take responsibility for their own pets. Ownership comes with obligations.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Recognise that stoats, rates etc are not the only threat to native wildlife, domestic animals are also a threat. it is magic on Waiheke when groups of up to 10 kaka fly over your house. It should be like that in all of Auckland.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

We do not want Caulerpa to spread. If people do not want to clean their gear they should not be on the water.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

I want our freshwater bodies to be in a healthy condition for my children all lakes etc are worthy of protection.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Once invasive species spread it is very hard to get rid of them.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, we must be prepared for our climate changing

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3683

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

I think they should be de-sexed in the endangered areas to protect local and off shore wild life

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Unsure

Tell us why

At least get cats registered

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

I think this is about too much restrictions on our cats and the consequences for not applying could lead to many new fines that no one wants to pay

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

because if you live their it should be a right to own your own cat but with more rules

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

So people in the more endangered areas can get them desexed or registered easier

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Nil

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Maybe more traps?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Minimise as much as possible by making anchor chains clean and maintaining clean boats

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

I think its more important to protect the areas with less human footprints so they can thrive

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Keep water clean for my mokos

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

not too sure what to do here

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3685

cat awareness so people are more responsible. To help protect threatened bird species and important wildlife from cat predation

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Help create more responsible cat owners. Also helps control numbers ad decrease cat population

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Again, to protect threatened wildlife and the damage roaming cats can create

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

As long as they are controlled and looked after I think thats fine

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Yes people are struggling to pay a lot of things. this would be great help.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

No

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Setting up save training course on setting traps for pests etc

More info taught in schools

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

protect all marine wildlife. Do not want to spread and marine pests

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Yes, needs to be controlled to ensure our marine life and wildlife thrives

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

To protect and restore native species such as Kakahi/freshwater mussels

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

It is safer if boats were banned. banning them altogether is much easier than making sure everyone keeps their boats clean.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes as climate change has a big impact on wildlife

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

n/a

Animal control workers need to know who owns the cat in order to get it back to its owner

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

For the past 20 years I've controlled rates and possums to protect native species in my backyard. So why should I tolerate my neighbours cats hunting and killing native species on my property.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

cats can get away from their owners. Cats should not be taken to islands or any other vulnerable habitat

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Vet charges are high, and more cats overall would be desexed with financial support

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

- Cats not allowed to leave owners property

- DCats' owners to pay a registration annual fee.

- Fines introduced for cats repeatedly wandering.

- If the owner can't demonstrate cat confinement measures, they should not be allowed to keep a cat.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Although free rat bait, bait stations, possum traps, etc, are available free of charge in kaipatiki, I find very few citizens are aware of this. there needs to be a lot more advertising of this, flyers in letterboxes, door knocking etc.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

To ensure the boat or vessel is free of pests as much as possible.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Marine areas of high value deserve to be better - protected.

Also no commercial fishing should be allowed in marine protected areas

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

I have been very disappointed to see koi in lakes where i expected they would be controlled. i want to see more freshwater pest control.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

These dune lakes, including late tomorata, are such special places, with endangered plant species, and highly threatened species such as fernbird bittern, and fairy fern. motorised boats clearly should not be allowed.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes, extreme events such as on 27 January 2023 will become even more intense and more frequent. We need to be better prepared to protect our biodiversity from the disruption.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Auckland's authorities, such as Auckland Council, Auckland transport, and others are not taking responsibility for control of weeds such as month plant, mignonette vine etc. Alos the road reserves have many thousands of tree privets, monkey apples, loquats, Chinese privet, etc. These are all invading councils bush reserves. Council should not tolerate invasive trees on any berms or road reserves

Let's protect our environment: early consultation #3702

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

As cats can have multiple litters per year and each litter can have 1-10+ kittens, I feel that desexing is the most effective option in reducing numbers over a window of time. And as cats don't currently have any predators that could make a significant impact on their numbers then I support a humane and caring management program.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

By doing this then stray cats can be euthanised, re-housed, or placed in care for the remainder of their lives and found registered cats can be returned to their families.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

This is now a viable option as we have the technology. Gardens can be catproofed so they can enjoy the outsides and not be trapped only indoors. As a house sitter I see family cats from both "free to roam" and "indoor" households and see the impact of both lifestyles. But now there are solution available that can be easily implemented by homeowners.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support

Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

I can't see why this would be any other way. I haven't come across anyone who takes their cats on holidays, or day trips. But again, as a house sitter I stay in peoples homes whilst their on holiday to care for their pets.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

I am becoming a strong believer in the containment of cats on owners properties. This can easily be achieved now.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No suggestions from me. I am happy with how efforts are being directed. Are they perfect? I don't know as this area of expertise is not in my field and I'm sure you have far greater access to that information than I do.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

This seems a reasonable request.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

This seems a reasonable request, however I ponder selection, application, and impact of solutions.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

I would also like considered the lakes that feed into salt water. As I live in Te Atatu and walk the motorway walkway I have crossed the Henderson estuary many times. On a couple of occasions I have I have seen Koi fish in the water close to the mangroves. Most are brown however there was one orange one which I have seem on two occasions. They appear to be water adaptive.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

This sounds viable. Goodluck with implementing it as I'm sure there will be a lot of kickback on blanket banning motorboats.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

I agree with increasing resilience in the management of natural environment.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

tp keep native taonga protected most domesticated cats will still hunt regardless how they are fed + cared for. So by containing them in all of Auckland.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

these islands are part of Auckland so one rule for all should apply. If they are microchipped and desexed + contained in a secure confined area, then Island residents can enjoy their pet as well.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

ensure compliance for all to maximise protection in our environment

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Council to support/manage feral colonies of cats in communities. Cat rescue operation are over loaded and unable to cope in some areas. Council funding for euthanasia/vet...

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

More widespread advertising/marketing so ALL are aware of the target, not just 'eco warriors' pest free mindset/behaviour could be ingrained more + educated overall.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

As mentioned, introduced marine pests are difficult to control once they are here. Best practice is to stop them from getting here (invading location/spreading) in the first place.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

high volume' marine ecosystems, in my opinion, are ones that contain high biodiversity and native taonga that need protecting and that may be threatened by human activity. I think one rule for all areas should apply so all locations will be regarded as 'high value' eg removal of pests, dirt + seaweed from anchor chains + marine gear when moving location regardless of location. if a particular area is highly threatened then consider making it a reserve so no boats can ...

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

If it stops the spread then yes! "pest free" applies to all of NZ??

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

Seems like motorised boats are not the only cause of spreading freshwater gold clam. Wetsuits, kayaks etc also so perhaps not a ban on all activity but a controlled cleaning + checking protocol for all equipment being used in the lake.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

No

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3725

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Do not support

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

no comments

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Do not support

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

no

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3746

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Other

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Ive seen how much damage has happened over th years. We need to ensure our environment is cared for before its all gone

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3759

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Do not support

Tell us why

I think that the islands should be more strict because their smaller and have more endangered to owned cats going wild

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

I think its important to keep our cat numbers down and by registering the cats it can make people think twice before buying a cat.

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

We shouldn't oppress the cats

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Shouldn't be taking pets to islands unless your a resident or if its a dog on a leash

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

People need help, its hard already and new people want to make rules on our cats.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Registered cats

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

Hunt for possums and more traps

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

Not sure

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

High ecological marine ecosystems are what makes NZ, we should keep it that way

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Unsure

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

Say no to motorised equipment in our endangered waters

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3772

Tell us why

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Unsure

Tell us why

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Unsure

Tell us why

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Do not support

Tell us why

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Do not support

Tell us why

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Let's protect our environment: early consultation #3776

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland

Other

Tell us why

You maybe, near threatened species to prevent unwanted litters and reduce the risk they could have on native species especially if they are left abandoned.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Support

Tell us why

To help identify lost cats and reunite them with their owners

1C. All domestic/pet cats must be contained to their owner's property

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Within 1km of known threatened species habitat (see map 1)

All of Auckland Unsure

Tell us why

Maybe near threatened wildlife but as long as they do not pose a risk it should be fine.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location

Aotea/Great Barrier Island

Kawau Island

Rakino Island

Waiheke Island

Tell us why

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Desexing cats could be beneficial for both the owner and the wildlife.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

No

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

If they are harmful to native species then yes.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

To protect native species.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Your feedback

1. Responsible cat ownership

1A. All domestic/pet cats must be desexed

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Unsure
Rakino Island	Unsure
Waiheke Island	Unsure
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Cats reproduce easily so it means more harm to native wildlife, depends on cat, strays especially. Better for cats wellfare as a whole.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Support

Tell us why

Makes sure cat is known and safer and can be returned home

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	
Kawau Island	
Rakino Island	
Waiheke Island	
Within 1km of known threatened species habitat (see map 1)	
All of Auckland	Unsure

Tell us why

Makes it safer for native wildlife but the cat also cannot leave so unsure of if its is completly ethical unless it is contained, such as being on a leash.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Keeps the animals contained, and safe as well as knowing the threat against wildlife means it can be contained.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

Desexing stops massive amounts of reproduction, and makes it safer and prolongs cats life, it is good for everyone involved.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

Colllars with bells (that can come off in case of strangaling) can warn birds of incoming cats. Registaring domestic cats and keeping them inside at night.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

More funding towards making islands pest free as well as creating sanctuarys and breeding programs for native wildlife

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

I would keep the spread of non-native wildlife to a minimum and chains and boats spread many animals like barnacles, crabs etc so this sounds right

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Increases native wildlife, so the environment thrives by increasing life intended to live there, marine reserves are important by stopping spead from boats and natural movement.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Support

Tell us why

Protects environment and creates a more thriving environment more benifitial for the future they could get other programes to manage as well.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Unsure

Tell us why

I think it would certainly help with polution but alternatives like maybe an motor running by different means may not be much better. But they should make sure it is free of pest before using boats

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes, climate change impacts environment and people more and more each year and it would be benifitial to cut down waste and manage more effectivly not just plastic waste but also fuel and it would be benifitial to the environment to find alternative sources of fuel, managing harmful animals entering enviroment

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

Create more sanctuaries and manage waste and more renewable energy

Let's protect our environment: early consultation #3833

Tell us why

All the places where cats are dangerous but cat breeders should be able to breed cats.

1B. All domestic/pet cats must be microchipped and registered on the Companion Animal Register

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support
Within 1km of known threatened species habitat (see map 1)	Support
All of Auckland	Support

Tell us why

Because microchipping isn't that expensive and can be done without much consequences

1C. All domestic/pet cats must be contained to their owner's property

Location	
Aotea/Great Barrier Island	Do not support
Kawau Island	Do not support
Rakino Island	Do not support
Waiheke Island	Do not support
Within 1km of known threatened species habitat (see map 1)	Do not support
All of Auckland	Do not support

Tell us why

Some cats need to be outside + can't be contained, high cost for paying for litter, cats are good at escaping closed areas when they really want to.

1D. Only island residents' domestic/pet cats can be taken to offshore islands

Location	
Aotea/Great Barrier Island	Support
Kawau Island	Support
Rakino Island	Support
Waiheke Island	Support

Tell us why

Cats can be looked after by neighbours etc, not that high maintenance.

1E. What is your opinion on council providing increased financial support for those who cannot afford to desex their cats?

Support

Tell us why

More money can be allocated within the local board.

1F. Do you have comments or suggestions for managing cats to protect both wildlife and cats in Auckland?

- Cats could be conditioned to stay inside

- Registration could be good as well.

2. Pest-free islands

Do you have any priorities or suggestions for our region's contribution towards being predator-free by 2050?

There's rats in suburban areas, how exactly are you going to do those? Places with threatened species that are nice + offclosed would be optimal.

3. Protecting our moana from Caulerpa seaweed and other marine pests

3A. What is your opinion on introducing a rule to require all anchor chains and other marine gear to be free of pests, visible dirt, seaweed and animals before moving to a new location?

Support

Tell us why

Very doable and spreading the work to each person, making them accountable.

3B. What is your opinion on Auckland Council controlling invasive species in high ecological and/or cultural value marine ecosystems?

Support

Tell us why

Nothing much, just a good idea.

4. Our freshwater bodies (including lakes Tomarata and Rototoa)

4A. What is your opinion on Auckland Council controlling pests in more of the region's lakes (beyond Tomarata and Rototoa)?

Unsure

Tell us why

Hard to make the best decision that will not offend everyone.

4B. What is your opinion on banning motorised boats from Lake Tomorata to help prevent the spread of freshwater pests and to protect shoreline vegetation?

Support

Tell us why

There's other lakes that people can enjoy, also more important to protect vulnerable wildlife then people making small sacrafices.

5. Climate resilience

Do you think we should prioritise increased climate change resilience in our management of the natural environment?

Yes because the more we go through life, the more natural disastors will happen and the city previously hasn't been prepared for large disasters. By having good infrastructure people will stay safe. And also natural plants.

6. Other feedback

Do you have any other priorities or suggestions for how we should protect our natural environment from the impacts of exotic species now and into the future?

- Definitely working on infrastructure

- Giving this submission to a more wider group of people - maybe people who aren't that climate focused to see what they have to say about the issue too.

- Cultural perspectives and learning
